ADASA (Heb. אָדָּשָׁה, *Ḥadashah*). (1) A village on a small hill strategically overlooking the Beth-Horon road close to the place of Judah Maccabee’s final victory over Nicanor. Nicanor fell in the battle and his army fled toward Gazera/Gezer (1 Macc. 7:39–40, 45; cf. Elasa which is probably a scribal error for Adasa in 11 Macc. 14:6). The town is mentioned in the Mishnah as a place with 50 inhabitants, or with three courtyards and two households (Er. 5:6). It is the present-day Khirbet ‘Adasa, a little more than 5 mi. (9 km.) north of Jerusalem. The site has not been excavated, but visible archaeological remains include the remains of a settlement with scattered Herodian, Roman, and Byzantine pottery, rock-hewn caves, and agricultural features round about. This site is not to be confused with another Khirbet ‘Adasa north of Jerusalem, situated immediately to the northeast of Tell el-Ful, mentioned by some scholars, which has remains that only date back to Mamluk times. Yet another Khirbet ‘Adasa is situated west of Gibeon (el-Jib), but the remains there are primarily of the Byzantine period. (2) *Ḥadashah/Adasa* is also the name of a town in the Shephelah of Judah. It is mentioned in Joshua 15:37 and located close to Migdal-Gad and Zenan. Since Lachish and Eglon are referred to in the same district, Adasa’s location should probably be sought in southwest Judah. However, no convincing suggestion has thus far been proposed for the site. Eusebius (26:1) situated Adasa of Joshua 15:37 at a totally different location, close to Gophna (Jifna), but Jerome (27:1) rightly expressed his doubts about this identification.

[Shimon Gibson (2nd ed.)]

ADASKIN, MURRAY (1905–2002), Canadian violinist, conductor, composer, teacher. Adaskin was born in Toronto of Russian immigrant parents. He studied music in Toronto and while still in his teens became a violinist with the Toronto Symphony Orchestra (1923–36). He played with the Banff Springs Trio (1932–41) and Toronto Trio (1938–52). Adaskin was a major figure in the decentralization of Canadian concert music. From the 1930s to 1950s, he toured the country with his wife, Frances James, Canada's leading soprano, and both were pioneers in disseminating contemporary music by radio broadcasting.

After studying composition with John Weinzwieg (1944) and, in Santa Barbara and Aspen with Charles Jones (1949–51) and Darius Milhaud (1949–53), Adaskin was appointed to the University of Saskatchewan (1952–72). There he served as head of music and composer-in-residence and conducted the Saskatoon Symphony Orchestra (SSO). In 1973, he moved to Victoria, where he continued to compose and teach violin and composition.

A leader in postwar cultural nationalism, Adaskin insisted that the SSO commission Canadian works annually and based many of his own pieces on Canada's landscape and early history as well as its First Nations' traditions. A conservative modernist, Adaskin's neo-classic works also include music on Jewish themes. His *T'filat Shalom* (1973) was commissioned by the father of Adaskin's violin student Jeff Krolik who premiered the piece in Jerusalem.

A founding member of the Canadian League of Composers, Adaskin served on the Canada Council (1966–69) and was named an Officer of the Order of Canada (1980).

ADASS JESHURUN, ADASS JISROEL, originally the breakaway (*Austritt*) minority of Orthodox congregations in Germany in the mid-19th century (see *Neo-Orthodoxy). These congregations dissociated themselves on religious grounds from the unitary congregations established by state law in which the majority tended toward *Reform Judaism. Their main aim was to safeguard strict adherence to Jewish law. The Hebrew terms *Adass* (or *Adat*, *Adath*) *Jeshurun* and *Adass Jisroel*, meaning “congregation of Jeshurun” and “congregation of Israel,” were chosen by these congregations to express their conviction that, even if in the minority, they were the “true Israel.” The names were cherished for their socioreligious connotations by Orthodox groups in the West where Reform Judaism was widespread. The Israelitische Religionsgesellschaft of Frankfurt on the Main, with Samson Raphael *Hirsch as rabbi, called itself Adass Jeshurun from 1851, as did a similar community in Cologne from 1867. The congregation founded in Berlin in 1869, the first rabbi of which was Azriel *Hildesheimer, and one in Koenigsberg in 1913, chose the name Adass Jisroel. The Berlin Adass Jisroel established

its own educational network. Between 1890 and 1903 there was an Adass Jeshurun congregation in Belfast, composed of immigrants from Russia. In England, the strictly Orthodox congregation which grew out of the north London *bet ha-midrash* (1909) was called Adath Yisroel. After 1933, immigrants from Germany, loyal to the concept of Adass Jisroel, formed a congregation in northwest London; Manchester has both an Adass Jeshurun and an Adass Jisroel synagogue. Such communities have also been formed in various places in the United States, the best-known in Washington Heights, New York City. Others exist in Canada, Australia, South Africa, and Israel. The names have also been used by other groups, e.g., by the Reform Adass Jeshurun in Amsterdam in 1796. The synagogue of an Adas Israel congregation in Louisville, Ky., was consecrated in 1849.

ADDA BAR AHAVAH (Aḥavah).

(1) Babylonian *amora* of the third century. He was born on the day R. Judah ha-Nasi died (Kid. 72a–b; Gen. R. 58:2). A distinguished pupil of Rav, he twice rent his garments in mourning for Rav's death; the second time, when he realized that there was now no authority to consult on halakhic matters (Ber. 42b–43a). His main interest centered on *halakhah*, which is reported in his name by the leading sages of his day. He was extremely pious and reputed to work miracles; his contemporaries were convinced that in his company no hurt would befall them (Ta'an. 20b). During a drought his prayers for rain were answered immediately (TJ, Ta'an. 3:13, 67a). When asked by the sages how he had attained a ripe old age, he replied: “No one ever came to synagogue before me, or remained behind when I left. I have not walked four cubits without meditating on the Torah, and never in an unclean place. I have not indulged in regular sleep. I have not disturbed my colleagues at the academy, nor called any of them by a nickname. I have not rejoiced at a colleague's misfortune, nor gone to sleep with an angry thought against a colleague. I have not gone in the market place to anyone who owed me money, nor ever lost my temper at home” (TJ, Ta'an. 3:13, 67a; cf. Ta'an. 20b). Another dictum is: “One who has sinned and confesses his sin but is unrepentant is to be compared to a person who holds in his hand an unclean insect. Even though he immerses himself in all the waters of the world, nothing avails him” (Ta'an. 16a). In TJ, Ta'anit 2:1, 65a this statement with slight variations is ascribed to Abba b. Zavda. A work entitled *Baraita (Tekufah) de-Rav Adda* dealing with the principles of intercalation is ascribed to Adda. It is no longer extant, but it was still known in the 14th century (Zunz-Albeck, *Derashot* 274).

(2) Babylonian *amora* of the fourth century. A favorite pupil of Rava who called him “my son,” he esteemed his teacher so highly that he said to his colleagues: “Instead of

gnawing bones under Abbaye, you should rather eat fat meat under Rava” (BB 22a). Many of the rabbis blamed themselves for his premature death because of their treatment of him (*ibid.*).

[Yitzhak Dov Gilat]

ADDIR BI-MELUKHAH (Heb. אָדיר בְּמְלוּכָה; “Mighty in Kingship”), acrostical hymn recited toward the close of the Passover *seder* in the Ashkenazi and some other rites. It enumerates various attributes of God in the first two lines of each strophe, followed by a list of the various types of angels and the praises which they voice.

The hymn is first found in German manuscripts of the early 13th century and was probably written in Germany about that time.

In the *Ez Hāyyim* of the 13th-century Jacob Hāzzan of London (edited by I. Brodie, 1 (1960), 332), an additional stanza gives the acrostic Jacob, and conceivably this author wrote the poem.

Kahana, 1 (1957), 279, no. 462; Zunz, *Vortraege*, 133; Kaufmann, in: JQR, 4 (1892), 32, 560–1; Davidson, *Ozar*, 2 (1929), s.v. *Ki Lo Nāh; E.D. Goldschmidt, Pessach-Haggada* (Heb., Ger., 1937), 100–2; idem, *Haggadah shel Pesah* (1947), 74–75; idem, *Haggadah shel Pesah* (1960), 97.

ADDIR HU (Heb. אָדיר הוּא; “Mighty is He”), a hymn in the form of an alphabetic acrostic enumerating the qualities of God (mighty, blessed, great), and imploring Him to rebuild the Temple, a prayer which is repeated in the refrain:

“Speedily, speedily/In our days, and soon to come;/ Build, O God! Build, O God/ Build Thy house speedily.”

Addir Hu is one of several hymns added to the Passover **Haggadah* in the Middle Ages to be chanted after the conclusion of the formal part of the **seder* service according to the Ashkenazi rite. Since the 16th century *Addir Hu* appears in printed texts. A Judeo-German version recited by Ashkenazi Jews was first printed in Gershom b. Solomon ha-Kohen’s *Haggadah* (Prague, 1527). Because of the refrain in that version (*Bau dein Tempel shire*) the Jews of southern and western Germany called the *seder* night “*Baunacht*” and the celebrating of the *seder* “*bauen*,” i.e., to build. In the Avignon *Mahzor* (1775) it is recited on all festivals.

[Ernst Daniel Goldschmidt]

Music

Only in the Ashkenazi tradition is *Addir Hu* given greater prominence than the other *Haggadah* songs. It is sung to basically the same tune in all Jewish homes, and this is used in the synagogue as a musical motif of the festival. The music appeared in print as early as 1644 but may be even older, since one of its variants is in a Shtayger scale with a diminished seventh. In the 18th century it was often quoted in cantorial Passover compositions. In the synagogue, the tune is used in

various parts of the service, including the **Hallel*, the **Kaddish* over the Scroll of the Law, and the Priestly Benediction. The domestic versions introduce many variations, abbreviations, and distortions characteristic of folk music.

[Mordecai Ben-Yehzekiel]

ADELAIDE, capital of South Australia, established in 1836. Among its first settlers were a number of Jews engaged in commerce and sheep farming. Joseph Barrow Montefiore, a cousin of Sir Moses *Montefiore, who became in 1832 the first president of the Sydney Synagogue, lived in Adelaide at the time of the founding of the synagogue there. Local Jewish life was stimulated after 1838 by Emanuel Solomon from Sydney, who organized religious services on the New Year and the Day of Atonement and in 1845 successfully applied to the government for land for a cemetery. In 1847 Eliezer Levi Montefiore sought state support for Jewish religious institutions. In 1848 there were 58 Jews living in Adelaide, and the first congregation was organized with Judah Moss Solomon as its president. J.B. Montefiore gave addresses in English during the High Holidays. The first synagogue, used also as a schoolroom, was opened in 1850 and the present one, adjoining it, in 1870, when the community numbered 435. A.T. *Boas was invited to act as minister in 1870 and served for nearly half a century. Vabian Louis *Solomon, son of Judah Moss Solomon, was premier of the colony for a brief period in 1898. The community declined considerably in numbers after World War I, but there was a subsequent increase, especially with the emigration of Jews from Egypt after the mid-1950s. Since the 1960s the Jewish population of Adelaide has numbered about 1,200, although, unlike most other Jewish communities in Australia, there has been a decline in population

in recent years. In 2001, according to the Australian census, 979 persons declared themselves to be Jewish by religion. An Orthodox and a Liberal synagogue operated. There were no other organized Jewish communities in South Australia apart from Adelaide, where the South Australian Board of Deputies had its headquarters.

ADELKIND, ISRAEL CORNELIUS (16th century), Italian printer. Adelkind was the son of a German immigrant who settled in Padua. He worked in the publishing house of Daniel *Bomberg in Venice from the time of its establishment, except for intervals at other Venetian publishers, such as Dei Farri (1544; where one of his brothers and later his son Daniel also worked) and Giustiniani (1549–52). Adelkind greatly admired the Bomberg family, adding the name of Daniel Bomberg’s father, Cornelius, to his own, and named his son after Daniel himself.

Adelkind supervised the publication of the first editions of the two Talmuds (1520–23), which Bomberg printed, and the *Midrash Rabbah* (1554) printed jointly by Bomberg and Giustiniani. In 1553 the printer Tobias Foa invited Adelkind to manage a printing press in Sabbioneta and, in particular, to supervise the publication of the Talmud. However, a ban was imposed on the Talmud in 1553 after only a few tractates had appeared. Nevertheless, he remained with the firm until 1555 and took part in the publication of other works. He also printed books in Judeo-German, e.g., Elijah Levita’s translation of the Psalms (1545). The statement of a Christian contemporary that Adelkind was converted to Christianity is questionable.

[Abraham Meir Habermann]

ADELMAN, URI (1958–2004), Israeli writer. Adelman studied and later taught musicology at Tel Aviv University, wrote for the stage and for television, and published four books on computers. His reputation rests on four thrillers, all of them bestsellers, which combine wit, erudition, and suspense. The first, “Concerto for Spy and Orchestra” (1993), intertwines espionage and musicology within the confines of the Pravoslav church in Jerusalem. “Lost and Found” (1998) was followed by “Tropic of Venus” (2000), a story of love and mysterious identities which won Israel’s Golden Book Prize. Adelman’s last novel, published shortly before his sudden death, is entitled *Sha’ot Metot* (“Dead Hours”), a thriller played out against the background of the Intifada, in which a young surgeon who wishes to save lives finds himself accused of homicide.

[Anat Feinberg (2nd ed.)]

ADELSON, HOWARD LAURENCE (1925–2003), U.S. medieval historian. Born in New York, Adelson taught at Princeton, served with the U.S. Air Force in the Korean War, and then joined the faculty of City College, New York. He began teaching economic history, early medieval history, and ancient and medieval numismatics in 1954 and remained there for nearly 50 years. He developed the Ph.D. program in medieval history at the Graduate Center at City University of New York (1969). He was also an officer of the National Committee on American Foreign Policy.

An ardent Zionist active in Jewish affairs, he served, from 1994, as co-chair of American Academics for Israel’s Future; was on the Board of Governors of the Hebrew University of Jerusalem; chaired the Academic Affairs Committee of the University’s Rothenberg International School; and, in the last ten years of his life, was chairman of the Anna Sobel Levy Foundation, which supports junior U.S. military officers studying Israel. For more than 20 years he wrote a weekly column for the *Jewish Press* that had a large following. Adelson was active as well in the American Numismatic Society and did research in medieval economic history and political thought. Among his achievements was the discovery, by analyzing the movement of coins, that there had been trade between the eastern and western halves of the Byzantine Empire. Adelson’s books include: *Light Weight Solidi and Byzantine Trade during the Sixth and Seventh Centuries* (1957); *The American Numismatic Society 1858–1958* (1958); and *Medieval Commerce* (1962).

[Ruth Beloff (2nd ed.)]

ADELSTEIN-ROZEANU, ANGELICA (1921–2006), Romanian table tennis player; considered the greatest female table tennis player in history, winning 18 world titles, including six straight singles championships from 1950 to 1955. Born in Bucharest, Romania, Adelstein-Rozeanu was the first Romanian woman to win a world title in any sport. She began playing at the age of nine and won her first title in competitive play at the age of 12. She won the Romanian National Women’s Cham-

pionship in 1936 at age 15 and won it every year until 1957 excluding the war years. In addition to her run of individual world titles, she picked up seven gold medals in women's and mixed doubles between 1950 and 1956 and helped Romania win the team championship in 1950, 1951, 1953, 1955, and 1956. Adelstein-Rozeanu served as president of the Romanian Table Tennis Commission from 1950 to 1960, and in 1954 was awarded the Merited Master of Sport, the highest sports distinction in Romania. She also received four Order of Work honors from her government. Adelstein-Rozeanu moved to Israel in 1960, where she won the Maccabiah Games Table Tennis Championship in 1961 and the Israeli national championship in 1960–1962.

[Elli Wohlgelernter (2nd ed.)]

ADEN, port and city in S.W. Arabia, now part of the Federation of South Arabia, possibly identical with the Eden referred to in Ezekiel 27:23. Aden had a medieval Jewish community of great importance for the history of Jewish letters. It reached its peak during the 12th century. About 150 letters and documents written in, sent to, or concerning Aden were found in the Cairo *Genizah*. In addition, Yemenite Jews of that period communicated with other Jewish communities via Aden. By the end of the 11th century there was a “representative of the merchants” in Aden, Abu Ali Hasan (Heb. Japheth) ibn Bundar (probably a name of Persian origin). He bore the Hebrew title *sar ha-kehillot* (“chief of the congregations”), which indicates that he was head of the Jewish communities of both Aden and *Yemen. His son, *Maḏmūn, was “*nagid* of the Land of Yemen.”

In addition to business and family ties, there were communal and religious relations between the Jews of Aden and practically all the Jewish communities of the Islamic empire. “Aden and India” formed one juridical diocese: the Jewish merchants and craftsmen of about 20 different ports of India and Ceylon were under the jurisdiction of the rabbinical court of Aden. In Yemen itself the authority of the court of Aden extended as far as Sa‘da, the northernmost important Jewish community of the country. In turn, the rabbinical court of Aden regarded itself subordinate to that of the Egyptian capital, which had been instituted by the head of the Palestinian academy. In a letter addressed in 1153 to Old Cairo, the rabbis of Aden describe themselves as authorized by their exilarch and their *nagid*, but add that they acknowledge their “masters in Egypt” as an authority higher than themselves (see Strauss (Ashtor), in *Zion*, 4 (1939), 226, 231).

Conflict of Religious Authority

Because of relations with both Iraq and Palestine-Egypt, the Jewish community of Aden was drawn into the rivalry between the respective Jewish authorities. The dissensions of the Old Cairo community were transmitted to Aden, where they erupted in the spring of 1134. On the Sabbath before Passover that year, a scholarly Jew from Sa‘da was asked to lead the community in prayer. Following his home custom and the written

instructions of the *nagid* Maḏmūn, he mentioned both the exilarch and the Palestinian *gaon* in his sermon. However, the Old Cairo opponents of Maḏmūn, who happened to be present, objected; and a cousin of the exilarch, recognized as his representative, forced the scholar from Sa‘da to recant his error publicly. After Passover the merchants from North Africa and Egypt who went to Aden – most of them ardent followers of the Palestinian *gaon* – gathered around Ḥalfon b. Nethanel Dimyati, known in Hebrew literature as an intimate friend of the poet Judah Halevi. The followers of Maḏmūn even threatened to apply to the Fatimid authorities to settle the dispute, but did not carry out the threat.

It is known that at the end of the 11th or the beginning of the 12th century the Jews of Aden contributed regularly to the upkeep of the academies of Iraq (see Goitein, in *Tarbiz*, 31 (1961/62), 363). Maḏmūn and other well-to-do merchants of Aden also sent regular contributions consisting partly of money and partly of precious Oriental spices and clothes to the *gaon* and members of the rabbinical court in Old Cairo.

The Jews of Aden and Yemen submitted religious queries to the scholars of Egypt even before the time of Maimonides. For example, Maḏmūn once sent *gaon* Maḏmūn a set of translucent Chinese porcelain accompanied by the religious query, often repeated in later sources, whether china should be regarded ritually as glass or pottery. Isaac b. Samuel ha-Sephardi, one of the two chief judges of Old Cairo between 1095–1127, sent responsa to Yemen, which, like Maimonides’ letters to Yemen, were certainly sent via Aden. (See the article on **nagid* for the later *negidim* of Aden and Yemen.)

The Aden tradition of contributing to the academies of Iraq and Palestine was extended to that of *Maimonides. A very large donation for it is indicated in a letter sent from Aden. Abraham, Maimonides’ son and successor, answered queries addressed to him by the scholars of Aden.

Adani and Yemenite Jews

The impressive number of chiefs of congregations and *negidim* of Aden in the 11th and 12th centuries and later may be misleading: these notables did not exercise authority over the Jews of Yemen throughout the whole period. Despite the close connection between the Jews of Aden and those of inner Yemen, there were tangible differences between them, and they were referred to as “Adani” and “Yemeni,” respectively, when traveling abroad. In the 12th century Adanis were found in Egypt and as far west as Mamsa in Morocco (cf. DIT, no. 109 (= manuscript Cambridge, T.-s., 12. 1905), Yosef al-‘Adanī al-Mamsāwī).

There were also Karaites in Aden. They tried to gain adherents to their beliefs, and the poems of Abraham Yiju in honor of Maḏmūn b. Japheth credit him with crushing their efforts. Disputations with Karaites are reflected in Yemenite writings of that period.

The Importance of Aden for Hebrew Literature

The Jews of Aden were ardent collectors of books. Maḏmūn b.

David in his letter of July 1202 asked to have the medical treatises of Maimonides and other useful books sent to him; he specifically requested copies written on good paper and in a clear hand. The Jews of Aden were such avid bibliophiles that the Egyptian India traveler Halfon b. Nethanel went there for books that he could not get elsewhere (DIT, no. 246). Many of the most important literary creations written in Hebrew, such as the poems of Judah Halevi and Moses ibn Ezra, have been preserved in manuscripts found in Yemen. The *Midrash ha-Gadol* of David *Adani shows that he possessed an exceptionally rich, specialized library, containing works that have not yet been found in their entirety elsewhere.

Most of the letters from Aden, consisting predominantly of business correspondence, are in Arabic, which was in those days the *lingua franca* of commerce throughout the Islamic world and beyond. However, the often very long Hebrew poems appended to these letters, as well as the personal letters written in Hebrew, prove that their writers were well versed in Hebrew literature and inclined toward the midrashic style and the *piyyut*.

Jewish Tombstones

A great many tombstones with Hebrew inscriptions were found in Aden. Some are preserved in the British Museum and many more in museums in Aden, but most of them have become known through rubbings and photographs made of tombs still *in situ*. The oldest inscriptions are from the 12th century; and those referring to persons mentioned also in the *genizah* documents are of particular interest. There are others from the 13th and 14th centuries and a great number from the 16th through the 18th. The wording in the older inscriptions is extremely modest and concise, while the later ones are occasionally more elaborate. In the tombstones of women, as a rule, the names of their fathers, but not those of their husbands, are indicated, even when the woman concerned was described as an *ishah hashuvah* ("an important lady"). (The comprehensive study of the subject by H.P. Chajes in the *Sitzungsberichte* of the Viennese Academy of Sciences, 147 (1904), no. 3, was complemented by additional material published by I. Ben-Zvi, in *Tarbiz*, 22 (1952/53), 198ff.; E. Subar, in *JQR*, 49 (1959), 301ff.; S.A. Birnbaum, in *JSS*, 6 (1961), 95ff.; and by the critical survey by S.D. Goitein, in *JSS*, 7 (1962), 81–84.).

Aden remained a busy port and its Jewish community prospered well into the 16th century. Despite a decline in Jewish participation in the India trade, Jewish Mediterranean merchants continued to frequent Aden, and scholars called Adani and known to have lived in Aden made considerable contributions. The replacement of a local dynasty by the Ottoman Turks in 1538 did not adversely affect the fortunes of the Jews of Aden. A Muslim book of legal opinions from the beginning of the Ottoman period gives the number of Jewish male taxpayers as 7,000. Since taxes customarily were paid for boys at the age of nine approximately, this number of taxpayers indicates the existence of about 3,000 Jewish families in Aden. In the 18th century, when the India trade was at

its lowest ebb and the tribal sultan of Lahj ruled it, Aden fell into utter decay.

[Shelomo Dov Goitein]

Modern Period

A new chapter in the history of Aden Jewry, as part of the political and economic changes in Aden itself, began with the conquest of the port and city from the Sultan of Lahj by the British captain S.B. Haines in 1839, supposedly in response to the aggressive action of the sultan against a British ship anchored next to Aden. In fact, the conquest of the port was intended to assure a safe place to anchor and fuel for British ships arriving from the Mediterranean basin via the Red Sea and Aden on their way to India. In 1839 the population of Aden was only 600, 250 of them Jewish and 50 Banyans (Indians). Soon after the British had occupied Aden, the governor abrogated the Jews' status as a protected community (**dhimmi*) and restored discriminatory laws in accordance with Islamic tradition (*Ghiyār*). This was done despite the sultan's explicit orders. Haines' reports describe the delighted reaction of the Jews to the British conquest as do the later accounts of the Jewish sources: Y. Sappir, S.D. Karasso, and M. ha-Adani. As a result of the occupation, the economic development of Aden took wing, especially after the opening of the Suez Canal in 1869. As a consequence, a profound transformation occurred in the economic structure of Aden's Jewry from traditional handicrafts to various kinds of commerce. Particularly prominent was the Moses (Messa) family, whose head, Menahem Moses (d. 1864), was the president of the community. This family became very wealthy, especially as suppliers to the British army and its administration in Aden, which trusted the Jewish merchants more than the Muslim ones. The Moses family continued to be the social and economic leaders of Aden Jewry in the next two generations, particularly Menahem Moses' son, Banin (d. 1922), who succeeded his father as the head of the family and president of the community.

Because of the equal rights enjoyed by the Jews and the access to the outside world, Aden became attractive to Yemenite Jews. Many Jews emigrated to Aden as refugees escaping Yemen and the deteriorating political situation that particularly affected Jews and merchants. Jewish ship passengers and emissaries stopped at Aden and some decided to settle there. The number of Jews in Aden in 1860 was 1,500 and, by 1945, 4,500 Jews inhabited the city. In this way the Aden community took on a somewhat "international" character somewhat different from that of Yemen Jewry. Aden became the entry port to Yemen. Leaders of the local community, such as Moses Hanoch ha-Levi from the Caucasus and Banin Moses looked out for the well-being of Yemenite Jews and the refugees passing through Aden on their way to Erez Israel. Banin Moses even supported educational and outreach institutions of various Diaspora communities in Jerusalem and many of the emissaries from Erez Israel used to apply to him for contributions.

The profound political and economic changes did not result in social and cultural change. The Moses family, and

especially Banin Moses, who held the economic reins of the community, virtually controlled single-handedly the social and religious administration of the community. He stymied all innovation, such as the establishment of modern schools and cooperation with the Zionist movement. As a result, a professional class of Jews did not come into being in Aden. Only after the death in 1924 of Judah Moses, the third family president, did a new family president, Selim (1924–38), another son of Menahem Moses, establish a modern educational system for girls and boys and strengthen the connections with the Zionist movement in Erez Israel. His partner in these activities was Mahalal *Adani. In this way the young generation – women as well as men – acquired a modern Zionist Hebrew education; however, none continued on to higher education. Neither did the small Hebrew printing press established in Aden in 1891 become a milestone in the cultural development of the community, as only a small number of religious books were printed there for the needs of religious life: various liturgical books and rules for ritual slaughter.

The abrogation of the status of the Jews as a protected community led to a deterioration in relations with the Muslim majority, heightened by the conflict with the Arabs in Erez Israel. Even though the Jewish community in Aden grew in numbers, the growth of the Muslim community was incomparably larger. As opposed to their relative size at the start of the British occupation in 1839, when they constituted approximately half the population, at this stage they became just a small religious minority. Apart from individual Muslim attacks against Jews, a large-scale attack on the Jewish quarter occurred in 1932 and continued for a few days. The Jewish stores were pillaged, many Jews were beaten, and the “Farhi” synagogue was desecrated. The British police showed its indifference by doing little to punish the attackers. Following these incidents, Aden Jewry no longer felt safe and immigration to Erez Israel became an alternative. Simultaneously, the Islamic nationalist movement began to develop in Aden, seeking to end the British occupation. The situation of the Jews further deteriorated after the riots in Erez Israel in 1936–39. However, Yemenite and Aden Jews faced difficulties in immigrating to Israel because of British Mandate policy, which limited the number of certificates to Palestine.

In contrast to the declining political and economic situation, educational and social activities increased among the young generation in Aden thanks to the numerous emissaries arriving from Erez Israel. These emissaries included Yemenite and Aden Jews who had already moved to Israel such as Yosef ben David, Ovadia Tuvia, Binyamin Ratzabi, and Shimon Sha'er (Avizemer). These activities were not approved of by the traditional Jewish religious authorities, which caused tension between them and the younger rebellious generation. But social change was nipped in the bud as Arab violence was stepped up following the UN decision to establish a Jewish state in Palestine. In the new pogroms, which continued for three days with no British intervention, nearly a hundred Jews were killed in Aden and the nearby city of Sheikh 'Uthmān.

Others were injured, two Jewish schools were burned down, and most Jewish stores and small businesses were pillaged. The Jewish community lost all at once its economic underpinning and its faith in the British government. An investigating committee initiated by the British government did little to improve the financial and mental state of the Jews. Most of them preferred to immigrate to Israel with the founding of the Jewish state. Out of a population of 4,500, only 1,100 remained in 1946. In the mid-1950s, 830 lived there, a small minority among the 135,000 members of the Muslim community. The number of Jews diminished further in the course of the following years when their political situation worsened due to the tension between Israel and the Arab states and the radicalism of the Islamic nationalist Arab movement in Aden and its struggle against the British occupation. The 1958 incidents are an example of this trend: Jews were attacked in their synagogues, cars were destroyed, and an attempt was made to burn the Jewish school. With Britain's departure after the Six-Day War in June 1967, many of the Jews who still lived in Aden left. In the following November an independent state was established in Aden. The remnants of the Jewish community arrived partly in Israel and partly in London, leaving their belongings and institutions behind them. The Jews who immigrated to London as British citizens joined the members of the community who had moved there several years earlier. This strengthened the Aden community in London, which still retains its religious traditions.

[Yosef Tobi (2nd ed.)]

Folklore

The folklore of the Jews of Aden was strongly influenced and dominated by that of the Jews of *Yemen. This was especially evident in their narrative lore. Among the unrelated local customs: The *tallit* (“mandil”) was worn with green silk edges; a goat was slaughtered and placed under the bed of a mother in childbirth; on the first day of the seven-day wedding celebration a heifer was slaughtered. These animal sacrifices were also practiced by neighboring non-Jewish tribes, and it is doubtful whether they stem directly from ancient Jewish traditions.

***ADENAUER, KONRAD** (1876–1967), first chancellor of the postwar German Federal Republic. Son of a Catholic official in the Cologne law courts, Adenauer was elected in 1906 to the city council of Cologne on behalf of the Center (Catholic) Party, and in 1917 became mayor of the city, a post which he held until he was dismissed by the Nazis in March 1933. Jewish friends helped him financially during the Nazi period. Adenauer was twice arrested by the Gestapo and escaped from a Nazi prison shortly before the Rhineland was occupied by the Allies. In 1949 Adenauer emerged as leader of the new party, the Christian Democratic Union, and was elected chancellor of the Federal Republic. He was instrumental in gaining its full sovereignty in 1955. Prompted not only by political motives but also by his own deep feelings, Adenauer tried to open lines of communication with the Jewish people and the State of Israel. His offer of financial assistance coincided with the initiative of the Israel government and of Jewish organizations which, immediately after the war, demanded restitution and compensation from the Allies and later from both the East and West German governments. In 1952, after the *Reparation Agreements with Israel and the Jewish organizations were signed in Luxembourg, Adenauer proposed to establish full diplomatic relations with Israel, but was refused. Despite the opposition to the financial commitment in reparations and compensation by influential groups both in his own party and outside, Adenauer realized both its moral importance and its political advantage for Germany. In 1960 he met with the Israeli prime minister David *Ben-Gurion in New York and promised to continue financial aid to Israel after the end of the reparation commitment. Later, he declared himself ready to supply arms to Israel. He changed his mind on the establishment of diplomatic relations, however, because he feared that it might result in Arab recognition of East Germany. (See Israel Relations with *Germany.) In 1966, three years after his resignation from the post of chancellor, Adenauer visited Israel as a guest of the Israeli government. He devoted a chapter in his memoirs (*Erinnerungen*, 3 vols., 1965–67; in English *Memoirs*, 1, 1966) to his relationship with Israel and with world Jewry.

[Shlomo Aronson]

ADENI, SOLOMON BAR JOSHUA (1567–1625?), commentator on the Mishnah. In 1571 he immigrated with his father, a *hakham* in Sa'na, Yemen, and his family to Safed, where he studied under David Amarillo. In 1577–78 Adeni's father moved to Jerusalem. After his father's death (1582) Adeni, then in difficult circumstances, was cared for and supported by R. Moses b. Jacob Alhāmi. Alhāmi continued, until his death, to support Solomon, who arranged Adeni's marriage in 1590. In about 1582 Adeni entered the yeshivah of the kabbalist Ḥayyim *Vital, but later studied under others as well, among them Bezalel *Ashkenazi, who came to Jerusalem. Studying in seclusion, he wrote annotations in the margins of the Mishnah, and

as these increased, he abbreviated them. It was apparently after the death of Bezalel Ashkenazi that Adeni settled in Hebron, where he earned a meager living as a schoolteacher. His wife, daughter, and two sons died in 1600, apparently from a plague. His eight children from a second marriage all died in childhood from epidemics and diseases.

Adeni's commentary on the Mishnah, *Melekheth Shelomo*, was intended to encompass the entire Torah, explain the Talmuds, and to concentrate their commentaries and halakhic discussions in one place. The importance of the work is twofold: (1) to determine the clearest text of the Mishnah; and (2) to explain the Mishnah according to primary sources by his own method.

Adeni made use of many manuscripts of the Mishnah and the foremost rabbinic authorities then available in Erez Israel. Adeni's method is remarkably accurate. He checked his quotations from primary sources. If the original text was not available, he noted from whom he copied his citation. His commentaries are the closest to the literal meaning of the Mishnah. He comments on the biographies of rabbis and he illustrates the orders *Zera'im* and *Tohorot* with many illustrations, and corrects the classical mishnaic commentators. He opened his comments with the words "the compiler states" and when he differed with a scholar, he modestly wrote, "And to me, a layman, it seems my humble opinion...."

Because of these attributes his work became an indispensable commentary for study of the Mishnah. In addition, it is an important source for philologists. Yom Tov Heller's commentary on the Mishnah, *Tosafot Yom Tov* (Prague, 1585–87) appeared after Adeni had finished his work. However, praising Heller's work highly, Adeni included selections from it when his book was published. Despite its importance the commentary was printed for the first time only in 1905. Adeni also produced some of Bezalel Ashkenazi's glosses and commentaries on the Mishnah and the Talmud in a work called *Binyan Shelomo le-Ḥokhmat Bezalel*.

Another work equally important, but less famous because it was lost in manuscript, is *Divrei Emet*, glosses on the Bible. Ḥ.J.D. *Azulai saw this manuscript in Jerusalem and used it extensively in his work on the Bible, *Ḥomat Anakh*.

Little is known about Adeni's later life. The last information about him dates from 1625.

ADERCA, FELIX (Froim Zeilig; 1891–1962), Romanian novelist and journalist. Born in Puiesti (near Vaslui) and educated in Craiova, Aderca made his literary debut with volumes of poetry. The titles of the first two reflect his early preoccupation with feeling and harmony: *Motive și simfonii* ("Motifs and Symphonies," 1910) and *Fragmente și romanțe* ("Fragments and Romances," 1912). Then came the cold, cerebral period of *Reverii sculptate* ("Sculptured Reveries," 1912) and *Prin lentile*

negre ("Through Black Lenses," 1912), finally emerging into the sensuality of *Stihuri venerice* ("Erotic Poems," 1915). Eroticism was to become the keynote of Aderca's first novels. *Moartea unei republici roșii* ("The Death of a Red Republic," 1924) gave expression to his deep humanitarianism and pacificism. The reconstruction of the tragic atmosphere in Romania in World War I in 1916 represents not only Aderca's outstanding work but is regarded as one of the best war books ever written. Two of his novels are distinctly Kafkaesque in form: *Aventurile domnului Ionel Lăcustă Termidor* ("The Adventures of Mr. Ionel Lacusta Termidor," 1932) and *Revolte*. The latter, written in 1938 but only published in 1945, is a series of sketches lampooning legal procedures.

Ebullient and argumentative, Aderca was a prolific journalist. His interviews with men of ideas, collected in *Mărturia unei generații* ("Testimony of a Generation," 1929), introduced a new genre into Romanian literature. In his youth, Aderca contributed to various Romanian Jewish publications (*Ha-Tikvah*, *Lumea evree*, and *Adam*) and showed some attachment to Judaism and Zionism. He also published hundreds of articles about antisemitism. Aderca translated into Romanian books dealing with Jewish themes, among them the trilogy of Sholem Asch. Aderca believed in the idea of symbiosis between his Judaism and the Romanian language and culture. Persecuted during the Holocaust period (1938–44), he worked as a librarian in the Jewish community of Bucharest. He was unpopular with the Communist regime after World War II and from 1947 was allowed to publish virtually nothing but instructional literature for young people. One of his last works was a monograph on Constantin Dobrogeanu-Gherea (1948), the Russian-Jewish refugee literary critic and sociologist who promoted socialist theories in Romania. Some of Aderca's literary works were republished in the "liberalization" period (after 1965), but most of them were republished only after the collapse of the Communist regime in Romania (1989). Fragments of his works were translated into Hebrew in Israel.

[Dora Litani-Littman / Lucian-Zeev Herscovici (2nd ed.)]

ADIABENE, district in the upper Tigris region. During most of the Hellenistic period Adiabene was a vassal kingdom within the Parthian Empire. From 36 to 60 C.E. Adiabene was ruled by Izates, son of King *Monobaz and Queen *Helena. By that time the small kingdom had attained a measure of power and influence within the Parthian Empire, and it was Izates who restored the deposed Parthian king Artabanus III to his throne. For this, Izates was granted the extensive territory of Nisibis and its surroundings, and proceeded to play an important part in the dynastic struggles within Parthia after the death of Artabanus III.

Before he became king, both Izates and his mother Helena had been converted to Judaism. As a youth, Izates had been sent to Charax Spasinu (capital of the kingdom of Charakene, between the Tigris and the Euphrates) and it was there that he came under the influence of a Jewish merchant named *Ananias. At the same time, Helena had been converted by another Jew, and when Izates returned to Adiabene he was determined to complete his own conversion by undergoing circumcision. Against the wishes of Helena and Ananias the rite was performed, for Izates had been convinced by another Jew, a Galilean named Eleazar, that failure to do so would be considered "the greatest offense against the law and thereby against God." This story, as it appears in Josephus (*Ant.*, 20:34ff.), bears an interesting resemblance to the account given in the Midrash (*Gen. R.* 46:11). Monobaz and Izates were sitting and reading the book of Genesis; when they came to the verse "ye shall be circumcised," they began to weep, and secretly had themselves circumcised. "When their mother learned of this she went and told their father: 'A sore has broken out on our sons' flesh, and the physician has ordered circumcision.'" The king then gave his consent to what had already been performed.

After their conversion the Adiabenean rulers were quick to establish strong ties with the Jews of Palestine. Appreciation of their generosity toward the population and the Temple is expressed in a variety of talmudic sources. "King Monobaz (older brother and successor to Izates) made of gold all the handles for the vessels used on the Day of Atonement. His mother Helena set a golden candlestick over the door of the Sanctuary. He also donated a golden tablet on which the paragraph of the Suspected Adulteress was written" (*Yoma* 3:10; cf. *Tosef. ibid.* 2:3; *TJ ibid.* 3:8, 41a; *TB ibid.* 37a–b). Josephus reports that when Queen Helena visited Jerusalem (c. 46 C.E.) the journey greatly benefited the inhabitants, who were suffering from severe famine. Helena sent her attendants to Alexandria and Cyprus to procure grain and dried figs, which were distributed forthwith to the needy. "She left a very great name that will be famous forever among all our people for her benefaction. When her son Izates learned of the famine, he likewise sent a great sum of money to leaders of the Jerusalemites" (*Jos., Ant.*, 20:49ff.). The Mishnah (*Naz.* 3:6) connects Helena's pilgrimage to Palestine with a Nazarite vow she took. With regard to the famine, the Talmud relates that King Monobaz dissipated all his treasures and those of his ancestors in years of scarcity. When reproached by members of the court for squandering his money, Monobaz replied: "My fathers stored up below and I am storing up above," i.e., in heaven (*BB* 11a; see also *Tosef. Pe'ah* 4:18; *TJ ibid.* 1:1, 15b). This piety is praised in other sources as well. Although there is no need to affix a *mezuzah* to a temporary abode, "the house of King Monobaz used to do so when staying at a hostel, merely in remembrance of the *mezuzah*" (*Tosef. Meg.* 4:30; *Men.* 32b). While in Judea, Helena erected a large *sukkah* in Lydda for the Feast of Tabernacles, and it was frequented by the rabbis (*Tosef. Suk.* 1:1).

The allegiance of the Adiabeniens to the Jewish State was again proved during the Roman War of 66–70 in which the royal family took an active part. Josephus comments that “in the Jewish ranks the most distinguished for valor were Monobaz and Cenedaeus, kinsmen of Monobaz, king of Adiabene” (Jos., Wars, 2:520).

By the late second century C.E., Judaism must have been firmly established in Adiabene. Christianity, which usually spread in existing Jewish communities, was accepted in Adiabene without difficulty.

[Isaiah Gafni]

ADJIMAN, family in Constantinople. Some members held important positions at the court of Ottoman sultans in the 18th and early 19th centuries. Some Adjimans were purveyors and treasurers of the Janissaries and therefore were called by the titles *Ocak Bazergani* (“Merchant to the Corps”) or *Ocak Sarrafi* (“Banker to the Corps”). The bazergans must have ranked among the most prominent figures in the Istanbul markets, conducting large-scale transactions. They were also known as philanthropists.

BARUCH ADJIMAN was the first rich man of the family in Istanbul. He settled in Jerusalem and died there in 1744. His two sons, Yeshaya Adjiman (d. 1751–2) and Eliya Adjiman, remained in Istanbul. His daughter was married to David Zonana.

ELIYA ADJIMAN was one of the wealthiest persons in the Jewish community and a philanthropist who helped Rabbi Ezra *Malkhi during his visit to Istanbul in 1755. His sons were Baruch, Abraham, and David Adjiman. He was *ocak bazergani* in 1770.

YESHAYA ADJIMAN died in 1751 or 1752 and like his brother was one of the wealthiest Jews in Istanbul. His sons were Baruch (first mentioned in 1755 and last information from 1791/2 or 1803) and Jacob, who is mentioned in the years 1755 and 1769/70.

BARUCH ADJIMAN was *ocak bazergani* from 1766–68 to 1782. It is not clear if he was the son of Eliya or of Yeshaya, as each had sons named Baruch. He was a wealthy man and a philanthropist in Istanbul. Jewish and Ottoman sources tell about his financial difficulties during the war between the Ottoman Empire and Russia (1768–74) and also in 1777. He left many debts. There is also a document from the year 1791/2 in which Baruch, son of Yeshaya Adjiman, signed his name as *Pakid Erez Israel* in Istanbul.

Another **YESHAYA ADJIMAN** signed his name as *Pakid Yerushalayim* in Istanbul. There are documents which deal with his assistance in 1820 in building a hotel in Jaffa for pilgrims to the Jewish festivals. He was the last Jewish *ocak bazergani*, serving from c. 1820 until he was executed with Bekhor Isaac *Carmona in 1826. An elegy was written in their memory.

ABRAHAM ADJIMAN was appointed a member of parliament in Istanbul in 1877–78. He served as the head of the Jewish community in Istanbul in 1880 but, following a dispute in which he was involved, he ceased to occupy his office. The dispute was between Adjiman and Nissim bar Nathan, who declared that Adjiman had wished to do harm to the rabbis, wishing to control the meat tax, which the rabbis opposed. In response Adjiman did not pay the chief rabbi his salary.

[Abraham Haim / Leah Bornstein-Makovetsky (2nd ed.)]

ADLER, family originally from *Frankfurt. There are different theories as to the origin of the family name. According to one, the early members of the family lived in a house bearing the sign of an eagle (Ger. *Adler*). The main branch, whose members were kohanim, i.e., of priestly stock, traced its descent to Simeon Kayyara (see **Halakhot Gedolot*), the presumed author of the *Yalkut Shimoni*. The first outstanding member of the family was the kabbalist Nathan B. Simeon *Adler (1741–1800), whose pedigree may be traced back to an earlier Nathan Adler of the beginning of the 18th century. **MARCUS (MORDECHAI; d. 1843)**, served as *dayyan* in Frankfurt and subsequently for 25 years as rabbi of Hanover. He had six children, most noted of whom was Nathan Marcus *Adler (1803–1890) who became the chief rabbi of the Ashkenazi congregations of Great Britain in 1848. He was succeeded by his second son, Hermann Naphtali *Adler (1839–1911). Nathan Marcus' eldest son, **MARCUS NATHAN ADLER (1837–1911)**, mathematician and educator, was active in England in Jewish communal life and published a critical edition and translation of the *Travels of Benjamin of Tudela* (1907, reprinted 1964); a half-brother Elkan Nathan *Adler (1861–1946), Nathan's youngest son, was an outstanding Hebrew bibliophile. Marcus Nathan's son **HERBERT MARCUS (b. 1876)**, a lawyer, was director of Jewish education in London. Hermann's daughter **NETTIE (1869–1950)**, a social worker and educator, wrote articles on child welfare.

A second Adler family, unconnected with the Frankfurt family (above), originated in Worms. The first known, **ISAAC ADLER (d. 1823)**, served as rabbi in Worms from 1810. One of his sons, Samuel *Adler (1809–1891), was rabbi in New York. Samuel's son, Felix *Adler (1851–1933), was founder of the *Ethical Culture movement.

[Cecil Roth]

ADLER, U.S. theatrical family. The founder was **JACOB ADLER (1855–1926)**, one of the leading Jewish actor-managers of his time, and a reformer of the early Yiddish theater. Born in Odessa, he first acted with amateurs, and in 1879 joined one

of Abraham *Goldfaden's touring companies. Good looks assured him early success in young-lover roles and he continued touring until the Czarist prohibition of Yiddish theater in 1883 forced him to leave Russia. In London, he appeared with his second wife, Dinah Lipna, in melodramas and in Gutzkow's *Uriel Acosta*. Success brought him invitations from New York, but he remained in London until disaster struck the Jewish Theater at the Prince's Club in January 1887 when a false cry of "Fire" caused a stampede and the death of 17 people. Arriving in the U.S., he found himself crowded out of New York and he could play only in Chicago. He returned to Europe on a tour which included Warsaw, Lodz, Lemberg, and London, and which made his reputation as a dynamic actor of striking personality. Returning to New York in 1890, he opened at Poole's Theater with a play that failed, but he quickly followed it with *Moshele Soldat* ("Soldier Moshele") which was an immediate success and made him an idol of the Yiddish theater.

As an actor, Adler was often criticized as stacy, but he could always captivate an audience and he displayed remarkable power in heroic roles. He was dissatisfied with the melodramas and operettas then in vogue, and looked for plays that gave him dramatic scope. He found them in the work of Jacob *Gordin, a serious writer whose plays other actors

had rejected. The two produced Gordin's *Siberia* (1891) and inaugurated what has been called the "golden epoch" of the Yiddish theater. They followed this success with Gordin's *The Great Socialist*, *Der Yidisher King Lear*, and *Der Vilder Mensch*. In these productions, Adler achieved a triumph which was capped by his appearance as Shylock in Shakespeare's *The Merchant of Venice*, 1893, playing in Yiddish while the rest of the cast played in English.

In ensuing years, Adler controlled various theaters such as The People's and the Grand, where his children often performed with him. He interspersed serious plays with melodramas. After World War I, now almost a legendary figure, he went on brief tours, appeared in the film *Michael Strogoff*, and was portrayed in a Broadway play, *Cafe Crown*, which satirized his flamboyant way of life and his large family. Illness made his later appearances infrequent, but he never lost his glamour for the Jewish public. His memoirs, serialized in Yiddish in *Die Varheit*, mostly between 1916 and 1919, appeared for the first time in English in 1999 as *A Life on the Stage*. In it he describes his tempestuous actor's life in the Ukraine and the pogroms he barely escaped.

SARA ADLER (LEVITSKY; c. 1858–1953), Adler's third wife, played opposite her husband and became associated

with his pioneering work. She appeared in hundreds of plays, most notably as Katusha Maslova in Gordin's adaptation of Leo Tolstoy's *Resurrection*, which established her reputation as a great star of the Yiddish stage. Her autobiography, *My Life*, was serialized in the Yiddish daily *Forward* (New York, 1937–39).

CELIA (1889–1979), daughter of Jacob Adler and Dinah Lipna, appeared at the age of nine with her father in *Der Yidisher King Lear*. In 1919 she joined Maurice *Schwartz's Yiddish Art Theater, directed her own repertory company, 1925–1926, with Samuel Goldenberg, and in 1937 appeared in the Yiddish film, *Vu iz Mayn Kind? Of the children of Jacob and Sara Adler*, FRANCES (1892–1964) toured America in Yiddish repertory. JULIA (1899–1995) played Jessica to her father's Shylock, following this with roles in Jacob Gordin's plays. Stella *Adler (1902–1992) acted on the English-speaking stage and became a founding member of the New York Group Theater and a renowned acting teacher. LUTHER (1903–1985) was a noted actor on the New York and London stage and in motion pictures. His successes included Ben Hecht's drama of Israel *A Flag is Born*, Clifford Odets' *Golden Boy*, and Arthur Miller's *A View From the Bridge*. He also played Tevye in *Fiddler on the Roof*, the musical based on stories by *Shalom Aleichem.

ADLER, ALEXANDRE (1950–), French historian and journalist. After completing his studies in history, he specialized in the former Soviet Union and the Middle East and quickly became one of the most eminent French experts in geopolitics. A professor in higher military education on behalf of the French Ministry of Defense, Adler is mainly known for his contributions to newspapers, news magazines, and radio and television. He was the editorial director of the weekly *Courrier International* and a regular columnist for the conservative daily *Le Figaro*. In addition, he helped found *Proche-Orient Info*, a website devoted to Middle East affairs and committed to the fight against new forms of racism and antisemitism, and was appointed adviser to the chairman of the Representative Council of Jewish Institutions of France (CRIF). Adler published several books, among them *J'ai vu finir le monde ancien* (2002), an essay on the consequences of the terror attacks on the World Trade Center, and *L'Odysée Américaine* (2004), a reflection on the evolution of American behavior in international affairs.

[Dror Franck Sullaper (2nd ed.)]

ADLER, ALFRED (1870–1937), Austrian psychiatrist. He was the founder of individual psychology, a theory of personality and method of psychotherapy based on the concepts of unity, self-determination, and future-orientation of man. His views

were opposed to the elementaristic and mechanistic views of man which prevailed at that time. Born in Vienna, Adler qualified at the university there in 1895. After his marriage he adopted Protestantism, a small minority denomination in Austria at that time, considering it the most liberal religion. Adler's theories were set forth in such a manner as to be understandable and useful to a wide audience, including especially teachers and counselors. He himself established many child-guidance clinics. In 1902 Freud invited Adler to participate in his discussion group which had weekly meetings in Vienna. In 1910 Adler was elected the president of the Vienna Psychoanalytic Society, which grew out of the informal discussion group. In 1911 he resigned from the society as a consequence of his new theoretical views and established his own society and journal. From 1926 on Adler visited the United States regularly and eventually settled in New York where he was professor of medical psychology at the Long Island Medical College. He died while on a lecture tour in Scotland.

Primary in Adler's system is the conception that the organism, growing from a single cell, remains biologically and psychologically a unit. All partial processes such as drives, perception, memory, and dreaming are subordinated to the whole. Adler called this unitary process the individual's style of life. A unitary concept of man requires one overall motivating force. For Adler it is a striving to overcome and compensate for inferiorities directed toward a goal of superiority or success, which the individual creates quite uniquely. Though the goal may take on strange forms, it always includes maintenance of self-esteem. The individual, however, cannot be considered apart from society. The three important life problems, occupational, social, and sexual, are all actually social and require a well developed "social interest" for a successful solution. Thus the individual's goals will include social usefulness corresponding to the ideals of the community. Neurotic, psychotic, sociopathic, addictive, suicidal, and sexually deviant personalities are all failures in life because of an underdeveloped social interest and strong inferiority feelings. The role of the psychotherapist is to raise the patient's self-esteem through encouragement, illuminate his mistakes in lifestyle, and strengthen his social interest. In this way a cognitive reorganization is produced and the patient directed toward more socially useful behavior. Birth order (among siblings), dreams, and early recollections are used by the therapist in diagnosing the patient's lifestyle.

Interest in Adler's psychology increased with the gain in the humanistic conception of man, which he pioneered. Adlerian societies exist in numerous European countries, in the United States, where the *Journal of Individual Psychology* is published, and in Israel. A government supported Adlerian institute was established in Tel Aviv to train school psychologists, counselors, and teachers.

phies and indices. **ADD. BIBLIOGRAPHY:** T. Weiss-Rosmarin, in: *Individual Psychology*, 46 (1990), 108–18.

[Heinz L. Ansbacher]

ADLER, CHARLES (1899–1980), U.S. engineer and inventor. A life-long resident of Baltimore, Maryland, Adler began his career as an inventor at 14, receiving a patent on an electric automotive brake. After attending Johns Hopkins University, he served briefly in the army during World War I and in 1919 became associated with the Maryland and Pennsylvania Railroad. In 1928 he developed and installed the first traffic-actuated signal light (actuated by the sound of a car horn). In 1937 he became a consultant to the Baltimore and Ohio Railroad, continuing to invent safety and signal devices for automobiles, trains, and aircraft. He was granted over 60 U.S. patents for devices in general use. He was a member of the Maryland Traffic Safety Commission from 1952 until his death.

[Bracha Rager (2nd ed.)]

ADLER, CYRUS (1863–1940), U.S. Jewish scholar and public worker. Adler was born in Van Buren, Arkansas, son of a cotton planter. In 1867, upon his father's death, Adler and his family moved to Philadelphia, where they lived with Mrs. Adler's brother, David Sulzberger. They were members of the Sephardi Congregation Mikveh Israel, and its atmosphere, together with the influence of Adler's uncle and his cousin, Mayer Sulzberger, did much to shape Cyrus Adler's religious traditionalism and devotion to scholarship. Graduating from the University of Pennsylvania in 1883, Adler thereafter studied Assyriology under Paul Haupt at Johns Hopkins University. He taught Semitics at the university, becoming assistant professor in 1890. Meanwhile, he had joined the Smithsonian Institution, and became librarian there in 1892. Two years before, he had been sent to the Orient as special commissioner of the Columbian Exposition.

Adler took part in the founding of the Jewish Publication Society of America (1888), serving as chairman of its various committees throughout his life. He was responsible for the establishment of the Society's Hebrew press. Adler was also a founder of the American Jewish Historical Society (1892), and its president for more than 20 years. He edited the first seven volumes of the *American Jewish Yearbook* (1899–1905; the last two vols. with H. Szold) and was a departmental editor of *The Jewish Encyclopedia* (1901–06).

Adler played an active role in reorganizing the Jewish Theological Seminary of America under the presidency of Solomon Schechter. He was president of the Board of Trustees from 1902 to 1905, dividing his time between the Seminary and the Smithsonian. When Schechter died, he became acting president (1915), taking office permanently in 1924. Adler maintained the academic standards set by Schechter, and was responsible for erecting the Seminary's new buildings. He was one of the founders of the United Synagogue of America (1913) and served as its president. In 1908 Adler was elected

president of Dropsie College, conducting its affairs and those of the Seminary simultaneously. Together with Schechter he had taken over the editorship of the *Jewish Quarterly Review* (1910) on behalf of Dropsie College, and after Schechter's death served as sole editor (1916–40).

Adler was one of the founders of the American Jewish Committee (1906). He became chairman of its executive board in 1915 and in 1919 represented the Committee at the Paris Peace Conference. Appointed president of the Committee in 1929, Adler, by then aging, had to face the bitterness of the economic depression, followed by the rise of Nazism. Adler frequently found himself in opposition to the leaders of American Zionism, but he took part in the Jewish Agency for Palestine.

Adler's success lay in his ability to bridge worlds which early in the 20th century had little common ground. An observant Jew, knowledgeable in the field of Jewish scholarship, he was also familiar and respected in the world of American government and scholarship. Adler was a tireless worker and a scrupulous and constructive administrator. He was able to interpret the needs of traditional-minded Jews to the men of wealth in American Jewry. His style allowed little scope for public display of emotion, and this, combined with his aloofness from Zionism, limited his relations to those with whom he was closest in his observance of Judaism.

He wrote a *Descriptive Catalogue of a Collection of Objects of Jewish Ceremonial Deposited in the U.S. National Museum by Hadji Ephraim Benguiat* (1901), with index, *I Have Considered the Days* (1941), and *Lectures, Selected Papers, Addresses* (1933), which contains a bibliography of his writings and addresses.

[Sefton D. Temkin]

ADLER, DANKMAR (1844–1900), U.S. architect and engineer. Adler was born in Stadtlengsfeld, Germany, the son of Rabbi Liebmann Adler (1812–1892). He was taken to the U.S. at an early age and was trained at American universities. During the Civil War he practiced as an engineer and later built up a successful architectural practice in Chicago. In 1879 Louis Sullivan (1856–1924) joined the firm and in 1881 became a partner. Adler and Sullivan are credited with introducing a completely new concept of office architecture and this found its expression in the steel-framed skyscraper. Their first framed building (Chicago, 1887) was a commercial building called the Auditorium and was later acquired by Roosevelt University. Together they designed more than a hundred structures, including the transportation building at the Chicago Columbian Exposition in 1893, and two impressive skyscrapers: the Wainwright Building in St. Louis, Missouri, and the Prudential

Building in Buffalo, New York. They were responsible for the Kehillath Anshe Maariv in Chicago, where Adler's father had become rabbi in 1861. Here, too, they broke with tradition. Believing that form follows function, they made the facade of this synagogue secondary to the tall roof that covered the main body of the hall. The Adler-Sullivan partnership was dissolved in 1895 and neither architect did any distinguished work after that. It was in their office that Frank Lloyd Wright (1869–1959), one of America's greatest architects, was trained.

BIBLIOGRAPHY: H. Morrison, *Louis Sullivan* (1962²), 283–93; Roth, Art, 749–50.

ADLER, DAVID BARUCH (1826–1878), Danish banker and politician. The banking firm of D.B. Adler and Co., which Adler founded in 1850, promoted the establishment of an independent modern credit system in Denmark. He was among the founders of the Privatbank (1857), remaining a director until 1866, and helped to launch the Kjøbenhavns Handelsbank in 1873. He negotiated foreign loans on behalf of the government, and was a founder member of the Copenhagen Chamber of Commerce. Adler entered politics as a Liberal and Free Trader, and became a member of parliament, city councilor, and member of the Board of Representatives (*Repraesentantskabet*) of the Jewish community. He encouraged Danish art and industry, and gave generously to charity. One of his daughters was the educationalist Hanna Adler, and another, Ellen, was the mother of Niels *Bohr.

[Julius Margolinsky]

ADLER, ELKAN NATHAN (1861–1946), Anglo-Jewish bibliophile, collector, and author. Adler, the son of Chief Rabbi Nathan Marcus *Adler, was a lawyer by profession and had unusual opportunities to travel under favorable conditions and to build up a remarkable library. He was among the first persons to realize the importance of the Cairo *Genizah*. He visited Egypt in 1888 and 1895–96 and brought back approximately 25,000 fragments from the *Genizah*. His library ultimately included about 4,500 manuscripts of which he published a summary *Catalogue of Hebrew Manuscripts in the Collection of E.N. Adler* (1921). He also had a collection of some 30,000 printed books in Judaica and in general fields. In order to make good the embezzlements of a business associate he sold his library in 1923 to the Jewish Theological Seminary of America in New York and the duplicates of the printed books (including many incunabula) to the Hebrew Union College in Cincinnati, thus helping to raise both of these libraries to positions of significance. By an agreement made at that time, the manuscripts that he subsequently collected passed after his death to the Jewish Theological Seminary. Adler's published writings were mainly based on his travels and on materials in his own collection. Among them are *About Hebrew Manuscripts* (1905), a collection of bibliographical essays; *A Gazetteer of Hebrew Printing* (1917); *Jews in Many Lands* (1905); *Auto de*

Fé and Jew (1908); *History of the Jews of London* (1930); *Jewish Travellers* (1930, repr. 1966); and articles on the Samaritans and on the Egyptian and Persian Jews. Adler played an active role in English-Jewish communal affairs, especially as regards educational and overseas matters, and was an early member of the Hovevei Zion in England. His personal archives are at the library of the Jewish Theological Seminary of America.

Adler (JHSEM, 4–5 (1942–48), includes his bibliography); *Register of the Jewish Theological Seminary of America* (1923); JC (May 4, 1923, Sept. 20, 1946); *United Synagogue Recorder*, 3 (1923); E.C.R. Marmorstein, *Scholarly Life of E.N. Adler* (1962); M. Ettinghausen, *Rare Books and Royal Collections* (1966).

[Cecil Roth]

ADLER, ELMER (1884–1962), U.S. publisher and bibliophile. In 1922 Adler established Pynson Printers in New York City and began to produce books noted for excellent design and craftsmanship. A cofounder of Random House, he printed its first publication, a limited edition of Voltaire's *Candide* with illustrations by Rockwell Kent.

From 1930 to World War II, he published and edited the *Colophon*, a quarterly in book form for bibliophiles. A few issues appeared in 1948 as the *New Colophon*.

In 1940 Adler dissolved the Pynson Printers, presented his magnificent library of printing and printing history to Princeton University, joined its library staff, and organized a department of graphic arts. He retired from Princeton in 1952 and moved to San Juan, Puerto Rico. Here he built up another outstanding printing arts library and museum for the university.

[Israel Soifer]

ADLER, EMANUEL PHILIP (1872–1949), U.S. newspaper publisher, born in Chicago. He began his career in Iowa and rose to be president of Lee Syndicate Newspapers, controlling ten dailies in Iowa, Illinois, Nebraska, Missouri, and Wisconsin. He founded the Tri-City Federated Jewish Charities in 1921 and organized the Jewish Community Office to act for Jewish organizations in Davenport, Des Moines, and Sioux City, Iowa. His son, Philip David Adler, later publisher of the *Davenport Times*, issued a book about him (1932) written by A.M. Brayton.

ADLER, FELIX (1851–1933), U.S. philosopher and educator. Adler was born in Germany, the son of the Reform rabbi Samuel *Adler. He studied at Columbia University and preached as a rabbi at Temple Emanu-el in New York, but was too rationalistic to accept Judaism in any traditional sense. In 1874 he accepted a professorship in Hebrew and Oriental literature established at Cornell. Two years later he founded the Society for Ethical Culture, which advocated an ethic apart from any religion or dogma. The Society gained support mainly among intellectuals in America and abroad. Adler worked for various social causes such as maternal and child welfare, vocational

training schools, medical care for the poor, labor problems, and civic reform. In 1883 he founded the first U.S. group for child study. Adler was appointed professor of social ethics at Columbia in 1902. His main writings include *Creed and Deed* (1877); *Moral Instruction of Children* (1892); *Prayer and Worship* (1894); *An Ethical Philosophy of Life* (1918), which is partly autobiographical; and *The Reconstruction of the Spiritual Ideal* (1924; The Hibbert Lectures). He was an editor of the *International Journal of Ethics*.

BIBLIOGRAPHY: H. Simonhoff, *Saga of American Jewry from 1865–1914* (1959), 178–85; H. Cohen, *They Buildd Better Than They Knew* (1946), 32–40; H. Neumann, *Spokesmen for Ethical Religion* (1951), 3–62.

[Richard H. Popkin]

ADLER, FRIEDRICH (1878–1942), German designer of arts and crafts. Born in Laupheim, Southern Germany, Adler went to Munich to study at the Royal School for Applied Arts at the age of 16. In the world of Munich art nouveau Adler was especially influenced by the artist Hermann Obrist. In order to break with Wilhelminian traditions, Obrist propagated a reform concept of cultural policy and art related to the art nouveau movement. In 1902 Adler continued his studies at the newly founded Debschitz School in Munich, where he became a teacher in 1903. The aim of the school was to intensify the contact between artists and manufacturers in the applied arts. Adler taught the technique of working in stucco and of edifice sculpture. From 1907 to 1933 he taught at the Hamburg School for Applied Arts, where he was appointed professor in 1927. When he lost his position after the National Socialist takeover in 1933, Adler continued to offer private lessons to Jewish students. From 1935 he took an active part in the Hamburg Jewish Cultural Union (*Juedischer Kulturbund*). In July 1942 he was deported to Auschwitz and apparently murdered there in the same year. Adler's work was multifaceted and his creations and designs were shown in several exhibitions such as the International Exhibition for Modern and Decorative Arts in Turin (1902) and the world exposition in Brussels (1910). His principal fields of activity were handcrafted work and the design of furniture and metal objects especially made of tin. During the exhibition of the German *Werkbund* in Cologne in 1914 he met with universal approval for his concept of a synagogue building and for his Jewish ceremonial objects. The latter were fine silver objects in the style of art nouveau and were manufactured by the famous Heilbronn company for silverware Peter Bruckmann & Sons. Only a few of these ritual objects have survived, such as a magnificent Passover set made of silver, ivory, and glass from 1913/14 and an Eternal Light from the same year (both in the Spertus Museum, Chicago).

[Philipp Zschommler (2nd ed.)]

ADLER, FRIEDRICH (1879–1960), prominent figure in the Austrian labor movement and secretary of the Socialist International. The son of Victor *Adler, he was born in Vienna, studied physics in Switzerland, and lectured at Zurich University. Adler, who was baptized at the age of seven and later renounced Christianity, had no religion. Adler returned to Austria at the age of 32 and entered active political life. During World War I he attacked the policy of the Austrian government and criticized his own Socialist party for supporting it. In order to awaken the public conscience against the horrors of war he shot and killed Count Sturgkh, the prime minister, in a Vienna restaurant on October 21, 1916, and was sentenced to death. His sentence was commuted to 18 years imprisonment, and, under the amnesty which followed the fall of the monarchy in 1918, he was released. Adler was one of the founders of the left-wing International Working Union of Socialist Parties in 1921. From 1923 to 1939 he acted as secretary of the Labor and Socialist International. During World War II he lived in the United States but returned to Europe after the defeat of Germany. While he had many contacts with Zionist Socialists and although he had a Jewish marriage, he believed in assimilation and opposed Jewish national aspirations.

[Robert Weltsch]

ADLER, GEORG (1863–1908), German economist and economic historian. Born in Posen, Adler taught at the universities of Berlin, Basle, and Kiel, and became professor of political economy at Freiburg. While in Basle, in 1894, he drafted the first law on workmen's unemployment insurance at the request of the Swiss government. He nevertheless considered the labor movement as necessary for social reform. A follower of the German historical school of economists, he advocated moderate socialism and bitterly opposed the revolutionary socialism of Karl *Marx. He remained a protagonist of social insurance and of international legislation for the protection of labor. His works include *Die Geschichte der ersten sozial-politischen Arbeiterbewegung in Deutschland* (1885); *Die Grundlagen der Karl Marx'schen Kritik der bestehenden Volkswirtschaft* (1887); and *Geschichte des Sozialismus und Kommunismus* (1899).

[Joachim O. Ronall]

ADLER, GUIDO (1855–1941), Austrian musicologist; one of the founders of modern musicology. Born at Eibenschitz (Moravia), he was appointed lecturer in musicology at Vienna University in 1881. He was a founder and editor of the *Vierteljahrsschrift fuer Musikwissenschaft* (1884–94) and in 1898 succeeded his former teacher, Eduard Hanslick, as professor

of music history at Vienna, a position he held until his retirement in 1927. Adler made Vienna one of the leading centers of musicological training and research. The International Society of Musicology, founded upon his initiative, elected him its honorary president in 1927. He was editor-in-chief of *Denkmaeler der Tonkunst in Oesterreich*, which he had founded in 1894, but was removed from this position by the Nazis in 1938. He remained in Vienna until his death. His work contributed much to the development of musicological discipline. Important publications are his *Richard Wagner* (1904), *Gustav Mahler* (1916), and the *Handbuch der Musikgeschichte* (1924), which he edited.

[Judith Cohen]

ADLER, HARRY CLAY (1865–1940), U.S. newspaper executive. Adler was born in Philadelphia. He was chairman of the board and general manager of the *Chattanooga Times* from 1901, a paper owned by his brother-in-law, Adolph S. *Ochs, who later became publisher of the *New York Times*. When Ochs went to New York, Adler, already an executive on the paper, was appointed general manager, a position he held for 30 years. He served as chairman of the southern division of the Associated Press from 1917 to 1922, and was considered the “father” of Chattanooga’s commission form of government. Adler used the editorial columns of his newspaper, and the Citizens’ League which he organized, to campaign against the policies of the entrenched political machine until it was overthrown. He was active in charities and for three years was a president of the Mizpah Congregation in Chattanooga.

[Stewart Kampel (2nd ed.)]

ADLER, HERMANN (Naphtali); 1839–1911), British chief rabbi, son of Nathan Marcus *Adler. Born in Hanover, Hermann Adler was taken to London as a child, when his father became British chief rabbi, and was educated at University College School and at University College, London, where he graduated with a B.A. in 1854. Adler was thus one of the first British rabbis to receive a middle-class secular education in England. He continued his studies in Prague under Rabbi S.J. *Rappaport, where he was ordained as a rabbi in 1862. Adler went on to receive a doctoral degree from Leipzig University, his thesis being on (of all things) Druidism. In 1863 he became principal of *Jews’ College, and in 1864 minister of Bayswater Synagogue in the West End of London. After 1879 he deputized as delegate chief rabbi for his father who was ill and was elected to succeed him in 1891. Adler followed and developed the tradition set by his father, combining Orthodoxy with organizational ability, as well as having a firm feeling for the dignity of his office. He was largely instrumental in securing general recognition of the chief rabbi as the main representative of English Jewry, taking his place alongside the heads of other religious communities on public occasions. Op-

posed to the ideas of Theodor *Herzl, in 1897 Adler termed political Zionism an “egregious blunder,” although he had previously visited Palestine and been active in the Hovevei Zion movement. His period of office coincided with the great Russo-Jewish influx into the British Isles. This created a large “foreign” element in the community, whose confidence he did not gain. Despite periods of friction, Adler succeeded in maintaining his position as chief rabbi of Anglo-Jewry as a whole, the *Reform and *Sephardi communities being satisfied to be formally represented by him on public occasions. In the relatively small Anglo-Jewish community of the second half of the 19th century, with its integration into non-Jewish society and its painfully achieved balance, Adler saw a sort of self-contained “National Jewish Church,” led on the lay side by the head of the Rothschild family and on the ecclesiastical by the Adlers, as the Jewish equivalent of the Anglican or Catholic hierarchy; Hermann Adler even imitated the Anglican episcopal garb. Hence they were seriously perturbed by the influx of Eastern European refugee immigrants from 1882 onward, which disturbed the delicate balance of the community. In politics, Adler was an avowed Tory and supported the Boer War. Adler published historical and other studies and numerous sermons, as well as preliminary studies for an edition of the *Ez Hayyim* by the 13th century scholar *Jacob b. Judah Hazzan of London. A selection of his sermons was published under the title *Anglo-Jewish Memories* (London, 1909). Adler’s career is evidence of how comprehensively the acculturated section of Anglo-Jewry had adapted to Britain and had been accepted by its “Establishment.”

[Cecil Roth]

ADLER, HERMANN (pseudonym *Zevi Neshet*; 1911–), German-language poet, essayist, and playwright. Adler was born in Deutsch-Diósseg, near Pressburg (Bratislava), but grew up in Nuremberg and after graduating from a teachers’ seminary at Wuerzburg taught in Landeshut (Kamienna Gora), Silesia. He returned to Czechoslovakia in 1934 and enlisted in 1939 in the Czechoslovak Legion in Poland. During World War II, he joined the Jewish resistance movement in Lithuania and Poland, playing an active part in the ghetto uprisings in Vilna and Warsaw. He escaped to Budapest, but was later deported to Bergen-Belsen, from which he was subsequently released, taking up residence in Switzerland, where he remained. His experiences of Nazi brutality on the one hand and of human dignity and heroism on the other were reflected in several gripping books, partly factual reporting, partly poetic crystallization, such as *Ostra Brama, Legende aus der Zeit des grossen Untergangs* (1945), *Ostra Brama* being

the name of a Catholic monastery near Vilna where a number of Jews were hidden and rescued; *Gesänge aus der Stadt des Todes* (1945); *Ballade der Gekreuzigten, Auferstandenen, Verachteten* (1945).

Among other books which Adler wrote on the fate of the Jews during the Holocaust, and religious poetry, are *Fieberworte von Verdammnis und Erloesung* (1948) and *Bilder nach dem Buche der Verheissung* (1950). He frequently chose the medium of radio and television. One of his TV plays (which won a prize from the Zweites Deutsches Fernsehen) was *Feldwebel Anton Schmidt*, the story of a German sergeant who during the occupation of Vilna had helped Adler to organize the escape of Jews who joined up with the Jewish resistance movement elsewhere. Schmidt, who was subsequently arrested and sentenced to death by the Nazis, is also referred to in his *Ostra Brama*. The significance of Adler's descriptions of the Holocaust for Christian readers was stressed by the Swiss-Catholic historian and theologian Karl Thieme in his epilogue to his selection from Adler's writings (*Vater ... vergib! Gedichte aus dem Ghetto*, 1950).

Writing more often on psychological themes in later years, Adler published *Judentum und Psychotherapie* (1958) and *Handbuch der tiefenpsychologischen Symbolik: Ein Lexikon der Symbolik mit Lesetexten und Index* (1968). He also translated Itzhak Katzenelson's Warsaw Ghetto epic *Dos Lid fun Oysgehargetn Yidishn Folk* from Yiddish into German (*Das Lied vom letzten Juden*, 1951). Of his own works, *Gesänge aus der Stadt des Todes* appeared in Hebrew and Dutch translations.

[Erich Gottgetreu]

ADLER, HUGO CHAIM (1894–1955), cantor and composer. Born in Antwerp, Adler served as a chorister to Yossele Rosenblatt in Hamburg. He officiated as cantor in Mannheim, 1921–39, studied composition with Ernst Toch, and was strongly influenced by the modern musical idiom. The *Juedisches Lehrhaus* of Franz Rosenzweig in Frankfurt helped to shape his thoughts and he set to music some of Rosenzweig's Hebrew hymns. Adler adopted the idea of the musical *Lehrstueck*, an ethical-political cantata first realized by Brecht and Hindemith, and composed a Maccabean cantata *Licht und Volk* (performed in 1931) and *Balak und Bileam* (1934). The performance of his *Akedah* was prevented by the Kristallnacht pogrom of November 1938. After his escape to the U.S. he was appointed cantor in Worcester, Massachusetts. There he reshaped the music of the service and composed music for complete liturgies as well as many short pieces and the cantatas *Parable of Persecution* (1946), *Behold the Jew*, and *Jona* (1943). Adler's importance rests upon his skill in replacing 19th-century additions to synagogue song by a lucid contemporary idiom and striving, in his cantatas, for a collective musical expression of Jewish consciousness.

[Hanoach Avenary]

ADLER, ISRAEL (1925–), Israeli musicologist and librarian. Born in Berlin, Adler immigrated to Palestine in 1937 and studied at yeshivot. From 1949 to 1963 he studied in Paris with Solange Corbin at the Ecole Pratique des Hautes Etudes and J. Chailley at the Institut de Musicologie. In 1963 he took a doctorat de 3^{ème} cycle with a dissertation on the music of Jewish communities in 17th- and 18th-century Europe. He was the head of the Hebraic Judaic Section of the Bibliothèque Nationale from 1950 to 1963. He returned to Israel in 1963, and became head of the music department of the Jewish National and University Library in Jerusalem. He founded and was director of the Jewish music research center at the Hebrew University from 1963 to 1969 and 1971 to 1994, and was chief editor of *Yuval*, the record of its studies. In 1964 he founded the National Sound Archives as part of the music department of the National Library and in 1967 he founded the Israel Musicological Society. From 1969 to 1971 Adler was director of the Jewish National and University Library. In 1971 he was appointed associate professor at Tel Aviv University and in 1973 he joined the Department of Musicology at the Hebrew University of Jerusalem. From 1967 he was a member of the RISM committee and vice president of the Association Internationale des Bibliothèques Musicales (1974–77). He was a guest lecturer at numerous European and North and South American universities. Among his publications are *La pratique musicale savante dans quelques communautés juives en Europe aux XVII^e et XVIII^e siècles*, 2 vols. (1966); *Musical Life and Traditions of the Portuguese Jewish Community of Amsterdam in the XVIIIth Century* (Jerusalem, 1974); *Hebrew Writings Concerning Music in Manuscripts and Printed Books from Geonic Times up to 1800*, RISM, B/IX/2 (1975); "Three Musical Ceremonies for Hoshana Rabba at Casale Monferrato (1732–1733, 1735)," in: *Yuval*, 5 (1986), 51–137; *Hebrew Notated Manuscript Sources up to circa 1840: A Descriptive and Thematic Catalogue, With a Checklist of Printed Sources* (Munich, 1989); *The Study of Jewish Music: A Bibliographical Guide* (Jerusalem, 1995).

[Gila Flam (2nd ed.)]

ADLER, JACOB (1872?–1974), Yiddish poet and humorist, often writing as **B. Kovner**. Adler was born in Dinov, Austria-Hungary (now Dynow, Poland), but in 1894 immigrated to the United States where he worked in sweatshops, agitated for socialism, and wrote nostalgic poems about the "old country" for various journals, especially his mentor David Pinski's *Der Arbeter*. These poems were collected in his first volume, *Zikhroynes fun Mayn Haym* ("Memories of My Home," 1907), with an introduction by Pinski. They are full of nostalgia for the Jewish milieu of his childhood, which he views as care-free and idyllic, despite its poverty: the festive Sabbaths and

holidays, spent in the sweet comfort of the synagogue; the pure yearnings of first love; the final, sad parting from family and birthplace. The volume ends with a lament for himself, sick and weak though young, his life ebbing away in an alien land. He sought relief from the misery of existence in sardonic humor, contributing under various pseudonyms to the popular humorous periodicals *Der Groyse Kundes* and *Der Kibetser*, and co-editing *Der Yidisher Gazlen* with Moyshe Nadir. In 1911, Abraham Cahan, editor of *Forverts*, invited him to join his staff and assigned him the pseudonym of B. Kovner, thus enabling him to exchange a former pseudonym "Der Galitsiyaner" for a new identity as a "Litvak." Kovner's humorous feuilletons immediately became a success and his characters, such as the shrewish busybody Yente Telebende, her henpecked husband Mendl, Moyshe Kapoyer, and Peyshe the Farmer soon became household names in American Yiddish homes. His anecdotes and witticisms circulated widely. His characters inspired many songs and stage routines. Many of Adler's humorous sketches were collected in six Yiddish volumes between 1914 and 1933 and two in English translation (*Laugh, Jew, Laugh*, 1936, and *Cheerful Moments*, 1940). His *Lider* ("Poems," 2 vols., 1924), which appeared at the height of his fame, revealed the sadness and loneliness of the humorist. These poems were grouped into cycles with such titles as "Alone" and "Between Gray Walls." Even the few poems designated as humorous were bitterly satiric. He continued to write prolifically until his late nineties.

[Sol Liptzin / Ben Furnish (2nd ed.)]

ADLER, JANKEL (Jacob; 1895–1949), painter, graphic artist, and art critic. Adler was born in Tuszyn, near Łódź. As a child, he received a traditional Jewish education. In 1912, living with his uncle in Belgrade, he worked in the post office and studied to become an etcher. In 1913, he moved to Germany and settled in Barmen (now Wuppertal), where he was employed as a textile worker and shop assistant. From 1916, he attended the local school of applied arts (Kunstgewerbschule), where his tutor was Gustav Wiethuechter. In 1917–18, Adler got to know many young German intellectuals, writers, and modernist artists and became close to the "Das Junge Rheinland" artistic group, who were seeking ways for a renewal of German art. While interested in modernist trends in European culture and establishing ties within the German artistic community, Adler never lost touch with his national roots. His works, starting from the earliest ones, always treated Jewish themes quite distinctly. By way of example, his still-lives of this period incorporate images of Jewish ritual objects bearing symbolic significance. In 1918, Adler returned to Poland. Together with other young Jewish artists, he took part in the exhibition arranged by the Artistic Society of Łódź. His desire to express national self-awareness in contemporary art forms brought him close to young Jewish artists in Łódź who were

pursuing the same goal. This circle formed "Yung Yiddish," a group that brought together Yiddish writers and modernist artists. Adler was among its founders; he took an active part in its performances and published his poems and etchings in its anthologies. In 1919, he displayed his works at the Jewish Kultur-Liga exhibition in Białystok. His works of this period are executed in an expressionist style incorporating elements of cubism and are characterized by ecstatic pathos and use of Jewish mystic symbols (as in *My Parents*, 1919; Muzeum Sztuki, Łódź). In 1920, Adler returned to Germany and for some time resided in Berlin, where he established close contacts both with German radical avant-garde artists and Jewish artistic circles, among them Marc *Chagall, Elsa Lasker-Schueler, and Henryk *Berlewi, with whom he collaborated. Later, Adler returned to Barmen and in 1920–21 participated in events organized by Dadaist and other avant-garde groups from Duesseldorf and Cologne. He continued maintaining close contacts with Poland and the Jewish modernist artistic movement there. He illustrated two collections of Yiddish poetry published in Łódź in 1921, one of them being *Peril oifn brik* by Moshe *Broderzon, the founder and artistic standard-bearer of the "Yung Yiddish" group. At the International Artistic Exhibition in Duesseldorf, he represented Polish artists. Together with Berlewi, he represented East European Jewish artists and was active in organizing the Congress of the Union of Progressive International Artists (Duesseldorf, May 29–31, 1922) and signing the Union's manifesto. He showed his works at the International Exhibition of Revolutionary Artists in Berlin. In 1922, Adler joined the "Das Junge Rheinland" group and from 1923 participated in "Novembergruppe" exhibitions. After "Das Junge Rheinland" split, Adler became the leader of the "Rheinland" group. In 1924, he took part in the First General German Art Exhibition in the U.S.S.R. He executed monumental murals for the Duesseldorf Planetarium in 1925–26. In the late 1920s, Adler frequently visited Poland, where several of his solo exhibitions took place. Being a prominent figure in German avant-garde art, he unambiguously called himself a "Jewish artist" in his interviews to the Polish and German press. In his publications and statements of the 1920s and 1930s, Adler formulated his own idea of "contemporary Jewish art," which, in his view, should express the striving for "creating new forms" which he believed to be inherent in Judaism and connected to ḥasidic humanistic mysticism. During the 1920s and the early 1930s, his individual artistic manner crystallized, organically combining elements of cubism, primitivism, expressionism, and "Neue Sachlichkeit." At the same time, he often incorporated images of Jews, Jewish inscriptions, and kabbalistic symbols into his compositions. In 1933, when the Nazis came to power in Germany, Adler moved to France. In 1935–37 he lived in Poland and had two solo exhibitions in Warsaw and Łódź. In 1937, Adler's works were withdrawn from German museums as embodiments of "degenerate art." Several of them were shown at "Entartete Kunst" and "Der ewige Jude." In 1937, Adler moved to France; when the country was occupied by Germans in 1940,

he fled to the south where he joined the Polish Army. After the Battle of Dunkirk, he was evacuated together with other Polish soldiers to Glasgow, Scotland, and was discharged due to poor health. From 1941, he lived in London, where he was among the initiators of artistic events presenting artists who had fled continental Europe. In addition, he was active in the Ohel club in London, where Jewish intellectuals and artists congregated. Adler's works from the mid-1930s and especially in the 1940s are characterized by a complete rejection of figurative manner and transition to symbolic abstraction. A number of his works created in this period treated "Jewish themes" and reflect his understanding of the Holocaust (as in *Two Rabbis*, 1942; Museum of Modern Art, New York). In 1946–47, Adler's solo exhibitions were on display in London, Dublin, Paris, and New York.

[Hillel Kozovsky (2nd ed.)]

ADLER, JOSEPH (1878–1938), U.S. rabbi, scholar, and educationist. Adler was born in Kletzk, Lithuania, and immigrated to America in 1909 after failing in the wood-product industry. His extensive religious education – including stints in yeshivot in Nesvizh, Minsk, Mir, Slobodka, Kovno, and Aishishok as well as rabbinical ordination – probably provided him with little preparation for the cutthroat lumber business, but served him well in the New World. His studies were not confined solely to religious subjects, as he also acquired a familiarity with Russian and Hebrew literature. After arriving in New York City, Adler served as rabbi in a succession of Orthodox synagogues. He joined the Agudat ha-Rabbonim, an organization whose membership was limited to European-trained rabbis. Adler was also active in the religious Zionist movement, directing the Downtown Keren ha-Yesod and becoming an office bearer in the Mizrahi Organization of America. Concerned with the religious laxity of many of his fellow immigrants, he became one of the organizers of the Jewish Sabbath Alliance, an initiative aimed at fostering Sabbath observance within the New York Jewish community. Similar motives most likely inspired his participation in the development of the system of Orthodox religious education. Adler was appointed in 1923 by Shraga Feivel *Mendlowitz, a pioneer of religious day school education in America, as a Talmud teacher at Yeshivah Torah ve-Da'at in Brooklyn. While the school and its later imitators maintained a traditional focus and approach to textual study, Mendlowitz sought to produce a generation of religiously educated American Jews, not train future religious functionaries. In 1931, Adler became the Talmud teacher and principal of Mesivta Tipheret Jerusalem, a yeshivah on the Lower East Side for young men who wanted to combine yeshivah studies during the daytime with evening

university classes. This yeshivah was part of an expanding network of religious schools that were established in the interwar and postwar periods by a resurgent Orthodox movement. He held this position until his death.

[Adam Mendelsohn (2nd ed.)]

ADLER, JULES (1865–1952), French artist. A prolific painter of landscapes, Adler was better known for his urban and industrial scenes such as *The Strike*, *The Factory Interior*, and *Towing the Barge*. These works reveal his socialist outlook and his keen interest in social problems. Adler was regarded as a leading member of the realist school of painting. His son Jean (1899–1944), a painter of promise and integrity, was killed by the Nazis.

[Edouard Roditi]

ADLER, JULIUS OCHS (1892–1955), U.S. newspaperman and soldier. Adler was born in Chattanooga, Tenn. He graduated from Princeton University and then joined the staff of the *New York Times*, published by his uncle, Adolph *Ochs. At the same time he enrolled as a citizen-soldier. Before World War I he was in the cavalry, but he transferred to the infantry on the outbreak of war. Adler was gassed while commanding a battalion on the Western Front. During World War II he commanded the 77th Infantry Division which was responsible for the defense of the Hawaiian Islands from 1941 to 1944. In 1948 he was promoted to major-general in the reserve. Meanwhile, Adler became vice president of the *New York Times*, and after a number of years he became the paper's general manager (1935). He was also publisher of the *Chattanooga Times*. In 1945 Adler was one of 17 newspaper executives invited by General Eisenhower to visit the liberated concentration camps and he wrote a series of moving and dramatic articles on them for the *New York Times*. In 1954 he was appointed chairman of the National Security Training Commission, and later headed a commission supervising the building of a combat-ready reserve through a modified form of universal military training.

[Irving Rosenthal]

ADLER, LARRY (1914–2001), harmonica (mouth organ) player. Born in Baltimore, Adler won the Maryland Harmonica Championship at the age of 13. He first performed in revues and films, developing the technique of the 12-hole chromatic harmonica. He worked in England from 1934 to 1939, with many prominent jazz musicians. In 1939 he made his debut as a concert soloist with the Sydney Symphony Or-

chestra. In 1940, determined to read music, he studied with Ernst Toch.

During World War II Adler joined the dancer Paul Draper touring for U.S. organizations abroad. On his return to the U.S. in 1959, he embarked on a career as a concert performer appearing as a soloist with leading symphony orchestras. Adler was acknowledged as the first harmonica player who elevated the instrument to concert status. His repertoire included arrangements of classical works, and famous composers wrote for him such as Darius Milhaud, R. Vaughan Williams, Gordon Jacob, and Malcolm Arnold. Adler toured extensively and broadcast frequently on radio and television. He appeared in films and composed scores for the cinema, such as *Genevieve* and *A High Wind in Jamaica*.

In 1988 Adler was made a fellow of Yale University. His CD *The Glory of Gershwin* earned him a place in the Guinness Book of Records as the oldest artist to reach the British pop charts. He also recorded as a pianist and singer and published several books, including *How I Play* (1936), *Harmonica Favorites* (1944), the autobiography *It Ain't Necessarily So* (1984), and *Have I Ever Told You* (2001).

[Naama Ramot (2nd ed.)]

ADLER, LAZARUS LEVI (1810–1886), German rabbi and pedagogue. Adler's education included intensive Talmud study in Gelnhausen (Hesse-Nassau) and Wuerzburg and secular studies culminating in a doctorate from the University of Erlangen in 1833. In 1852 Adler became district rabbi of the province of Hesse-Kassel and retained this post until his retirement to Wiesbaden in 1883. Adler represented the more conservative branch of the Reform movement in Germany. While a consistent advocate of religious and educational progress, he opposed measures, such as the abolition of circumcision, which he felt would create an unbridgeable gulf between factions of the Jewish community. He was president of the Kassel rabbinical conference (1868) and an important participant in the German-Jewish synods of Leipzig (1869) and Augsburg (1871). From 1837 to 1839 Adler published *Die Synagoge*, a periodical containing sermons, popular historical studies, and essays dealing with contemporary Jewish issues. His final religious position is presented in *Hillel und Schamai* (1878).

[Michael A. Meyer]

ADLER, LIEBMAN (1812–1892), U.S. rabbi. Born in the town of Lengsfeld in the Grand Duchy of Saxe-Weimar, Adler received his education at the Jewish high school in Frankfurt and later trained at the teachers' seminary in Weimar. He taught at the synagogue school in Lengsfeld until 1854, immigrating to America in his early forties. Adler served as rabbi at Temple Bethel in Detroit before assuming the pulpit of Kehillath An-

she Maarabh in Chicago in 1861. His arrival coincided with a period of dissension within the German congregation over the introduction of liturgical reforms. A self-styled "orthodox reformer," Adler proved to be a perfect fit for the divided congregation, able to act as a mediator between the younger reform-minded generation and older traditionalist immigrants. Under his stewardship, the synagogue gradually adopted reformist innovations. Adler served the congregation for over 20 years, earning the adoration of its membership. He delivered sermons in German until 1872, when the congregation hired a minister able to preach in English. During the Civil War, he spoke out forcefully against slavery. Adler was a regular contributor to the German-language Jewish press in America. He also published three volumes of sermons in German. The Jewish Publication Society printed a collection of his sermons in translation in 1893.

Felsenthal and H. Eliassof, *History of Kehillath Anshe Maarabh* (1897), 40–45; J. Sarna, *JPS: The Americanization of Jewish Culture, 1888–1988* (1989), 43.

[Adam Mendelsohn (2nd ed.)]

ADLER, MAX (1866–1952), U.S. merchant-executive, musician, and philanthropist, who provided the money for America's first planetarium. Born in Elgin, Illinois, Adler as a child revealed remarkable talent for the violin. After receiving instruction in Elgin and Chicago, he was sent in 1884 to study at the Royal Conservatory in Berlin. Upon his return to the United States in 1888, he joined Boston's Mendelssohn Quintet as violinist and manager. In 1897, in response to the invitation of his brother-in-law, Julius Rosenwald, president of Sears, Roebuck and Company, Adler left the concert platform to supervise the firm's music department. He rose rapidly to a vice presidency and membership on the board of directors. His enthusiasm for music never waned, and among his many philanthropic acts was the assistance he gave promising young musicians. His principal philanthropy was his gift to Chicago in 1930 of the Adler Planetarium and Astronomical Museum.

[Morton Mayer Berman]

ADLER, MAX (1873–1937), Austrian socialist theoretician. Adler studied law at the university of his native Vienna, where he was professor of sociology from 1920. He joined the socialist movement in his youth and was a Social-Democratic deputy in the Austrian parliament for more than twenty years.

In his first major work, *Kausalitaet und Teleologie im Streite um die Wissenschaft* (1904), as well as in such later writings as *Das Soziologische in Kants Erkenntnis-Kritik* (1924) and *Kant und der Marxismus* (1925), he considers society and social phenomena not only as products of social interaction,

but also as *a priori* concepts of the human mind. The social nature of consciousness brings about actual sociation and societal development. Using this theory as a basis, he formulated a dynamic proletarian (as opposed to a static bourgeois) sociology, and epistemologically clarified the materialistic conception of history. He attempted to fortify the dialectic elements in Marxism with the principles of idealistic philosophy. These ideas are worked out in *Marxistische Probleme* (1913), *Wegweiser-Studien zur Geistesgeschichte des Sozialismus* (1914), *Die Staatsauffassung des Marxismus* (1922), *Marx als Denker* (2nd ed. 1925), *Lehrbuch der materialistischen Geschichtsauffassung* (1930–32), and *Das Raetsel der Gesellschaft* (1936). His book *Neue Menschen* (1926) was translated into Hebrew under the title *Anshei ha-Mahteret* (1931).

Adler's combination of philosophical idealism and socio-economic realism led him to a deterministic interpretation of Marxism and to revisionism in socialist politics. He warned that the ruling classes would be likely to abandon parliamentary democracy as soon as class antagonisms became intensified and that a revolutionary posture of the unified Socialist movement was therefore necessary. This position is clarified in his book *Politische oder soziale Demokratie* (1926).

[Werner J. Cahnman]

ADLER, MICHAEL (1868–1944), English minister and historian. Born into an immigrant Russian-Jewish family, he later adopted the name Adler. In 1890 he was appointed minister of the newly founded Hammersmith Synagogue in London and was for many years minister of the Central Synagogue. In World War I he served as senior Jewish chaplain to the armed forces, receiving a medal for his efforts. He was also chairman of the Jewish Central Lads' Brigade. He published, mainly in the *Transactions of the Jewish Historical Society of England* (of which he was president, 1934–36), a number of fundamental essays on the history of the Jews in England in the Middle Ages, based largely on documentary sources. Many of these were republished in his *The Jews of Medieval England* (1939). He also published two Hebrew grammars and edited *British Jewry, Book of Honour* (1922) on the service of the English Jews in World War I.

[Cecil Roth]

ADLER, MORITZ (1826–1902), Hungarian painter. Born in Budapest, Adler studied in Munich and in Paris. On his return to Hungary, he settled in Budapest. Adler's reputation was created with his painting *Memento Mori* (1852). A meticulous

artist, he was popular as a painter of genre and still life, and made portraits of many eminent Hungarians of his time. His *Apotheosis of Baron Joseph Eötvös* pays tribute to this champion of the emancipation of Hungary's Jews.

ADLER, MORRIS (1906–1966), U.S. Conservative rabbi. Adler, son of a rabbi, was born in Slutsk, Russia, and was brought to the U.S. in 1913. After serving in Buffalo, N.Y., Rabbi Adler accepted the pulpit of Shaare Zedek in Detroit, Mich. (1938), where, except for his chaplaincy (1943–46), he remained for the rest of his life. Under Rabbi Adler's leadership the congregation grew into one of the largest in the world, and he was considered by many to be the leading spokesman of the Detroit Jewish community. He was especially devoted to the field of adult Jewish education, on which he lectured and wrote extensively. A friend of labor leader Walter Reuther, Rabbi Adler served as chairman of the Public Review Board of the United Auto Workers (1957–66) and was a member of the Michigan Fair Election Practices Commission and the Labor-Management Citizens' Committee. He was a member of the Governor's Commission on Higher Education (1963–66). Positions he held in the Jewish world included chairmanship of the B'nai B'rith Adult Jewish Education Commission (1963–66) and various offices in the Rabbinical Assembly. He wrote *Great Passages from the Torah* (1947) for adult Jewish study, and *World of the Talmud* (1958). He also edited the *Jewish Heritage Reader* (with Lily Edelman, 1965).

He was killed during Sabbath services in his synagogue by a mentally ill youth. The day of his funeral was declared by Governor George Romney a day of mourning in the state of Michigan. A collection of his writings, compiled by his widow Goldie Adler and Lily Edelman, *May I Have a Word With You*, appeared in 1967. A second posthumous volume, *The Voice Still Speaks: Message of Torah for Contemporary Man* (ed. Jacob Chinitz), appeared in 1969.

[Alvin Kass]

ADLER, MORTIMER JEROME (1902–2001), U.S. philosopher and educator. Born in New York, Adler studied and later taught psychology at Columbia. From 1927 to 1929 he was assistant director of the People's Institute in New York. In 1930, he was appointed associate professor of philosophy of law at the University of Chicago (full professor in 1942), where he was active in curriculum reform. In 1952 he became director of the Institute for Philosophical Research in Chicago. Adler opposed John Dewey's influence in education, and advocated studying the great books of the Western tradition. While he continued his educational reforms on a more conservative basis, the concept of seminars on "great books" and "great ideas" continued to become integrated into programs at other educational institutions. In 1952, his work in this area culminated in the publication of the *Great Books of the Western World* by the Encyclopaedia Britannica company in 54 volumes (1945–52), with R.M. Hutchins.

Adler helped found the Institute for Philosophical Research and the Aspen Institute. He taught business leaders the classics at the Aspen Institute for more than 40 years. He was also on the board of the Ford Foundation and the Board of Editors of the *Encyclopaedia Britannica*, where his influence was clearly felt in its policies and programs. He was also the co-founder, along with Max Weismann, of the Center for the Study of Great Ideas.

In 1977, Adler published an autobiography entitled *Philosopher at Large*, which was later followed by another account entitled *A Second Look in the Rearview Mirror: Further Autobiographical Reflections of a Philosopher at Large* (1992). He spent a lifetime making philosophy's greatest texts accessible to everyone. Throughout his teaching career, he remained devoted to helping those outside academia educate themselves further. According to Adler, no one, no matter how old, should stop learning. He wrote more than 20 books after the age of 70, and at the age of 95 was working on his 60th, *The New Technology: Servant or Master?*

Adler's main works include *Art and Prudence* (1937); *St. Thomas and the Gentiles* (1938); *How to Read a Book* (1940); *A Dialectic of Morals* (1941); *The Capitalist Manifesto* (with L. Kelso, 1958); *Great Ideas from the Great Books* (1961); *The Conditions of Philosophy* (1966); *The Difference of Man and the Difference It Makes* (1968); *Reforming Education: The Opening of the American Mind* (1977); *The Time of Our Lives: Ethics of Common Sense* (1970); *Aristotle for Everybody: Difficult Thought Made Easy* (1980); *The Paideia Proposal: An Educational Manifesto* (1982); *The Angels and Us* (1982); *Six Great Ideas* (1984); *A Vision of the Future: Twelve Ideas for a Better Life and a Better Society* (1984); *Ten Philosophical Mistakes* (1985); *How to Speak / How to Listen* (1985); *A Guidebook to Learning: For a Lifelong Pursuit of Wisdom* (1986); *Truth in Religion: The Plurality of Religions and the Unity of Truth* (1990); *How to Think about God: A Guide for the 20th-Century Pagan* (1991); *Desires, Right & Wrong: The Ethics of Enough* (1991); and *Adler's Philosophical Dictionary: 125 Key Terms for the Philosopher's Lexicon* (1995).

A self-described pagan for most of his life, Adler converted to Christianity in 1984 and was baptized by an Episcopalian priest. In 1999, he converted to Roman Catholicism.

[Richard H. Popkin / Ruth Beloff (2nd ed.)]

ADLER, NATHAN BEN SIMEON HA-KOHEN (1741–1800), German rabbi. Born into a distinguished family in Frankfurt, Adler was a student of Tevele David *Schiff, and became known as an “*illui*” (an extraordinarily talented student of Talmud). In addition to talmudic subjects, he studied the natural sciences and Hebrew and Aramaic grammar. At the age of 20 he had achieved a reputation for his scholarship and piety. He founded a yeshivah which drew students from many cities. His students included Seckel Loeb *Wormser, Mendel *Kargau, and Moses *Sofer. Adler was especially attracted to practical Kabbalah. He gathered a congregation in his home and conducted the services from the prayer book of

Isaac *Luria, employing the Sephardi pronunciation he had learned from R. Ḥayyim Modai of Jerusalem who had been his houseguest for several years. Adler even had the priestly blessing recited daily, and departed from accepted practices in other particulars. He was especially stringent in regard to laws relating to ritual slaughter and the dietary laws. Although he was careful not to cite the Zohar or to canvass disciples for his views, there was considerable friction between his followers and the community leaders. Nevertheless, his profound learning and impeccable conduct were universally acknowledged. In 1779, his followers excommunicated one of the members of the Frankfurt community. Adler was summoned to the *bet din* to account for this presumptuous act. He refused to appear, and in consequence a resolution was passed and proclaimed in the synagogues, forbidding him to conduct services in his house, forbidding any member of the community from participating in these services, and threatening transgressors with excommunication. Adler ignored the order, whereupon a statement was issued by the rabbis and communal leaders of Frankfurt, signed by Phinehas *Horowitz. It threatened to place Adler under a ban which would prevent him from fulfilling any rabbinic functions and withdraw his right to decide on religious matters. The decision was referred to the civil authorities and approved by them, and Adler was obliged to submit. A temporary truce resulted when Adler was invited to accept the post of rabbi of Boskowitz in Moravia (1782). His devoted follower, Moses Sofer, decided not to abandon his master, and Adler encouraged him to accompany him. Eighteen years later, in his eulogy on Adler, Sofer declared, “I ran after him for 100 miles, forsaking my mother's house, and the home in which I was born.” On their way, they passed through Prague where they were received with great honor by Ezekiel *Landau. Adler, however, was not happy in Boskowitz, and after three years a dispute broke out between him and the community as a result of his attempt to introduce regulations regarding *terefot* which were more stringent than those hitherto in use. As a result he was obliged to leave the city. He and Sofer reached Vienna in the spring of 1785, but eventually Adler returned to Frankfurt, while Sofer settled in Prossnitz. In Frankfurt Adler reopened his yeshivah and reconvened his congregation. No action was taken by the community, but, in 1789, two of his students were punished by the communal leaders for alarming the community with accounts of their dreams. Adler and his disciples placed great significance on heavenly signs, miracles, and especially dreams. Adler himself was well-known for his dreams. As part of his kabbalistic life style, he was in constant search of divine revelation and prophetic visions. The excommunication pronounced ten years earlier against Adler and his *dayyan*, R. Lazer Wallase (the maternal grandfather of Abraham *Geiger), was renewed. About that time an anonymous polemical pamphlet entitled *Ma'asei Ta'atu'im* (1790) appeared in Frankfurt, describing the practices of the Ḥasidim who were attracted to Adler. The author of the brochure, a certain Loeb Wetzler, who wrote in the style of the early Haskalah, claimed that the Ḥasidim had devised new

laws. Adler's community did deviate from common practice in the areas of prayer, asceticism, and wearing two sets of *tefillin* instead of the usual one, all based on their study of Kabbalah. The added strictures of law, the asceticism, and the life style based on Kabbalah were very close to similar practices of the nascent ḥasidic communities developing in Eastern Europe during the same period. To a certain extent the opposition to these "deviant" practices was motivated by a resurgence of interest in the Shabbatean movement that occurred at the same time. The excommunication on Adler was removed on the 11th of Elul 1800, only three weeks before his death. The eulogy was delivered by R. Phinehas Horowitz, *av bet din* of Frankfurt. Adler left no writings except some brief notes, based on explanations he had heard from Tevele David Schiff. He wrote these in the margins of his copy of the Mishnah. Some, on *Berakhot* and tractates of the order *Zera'im*, were published by R. Zevi Benjamin Auerbach under the title *Mishnat Rabbi Nathan* (1862). Some of Adler's views on *halakhah* and *aggadah* and his *minhagim* were published in Moses Sofer's *Ḥatam Sofer* and *Torat Moshe* (1906²). Adler's method in teaching the Oral Law was original. He took the Mishnah as his starting point, gave the results of the discussion of the *Gemara* on it, and then pointed out the various stages in the development of the *halakhah* as it appears in the works of the early codifiers, particularly Maimonides and Alfasi.

[Zvi Avneri / David Derovan (2nd ed.)]

ADLER, NATHAN MARCUS (1803–1890), British chief rabbi. Nathan Adler was born in Hanover, then under the British crown, and was educated in Germany. He became rabbi of Oldenburg in 1829 and succeeded his father, Marcus Baer Adler, at Hanover the following year. In 1844 he was elected chief rabbi of the United Hebrew Congregations of the British Empire in succession to Solomon *Hirschel. He was chosen by a representative gathering of national delegates, and not, as with his predecessors, by the London Great Synagogue alone. S.R. *Hirsch was among the other candidates. During his 45 years of office the Anglo-Jewish community developed its modern features, which Adler did much to shape. His firm but enlightened orthodoxy was coupled with a strong and attractive personality. Adler was largely responsible for the failure of the *Reform movement, established in England shortly before his arrival, to make much headway there. His wide-ranging and ambitious conception of his office was made clear in his *Laws and Regulations for all the Ashkenazi Synagogues in the*

British Empire, issued in 1847. He was mainly responsible for the establishment of *Jews' College in 1855 and was a moving spirit in the organization of the Jewish Board of Guardians in 1859. In 1866 he took the first steps toward the creation of the *United Synagogue. His pastoral tours and visits to provincial communities made his influence felt throughout the country, and he was also able to secure recognition of his authority in the British colonies. Adler regarded Anglo-Orthodoxy as lax compared with the Continent and therefore in need of central direction. Outside the community he was regarded as the official representative and public spokesman for Judaism. Ill health curtailed his activity after 1879, when his son Hermann *Adler was appointed delegate chief rabbi. His principal literary work is *Netinah la-Ger*, a Hebrew commentary on the Targum *Onkelos (Vilna, 1875; published in numerous editions). His *Ahavat Yonatan*, a commentary on the Targum Jonathan, remains in manuscript (JTSa, Ms. Adler, 1173). Adler enjoyed an international reputation for his scholarship. He greatly strengthened the position of the chief rabbi.

Alderman, *Modern British Jewry* (1992), index.

[Cecil Roth]

ADLER, PAUL (1878–1946), German author. Adler studied law in his native Prague and served for a short time as a judge. He moved to France and Italy and finally settled in Hellerau, an artists' community near Dresden. He joined the "Hellerau Circle," inspired by the publisher Jacob Hegner, who gathered about him neoromantic and expressionist authors, the exponents of an esoteric, religious mysticism. Adler was coeditor of *Neue Blaetter*, the circle's periodical. In 1933, he returned to Czechoslovakia and survived the Nazi occupation in hiding. Adler's best known legendary tales, collected in *Elohim* (1914), teem with fantastic characters, and anticipate those of Franz *Kafka. *Elohim's* giants, angels, and titans combine the symbolism of the Talmud, of Christianity, and of paganism. Adler's two major novels were *Naemlich* (1915) and *Die Zaubersfloete* (1916); here he interpreted creation as a work of destruction. In later years he became interested in Japanese literature and collaborated in a monograph, *Japanische Literatur* (1925).

[Rudolf Kayser]

ADLER, POLLY (Pearl) (1900–1962), U.S. author and owner of bordellos. The eldest of nine children of Gertrude Koval and Morris Adler, a tailor, Pearl Adler hoped to complete gymnasium studies in her native Belorussia. However, her father sent her to America to prepare the way for the immigration of the rest of the family. On her own in New York, she was

raped at 17 by a sweatshop foreman and resorted to an abortion. Alienated from relatives, she learned to support herself in the sex industry, a survival necessity followed by a significant number of Jewish female immigrants from Eastern Europe. Unsuccessful in legitimate undertakings, Adler became a madam, operating a series of increasingly upscale brothels catering to gangsters and the fashionable upper classes. She retired in 1943 to Burbank, California, where she completed high school and enrolled in college courses. Her notoriety as the classic American madam, “a feisty, albeit disreputable, victor over adversity” was sealed by the publication of her popular memoir, *A House Is Not a Home* (1953) and its film version (1964).

[Judith R. Baskin (2nd ed.)]

ADLER, RENATA (1938–), U.S. journalist, novelist, and film critic. Born in Milan, Italy, Adler graduated from Bryn Mawr College in 1959; the Sorbonne in 1961; Harvard University in 1962; and Yale University Law School. Trained as a journalist, Adler worked intermittently for 20 years at the *New Yorker* magazine. Hired in her twenties by the legendary editor William *Shawn, she reported from Vietnam; from Selma, Ala., a civil rights hot spot; and from the Middle East. Her first two books were collections of essays and reviews written on assignment for that magazine and for the *New York Times*, where she worked, still in her twenties, for 18 months as a film critic, at a time when film became a serious intellectual, artistic, and political pursuit. Her generally negative reviews so angered the movie-making industry that in 1968 United Artists took out a full-page ad in the *New York Times* denouncing her. Strom Thurmond attacked her on the floor of the Senate for her critique of the John Wayne film *The Green Berets*.

She returned to the *New Yorker* and was promptly sent to report on the civil war in Biafra. Then she went to Washington, where she was hired by the House Committee investigating the Watergate scandal to write speeches for the chairman, Representative Peter Rodino. In 1969, she turned to writing short stories. Her early work surfaced in the *New Yorker*, and she eventually collected and reshaped much of this short fiction into an award-winning first novel, *Speedboat*, a collection of short paragraphs offering snippets of narrative, sometimes presented randomly. Essentially Adler was creating a disturbing portrait of urban life. The critics, however, were unimpressed. The literary controversy was rekindled in 1983 with her second novel, *Pitch Dark*, an autobiographical story about a young woman running from her relationship with a married man. It was similar in style to her first novel, with a skeletal plot and observations arranged haphazardly.

Her legal training was reflected in her 1986 book, an exhaustive investigation into shoddy news reporting practices, *Reckless Disregard: Westmoreland v. CBS et al.; Sharon v. Time*. It dealt with Ariel Sharon's libel suit against *Time* for its reporting of the Sabra and Shatila massacre in Lebanon and West-

moreland's suit against CBS for accusing him of deception in estimating North Vietnamese troop strengths. Adler accused the defendants of refusing to acknowledge even the possibility of error and their lawyers with having displayed “a concerted disregard for the fundamental goals of truth and accuracy.” CBS tried to get the book suppressed; the network was unsuccessful and the manuscript was published without change.

In the late 1980s, Adler became a single mother by adopting a baby and wrote little. Her critique of the venerated *New Yorker* film critic Pauline *Kael, published in the *New York Review of Books*, was particularly noteworthy for the viciousness of her attack. In 1999, she published *Gone: The Last Days of the New Yorker*, a critique of the magazine after it changed ownership and editors. In 2001 came *Canaries in the Mine-shaft: Essays on Politics and Media*. She also contributed articles and short stories, sometimes under the pseudonym Brett Daniels, to the magazines *National Review*, *Vanity Fair*, *Harp-er's Bazaar*, *Commentary*, and *Atlantic*. She was a member of the editorial board of *American Scholar* from 1969 to 1975. She was a Guggenheim Fellow in 1973–74, won first prize in the O. Henry Short Story Awards in 1974, won the American Academy and Institute of Arts and Letters Award in 1976, and the Ernest Hemingway Prize in 1976 for the best first novel. She taught at several universities and was a member of PEN and the National Academy of Arts and Letters.

[Stewart Kampel (2nd ed.)]

ADLER, RICHARD (1921–), U.S. composer, lyricist. Bronx-born Adler, the son of a classical pianist-teacher, Clarence Adler, graduated from the University of North Carolina and served as a lieutenant (jg.) in the U.S. Navy during World War II before concentrating on composing. He began collaborating with Jerry Ross, also Bronx-born and Jewish, in 1950 and had a popular success with the song “Rags to Riches.” But their first Broadway musical, *The Pajama Game*, in 1954, brought them recognition for the way the songs worked with the plot and for their integration of American speech idioms. The show, about a labor-union conflict and the threat of a strike in a pajama factory, was directed by the venerable George Abbott and also launched the career of Harold *Prince as a producer and established Bob Fosse as a major choreographer. Jerome *Robbins was hired as a backup in case Fosse did not work out. The show had hit songs like “Hernando's Hideaway,” “Hey There,” and “Steam Heat.” The next year Adler and Ross gave Broadway *Damn Yankees*, a musical comedy version of the Faust story, with such songs as “Whatever Lola Wants” and “(You Gotta Have) Heart.” But Ross died that year, at the age of 29, of a bronchial infection and Adler began to work alone.

Adler had little commercial success with Broadway musicals in the 1960s and 1970s but his symphonic works, including “Yellowstone Overture”; “Wilderness Suite,” commissioned by the Interior Department for full orchestra to celebrate the wilderness park lands; and “The Lady Remembers,” commissioned by the Statue of Liberty / Ellis Island Foundation to

celebrate the statue's centennial, also for full orchestra; and his ballets were performed widely and won awards. He also achieved success at composing musical commercials ("Let Hertz Put You in the Driver's Seat") and earned himself the sobriquet "king of the jingles." Adler was also called on to produce shows to mark celebrations and stage entertainments for inaugural galas. Perhaps his most celebrated show was produced on May 19, 1962, when Marilyn *Monroe sang "Happy Birthday" to President John F. Kennedy during a birthday salute at Madison Square Garden. Adler won two Tony (theater) awards and four Pulitzer Prize nominations; he was a member of the Songwriter's Hall of Fame.

In later years, Adler turned to a form of meditation called Siddha Yoga, which he said helped him deal with the grief when his son died of cancer at the age of 30 and when he himself battled throat cancer.

[Stewart Kampel (2nd ed.)]

ADLER, SAMUEL (1809–1891), rabbi and pioneer of the Reform movement. Adler, born in Worms, was the son of Rabbi Isaac Adler, who gave him his early education. He received a traditional education at the Frankfurt Yeshivah and studied privately with Rabbi Jacob Bamberger. He also received a secular education at the University of Bonn and Giessen, where he studied philosophy and especially Hegel under Joseph Hillebrand. He officiated as preacher and assistant rabbi at Worms, and in 1842 was appointed rabbi of the Alzey (Rhenish Hesse) district. Adler was one of the early protagonists of Reform and took part in the rabbinical conferences of 1844–46 (see *Reform Judaism). He worked strenuously for the improvement of Jewish education and the removal of legal disabilities affecting Jews. He believed that rituals had to be changed to fit contemporary circumstance and worked on improving the status of women in Jewish education and in prayer. In 1857 Adler went to America as rabbi of Congregation Emanu-el in New York, succeeding Leo *Merzbacher. A classic reformer, he rejected supernatural revelation and the authority of the law. He omitted references to the return to Zion in the prayer book and during the parts of the service that were not devotional, head covering was removed at Emanu-El. He published a revised edition of its prayer book in 1860, and in 1865 helped form a theological seminary under the auspices of his congregation. He was also one of the founders of the Hebrew Orphan Asylum. Adler's interests were scholarly, and he appears to have exercised little influence on the community. In 1874 his congregation resolved on his retirement and appointed him rabbi emeritus. When the Central Conference of American Rabbis was established (1889), Adler was made honorary president. Among his publications are *A Guide to Instruction in Israelite Religion* (1864) and a selection of his writings, *Kobez al Jad*, was published privately (1886). An English translation of Adler's memoirs was published privately by A.G. Sanborn (1967). His son Felix was presumed to be his successor but left the rabbinate to found the Ethical Culture Society and therefore take his father's ideas to the next stage

of their evolution where the particularity of Jews and Judaism are no longer necessary.

[Sefton D. Temkin / Michael Berenbaum (2nd ed.)]

ADLER, SAMUEL M. (1898–1979), U.S. painter. Born in New York City, Adler began drawing as a child. His parents saw the life of an artist as a challenge and thus did not encourage his interest. Nonetheless, at the age of 13 – several years earlier than typical admissions – Adler began artistic training at the National Academy of Design in New York. A talented violinist as well, he supported himself by playing in various venues, from weddings to symphonies. Before graduation Adler left the Academy, dedicating himself to music full time.

In 1933 Adler returned to painting. His first one-man show was not until mid life, when he had a 1948 exhibition at the Joseph Luyber Galleries in New York. This exhibition showed only his current work as two years previously he had destroyed all but two of his paintings. Overnight, critics lauded Adler as an important contemporary artist. Within the year he was teaching art at New York University and from this period on his works were displayed at, and acquired by, various venues in New York and elsewhere.

While Adler grew up with little religious training, he turned to depictions of the Jewish experience when he entered the art world. He created dozens of paintings of rabbis, including *White Rabbi* (1951), which shows a young rabbi in a *tallit* and *kippah* standing in front of Sabbath candles. In this work, and others, one can see the influence of Amadeo *Modigliani's simplified, symmetrical approach to the human figure. Adler always kept the human form at the center of his art, even as he moved away from representational painting to more abstract collages.

Adler discussed his view of Jewish art in a 1964 public lecture: "I believe in a dimension in every work of art that lies beyond the measurables, an inexplicable, a quality of life we call presence, that cannot be construed as either Jewish or Christian."

[Samantha Baskind (2nd ed.)]

ADLER, SAUL AARON (1895–1966), Israeli physician and parasitologist. Adler was born in Karelitz, Russia, but was taken to England as a child of five. He studied medicine at Leeds University and specialized in tropical medicine at the University of Liverpool. During World War I he served as a doctor and pathologist with the British armies on the Iraqi front. Between 1921 and 1924 he did research on malaria in Sierra Leone. In 1924 he made his home in Jerusalem and

joined the staff of the Hebrew University Medical School. Four years later he was appointed professor and director of the Parasitological Institute of the university. Adler translated Darwin's *Origin of Species* into Hebrew.

Under the auspices of the British Royal Society, he organized a number of scientific expeditions in the countries and islands of the Mediterranean. He specialized in the etiology and pathology of tropical diseases, the ways in which parasites pathogenic to man and animals are spread, and the immunology of protozoan infections. Adler introduced the Syrian golden hamster (brought to the Hebrew University from Aleppo by Israel *Aharoni) into experimental medicine. His work on malaria, cattle fever, leprosy, and dysentery, and his pioneer research into the Leishmania diseases (the Jericho and kala-azar groups) and their carriers, the sandflies, won him an international reputation. In 1933 Adler was awarded the Chalmers Gold Medal of the Royal Society of Tropical Medicine and Hygiene for his work on the transmission of kala-azar by the sandfly. In 1957 he was made a Fellow of the Royal Society.

[Meir Yoeli]

ADLER, SELIG (1909–1984), U.S. historian. Born in Baltimore, Maryland, Adler graduated from the University of Buffalo in 1931. He was appointed to the history faculty of the University of Buffalo in 1938 and subsequently named Samuel Paul Capen Professor of American History at the State University of New York at Buffalo in 1959. He specialized in American diplomatic and American Jewish history. His *Isolationist Impulse* (1957) is a study of isolationist thinking in the United States between the two World Wars. *American Foreign Policy Between the Wars* (1965) is a judicious, widely accepted account of that contentious subject. *From Ararat to Suburbia: A History of the Jewish Community of Buffalo* (with Thomas E. Connolly; 1960) is one of the most extensive and exact histories of any Jewish community. He was also the archivist for the Buffalo Jewish community archives that bear his name, which are located in the Butler Library at Buffalo State College. Active in Jewish communal and cultural affairs, Adler was a member of the New York Kosher Law Advisory Board and of the executive board of the American Jewish Historical Society.

[Lloyd P. Gartner / Ruth Beloff (2nd ed.)]

ADLER, SHALOM BEN MENAHEM (1847–1899), rabbi and author. Adler was educated in the home of his uncle R. Hillel *Lichtenstein. In 1869 Adler was appointed rabbi of Szerednye (now Sered, Slovakia), a position he occupied for 30 years until his death. His *Rav Shalom*, published posthumously by his son-in-law Elijah Sternhell (1902), is distinguished for its inspiring homilies and beautiful style. His unpublished works include novellae on the Talmud and responsa. His three sons were all rabbis: Menahem Judah, his successor; Phinehas, the rabbi of Radvancz; and Joab, the rabbi of Tapoly-Hanusfalva, who was born in 1880 and killed by the Nazis.

[Naphtali Ben-Menaheem]

ADLER, STELLA (1901–1992), U.S. actress and acting teacher. An exponent of Method acting and probably the leading American teacher of her craft, Adler was born into a celebrated acting family rooted in the Yiddish theater (see *Adler). She made her stage debut at four, appeared in nearly 200 plays, and occasionally directed productions. She also shaped the careers of thousands of performers at the Stella Adler Conservatory of Acting, which she founded in Manhattan in 1949 and where she taught for decades.

Born in Manhattan, the youngest daughter of Jacob Adler and the former Sara Levitzky, Russian immigrants who led the Independent Yiddish Art Company, Stella had five siblings, and they all became actors, notably Luther. Her parents were the leading classical Yiddish stage tragedians in the United States. Stella started on the stage in 1905 at the Grand Street Theater on the Lower East Side in Manhattan. She played both girls' and boys' roles and then ingénues in a variety of classical and contemporary plays over ten years in the United States, Europe, and South America, performing in vaudeville and the Yiddish theater. She won acclaim as the leading lady of Maurice *Schwartz, but she sought more versatility. Her work schedule allowed little time for formal schooling.

She was introduced to the Method theories of Konstantin Stanislavsky, the legendary Moscow Art Theater actor and director, in 1925 when she took courses at the American Laboratory Theater school, founded by Richard Boleslavski and Maria Ouspenskaya, former members of the Moscow troupe. Adler's most frenetic years were with the Group Theater, a cooperative ensemble dedicated to reinvigorating the theater with plays about important contemporary topics. The Group, founded by Harold *Clurman (whom she married in 1943), Lee *Strasberg and Cheryl Crawford, also believed in a theater that would probe the depths of the soul. Both aspects appealed to her and she joined in 1931. She won high praise for performances in such realistic dramas as *Success Story* by John Howard Lawson and two seminal Clifford *Odets plays, *Awake and Sing!* and *Paradise Lost*. She was also hailed for directing the touring company of Odets' *Golden Boy*. Recalling her years with the company, she deplored a dearth of good roles for women in "a man's theater aimed at plays for men." But she credited the company with evoking in her an idealism that shaped her later career. "I knew that I had it in me to be more creative, had much more to give to people," she said. "It was the Group Theater that gave me my life."

Before the Method revolutionized American theater, classical acting instruction had focused on developing external talents. Method acting was the first systematized training that also developed internal abilities, sensory, psychological, and emotional. Strasberg, who headed the Actors Studio

until his death in 1982, rooted his view on what Stanislavsky stressed in his early career. Adler went to Paris and studied intensively with Stanislavsky for five weeks in 1934. She found he had revised his theories to stress that the actor should create by imagination rather than by memory and that the key to success was “truth, truth in the circumstances of the play.” She instructed: “Your talent is your imagination. The rest is lice.” She was a stern taskmaster, believing that a teacher’s job is to agitate as well as inspire. She demanded craftsmanship and self-awareness, calling it the key to an actor’s sense of fulfillment. When students failed to understand roles, she acted them out, insisting: “You can’t be boring. Life is boring. The weather is boring. Actors must not be boring.”

She appeared in three films: *Love on Toast* (1938), *Shadow of the Thin Man*, and *My Girl Tisa* (1948). Her later stage roles included a fiery lion tamer in a 1946 revival of *He Who Gets Slapped* and in London an eccentric mother in a black comedy, *Oh Dad, Poor Dad, Mama’s Hung You in the Closet and I’m Feeling So Sad*, in 1961. She restated her theories in *Stella Adler on Acting*, published by Bantam Books in 1988. For her students, who included Marlon Brando, Robert De Niro, Warren Beatty, and Candice Bergen, she was both the toughest critic and the most profound inspiration, saying: “You act with your soul. That’s why you all want to be actors, because your souls are not used up by life.”

[Stewart Kampel (2nd ed.)]

ADLER, VICTOR (1852–1918), pioneer and leader of the Austrian Social-Democratic party and a prominent figure in the international labor movement. Born in Prague, Adler was taken as a child to Vienna where his father became a rich man and, two years before his death, embraced Catholicism. A physician by profession, Adler devoted his life to the cause of the working class. His greatest political victory was the granting of universal suffrage by the Imperial Government in 1905. He was a member of the Austrian parliament from 1905 to 1918 and foreign minister in the Socialist government of 1918. Adler was a victim of antisemitic agitation and suffered from the ambivalent attitude to Jews on the part of his colleagues at school and university. After his marriage he converted to Christianity “to save his children from embarrassment.” During his long political life he was always conscious of his origin but avoided taking a clear stand on Jewish issues. He opposed a debate on antisemitism at a congress of the Socialist International in Brussels in 1891. In later life, free from any religious affiliations, Adler refused to acknowledge the specific problems of the Jewish proletariat and opposed the idea of Jewish nationhood.

[Schneier Zalman Levenberg]

ADLERBLUM, NIMA (1881–1974), author and philosopher. Adlerblum, a daughter of Ḥayyim *Hirschensohn, was born in Jerusalem but left the city with her parents when she was about

11, moving to Turkey and later to the United States. She studied in Paris and subsequently at Columbia University, where she became closely associated with John Dewey. Her doctoral thesis, *A Study of Gersonides in His Proper Perspective* (Columbia University Press, 1926), was actually a call for a new approach to Jewish philosophy, which she felt was wrongly assessed by being viewed in its relation to other contemporary philosophies, maintaining that its true main thrust could be detected only when it was examined within its own environment. This conception, she argued, was best expressed by *Judah Halevi (1075–1145) who, in his *Kuzari*, maintained that Judaism had its own spiritual ideas and ideals, which were intimately bound with the historic experience of the Jewish people. Her attitude coincided with John Dewey’s philosophical theory that the value of abstract thinking depended on its concern with living experience and its fruitful application to life, but her views were challenged and criticized by many scholars.

In her *A Perspective of Jewish Life Through Its Festivals* (1930) she further expounded her philosophical theory of Judaism, and in her *Elan Vital of the Jewish Woman* (1934) she stressed that woman’s sensitivity in certain areas was vital and would enrich Jewish scholarship when it was opened up to them. She also published philosophical treatises on medieval Jewish thinkers. Adlerblum served on the international committee for spreading the teaching of John Dewey (outside America), was a member of the American Philosophical Association, and a life fellow of the International Institute of Arts and Letters. She was active in Hadassah from its inception, serving on its National Board from 1922 to 1935.

After an absence of 80 years she returned to Israel. A number of her articles on the vivid impact of her childhood in Jerusalem on her thinking were included in *The Jewish Heritage Series* edited by Rabbi Leo Jung (New York).

[Penina Peli (2nd ed.)]

ADLER-RUDEL, SALOMON (1894–1975), social worker. He was born in Czernowitz, Austro-Hungary (now Ukraine). Adler-Rudel was director of the Welfare Organization of Eastern Jews in Berlin (1919–30) and was active in developing welfare services for Jewish migrants from Eastern Europe. As director of the Berlin Jewish community’s department of productive welfare from 1930 to 1934, he contributed to programs to reduce dependence and to increase self-support among welfare cases. From 1926 to 1929 he served as editor of the *Juedische Arbeits – und Wanderfuersorge*. When the Nazis came to power, he moved to London where he was administrator of the *Central British Fund (1936–45). During World War II, he was prominent in rescue activities of Jews from Europe. After the war he settled in Erez Israel and was director of the Jewish Agency’s department of international relations. In this capacity, he prepared agreements with the International Refugee Organization and other international migration bodies for the transfer to Israel of the “hard-core” cases in the European Displaced Persons Camps. From 1958 he was director of the *Leo Baeck Institute for German Jews

in Jerusalem. In 1959 he published *Ostjuden in Deutschland 1880–1940*.

[Jacob Neusner]

ADLIVANKIN, SAMUIL (1897–1966), painter and graphic artist. Adlivankin was born in Tatarsk, Mogilev province, Russia. As a child, he received a traditional Jewish education. In 1912–17, he studied at the Odessa Art School. In 1916, he became a member of the Odessa Association of Independent Artists and participated in their exhibitions. In 1918–19, Adlivankin studied at the Moscow Free Art Workshops, where his tutor was V. Tatlin (1885–1953). In the constructivist works created by Adlivankin in 1919–20, Tatlin's influence is clearly manifested. In 1921–23 he joined the New Painters' Society (NOZH) and showed his work at its 1921 exhibition in Moscow. His works of this period feature scenes of everyday Soviet life, treated ironically or satirically and executed in the expressionist manner, sometimes incorporating elements of primitivism. In 1923–28, Adlivankin drew caricatures for various magazines and worked on political posters together with V. Mayakovsky. In the late 1920s he worked for a number of film studios and made set designs for several productions. In the early 1930s, he made several trips to Jewish agricultural communities in the Crimea and Ukraine that inspired several works portraying the life of Jewish kolkhozes and showed them at the exhibition dedicated specifically to this theme, which took place in Moscow in 1936. In the notorious, overtly antisemitic campaign launched in 1949 against "cosmopolitanism," Adlivankin, together with other Soviet culture figures who happened to be ethnic Jews, was subjected to severe criticism and distanced from public cultural life until the mid-1950s: his works were not accepted for exhibits, he received no commissions, etc. The first and only one-man exhibition in his lifetime was held in 1961 in Moscow.

ADLOYADA (Heb. אֲדֹלָיָדָה; Aramaic אֲדֹלָיָדָה אֲדֹלָיָדָה), Purim carnival. The name is derived from the rabbinic saying (Meg. 7b) that one should revel on Purim until one no longer knows (*ad de-lo yada*) the difference between "Blessed be Mordecai" and "Cursed be Haman." The first *Adloyada* was held in Tel Aviv (1912) and spread to other communities in Israel. It is celebrated by carnival processions with decorated floats through the main streets, accompanied by bands.

ADMISSION, legal concept applying both to debts and facts. Formal admission by a defendant is regarded as equal to "the evidence of a hundred witnesses" (BM 3b). This admission had to be a formal one, before duly appointed witnesses, or before the court, or in writing. When the denial of having received a loan is proved to be false, this is regarded as tantamount to

an admission that it has not been repaid. Admissions were originally regarded as irrevocable, but in order to alleviate hardships caused by hasty admissions, the Talmud evolved two causes for their revocation; a plea that the person making the admission had not been serious, or that he had had a special reason for making the admission. When partial admission has been made, the admission is accepted and he is bound to take an oath with regard to the remainder. Admissions can also apply to procedural matters; e.g., on the part of a party to an action that he has no witnesses, in which case he cannot subsequently call one.

The formal admission of a debt, or of facts from which any liability may be inferred, is in civil cases the best evidence of such liability (Git. 40b, 64a; Kid. 65b). The requirements of formality may be met: (1) by making the admission before two competent witnesses, expressly requested to hear and witness the admission (Sanh. 29a); (2) by way of pleading before the court, whether as plaintiff or defendant (Sh. Ar., ḤM 81:22); (3) in writing (*ibid.*, 17); (4) through any of the recognized modes of *kinyan* ("*acquisition" *ibid.*); (5) on oath or the "symbolic shaking of hands by the two parties... which is the equivalent of an oath" (*ibid.*, 28; Herzog, Instit, 2 (1939), 103).

While generally the admission must be explicit, in an action for the recovery of a loan, the denial of the loan would amount to an admission of nonpayment which is implicit in the denial (BB 6a; Shevu. 38b); on proof of the loan, the defendant will then be bound by his admission that he has not repaid it. Conversely, where a plaintiff claims that the defendant owes him a certain species of goods without reserving his right to claim also some other species, he is deemed to have admitted that the defendant owes him only the species claimed and no other, and any admission by the defendant that he does owe another species than that claimed, will not avail the plaintiff (BK 35b). The general rule in a conflict between two contradictory admissions is that the explicit prevails over the implicit and the negative (e.g., "I have not acquired property"*) over the positive (e.g., "I have transferred my property"; Tosef., BB 10:1; Git. 40b), but an admission presumed to stem from the knowledge of the relevant facts prevails over one possibly made in ignorance of those facts (cf. BB 149a).

As formal admissions were originally irrevocable, they were widely used as a means of creating new liabilities, as distinguished from the mere acknowledgment of already existing ones. Even though recognized as factually false admissions, they were held to bind the person making them (BB 149a), whether by way of gratuitously incurring a new and enforceable obligation (Ket. 101a–102b; Maim. Yad, Mekhirah, 11:15), or by way of transfer (*kinyan*). The property concerned thus passes from the owner to the person now admitted by him to have acquired it from him, the concurrence of the beneficiary not being required as he was only benefiting by the admission (Git. 40b; Maim. Yad, Zekhiyyah, 4:12). Admissions of this nonprocedural variety are also termed *udita* or *odaita*.

With a view to alleviating hardships caused by precipitate admissions, talmudic jurists evolved two *pleas for having

them revoked: the plea of feigning (*hashta'ah*) and the plea of satiation (*hasba'ah*). Where a man, not of his own accord but in reply to a question or demand, made an admission, and on being sued maintained that he had not been serious about it and that the admission was not true, an oath would be administered to him to the effect that he had not intended to admit the debt and that he did not in fact owe it (Sanh. 29b). Similarly, a statement of a person that he had admitted debts owed by him, only for the purpose of ostensibly reducing his assets so as not to appear rich was accepted (Sanh. 29b). Neither plea is valid against admissions made in court, or in writing, or by *kinyan*, or on oath (Sh. Ar., ḤM 81). As to admissions made in writing, some scholars hold that so long as the deed has not been delivered to the creditor, the admittor may plead that he was not serious or that he wrote it in order to appear poor (Sh. Ar., ḤM 65:22 and Isserles to Sh. Ar., ḤM 81:17). A dying man is presumed not to be frivolous on his deathbed, and his admissions are irrevocable (Sanh. 29b), so are admissions made by his debtors in his favor and presence while he is dying (Isserles *ibid.*, 81:2). The public (the community) must be presumed neither to make rash admissions nor to be interested in appearing without means, hence none of the pleas is available against admissions made by or on behalf of the public (Isserles *ibid.*, 81:1). Where only part of a claim is admitted, the admittor will be adjudged to the extent of his admission and be required to take the oath that he does not owe the remainder (Shevu. 7:1). This rule is based on the presumption that no debtor has the temerity to deny his debt falsely in the face of his creditor (Shev. 42b; BM 3a), a presumption which, curiously enough, does not necessarily apply to a debtor denying the whole (as distinguished from a part) of the debt. Where the whole is denied, the oath is administered to the defendant upon the presumption that a plaintiff will not normally abuse the process of the court (Shev. 40b). Where the defendant satisfies the admitted portion of the claim without adjudication, the claim is deemed to be for the nonadmitted portion only and to be denied in whole (BM 4a, 4b). While a part admission must fit the subject matter of the claim (Shev. 38b), it need not necessarily fit the cause of action; thus, the admission of a deposit might fit the claim on a loan (Sh. Ar., Ḥ.M. 88:19). The claim of the whole must precede the admission of the part, the admittor who is not yet a defendant being regarded as a volunteer returning a lost object (Sh. Ar., ḤM 75:3). An admission is not allowed to prejudice the admittor's creditors: the holder of a bill may not be heard to admit that he has no claim on it, or the possessor of chattel that they belong to somebody else, so as to deprive his creditors of an attachable asset (Kid. 65b; Ket. 19a). Admissions need not relate to substantive liabilities, but may be procedural in nature: thus a party may admit that he has no witnesses to prove a particular fact, and he will not then be allowed to call a witness to prove it, lest the witness be suborned (Sanh. 31a); or, having once admitted a particular witness to be untrustworthy, he will not later be able to rely on his testimony (Ket. 44a). Admissions could be accepted for one purpose and rejected

for another, e.g., the admission of a wrongful act would be inadmissible as a *confession in criminal or quasi-criminal proceedings, but could afford the basis for awarding damages in a civil suit. This rule is found to have been applied to larceny (BM 37a; see *Theft and Robbery), to the seduction of women (Ket. 41a; see *Rape), to arson (Solomon b. Abraham Adret, resp. 2:231), to *usury (*ibid.*), to embezzlement (see *Theft and Robbery), and to breach of trust (Isserles to Sh. Ar., ḤM 388:8; Yom Tov b. Abraham Ishbili, Ket. 72a); a wife admitting her adultery was held to lose, on the strength of her admission, any claim to maintenance or other monetary benefits, but not her status as a married woman, thus incurring no liability to be divorced or punished (Maim. Yad, Ishut, 24:18). An early authority posed the question whether the injunction, "you shall have one standard of law" (Lev. 24:22), should not be read to prohibit any distinction between civil and criminal law with regard to admissions; the answer is in the negative, because in civil causes it is said: "He shall pay"; but in criminal cases it is said: "He shall die" (Tosef. Shevu. 3:8).

[Haim Hermann Cohn]

ADMON (Gorochov), YEDIDYAH (1897–1982), Israeli composer. Admon, who was born in Yekaterinoslav, Ukraine, went to Erez Israel in 1906. From 1923 to 1927 he studied theory of music and composition in the U.S. In 1927 he returned to Palestine and in the same year published his first songs, among them the popular "Gamal Gemali" (Camel Driver's Song). In 1930 he went to Paris to study with Nadia Boulanger, the French music teacher. For several years Admon was director of the Israeli Performing Rights Society (ACUM). After spending 13 years in America, he returned to Israel in 1968. Admon was a pioneer in the field of Israeli song. He was one of the first Israeli composers, and one of the earliest to create a new style which served, often subconsciously, as a model for other composers. This style blends four elements: the music of the Oriental Jewish communities, especially the Yemenite and Persian; Arab music; ḥasidic music; and Bible cantillation. The result is an absolute organic unity. The rhythm of the Hebrew language is also an important factor in Admon's music. He was awarded the Israel Prize for the arts in 1974. His work includes music for the theater – *Bar Kokhba*; *Michal, Daughter of Saul*; and *Jeremiah* – for piano and violin, and a symphonic poem, *The Song of Deborah*.

[Herzl Shmueli]

ADMON BEN GADDAI, one of the few civil law judges in Jerusalem whose name is mentioned in talmudic literature (Ket. 13:1–9; TB, Ket. 105a). Admon probably lived in the latter days of the Second Temple, as three of the seven *halakhot* in his name are supported in the Mishnah by R. *Gamaliel the Elder. Admon and his colleagues received a salary of 99 maneh (1 maneh = 100 denarii) from the Temple treasury. However, due to early variants in mishnaic tradition regarding Admon's title, his precise judicial function is not clear. He is referred to as either one of the *dayyanei gezerot* (דַּיְיָנֵי גְזֵרוֹת “decree judges”) or one of the *dayyanei gezelot* (דַּיְיָנֵי גְזֵלוֹת “robbery judges”). On this and similar changes of the Hebrew letters ג and ל see Epstein, *Tarbiz*, 1 (1930), n. 3, 131–2.

[Isaiah Gafni]

ADMONI, VLADIMIR GRIGORYEVICH (1909–1993), Soviet Russian literary and linguistic scholar. A professor at the Pedagogical Institute of Leningrad, he specialized in Germanic and Norwegian languages and literature and in the theory of literary translation. He wrote monographs on Ibsen (1956) and Thomas Mann (1960; in collaboration with T.I. Silman) and on problems of German syntax (1955). He also translated and edited the standard Russian version of the works of Ibsen (4 vols., 1956–58). During the 1964 trial of the young Leningrad Jewish poet Yosif *Brodski, Admoni, who testified for the defense, was ridiculed by the presiding Soviet judge for his “strange-sounding” (i.e., Jewish) name.

[Maurice Friedberg]

ADMOR (Heb. אַדְמוֹר; plur., *Admorim*), the title by which ḥasidic rabbis are known. The term is an abbreviation of the Hebrew words *Adonenu*, *Morenu*, *ve-Rabenu* (“our lord, teacher, and master”).

ADOLPHUS, English family, known in the synagogue as Bira. Its members included JACOB ADOLPHUS, stockholder in the Bank of England (late 17th century), founder member of the London Ashkenazi Synagogue. Among his sons were: SIMON, a physician, who was admitted to the University of Halle at the request of Frederick William I of Prussia on condition that he did not practice there, and MOSES (b. c. 1690), who married Abigail, daughter of Benjamin *Levy, founder of the London Ashkenazi community. In his 56th year he matriculated at the University of Leiden, Holland, in philosophy and literature, along with his son SIMHAH (Joy, 1714–1760), who graduated in medicine and subsequently practiced in Cleves, Germany (1748–56) where he headed the Jewish community. Joy Adolphus published *Histoire des Diables Modernes* (London, 1763; Cleves, 1770, 1771), satirizing the political and social scene, and dedicated the book to Frederick the Great, whom he is said to

have served as personal physician. Another son of Moses was MICHAEL or MEIR (died 1785), prominent in London communal life, and as warden of the Great Synagogue, one of the original members of the *Board of Deputies of British Jews. JOHN (1768–1845), historian and lawyer, grandson of Joy, was author of *History of England from the Accession of King George III to the Conclusion of Peace in 1783* (3 vols., London, 1802). His mother was Christian and he was out of touch with the Jewish community. However, he was caricatured by Cruikshank as a Jew. Originally a solicitor, he became a barrister in 1807 and achieved notable success at the bar. His son, JOHN LEYCESTER ADOLPHUS (1794–1862), educated at Oxford, was a barrister and literary critic. He became a close friend of Sir Walter Scott. There was also an Adolphus family in America in the colonial period, founded by ISAAC (died 1774) who came to New York from Bonn, Germany, about 1750. Another family of this name was established in Jamaica not later than 1733, its most eminent member being Major General Sir JACOB ADOLPHUS (1775–1845), inspector general of army hospitals.

[Cecil Roth]

ADONAI, ADONAI, EL RAḤUM VE-ḤANNUN (Heb. אֲדֹנָי, אֲדֹנָי, אֱלֹהִים רַחוּם וְחַנּוּן; “The Lord, The Lord, God, merciful and gracious”; Ex. 34:6–7), initial words of the Thirteen Attributes of God. Based upon a talmudic saying that God Himself revealed this formula to Moses as being effective for obtaining Divine Pardon (RH 17b), it is recited on the following occasions:

(1) in the **Seliḥot* of the month of Elul, during the *Ten Days of Penitence, and on fast days including the Day of Atonement when it is preceded by the *piyyutim* “*El Melekh Yoshev*” or “*El Erekh Appayim*”;

(2) before removing the Torah scrolls from the Ark on Rosh Ha-Shanah, the Day of Atonement, and the three Pilgrim festivals (Ashkenazi rite);

(3) at the opening of the *piyyut* attributed to *Amittai (II) which is recited on the fifth day of *Seliḥot*, on the Day of Atonement, and on Mondays and Thursdays (Ashkenazi rite);

(4) at the morning and afternoon prayers before *Taḥanun* (mostly Sephardi rite);

(5) during prayers in an emergency situation, e.g., for a critically ill person. In the liturgical recital of the Thirteen Attributes the final words *lo yentakkeh* (“He does not remit all punishment”; Ex. 34:7) are omitted.

ADONI-BEZEK (Heb. אֲדֹנִי בֶזֶק; “the lord [of the city] of Bezek”), Canaanite ruler in the early stages of the Hebrew conquest of Canaan (Judg. 1:1–7) and probably leader of an anti-Israelite coalition formed by “the Canaanites and the Perizzites.” The allies gathered at *Bezek and forced the tribe of Judah, together with Simeon, to take defensive action. The coalition was defeated at Bezek and retreated eastward towards Jerusalem. The tribe of Judah pursued and captured Adoni-Bezek and mutilated him. He was brought to Jerusalem where he died.

Adoni-Bezek is most likely a title since, as a personal name, the second element would refer to a place or a god. However, a city as a component in biblical proper names is without analogy and a deity Bezek is not otherwise attested. The name is most likely a corruption of *Adoni-Zedek (cf. Josh. 10:1ff.).

BIBLIOGRAPHY: Y. Amit, *Judges* (1999), 32.

ADONIJAH (Heb. אֲדֹנִיָּהוּ, אֲדֹנִיָּה; “YHWH is my lord”), fourth son of King David by his wife Haggith of Hebron (II Sam. 3:2ff.; I Chron. 3:1ff.). I Kings 1:5–6 notes that his father had not disciplined him. After the death of his brothers Amnon, Absalom, and, presumably, Chileab, Adonijah conducted himself as heir apparent (I Kings 1:5–6). When David was on his deathbed, Adonijah attempted to seize power in order to forestall succession by *Solomon. In this he was supported by such veteran courtiers of David as *Joab and *Abiathar, and by many members of the royal family and the courtiers of the tribe of Judah (*ibid.* 7). Zadok the priest, Nathan the prophet, and others who had risen to prominence more recently, sided with Solomon (*ibid.* 8). Under Nathan’s influence, David ordered that Solomon should be anointed king in his own lifetime, in accordance with his promise to Bath-Sheba (*ibid.* 10ff.). At first Solomon took no action against his brother (*ibid.* 50–53), but after David’s death, when Adonijah wished to marry *Abishag the Shunammite, his father’s concubine, Solomon correctly interpreted this as a bid for the throne and had him executed (*ibid.* 2:13ff.).

Other biblical figures of the same name were Adonijah a Levite who, with other Levites, priests, and princes, taught in the cities of Judah during the reign of Jehoshaphat (II Chron. 17:8); and Adonijah, one of the leaders who signed the covenant in the days of Nehemiah (Neh. 10:17).

[*Encyclopaedia Hebraica*]

In the Aggadah

Adonijah was one of those who “set their eyes upon that which was not proper for them; what they sought was not granted to them; and what they possessed was taken from them” (Sot. 9b). The biblical verse “and he [Adonijah] was born after Absalom” (I Kings 1:6) is interpreted to mean that, although the two were of different mothers, they are mentioned together since Adonijah acted in the same way as Absalom in rebelling against the king (BB 109b). The extent of his rebellion is illustrated in the aggadic tradition that he even tried the crown

on his head (Sanh. 21b) and according to Rashi (*loc. cit.*), it would not fit. The importance and danger of Adonijah’s rebellion is emphasized by the teaching that, although Solomon succeeded to the throne by the law of inheritance, he was ceremoniously anointed in order to counteract Adonijah’s claim (Mid. Tan. 106).

ADD. BIBLIOGRAPHY: M. Cogan, *I Kings* (2000), 164–68.

ADONIM BEN NISAN HA-LEVI (c. 1000), *paytan* and rabbi. Adonim, who served as a rabbi in Fez, Morocco, was among the first to use Arabic-Spanish metrics in his writings. Only a few of his *piyyutim* have survived, among them the lamentation “*Bekhu, Immi Benei Immi*”; the *reshut* to *Parshat ha-Hodesh* (see Special *Sabbaths) “*Areshet Sefatenu Petaḥ Hodayot*”; and the *seliḥot* “*Eli Hashiveni me-Anahah u-Mehumah*” and “*Ro’eh Yisrael Ezon Enkat Zonekha*.” His *piyyutim* excel in their fine poetic language and their originality. Several philosophical concepts which were discussed in intellectual circles in his days find expression in his works.

ADONIRAM (or **Adoram, Hadoram**; Heb. אֲדֹנִירָם, אֲדֹרָם; “the Lord / my Lord is exalted”), son of Abda. Adoniram is described in a list of King David’s officials from the later years of David’s reign (II Sam. 20:24) as the minister “in charge of forced labor.” He continued in the same office during Solomon’s reign (I Kings 4:6) and was in charge of the levy of all Israel sent to *Lebanon to cut lumber (I Kings 5:27–28). During the first year of *Rehoboam, Adoniram was sent to face the discontented and revolting assembly at Shechem (12:1–19). The people, for whom he no doubt personified the detested corvée, stoned him to death (12:18). B. Mazar (Maisler) has suggested that Adoniram was of foreign origin, as the institution of forced labor was adopted by the Israelite monarchy from Canaanite patterns, and that it was only natural to appoint a Canaanite official as its head. The names of Adoniram and his father support the view of his Canaanite origin, since *ad* is synonymous with *ab* (*av* – father – in West-Semitic languages), while “Abda” is an abbreviated theophorical name found in Phoenician inscriptions. Some scholars believe that the lengthy tenure assigned by the Bible to Adoniram’s office is due to chronological confusion.

ADONI-ZEDEK (Heb. אֲדֹנִי זְדֵק; “[the god] Zedek [the god of justice] is lord” or, “my Lord is righteousness”), king of *Jerusalem at the time of the Israelite conquest of Canaan (Josh. 10:1–3). Adoni-Zedek was the leader of a coalition to-

gether with four of the neighboring *Amorite cities – Hebron, Jarmuth, Lachish, and Eglon. The coalition was formed as a reaction to the conclusion of a covenant between the Israelites and the *Gibeonites as well as to the conquest of *Ai by the Israelites, who threatened the region and the sovereignty of the city-states over this area. The members of the coalition attacked Gibeon. The Gibeonites, however, solicited the aid of Joshua, who preferred to fight against the Amorites in an open area. The Amorites were defeated at Gibeon, and, finding no alternative route of escape, retreated to Beth-Horon where their pursuers routed them with the help of a hailstorm; the five allied kings hid in a cave at Makkedah but were found and killed. Nothing is said about the capture of Jerusalem, although its king had lost his life; a reduction of Jerusalem's influence, however, did result from the war.

It is apparent that Jerusalem was an important city-state at the time, as is clear not only from this biblical passage but also from the *El-Amarna letters (14th century B.C.E.). Six of these letters, sent by the king of Jerusalem (Abdi-Ḥepa) to the pharaoh of Egypt, warrant the conclusion that Jerusalem (and Shechem) controlled the hill country of Judah and Ephraim and ruled over “the land of Jerusalem” (Pritchard, Texts, 487–9). Adoni-Zedek is unknown from other sources, but he fits well into the above picture of pre-Israelite Jerusalem. Some identify him with *Adoni-Bezek (Judg. 1:5–7), because the Septuagint reads Adoni-Bezek in place of the masoretic Adoni-Zedek.

ADON OLAM (Heb. אֲדוֹן עוֹלָם; “Lord of the World”), rhymed liturgical hymn in 12 verses (in the Ashkenazi rite) extolling the eternity and unity of God and expressing man's absolute trust in His providence. The Sephardi rite has 16 verses. The author is unknown, though it has been attributed to Solomon ibn *Gabirol (11th century). It may, however, be much older and stem from Babylonia. The hymn has appeared as part of the liturgy since the 14th century in the German rite and has spread to almost every rite and community. It was incorporated into the initial section of the *Shaharit* Service, but it has been suggested on the basis of the penultimate line that it originally formed the conclusion of the Night Prayers where it also still appears. Its main place now is at the conclusion of the Sabbath and festival *Musaf* Service (with the Sephardim even on the Day of Atonement) and of the **Kol Nidrei* Service. *Adon Olam* has become a popular hymn. In Morocco it serves as a wedding song and it is also recited by those present at a deathbed. The hymn has been translated several times into English verse, among others by George Borrow in his *Lavengro* (reprinted in Hertz, Prayer, p. 1005) and by Israel Zangwill (reprinted *ibid.*, 7, 9), and into other European languages.

Music

Adon Olam is generally sung by the congregation. In the Ashkenazi tradition it is also sometimes rendered by the cantor on certain festive occasions, and then the melody is adapted to the *nusah* of the section of the prayer into which it is incorporated. The great number of melodies for *Adon Olam* includes both individual settings, and borrowings from Jewish and Gentile sources. Ex. 3, from Djerba, is a North African “general” melody for *piyyutim*. Two versions from Germany in Idelsohn (Melodien, 7 (1932), nos. 59 and 336) both borrow the western Ashkenazi melody of *Omnam Ken*, while no. 346a is a German folk tune. A melody from Tangiers (I. Levy, *Antologia*, 1 (1965), no. 96) is the tune of the Romance *Esta Rahel la estimoza*. The composed or adapted tunes are mostly based upon a strict measure of four or three beats, both equally suitable for conforming to the *hazak*-meter of the text – one short and three longs. The melody is sung in many schools in Israel at the end of the pupils’ morning prayer (in 4/4 measure; cf. the same, in 3/4 measure, YE, vol. 1, p. 514). Salamone de’ Rossi included an eight-voice composition of *Adon Olam* in his *Ha-Shirim Asher li-Shelomo* (Venice, 1622/23).

ADOPTION, taking another’s child as one’s own.

Alleged Cases of Adoption in the Bible

The evidence for adoption in the Bible is so equivocal that some have denied it was practiced in the biblical period.

(A) GENESIS 15:2–3. Being childless, Abram complains that *Eliezer, his servant, will be his heir. Since in the ancient Near East only relatives, normally sons, could inherit, Abram had probably adopted, or contemplated adopting, Eliezer. This passage is illuminated by the ancient Near Eastern practice of childless couples adopting a son, sometimes a slave, to serve them in their lifetime and bury and mourn them when they die, in return for which the adopted son is designated their heir. If a natural child should subsequently be born to the couple, he would be chief heir and the adopted son would be second to him.

(B) GENESIS 16:2 and 30:3. Because of their barrenness, Sarai and Rachel give their servant girls to Abram and Jacob as concubines, hoping to “have children” (lit. “be built up”) through the concubines. These words are taken as an expression of intention to adopt the children born of the husbands and concubines. Rachel’s subsequent statement, “God... has given me a son” (30:6) seems to favor this view. A marriage contract from *Nuzi stipulates that in a similar case the mistress “shall have authority over the offspring.” That the sons of Jacob’s concubines share in his estate is said to presuppose their adoption. Bilhah’s giving birth on (or perhaps “onto”) Rachel’s knees (30:3; cf. 50:23) is believed to be an adoption ceremony similar to one practiced by ancient European and

Asiatic peoples among whom placing a child on a man’s knees signified variously acknowledgment, legitimation, and adoption. Such an adoption by a mistress of the offspring of her husband and her slave-girl would not be unparalleled in the ancient Near East (see J. van Seters, JBL, 87 (1968), 404–7), but other considerations argue that this did not, in fact, take place in the episodes under consideration. Elsewhere in the Bible the sons of Bilhah and Zilpah are viewed only as the sons of these concubines, never of the mistresses (e.g., 21:10, 13; 33:2, 6–7; 35:23–26). Rachel’s statement “God... has given me a son” reflects not necessarily adoption but Rachel’s ownership of the child’s mother, Bilhah (cf. Ex. 21:4, and especially the later Aramaic usage in Pritchard, Texts³, 548a plus n. 5). The concubines’ sons sharing in Jacob’s estate does not presuppose adoption by Rachel and Leah because the sons are Jacob’s by blood and require only his recognition to inherit (cf. *The Code of Hammurapi*, 170–1). Finally the alleged adoption ceremony must be interpreted otherwise. Placing a child on the knees is known from elsewhere in the ancient Near East (see I.J. Gelb et al., *The Chicago Assyrian Dictionary*, vol. 2 (1965), 256, s.v. *birku*; H. Hoffner, JNES, 27 (1968), 199–201). Outside of cases which signify divine protection and/or nursing, but not adoption (cf. T. Jacobsen, JNES, 2 (1943), 119–21), the knees upon which the child is placed are almost always those of its natural parent or grandparent. It seems to signify nothing more than affectionate play or welcoming into the family, sometimes combined with naming. (Only once, in the Hurrian Tale of the Cow and the Fisherman (J. Friedrich, *Zeitschrift fuer Assyriologie*, 49 (1950), 232–3 ll. 38ff.), does placing on the lap occur in an apparently adoptive context, but even there it is not clear that the ceremony is part of the adoption.) Some construe the ceremony as an act of legitimation, but no legal significance of any sort is immediately apparent. Significantly, the one unequivocal adoption ceremony in the Bible (Gen. 48:5–6) does not involve placing the child on the knees (Gen. 48:12 is from a different document and simply reflects the children’s position during Jacob’s embrace, between, not on, his knees). Furthermore, Genesis 30:3 speaks not of placing but of giving birth on Rachel’s knees. This more likely reflects the position taken in antiquity by a woman during childbirth, straddling the knees of an attendant (another woman or at times her own husband) upon whose knees the emerging child was received (cf. perhaps Job 3:12). Perhaps Rachel attended Bilhah herself in order to cure, in a sympathetic-magical way, her own infertility (cf. 30:18, which may imply that Rachel, too, had been aiming ultimately at her own fertility), much like the practice of barren Arab women in modern times of being present at other women’s deliveries. Genesis 50:23 (see below) must imply Joseph’s assistance at his great-grandchildren’s birth; or, if taken to mean simply that the children were placed upon his knees immediately after birth, it would imply a sort of welcoming or naming ceremony.

(C) GENESIS 29–31. It is widely held that Jacob was adopted by the originally sonless Laban, on the analogy of a Nuzi contract in which a sonless man adopts a son, makes him

his heir, and gives him his daughter as a wife. This in itself is not compelling, but the document adds that, unless sons are later born to the adopter, the adopted son will also inherit his household gods. This passage, it is argued, illuminates Rachel's theft of Laban's household gods (31:19), and herein lies the strength of the adoption theory. But M. Greenberg (JBL, 81 (1962), 239–48) cast doubt upon the supposed explanation of Rachel's theft, thus depriving the adoption theory of its most convincing feature. In addition, the Bible itself not only fails to speak of adoption but pictures Jacob as Laban's employee.

(D) GENESIS 48:5–6. Near the end of his life Jacob, recalling God's promise of Canaan for his descendants, announces to Joseph: "Your two sons who were born to you . . . before I came to you in Egypt, shall be mine; Ephraim and Manasseh shall be mine, as Reuben and Simeon are"; subsequent sons of Joseph will (according to the most common interpretation of the difficult v. 6), for the purposes of inheritance, be reckoned as sons of Ephraim and Manasseh. In view of the context – note particularly that grandsons, not outsiders, are involved – many believe that this adoption involves inheritance alone, and is not an adoption in the full sense. (M. David compares the classical *adoptio mortis causa*.) This belief is strengthened by the almost unanimous view that this episode is intended etiologically to explain why the descendants of Joseph held, in historical times, two tribal allotments, the territories of Ephraim and Manasseh.

(E) GENESIS 50:23. "The children of Machir son of Manasseh were likewise born on Joseph's knees" is said to reflect an adoption ceremony. To the objections listed above (b), it may be added that unlike (d), Joseph's adoption of Machir's children would explain nothing in Israel's later history and would be etiologically pointless.

(F) EXODUS 2:10. "Moses became her [= Pharaoh's daughter's] son." Some, however, interpret this as fosterage.

(G) LEVITICUS 18:9. A "sister . . . born outside the household" could mean an adopted sister, but most commentators interpret it as an illegitimate sister or one born of another marriage of the mother.

(H) JUDGES 11:1ff. S. Feigin argued that Gilead must have adopted Jephthah or else the question of his inheriting could never have arisen. But since Jephthah was already Gilead's son, the passage implies, at most, legitimation, not adoption.

(I) RUTH 4:16–17. Naomi's placing of the child of Ruth and Boaz in her bosom and the neighbors' declaration "a son is born to Naomi" are said to imply adoption by Naomi. But the very purpose of Ruth's marriage to Boaz was, from the legal viewpoint, to engender a son who would be accounted to Ruth's dead husband (see Deut. 25:6 and Gen. 38:8–9) and bear his name (Ruth 4:10). Adoption by Naomi, even though she was the deceased's mother, would frustrate that purpose. The text says that Naomi became the child's nurse, not his mother. The child is legally Naomi's grandson and the neighbors' words are best taken as referring to this.

(J) ESTHER 2:7, 15. Mordecai adopted his orphaned cousin Hadassah. (This case, too, is taken by some as rather

one of fosterage.) This possible case of adoption among Jews living under Persian rule is paralleled by a case among the Jews living in the Persian military garrison at Elephantine, Egypt, in the fifth century C.E. (E. Kraeling, *The Brooklyn Museum Aramaic Papyri* (1953), no. 8).

(K) EZRA 2:61 (= Nehemiah 7:63). One or more priests married descendants of Barzillai the Gileadite and "were called by their name." This may imply adoption into the family of Barzillai.

(L) EZRA 10:44. Several Israelites married foreign women. The second half of the verse, unintelligible as it stands, ends with "and they placed/established children." S. Feigin, on the basis of similar Greek expressions and textual emendation, viewed this as a case of adoption. Since the passage is obviously corrupt (the Greek text of Esdras reads differently), no conclusions can be drawn from it, though Feigin's interpretation is not necessarily ruled out.

(M) I CHRONICLES 2:35–41. Since the slave Jarha (approximately a contemporary of David according to the genealogy) married his master's daughter, he was certainly manumitted and, quite likely, was adopted by his master; otherwise, his descendants would not have been listed in the Judahite genealogy.

(N) In addition to the above possible cases, one might see a sort of posthumous adoption in the ascription of the first son born of the levirate marriage (Gen. 38:8–9; Deut. 25:6; Ruth 4) to the dead brother. The child is possibly to be called "A son of B [the deceased]"; in this way he preserves the deceased's name (Deut. 25:6–7; Ruth 4:5) and presumably inherits his property.

SUMMARY. Of the most plausible cases above, two (A, D) are from the Patriarchal period, one reflects Egyptian practice (F), and another the practice of Persian Jews of the Exilic or post-Exilic period (J). From the pre-Exilic period there is a possible case alleged by the Chronicler to have taken place in the time of David (M), one or two other remotely possible cases (G) and (K), the latter from the late pre-Exilic or Exilic period) and the "posthumous adoption" involved in levirate marriage (N). The evidence for adoption in the pre-Exilic period is thus meager. The possibility that adoption was practiced in this period cannot be excluded, especially since contemporary legal documents are lacking. Nevertheless, it seems that if adoption played any role at all in Israelite family institutions, it was an insignificant one. It may be that the tribal consciousness of the Israelites did not favor the creation of artificial family ties and that the practice of polygamy obviated some of the need for adoption. For the post-Exilic period in Palestine there is no reliable evidence for adoption at all.

Adoption as a Metaphor

(A) GOD AND ISRAEL. The relationship between God and Israel is often likened to that of father and son (Ex. 4:22; Deut. 8:5; 14:1). Usually there is no indication that this is meant in an adoptive sense, but this may be the sense of Jeremiah 3:19; 31:8; and Hosea 11:1. (B) IN KINGSHIP. The idea that the king is

the son of a god occurs in Canaanite (Pritchard, *Texts*, 147–8) and other ancient Near Eastern sources. In Israel – which borrowed the very institution of kingship from its neighbors (1 Sam. 8:5, 20) – this idea could not be accepted literally; biblical references to the king as God’s son therefore seem intended in an adoptive sense. Several are reminiscent of ancient Near Eastern adoption contracts. Thus, Psalms 2:7–8 contains a declaration, “You are my son,” a typical date formula “this day” (the next phrase, “I have born you,” may reflect the conception of adoption as a new birth), and a promise of inheritance (an empire); II Samuel 17:7 contains a promise of inheritance (an enduring dynasty), a declaration of adoption, and a statement of the father’s right to discipline the adoptive son (cf. Ps. 89:27ff.; 1 Chron. 17:13; 22:10; 28:6).

Since the divine adoption of kings was not known in the ancient Near East, and the very institution of adoption was rare – if at all existent – in Israel, the question arises as to where the model for these metaphors was found. According to M. Weinfeld (*JAOS*, 90 (1970)) the answer is found in the covenants made by God with David and Israel. These are essentially covenants of grant, a legal form which is widespread in the ancient Near East. In some of these a donor adopts the donee and the grant takes the form of an inheritance. Thus in the biblical metaphor God’s adoption of David serves as the legal basis for the grant of the dynasty and empire, and God’s adoption of Israel underlies the grant of a land (Jer. 3:19; also noted by S. Paul). According to Y. Muffs, the pattern of the covenant in the Priestly Document (P) is modeled on adoption by redemption from slavery (cf. Ex. 6:6–8). In later times adoption was used metaphorically in the Pauline epistles to refer variously to Israel’s election (Rom. 9:4), to the believers who were redeemed from spiritual bondage by Jesus (Rom. 8:15; Eph. 1:5; Gal. 4:5), and to the final eschatological redemption from bondage (Rom. 8:21–23). Whether Paul modeled the metaphor on biblical or post-biblical, ancient Near Eastern, or Roman legal sources is debated.

[Jeffrey Howard Tigay]

Later Jewish Law

Adoption is not known as a legal institution in Jewish law. According to *halakhah* the personal status of parent and child is based on the natural family relationship only and there is no recognized way of creating this status artificially by a legal act or fiction. However, Jewish law does provide for consequences essentially similar to those caused by adoption to be created by legal means. These consequences are the right and obligation of a person to assume responsibility for (a) a child’s physical and mental welfare and (b) his financial position, including matters of inheritance and maintenance. The legal means of achieving this result are (1) by the appointment of the adopter as a “guardian” (see **Apotropos*) of the child, with exclusive authority to care for the latter’s personal welfare, including his upbringing, education, and determination of his place of abode; and (2) by entrusting the administration of the child’s property to the adopter. The latter undertaking to be

accountable to the child and, at his own expense and without any right of recourse, would assume all such financial obligations as are imposed by law on natural parents vis-à-vis their children. Thus, the child is for all practical purposes placed in the same position toward his adoptors as he would otherwise be toward his natural parents, since all matters of education, maintenance, upbringing, and financial administration are taken care of (Ket. 101b; Maim., *Yad*, *Ishut*, 23:17–18; and Sh. Ar., EH 114 and Tur *ibid.*, Sh. Ar., HM 60:2–5; 207:20–21; PDR, 3 (n.d.), 109–125). On the death of the adopter, his heirs would be obliged to continue to maintain the “adopted” child out of the former’s estate, the said undertaking having created a legal debt to be satisfied as any other debt (Sh. Ar., HM 60:4).

Indeed, in principle neither the rights of the child toward his natural parents, nor their obligations toward him are in any way affected by the method of “adoption” described above; but in fact, the result approximated very closely to what is generally understood as adoption in the full sense of the word. The primary question in matters of adoption is the extent to which the natural parents are to be deprived of, and the adoptive parents vested with, the rights and obligations to look after the child’s welfare. This is in accordance with the rule that determined that in all matters concerning a child, his welfare and interests are the overriding considerations always to be regarded as decisive (Responsa Rashba, attributed to Nahmanides, 38; Responsa Radbaz, 1:123; Responsa Samuel di Modena, EH 123; Sh. Ar., EH 82, *Pithei Teshuvah* 7).

Even without private adoption, the court, as the “father of all orphans,” has the power to order the removal of a child from his parents’ custody, if this is considered necessary for his welfare (see **Apotropos*). So far as his pecuniary rights are concerned, the child, by virtue of his adoptors’ legal undertakings toward him, acquires an additional debtor, since his natural parents are not released from their own obligations imposed on them by law, i.e., until the age of six. Furthermore, the natural parents continue to be liable for the basic needs of their child from the age of six, to the extent that such needs are not or cannot be satisfied by the adopter; the continuation of this liability is based on *Dinei Zedakah* – the duty to give charity (see **Parent & Child*; PDR, 3 (n.d.), 170–6; 4 (n.d.), 3–8).

With regard to right of inheritance, which according to *halakhah* is recognized as existing between a child and his natural parents only, the matter can be dealt with by means of testamentary disposition, whereby the adopter makes provision in his will for such portion of his estate to devolve on the child as the latter would have gotten by law had the former been his natural parent (see Civil Case 85/49, in: *Pesakim shel Beit ha-Mishpat ha-Elyon u-Vattei ha-Mishpat ha-Mehozziyim be-Yisrael*, 1 (1948/49), 343–8). In accordance with the rule that “Scripture looks upon one who brings up an orphan as if he had begotten him” (Sanh. 19b; Meg. 13a), there is no halakhic objection to the adopter calling the “adopted” child his son and the latter calling the former his father (Sanh. *ibid.*, based on 11 Sam. 21:8). Hence, provisions in documents in which these appellations are used by either party, where the adopter has no

natural children and/or the child has no natural parent, may be taken as intended by the one to favor the other, according to the general tenor of the document (Sh. Ar., EH 19, *Pithei Teshuvah*, 3; ח"מ 42:15; Responsa Hatam Sofer, EH 76). Since the legal acts mentioned above bring about no actual change in personal status, they do not affect the laws of marriage and divorce, so far as they might concern any of the parties involved.

In Israel

In the State of Israel, until 1981, adoption was governed by the Adoption of Children Law, 5720/1960, which empowered the district court and, with the consent of all the parties concerned, the rabbinical court, to grant an adoption order in respect of any person under the age of 18 years, provided that the prospective adopter was at least 18 years older than the prospective adoptee and the court were satisfied that the matter was in the best interests of the adoptee. Such an order had the effect of severing all family ties between the child and his natural parents. On the other hand, such a court order created new family ties between the adopter and the child to the same extent as are legally recognized as existing between natural parents and their child – unless the order was restricted or conditional in some respect. Thus, an adoption order would generally confer rights of intestate succession on the adoptee, who would henceforth also bear his adopter's name. However, the order did not affect the consequences of the blood relationship between the adoptee and his natural parents, so that the prohibitions and permissions of marriage and divorce continued to apply. On the other hand, adoption as such does not create such new prohibitions or permissions between the adopted and the adoptive family. There was no legal adoption of persons over the age of 18 years.

[Ben-Zion (Benno) Schereschewsky]

In 1981 the Knesset repealed the Adoption of Children Law, 5720/1960 and enacted in its stead the Adoption of Children Law, 5741/1981 (hereinafter – the Law), empowering the Family Court to issue adoption orders. The Law and its subsequent amendments provide for two substantively different modes of adoption. The first is local adoption, in which the Child Welfare Authority – a branch of the Welfare Ministry – functions as an adoption agency: it determines the adoptive parents' eligibility and even initiates adoption proceedings of the minor in the court, by way of special welfare officers for adoption. Proceedings to declare a minor adoptable can only be initiated by these welfare officers. The Child Welfare Authority is similarly responsible for the removal of a child from the custody of his natural parents against their wishes, for purposes of adoption. Occasionally, and under special circumstances, even prior to the child being declared adoptable the Authority may hand over the child "to a person who has agreed to receive him into his house with a view to adopting him" (§12 (c) of the Law). The second mode is that of "intercountry" (i.e., international) adoption, in which the adoption is undertaken by non-profit organizations under the supervision of a "central authority," i.e., the Child Welfare Authority.

The difference between the two kinds of adoption is as follows: local adoption also involves numerous cases in which the biological parents do not consent to hand their child over for adoption, in which case, quite naturally, the identity of the adoptive parents is withheld (closed adoption) to protect the adopted child from potential harm at the hands of his natural parents. In international adoption, the adoption is the product of negotiations between the prospective adoptive parents and the natural family. Under the Law, the rabbinical court is also permitted to issue adoption orders with the consent of all the parties, i.e., the parents (or adoptive parents, respectively) and the minor (when the case concerns a minor above the age of nine) or with the consent of the attorney general (in cases of a minor below nine). Even in those cases in which the rabbinical court has jurisdiction pursuant to the parties' consent, it is nevertheless obliged to comply with all the provisions of the law (§27).

The arrangements for international adoption were transformed when the law was amended in 1996, in accordance with the format of the Hague Convention on Protection of Children and Co-operation in Respect of Intercountry Adoption, which Israel ratified in 1993. Together with the incorporation of the Convention's provisions in the Law, the legislature also addressed a particular problem, unique to the State of Israel by virtue of its Jewish character. Under section 5 of the Law: "The adopter shall be of the same religion as the adoptee." How then can a Jewish family receive an adoption order for a non-Jewish child, brought to Israel from abroad? The legislature resolved this problem by amending section 13A of the Capacity and Guardianship Law, 5722/1962, which now provides that the court may give an instruction for the minor's religious conversion "to the religion of the person who provided for the minor with the intention of adopting him, during the six months that preceded the filing of the application for conversion."

In addition to the court's authorization, the minor who is a candidate for adoption must undergo a conversion process; according to the *halakhah*, a minor who is to be converted must be ritually immersed for conversion through the authority of the *bet din*. This is so, "because it [the conversion] is a benefit to him" (Ketubot 11a). The Israeli rabbinical courts have avoided converting minors who are candidates for adoption when the prospective adoptive parents will not provide him/her with an education based upon religious observance.

The case law of the Israel Supreme Court on adoption (given by Deputy President Menachem *Elon) emphasized the extensive impact of Jewish law on actual adoption procedures. The Law provides that "the adoption shall not affect any legal prohibition or permission as to marriage or divorce" (§16(c)); accordingly, the Adoption Register may be inspected by a marriage registrar in the course of carrying out his official function (§30 (2)). In doing so he raises the legal "veil" separating the adopted child from his natural family in order to establish the "legitimacy of his pedigree"; in other words, to prevent marriages between a brother and sister, etc. Furthermore, an adoption performed "for the benefit of the adoptee"

does not represent the optimal solution, and preference should be given to the other arrangements, which do not sever the child from his natural family, despite their defective parental capacity. "Adoption is not intended as a punishment for the natural parents... we punish by confiscating property; we punish by denying freedom, but we do not punish by taking children away" (C.A. 3063/90 P.D. 45 (5) 837, 848), save for cases in which there is unequivocal, objective proof that the parents are incapable of raising their children.

As a rule, there is no discussion of the "child's best interests" until after examination as to whether there is any statutory ground for "removing the child from the natural guardianship of his parents and placing him in the home of the adopters" (H.C. 243/88 *Konsols v. Turgeman*, 45 (5) P.D. 837, 848). For the same reason, all possible efforts should be made to avoid ordering that the adoption of the minor be a "closed" adoption, which separates the minor from his natural identity. Indeed, in its capacity as the "father of minors," the court is commanded to "ensure the welfare and the future of the minor" and order that he be severed from his natural family – but this, only done when the court is convinced that leaving the minor with his family, or placing him with a foster family or in an "open adoption" will cause him terrible suffering due to his parents' incompetence (Elon, in the following judgments: C.A. 310/82, 37 (4) P.D. 421; C.A. 3763/92, 47 (1) P.D. 869). Similarly, the court will order the Child Welfare Service to seriously consider a request from the natural family that their child be given to "a family belonging to their own religious community, that maintains a religious lifestyle" (C.A. 3063/90 45 (3) 837) and, in exceptional circumstances, consider assenting to the parents' request that their child be adopted by their relatives who have no children of their own. This is in accordance with the prevalent custom in a number of Jewish communities whereby "when a couple belonging to the extended family is childless, another couple in the family, blessed with children, gives one of them to the couple that was denied their own offspring, and the latter can adopt and raise the child, as if he was their own child" (C.A. 568/80 35 (3) 701, 702).

Where the question arose of severing an adoptee minor from the religion of his natural parents, Justice Elon raised another consideration for withholding authorization of an adoption performed against the natural parents' wishes, or with their coerced consent: "We remember the battles fought by Jewish families and institutions in order to restore Jewish children to their families and religion. Prior to being sent to the death camps and gas chambers these families placed their children with Christians to care for them and raise them. It is befitting that we emulate their conduct in similar situations, when the tables are turned and the context is no longer the death camps but rather gangs of avaricious criminals" (the case of the "Brazilian girl" who was abducted from her natural mother; H.C. 243/88, 45 (2) P.D. 652).

In describing the character of the institution of adoption, its interpretation and implementation by the Israeli judiciary, Justice Elon further stated:

I wholeheartedly agree that we must not hinder the development of the institution of adoption, having regard primarily for its crucial importance in locating a warm and secure home and a loving, devoted family for children who have suffered at the hands of fate. In pursuing this important goal we must also ensure the totality of the adoptive parents' rights and obligations in their relations with the adopted child. However, we must not ignore our principal and basic obligation, which is to maintain, promote and preserve the earliest and most fundamental social unit in human history: the natural family, its descendants, offshoots and progeny, the unit which always has, does, and always will continue to guarantee the survival of human society. This is certainly the case when dealing with the history of the Jewish family, in which the family unit, in both the immediate and extended sense, was the central pillar that guaranteed Jewish survival and continuity. This principle applies *a fortiori* in our times, in which the institution of the natural family has encountered tumultuous upheavals and frequent crises, which have weakened its capacity to function. (C.A. 488/77, 32 (3) P.D. 421 434)

And, in another decision:

Tearing a child away from his biological parents is more difficult than splitting the Red Sea. The same applies to all decisions concerning a minor's adoption; all the more so in a case such as the one confronting us, in which the children are no longer infants and know their parents and their siblings. But as a court that is the "father of all minors," it is our responsibility to ensure their welfare and their best interests. It is incumbent upon us to find them a home in which they will merit love and warmth, physical well-being and spiritual tranquility, and all of the basic, elementary needs that they are not receiving in the home of their biological parents. (C.A. 658/88, 43 (4) P.D. 468, p. 477)

ADORAIM (Heb. אָדוֹרַיִם), ancient city of Judah, southwest of Hebron. It appears in the Bible only in the list of cities fortified by Solomon’s son, Rehoboam (11 Chron. 11:9). Adoraim (Adoram) is also mentioned in the Book of Jubilees 38:8–9. In the Hellenistic period, when it was known as Adora, it was one of the chief cities of Idumea; the Ptolemaic official Zeno visited it in 259 B.C.E. (Zeno papyri, 76). The city is also mentioned in 1 Maccabees 13:20 in connection with the campaigns of the Hasmonean Jonathan and his adversary Tryphon in 143 B.C.E. It was later captured by John Hyrcanus together with Marisa and the whole of Idumea (Jos., Wars, 1:63; Ant., 13:257). The Roman proconsul Gabinius (d. 48/7 B.C.E.) chose it as the seat of one of his *synhedria* (“councils”; Jos., Ant., 14:91) and it retained its Jewish character until the end of the Bar Kokhba War (135 C.E.). The site is occupied by the twin villages of Dūrā al-ʿArajān, 5 mi. (8 km.) south west of Hebron, situated on a plateau overlooking the coastal plain, with a population of 10,000.

[Michael Avi-Yonah]

Modern Period

The name Adoraim also describes a ridge of the Hebron Hills. Most of the ridge, including the site of ancient Adoraim, remained until 1967 on the Jordanian side of the 1949 armistice lines. However, the name Adoraim was given in the middle 1950s to a specially planned region in the Judean Foothills under Israel control between the Bet Guvrin–Hebron road and Kibbutz.

ADORNO, THEODOR W. (1903–1969), German philosopher, sociologist, composer. As a sociologist (in conjunction with Max Horkheimer et al.) he developed the Critical Theory of society (the so-called Frankfurt School project) and published treatises in the fields of literary and cultural criticism. As a composer he produced over 30 musical works in various genres.

After completing his academic studies in philosophy, psychology, sociology, and musical sciences in Frankfurt/Main in 1925, Adorno took composition lessons with Alban Berg in Vienna – an education he had begun (with Bernhard Sekles) when he was still a high school student. Alongside his studies with Berg he also published numerous musical reviews. In

1931 he qualified as a university professor in philosophy and took up a chair in philosophy at the Johann Wolfgang Goethe Universität of Frankfurt/Main. During this time Adorno was most strongly influenced by Walter Benjamin and particularly by his notion that language preserves historical truth. When the National Socialists came to power, he was deprived of his chair. Adorno had always considered his Jewish descent (his father was Jewish and Adorno’s last name was Wiesengrund-Adorno until his mid-forties) to be unimportant but the race laws introduced by the Nazis made him into an outsider. This turning point in his life and his personal experience of having an outsider status in society generated a politically accentuated intellectualism. In the period 1934–49 he lived as an emigré – initially in England (Oxford) and then in the United States (New York and Los Angeles). During this period he wrote major philosophical and sociological works, most of which were published after his return to Germany (October 1949): *The Philosophy of Modern Music* (1949), *Dialectic of Enlightenment* (1947), *The Authoritarian Personality* (1950), *Minima Moralia* (1951), and *Against Epistemology: Meta-Critique – Studies in Husserl and the Phenomenological Antinomies* (1956).

Teaching philosophy and sociology in the 1960s, Adorno made a name for himself not only as an extremely successful university lecturer and public intellectual but also as the director of the Institute of Social Research in Frankfurt, gaining fame for such publications as *What Does It Mean: Working Up the Past* (1959) and *Education after Auschwitz* (1967).

Adorno’s critical stance towards the world and the negativism of his social criticism resulted from his personal experience of sustained horror: Exposure to the monstrous cruelty of the Nazi genocide was the guiding moral force behind his philosophical theory of society and its ultimate source. His intellectuality resided in his ability to maintain the tension between opposing phenomena instead of synthesizing or harmonizing the differences. The individual experience of acknowledging the uniqueness of the Other crystallized into a fundamental concept which Adorno brought to bear in seeking a decent social order: “living one’s difference without fear.”

In the 1960s Adorno published a volume on Gustav Mahler (1960), three volumes of *Notes on Literature* (1965–68), and his main philosophical opus, *Negative Dialectics* (1968). During this decade he was given the German Critics’ Award for Literature and for his 60th birthday the city of Frankfurt/Main bestowed the Goethe Medal on him. His *Aesthetic Theory* was published posthumously. In addition to a large number of letters he exchanged with contemporaries, his *Complete Works* comprise his musical compositions, 20 volumes of collected writings, and the equally comprehensive posthumous writings (Suhrkamp Verlag).

[Stefan Müller-Doohm (2nd ed.)]

ADRAMMELECH (Heb. אֲדַרְמֶלֶךְ). (1) A deity named Adrammelech was worshiped, together with *Anammelech, by the people of *Sepharvaim (II Kings 17:31), possibly Assyrian Saparré, who settled in Samaria after its destruction in 722 B.C.E. No Assyrian or Babylonian deity is known by the name Adrammelech. Inscriptions from Gozan (Tell Ḥalaf on the Khabur, beginning of the ninth century B.C.E.) were once thought to attest the name of a god Adad-Milki. Accordingly, it was suggested to correct Adrammelech to Adadmelech assuming the common graphic confusion of *dalet* and *resh*. But the reading Adad-Milki in the Gozan inscriptions themselves now seems questionable. The element *melech* in the name is probably the Hebrew word for king, so Addir-Melech, “the glorious one is king,” is a possibility. At the same time Addir-Molech, “glorious is (the god) Molech” (see *Moloch), cannot be ruled out.

(2) According to the received Hebrew text, Adrammelech was the name of a son of *Sennacherib, king of Assyria (II Kings 19:37; Isa. 37:38). Together with his brother *Sharezer, Adrammelech murdered his father in the temple of Nisroch and escaped to the land of *Ararat (cf. II Chron. 32:21). Abydenus (Eusebius, *Armenia Chronicle*, ed. Schoene, 1:35) gives the name of the murderer as Adramelus. That reading is now confirmed by cuneiform evidence that gives the regicide’s name as Arda-Mulissi, “servant of Mulissu,” Mulissu being the neo-Assyrian name of the goddess Ninlil. In turn we may correct the Hebrew to אֲרַדְמֶלֶךְ.

The biblical description of Sennacherib’s murder is given in relation to the Assyrian defeat near Jerusalem (II Kings 19:36–37; Isa. 37:37–38; cf. II Chron. 32:21). In point of fact, many years elapsed between Sennacherib’s campaign in Phoenicia and Erez Israel (c. 701 B.C.E.) and his death (681 B.C.E.), but the Bible telescopes these events to show that the prophecy of Isaiah about Sennacherib (II Kings 19:7; Isa. 37:7) was fulfilled.

[Yuval Kamrat / S. David Sperling (2nd ed.)]

ADRET, MOSES IBN (d. 1772), rabbinic scholar of Smyrna. Ḥ.J.D. *Azulai described Adret as an eminent and saintly scholar with extensive knowledge in rabbinic literature, endowed with a keen intellect and a phenomenal memory. Adret often took an independent and critical stand against older authorities. Twelve of his works, listed by Azulai, include novellae on the major part of the Talmud, notes on the Mishnah, *Maimonides’ code, *Asher b. Jehiel’s compendium, and *Jacob b. Asher’s *Arba’ah Turim*, as well as responsa, and Bible commentaries. Only *Berakh Moshe*, novellae on various Talmud tractates, has been published (Salonika, 1802). His *Torat Moshe* (commentary on the Mishnah) was supposed to have appeared in Leghorn, but has not survived. Responsa by Adret were incorporated in E. Malki’s collection *Ein Mishpat*

(Constantinople, 1770, YD, nos. 7, 8, 9, 10). In responsum no. 10 Adret boasted of his complete mastery of the whole range of talmudic sources and the various halakhic works he had composed to justify his stand in his protracted dispute with Malki, who speaks sarcastically of Adret’s vaunted piety and modesty (*ibid.*, no. 11).

BIBLIOGRAPHY: Azulai, 1 (1852), 130, no. 95, s.v. *Moshe Adret*.

ADRET, SOLOMON BEN ABRAHAM (known from his initials as **RaShBa**, Rav Shlomo Ben Abraham; c. 1235–c. 1310), Spanish rabbi and one of the foremost Jewish scholars of his time, whose influence has remained to this day. Adret belonged to a well-to-do family of Barcelona where he lived all his life. His principal teacher was Jonah b. Abraham *Gerondi and Adret always refers to him as “my teacher.” He also studied under Nahmanides, being considered one of his outstanding students and principal exponent of his “school” in the interpretation of the Talmud.

While still young, Adret engaged extensively in financial transactions, and the king of Aragon was among his debtors. After a few years he withdrew from business and accepted the position of rabbi in Barcelona, which he held for more than 40 years. Adret was recognized as the leading figure in Spanish Jewry before he was 40 and his opinions carried weight far beyond the frontiers of Spain. He was a man of great accomplishments, strong character, and incorruptible judgment. Not long after he entered upon his office as rabbi, he vigorously defended an orphan against leading court Jews and the powerful Christian nobles who supported them. Yet, he was a humble man, with a warm, sensitive heart. Pedro III of Aragon submitted to him for adjudication of a number of complicated cases that had arisen between Jews of different communities. Against his will, the case of an informer belonging to an aristocratic family was assigned to him for trial by order of the king: he sentenced the man to death. Three years later the relatives of the condemned man appealed the verdict. Adret referred the case to *Meir b. Baruch of Rothenburg, the foremost rabbinic authority in Germany, who sustained the verdict.

Questions were addressed to Adret from all parts of the Jewish world including Germany, France, Bohemia, Sicily, Crete, Morocco, Algiers, Palestine, and Portugal. The communities gathered his responsa into special collections and kept them as a source of guidance. He explained the most abstruse matters in clear and simple terms. Many of his responsa deal with the clarification of problematic biblical passages, and some of them touch on questions of philosophy and the fundamentals of religion. Altogether Adret wrote thousands of responsa (3,500 have been printed). One responsum, written a few days before his death, is signed by his son. Adret’s responsa constitute a primary source of information for the history of the Jews of his period and, to some extent, also for general history. When Maimonides’ grandson David was denounced to the Sultan of Egypt, Adret collected 25,000 dinars

from the Spanish community to secure his release. Similarly when the Rome community wished to translate Maimonides' commentary on the Mishnah into Hebrew, Adret secured the necessary manuscripts and translators, one of whom testified, "It is because of the awe with which our master inspires us, that we have persisted in our undertaking."

Adret acquired a considerable knowledge of Roman law and local Spanish legal practice. He played a vital role in providing the legal basis for the structure of the Jewish community and its institutions, and many of his responsa are devoted to communal matters and to the activities of rabbinic courts. He defended the rights of the Jewish communities and opposed all attempts at arbitrary control and recourse to non-Jewish tribunals. That Adret was considered by his contemporaries to be one of the outstanding authorities of the generation is obvious from the efforts that Abba Mari *Astruc made to enlist his support in the campaign for the preservation of the traditional way of study and traditional values against the philosophical school. These efforts ultimately culminated in a ban (see below). The correspondence on the subject was included by Astruc in his *Minḥat Kenaot* (Pressburg, 1838).

Adret had a considerable knowledge of philosophy and was well-versed in the scientific literature of his day, although he headed the movement against the spreading of these subjects among the masses. To an opponent of a ban on secular studies he wrote: "You seem to think that we have no share in (secular) wisdom... This is not the case... for we know these lofty sciences and we are aware of their nature" (Abba Mari b. Moses of Lunel, *Minḥat Kenaot* (1838), 43). He defended Maimonides in the second attack directed against his writings in France and in Palestine. He opposed both the allegorical method of interpreting the Bible that was then prevalent among the rationalists in southern France and in Spain, and the extreme mystical tendency which was making headway in Spain, and he strongly attacked the activities of Abraham *Abulafia. He also took precautions against those who denied the Divine origin of the Torah and forsook its study for that of the sciences. In the bitter conflict which flared up in the communities of southern France, Adret was on the side of the traditionalists. There were extremists who wished to prohibit the study of the sciences completely; in the text of the ban which they suggested to Adret they proposed that such studies be prohibited until the age of 30. However, Adret, in the famous ban he proclaimed in Barcelona in 1305, adopted a middle course. He permitted the study of physics and metaphysics from the age of 25, put no restriction at all on the study of astronomy and medicine, and sanctioned the reading of Maimonides' works. In the end the communities in southern France resisted Adret's ban. In part, their resistance stemmed from the efforts of Philip the Fair (1285–1314) to unite all of France. Since rabbinic bans required authorization from the State, the acceptance of a ban originating in Spain might have been viewed as treason by the French crown.

Adret took up arms also, both in oral and written disputes, against detractors of Judaism, such as Raymond *Martini and his work *Pugio fidei*. Adret replied to this in a special work in which he defended the eternity of the Torah and the value of its practical commandments. In his responsa (4, 187) he gave details of a disputation he had with a leading Christian scholar. He wrote a book refuting the attacks of the 11th-century Mohammedan scholar, Aḥmad ibn Ḥazm (published by Perles, 1863). A variety of reasons have been suggested as to why Adret wrote his attack on ibn Ḥazm. They include the fact that Christian polemicists drew many of their arguments from ibn Ḥazm's tract, that Adret's book served to bolster the communities of Jews under Muslim rule, and that Adret was fearful that ibn Ḥazm's biblical criticisms might be accepted.

Collections of the responsa of Adret are extant today. They pose a difficult literary problem. The first collection was printed in Rome before 1480 and the second, of which only a few copies remain, in Constantinople in 1516. In 1908 (on the front page incorrectly 1868) these two collections were reprinted in Warsaw, and the editor called them "Part 7" of the responsa of Adret. An additional collection, containing 1255 responsa, was printed in Bologna in 1539. It is this which is referred to as the Responsa of Adret "Part 1." The so-called "Part 2" containing 405 responsa, called *Toledot Adam*, was published in Leghorn in 1657, and "Part 3" with 488 responsa, also in Leghorn, in 1788. "Part 4" was published in Salonika in 1803 and "Part 5" in Leghorn in 1825. "Part 6" was published together with the 1908 Warsaw edition previously mentioned. Many of the responsa are not the work of Adret, but of other scholars whose responsa the copyists collected together with his. On the other hand, most of the responsa in the collection attributed to Naḥmanides (Venice, 1519) are the work of Adret. These collections, amounting to a few thousand responsa, contain many responsa identical in wording and context. A critical edition of Adret's responsa, which should facilitate identification and determine authorship, is a primary scholastic need and is still lacking.

Adret headed a yeshivah to which students flocked, even from Germany (Responsa 1,395) and other countries. Among his distinguished students were *Yom Tov b. Abraham of Seville, Shem Tov *Ibn Gaon, and *Bahya b. Asher. According to Adret, his academy housed valuable manuscripts of the Talmud brought from the Babylonian academies or which had been checked in the academies of Kairouan. It appears that he composed his famous novellae to the Talmud in connection with his lectures to his students. His novellae to 17 tractates of the Talmud have been published: *Berakhot* (Venice, 1523); *Shabbat* (Constantinople, 1720); *Eruvin* (Warsaw, 1895); *Bezah* (Lemberg, 1847); *Rosh Ha-Shanah* (in part, Constantinople, 1720, and in a complete, critical edition, 1961); *Megillah* (Constantinople, 1720; complete edition, 1956); *Yevamot* (Constantinople, 1720); *Gittin* (Venice, 1523); *Kiddushin* (Constantinople, 1717); *Nedarim* (*ibid.*, 1720); *Bava Kamma* (*ibid.*, 1720); *Bava Mezia* (in part, Jerusalem, 1931); *Bava Batra* (*ibid.*, 1957);

Shevu'ot (Salonika, 1729, and in full, Jerusalem, 1965); *Avodah Zarah* (in part in Jerusalem, 1966); *Hullin* (Venice, 1523); *Niddah* (Altona, 1797 and a complete edition, Jerusalem, 1938). The novellae to *Menahot* are not his, and the novellae to *Ketubbot* ascribed to him are actually by Nahmanides. *Ketubbot* and *Nazir* are still in manuscript. In his novellae, Adret was greatly influenced by Nahmanides' method, a synthesis of the methods of French scholars and of the early Spanish authorities such as Joseph *Ibn Migash and his colleagues. He carried, however, Nahmanides' methods to their extreme, establishing the French school in Spain, though there exist strong literal ties between the two methods. The novellae enjoyed a wide circulation; they have gone through many editions and are still extensively consulted by students of the Talmud.

Adret also devoted much time to commenting on the *aggadot* in the Talmud and wrote a special work on the subject (*Hiddushei Aggadot ha-Shas*, Tel Aviv, 1966). In his commentaries, Adret followed the methods of inquiry of the moderate Spanish scholars; the influence of Maimonides' Guide is also evident. It is evident from many places in his works that Adret interested himself in Kabbalah and even acquired great knowledge of it. In this he resembled his teacher Nahmanides. On the other hand it appears that he did his best to conceal his opinions on the subject. However it is significant that most of his pupils wrote commentaries to the mystical part of Nahmanides' commentary on the Pentateuch, many of them still in manuscript.

Beside his responsa and novellae, Adret wrote two legal manuals. The more important, *Torat ha-Bayit*, deals with most of the ritual observances, such as ritual slaughter, forbidden foods, gentile wine, and the laws of *niddah* (Venice, 1607), together with *Sh'ar ha-Mayim* – laws of *mikveh* (first published in Budapest, 1930, and again in Jerusalem, 1963). The book is divided into seven parts, is written with great profundity and perception, and embodies detailed halakhic discussions. He reviews the methods of his predecessors, raises and meets objections, refutes and corroborates, decides among opposing views, and advances his own opinion. For practical purposes of guidance, he wrote a compendium of the larger work, *Torat ha-Bayit ha-Kazer* (Cremona, 1566). Aaron ha-Levi of Barcelona (see **Ha-Hinnukh*), a fellow townsman and old friend of the author, wrote many critical notes on this book in his *Bedek ha-Bayit*. Although Aaron ha-Levi in his introduction and criticisms wrote in a respectful tone, Adret felt offended and wrote in reply his *Mishmeret ha-Bayit* (all included in the 1608 Venice edition) which was issued anonymously and contained no clue to the author's identity. It purports to have been written by a scholar solicitous of Adret's honor. However, in one of his responsa Adret revealed that he was the author. Adret's refutations are written in a pungent style reminiscent of *Abraham b. David of Posquières' strictures on Maimonides, and in this book he reveals himself as a doughty polemicist.

Adret's *Avodat ha-Kodesh* on the laws of the Sabbath and the festivals is also extant. It appeared in two versions, one complete and the other abridged. The former has not yet

been published, while the latter was published in Venice in 1602. He also wrote *Piskei H'Allah* (Constantinople, 1516) on the laws relating to **H'Allah*.

The changes in rabbinic study in Spain started by Nahmanides were finally effected by Adret. His responsa have at all times been highly influential and were a major source of the Shulhan Arukh.

[Simha Assaf / David Derovan (2nd ed.)]

ADRIEL (Heb. אֲדִיֵּל; "God is my help"), son of Barzillai the Meholathite; the husband of *Merab, the daughter of Saul (1 Sam. 18:19). Saul pledged his daughter Merab to David; however, when the time came to fulfill his promise, he gave her to Adriel. Critics have suggested that the name Michal in 11 Samuel 21:8 is an error for Merab (which is read by the Lucianic recension of the Septuagint and by the Peshitta). David handed over the five sons of Adriel and Merab to the Gibeonites for impalement (11 Sam. 21:8–10).

ADULLAM (Heb. אֲדֻלָּם), city in Judah in biblical times. It was originally a Canaanite town, the seat of Hirah the Adullamite (friend and father-in-law of Judah (Gen. 38:1, 12, 20)). Adullam's king was defeated by Joshua and the city is mentioned together with 13 others as belonging to the second district of Judah (Josh. 12:15; 5:35). This region contained many caves which could offer refuge to outlaws. In one of these, David hid after fleeing from Saul, and it served as his headquarters for a time during his war with the Philistines (1 Sam. 22:1). It was there that the three "mighty men" brought David water from the well at Beth-Lehem (11 Sam. 23:13; 1 Chron. 11:15ff.; Jos., Ant., 6:247). Rehoboam included Adullam in his line of fortifications beside Soco in the valley of Elah (11 Chron. 11:7). After the return from Babylonian exile it is mentioned in Nehemiah 11:30 among the places inhabited by Jews. It remained a Jewish town in Hasmonean times (11 Macc. 12:38, cf. 1 Macc. 5:59–60); Judah the Maccabee withdrew to Adullam after his battle against Gorgias near Marissa (Mareshah) in 163 B.C.E. Eusebius (Onom., 24:21) describes fourth-century Adullam as a large village, 10 Roman mi. east of Eleutheropolis (Bet Guvrin). It has been identified with al-Sheikh Madhkūr, 9 mi. (15 km.) northeast of Bet Guvrin. The name Adulam may have survived in Khirbat 'Id al-Mā' (or Miyeh) in the vicinity of that tell.

ADULLAM REGION (Heb. אָדּוּלָם), settlement region in southern Israel, N.W. and W. of the Hebron Hills, comprising over 100,000 dunams (25,000 acres). Geographically, it belongs partly to the Judean Hills and partly to the Shephelah. The name was chosen because the assumed site of ancient *Adullam lies in the center of this region. After the principle of comprehensive regional planning had been adopted by the relevant authorities in the mid-1950s, the area was first included in the *Lachish Region (which eventually became the prototype of all such planning). After 1957, however, the Adullam Region was treated as a separate area, as conditions there were much more difficult and land reclamation had to precede all settlement activity. The Jewish National Fund, therefore, assumed responsibility for the first stage of the urgent development of this border region. In the project, three clusters of villages were arranged around the “rural centers” of Z̄ur Hadassah in the northeast, Neveh Mikhaël in the center, and Li-On (later renamed Sarigim) in the southwest. New villages were founded in the framework of the regional plan (e.g., Avi’ezzer, Roglit (later united with Neveh Mikhaël), Adderet, Givat Yeshayahu, Z̄afiririm), and earlier settlements in adjoining areas (e.g., Netiv ha-Lamed He, Bet Guvrin, Mevo Beitar, Matta, Bar Giora, and Neḥushah) were included in the project. Farming land was reclaimed by terracing and stone clearing, and by drainage of soil in small valleys. The water supply was greatly improved by drilling of deep wells in and near the region. The actual development of villages and their farming branches was carried out by the Jewish Agency’s Agricultural Settlement Department. In the higher northeastern part of the region with its limestone rocks, terra rossa soils, and its cool and relatively wet climate, deciduous fruit and grapevines became important factors in the local economy, and poultry breeding constituted a main source of income. In the lower southwest parts with their broader valleys and deeper rendzina or alluvial soils, the economy was based on field crops (wheat, cotton, sunflowers, sorghum, etc.) as well as tobacco, vegetables, sheep, and cattle. In 1968 a road was built connecting Neveh Mikhaël with the reestablished *Gush Ezyon bloc. At the beginning of the 21st century the region included 16 moshavim, a kibbutz, and two rural communities, reaching a population of approximately 8,000. The economy of the region developed to include wine and olive oil production, citrus groves, fruit orchards, cotton, and flowers. In addition to farming, many of the settlers earned their livelihoods in the tourist industry.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

ADULTERY (Heb. נִאֻף, *ni’uf*; sometimes, loosely, זְנוּת, *zenut*; זְנוּנִים, *zenunim*; lit. “fornication, whoredom”). Voluntary sexual intercourse between a married woman, or one engaged by payment of the brideprice, and a man other than her husband.

Biblical Period

The extramarital intercourse of a married man is not *per se* a crime in biblical or later Jewish law. This distinction stems from the economic aspect of Israelite marriage: the wife was the husband’s possession (of a special sort, see *Marriage), and adultery constituted a violation of the husband’s exclusive right to her; the wife, as the husband’s possession, had no such right to him. Adultery is prohibited in the Decalogue (Ex. 20:13; Deut. 5:17), where it is listed between murder and theft (cf. Jer. 7:9; Ezek. 16:38; Hos. 4:2; Ps. 50:18; Prov. 6:30ff.; Job 24:14–15) among offenses against one’s fellow. Like all sexual wrongs, it defiles those who commit it (Lev. 18:20; Num. 5:13). It is termed “(the) great sin” in Genesis 20:9 and in Egyptian and Ugaritic texts (cf. [ha]-’Averah, “[the] transgression,” for sexual crimes in rabbinic texts, e.g., Av. Zar. 3a). Its gravity is underscored by its being punishable by the death penalty for both the man and the woman (Lev. 20:10; Deut. 22:22). Stoning by the public, a procedure often prescribed for crimes felt to threaten the well-being of the nation as a whole, among which were sexual crimes (Lev. 18:24–27; 20:22; Deut. 24:4; cf. Jer. 3:1–2), is mentioned in Deuteronomy 22:24; cf. Ezekiel 16:40; 23:46–47 (cf. John 8:3–7). Other punishments are reflected in non-legal texts. Burning is mentioned in Gen. 38:24 (cf. Lev. 21:9). Stripping, known in ancient Near Eastern divorce procedure, is reflected in the metaphor of Hos. 2:5 and mentioned in Ezekiel 16:37, 39; 23:26. The mutilation mentioned in Ezekiel 16:39; 23:25 does not seem to reflect Israelite practice, but rather the legal traditions of Mesopotamia, where Ezekiel lived (cf. 23:24: “[the nations] shall judge you according to their laws,” and, cf. *The Middle Assyrian Laws*, 15 in Pritchard, Texts, 181; the same punishment for adulteresses in Egypt is attested by Diodorus Siculus, *Bibliotheca*, 1:18, according to G.A. Cooke, *The Book of Ezekiel*, 254).

Other ancient Near Eastern law collections also prescribe the death penalty for adulterers, but, treating adultery as an offense against the husband alone, permit the aggrieved husband to waive or mitigate the punishment (*The Code of Hammurapi*, 129, in: Pritchard, Texts, 171; *The Middle Assyrian Laws*, 14–16, in: Pritchard, Texts, 181; *The Hittite Laws*, 197–98, in: Pritchard, Texts, 196). Biblical law allows no such mitigation. Because the marriage bond is divinely sanctioned (cf. Mal. 2:14; Prov. 2:17) and the prohibition of adultery is of divine origin, God as well as the husband is offended by adultery (cf. Gen. 20:6; 39:8–9; Ps. 51:6), and an offense against God cannot be pardoned by man. Mesopotamian religious literature also views adultery as offensive to the gods, but, unlike the situation in Israel, this religious conception is not reflected in Mesopotamian legal literature.

Whether the severe provisions of the law were actually carried out in biblical times cannot be ascertained. Proverbs 6:23–35, warning of the harm and disgrace which will befall the adulterer, and Job. 31:11, which terms adultery “an assessable transgression” (E.A. Speiser, *JBL*, 82 (1963), pp. 301–306) seem to assume that the crime could be composed monetarily at the husband’s discretion. But whether passages from the wisdom literature, with its strong international literary ties, reflect actual practice in Israel is a moot question.

As in other cases (see M. Greenberg, *IDB*, 1 (1962), 739), here too, biblical law distinguishes between intentional and unintentional acts. In the Priestly Code, the final clause in Numbers 5:13 (lit. “she was not caught”; cf. the use of the word in Deut. 22:28) may mean that a woman who has had extramarital intercourse is guilty only if she was not forced. In the Deuteronomic Code (Deuteronomy 22:23–27), the presumption of consent on the part of the engaged girl is treated: If in the open country where no help would be available in response to a cry from the girl, she is presumed to have been forced and only her attacker is executed; if the crime occurred in the city, where help would presumably have been afforded her had she cried out, she is presumed to have consented, and is stoned with her paramour. No such presumptive distinction is made in this passage regarding the married woman: she and her lover must die in any case (Deut. 22:22; unlike *The Hittite Laws*, 197, in: Pritchard, *Texts*, 196, which makes this very distinction for married women). According to J.J. Finkelstein (*JAOS*, 86 (1966), 366ff.; *JCS*, 22 (1968–9), 13), the absence of such a distinction may reflect reality: the experience of daily life may have shown that married women who had had extramarital intercourse were likely to have been seeking sexual experience. While payment of a brideprice established a marriage tie constitutive of adultery, the “designation” of a slave woman to marry a man (free women are engaged by brideprice while slave women are designated for marriage by their masters; cf. Ex. 21:8) does not establish such a tie before the woman has been redeemed or freed. Hence a designated slave woman and her paramour are not executed, but the paramour must pay an indemnity and bring a guilt offering (Lev. 19:20–22). The question of the slave woman’s consent is not raised in the law, presumably because she is not a legal person and her consent is legally immaterial.

Evidence for prosecution of adultery is scant in the Bible. Some passages suggest the husband’s initiative in prosecuting (Num. 5:11–31; cf. Prov. 6:32–35), while another might be construed as reflecting public initiative (Deut. 22:22; cf. Sus. 28–41, 60ff.). None of these passages is decisive. If a husband in a fit of jealousy but without evidence suspects his wife of adultery, the case is turned over to God (by means of the “ritual for cases of jealousy,” Num. 5:11–31; see *Ordeal of Jealousy) for decision and, where the wife is guilty, for punishment.

IN NARRATIVE, PROPHETIC, AND WISDOM LITERATURE. The theme of adultery appears in several biblical narratives.

Abraham’s and Isaac’s wives were taken or nearly taken by foreigners who believed them to be the patriarchs’ sisters (Gen. 12:10–20; 20:2ff.; 26:6–11), but Genesis 20:4 and 26:10 deny that any sexual contact took place. It is noteworthy that these passages seem to assume that these foreigners would sooner commit murder than adultery, “the great sin.” Tamar’s fornication (Gen. 38) might be viewed as technically adulterous, since she had already been assigned for Shelah. Potiphar’s wife attempted to seduce Joseph, who refused to sin against his master and against God (Gen. 39:7–12). David committed adultery with Bath-Sheba, wife of Uriah the Hittite (11 Sam. 11). The narrative about Hosea’s marriage (Hos. 1) describes Hosea’s wife as adulterous, but this is probably a legendary motif of the sort typical in third-person prophetic narratives (see *Hosea).

Adultery is one of the crimes with which the prophets, particularly Hosea (4:2; etc.) and Jeremiah (7:9; 23:10, 14; etc.), charged Israel. The adultery and ravishing of wives is mentioned among threatened punishments (Deut. 28:30; Amos 7:17).

The book of Proverbs warns extensively against the seductions of the adulterous woman (2:16–19; 5:1–14; 6:24–35; 7:5–27; cf. 30:20). She is a gadabout (a frequent description of promiscuous women in the ancient Near East: cf. Gen. 34:1; *The Code of Hammurapi*, 141, 143, in: Pritchard, *Texts*, 172; J.J. Finkelstein, *JAOS*, 86 (1966), 363, with nn. 28–29), rarely found in her own home (Prov. 7:11–12). She uses a smooth tongue to lure the foolish – like oxen to the slaughter – to her bed (2:16; 5:3; 6:24; 7:13ff.). Adulterers seek the protection of darkness (7:9; cf. Job 24:15; Eccles. 23:18). The adulterer is more foolish than a thief, who will at least escape with his life (Prov. 6:30ff.). Wisdom warns (6:20ff.; 7:4ff.) that traffic with the adulterous woman leads inevitably to loss of wealth (5:9–10) and life (2:18–19; 5:5; 6:32–35; 7:22–23, 26–27). One ought to “drink water from his own cistern” (5:15) and not from another’s.

AS A METAPHOR FOR IDOLATRY. The exclusive loyalty which Israel must give God is analogous to the exclusive fidelity a wife owes her husband. Thus, Israelite religion seized upon the metaphor of marriage to express Israel’s relationship with God and already in early texts employed language from the sphere of adultery to describe worship of other gods: Israel “goes a-whoring” (*zanah*) after other gods (Ex. 34:16; Num. 15:39–40) and *YHWH*, the “impassioned” or “jealous” (*qanna*) God, becomes “wrought up,” or “jealous” (*qanna*) over Israel (Ex. 20:5; 34:14; Deut. 5:9; cf. Num. 5:14); idolatry, like adultery, was described as “great sin” (Ex. 32:21, 30–31; 11 Kings 17:21). Later prophets, especially the author of Hosea 1–3 and after him Jeremiah (2:23; 3:1ff.) and Ezekiel (16:1ff.; 23:1ff.), gave the metaphor full and explicit expression.

[Jeffrey Howard Tigay]

In Jewish Law

It appears that originally it was the husband’s right to punish his adulterous wife himself (cf. the story of Judah – ordering

even his daughter-in-law to be burned: Gen. 38:24) and that he could take the law into his own hands even against the adulterer (cf. Prov 6:34). It was only when adultery was elevated to the rank of a grave offense against God as well that the husband was required to resort to the priests or to the courts. Yet, so far as the adulterer was concerned, it is probable that he could always buy himself off by paying to the husband a sum of money by way of compensation: *compounding was not prohibited for adultery (cf. Prov. 6:35) as it was for murder (Num. 35:31). Where sufficient evidence was available both of the act of adultery (Mak. 7a) and of the adulterer and the adulteress having first each been duly warned (Sanh. 41a), both would be liable to the death penalty. The trial reported in the apocryphal book of *Susannah (37–41) was held without any evidence being adduced of a previous warning having been administered, either because the book predates the mishnaic law to this effect, or because the warning appeared irrelevant to the point of the story. No particular mode of execution is prescribed in the Bible, but talmudical law (Sifra 9:11) prescribed strangulation as being the most humane mode of *capital punishment (Sanh. 52b et al.). An older tradition appears to be that the punishment for adultery was stoning; the lighter offenses of the unvirginal bride (Deut. 22:21) and of the betrothed woman and her adulterer (Deut. 22:24) were punished by stoning, and the severer offense of adultery would certainly not have carried a lighter punishment. Stoning of adulteresses is more-over vouched for in prophetic allegories (e.g., Ezek. 6:38–40) and is described in the New Testament as commanded by the Law of Moses (John 8:5). In the aggravated case of adultery by a priest's daughter, the adulteress was burned (Lev. 21:9), while the adulterer remained liable to strangulation (Sif. 5:19). Burning is provided for another similar offense (Lev. 20:14) and is also found in prophetic allegory (e.g., Ezek. 23:25; Nah. 3:15). Where the woman was a slave "designated" for another man, the punishment was not death (Lev. 19:20), but he had to bring a sacrifice (*ibid.* 21:7), while she was flogged (Ker. 11a). Where insufficient evidence was available (the nature of the offense being such as usually took place in secret: cf. Job 24:15), a husband was entitled to have his wife, whom he suspected of adultery, subjected to the *ordeal of the waters of bitterness (Num 5:12–31). If found guilty, her punishment was a kind of talio, she being made to suffer with those organs of her body with which she had sinned (Sot. 1:7). One of the features of the ordeal was that the woman's hair was "loosened" (Num. 5:18), that is, disarranged (except, according to R. Judah, if her hair was very beautiful: Sot. 1:5). This disarrangement of the hair (usually covered and concealed) may be the origin of the later punishment of shaving a woman's head – more particularly in cases where lesser misconduct, and not the act of adultery, could be proved against her. Other punishments meted out to adulteresses in post-talmudic times included death, both by strangulation (hanging) and by burning, imprisonment, and, commonly, public flogging.

[Haim Hermann Cohn]

Maimonides rules that "if a woman has, while married to her husband, committed adultery unwittingly or under duress, she is permitted to him..." (Yad *Ishut* 24:19). Adultery committed under duress is rape, and is dealt with at length in the relevant entry (see *Rape). The question is what defines "inadvertent adultery" in this context and how it is adapted to the modern legal categories of mistake of law and mistake of fact.

ADULTERY DUE TO MISTAKE OF FACT. In a situation where a woman thought that the man with whom she engaged in sexual relations was her husband, but was in fact another man, the *halakhah* regards the act as "inadvertent" or, in contemporary terminology – a mistake of fact. The Mishnah (Yeb. 3:10) deals with a case in which two men betrothed two women and, at the time of marriage, they exchanged the women between themselves. The Mishnah rules that in such a case, where the parties acted unwittingly and unintentionally (see TB Yeb. 33b where it explains that the term "[they were] exchanged" indicates that the exchange was inadvertent), all four parties involved must bring sin offerings, because they unwittingly violated the prohibition against relations with a married woman. However, the original couples are permitted to continue living together as man and wife (following an initial separation of three months in order to enable determination of the biological father in the event of pregnancy). The halakhic ruling is that "at all events they are permitted to one another after three months, for they are considered to have acted under duress because they were mistakenly exchanged" (*Yam shel Shlomo*, to Yebamot, ch.3, §17).

Another source dealing with adultery as the result of a mistake of fact was based on an actual case, recorded in TB *Nedarim* 91a–b. A woman informed her husband that they had conducted sexual relations on the previous night. The husband expressed astonishment; denying that this had taken place. The woman responded that apparently she had sexual relations with one of the spice sellers, mistakenly assuming that it was her husband. R. Nahman rules that the woman was not to be believed, for "perhaps she set her eyes on another" and made up the story, so that she could receive a divorce from her husband. He explains that this case concerned the wife of a kohen (priest) who would be forbidden to her husband even in the event of rape. Had the case involved the wife of an Israelite "since even according to her words she believed he was her husband, then there is no greater duress than that – and when there was duress regarding one of Israelite descent, she is permitted."

What follows from these sources is that adultery resulting from mistake of fact is governed by the law of duress, and therefore the law of adultery, including the prohibition of the woman to her husband, does not apply.

ADULTERY RESULTING FROM IGNORANCE OF THE LAW. The responsa literature contains a number of responsa discussing the question of how to view adultery when it resulted

from a mistake in the law (i.e., ignorance of the law). One case dealt with by Rashba concerned a woman who had accepted a ring from a man to whom she had been introduced during a meal, and a few years later she married another man. Rashba ruled that she is considered an adulteress, and is prohibited to both of them. In his responsa, he discusses the claim that the woman was unaware that she was married to the first man, and that the adultery was therefore the result of a mistake. He wrote as follows: "Should it be claimed that she was under duress because she did not know that she was forbidden to marry – this is incorrect, for she ought to have verified the matter, and in any case where she did not examine, she is prohibited to both of them ... But what kind of duress was there that she could rely upon in order to marry? For if so [were we to accept this claim], we would permit all women who had committed adultery, by saying: she believed that she had not become prohibited by this action. And the matter is clear" (Resp. *Rashba*, 1:1189).

When R. Joseph Colon (Maharik) was asked how to judge a woman "who had intentionally committed adultery while married to her husband, and did not know whether the act was forbidden: should it be regarded as an unintentional act?" His response was: "In my humble opinion, she cannot be permitted to her husband under the law applying to one who acted inadvertently, because she intended to betray her husband, and committed adultery while still married to him" (Resp. *Maharik*, 168). He based his position on Numbers 5:12: "If any man's wife go aside and commit a trespass against him" – in other words: the trespass is against the husband and not against the law (or, in Maharik's language, against God). There is no requirement that the woman actually intend to commit the sin of adultery; it is sufficient that she betrays her husband. Maharik offers the following explanation of the aforementioned passage from Maimonides – that the woman who commits adultery inadvertently is permitted to her husband – "this is only applicable where the mistake relates to the act of adultery, and was not a mistake regarding the prohibition itself, for the reason that her adultery is not considered to have been inadvertent is that she intended to commit adultery, but was unaware of the prohibition. What case would be deemed as inadvertent adultery? One in which she thought that it was her husband, as in the case mentioned in *Nedarim* 91."

These responsa were codified in later halakhic literature (see *Beit Yosef* on *Tur* EH 115, s.v. *u-mishum hakhi*; *Rem'a*, to *Sh. Ar.* EH 178.3; *Yam shel Shlomo*, Yeb. 3:17). The subject was the source of further discussion in subsequent responsa literature (see *Lehem Yehudah* of R. Judah Eish, *Hilkhot Ishut* 24; Hida, *Hayyim She'al*, 2: 48).

In a judgment given in Israel, by the Ashkelon Regional Rabbinical Court (8 PDR 184) the aforementioned conception was accepted: namely, the distinction between a mistake of fact, which constitutes a defense with respect to adultery, and a legal-halakhic mistake – ignorance of the *halakhah* – which

cannot exempt the woman from the consequences of the act of adultery. In the case in question, the Rabbinical Court ruled that the parties must divorce, and a few months later the *get* was given. It was proven to the court that the woman and another man had engaged in sexual relations after a divorce judgment had been given, believing that once a divorce judgment had been issued there was no longer any prohibition involved, even though they knew that the *get* had not yet been given. The Rabbinical Court based its ruling on the aforementioned responsa of Rashba and Maharik (as well as additional halakhic sources). The woman and the man, with whom she had become pregnant during the intermediate period between the divorce ruling and the *get*, were forbidden to marry each other, in accordance with the law that an adulterous woman is forbidden both to her husband and to her lover.

Summing up the position of Jewish law – which is also the positive law of the State of Israel in this area – adultery under duress is not considered adultery. As for adultery resulting from a mistake, a distinction is drawn between a mistake in fact, which is regarded as a case of duress, and hence not in the category of adultery, and a legal-halakhic mistake – i.e., ignorance of the prohibition on adultery, or of the law that only a *get* terminates the marriage; neither of the variants of the latter category will be regarded as duress. A woman engaging in sexual relations with another man under such circumstances is deemed an adulteress, and as such forbidden both to her husband and to her lover.

ADVERTISING. In few modern industries have Jews had greater influence than in advertising, and this applies particularly in America. It has even been suggested that Jewish advertising men are responsible for the wide scope and shape of the modern advertising agency. Though the use of adver-

tising began after the Civil War of 1865, until the beginning of the 20th century, business concerns wishing to promote the sale of their goods or services developed their own programs and even wrote their own copy. The existing agencies were thus brokers in media space. This was the pattern when Albert D. Lasker, often called the father of modern advertising, joined the Chicago agency of Lord and Thomas in 1898. He soon realized that by providing first-rate copywriters, who were creative, imaginative artists, the agency could be of far greater help to the client than by just offering the service of selling him space for his advertisements. In 1904, when only 24 years of age, he became a partner in the firm and by 1912, Lasker became the sole owner of Lord and Thomas. He built it in three decades into one of the best known and most respected advertising agencies in America.

Milton H. Biow may be regarded as the man who molded the advertising agency into a form which would meet the requirements of modern business. He began in 1918 with a one-man business and in the four decades of its existence, it became one of the largest and best known agencies both in the United States and abroad. Biow's agency was credited with being the first to use radio and television "spots" for short advertisements. This era saw the development of the partnership agencies. One of these, Grey Advertising, was founded in 1917 by 18-year-old Lawrence Valenstein. Later he formed a three-man partnership with two men he had taken into his employment, Arthur C. Fatt and Herbert D. Strauss. Each of the three was successively president of the company. All three believed advertising to be an important ingredient in the wider activity of marketing, and the firm played a leading part in developing the system of creating a demand for a product before introducing it to the market. In 1936 the agency started *Grey Matter*, a newsletter of merchandising comment and interpretation, which was widely read both by the advertising industry and by business generally. By the late 1960s the agency was one of the most successful with branches in Canada, Japan, and a number of European countries.

Two former directors of Grey Advertising, William *Bernbach and a non-Jew, Ned Doyle, joined with Maxwell Dane in 1949 to form another three-man partnership, Doyle, Dane, Bernbach, which developed rapidly. Bernbach may well be regarded as the successor to Lasker, Biow, and the Grey partners, becoming the leader of the "creative revolution" that was sweeping across Madison Avenue, the New York center of American advertising. Bernbach began to use copy in which advertisers spoke to the public in low-keyed, even self-deprecating terms. This new approach of intelligent subtlety was quickly and widely emulated. In 1955 Norman B. Norman and a number of his associates in the agency firm of William H. Weintraub and Co. bought control of the agency and changed its name to Norman, Craig, and Kummel. They soon expanded its business by the use of the "empathy" formula, which Norman described as "emotional advertising" aimed at having the reader find himself inside the advertisement.

Other Jews who have made important contributions to advertising are Julian Koenig and Frederic S. Papert (1926) who founded Papert, Koenig, and Lois; Maxwell B. Sackheim (d. 1982), an expert in mail order advertising; David Altman, of Altman, Stoller, and Chalk, specialist in fashion advertising; Ernest Dichter, a psychologist who founded the Institute for Motivational Research; Stanley Arnold, sales promotion consultant; and Monroe Green, an advertising vice president of the *New York Times*. Green was largely responsible for building the *New York Times Sunday Magazine* into a powerful combination of trade and consumer publication. In the 1920s and 1930s Jews in advertising were mainly relegated to media or market research jobs, and had no part in front office, account-management, or contact functions. But the skill and accomplishments of many of them opened the gates to Jews and other members of minorities, in a profession that had been restricted to gentiles for decades. Among the Jews who rose to prominence in the American advertising industry in more recent years were Carl *Spielvegel, who later became United States ambassador to Slovakia; Donny Deutsch, who sold his agency for many millions and began a career in television; and Linda Kaplan Thaler, whose creativity started with advertising jingles and expanded into a flourishing, multifaceted agency.

It was not until the 20th century after World War II, that Jews rose to prominence in advertising in Britain. The multiplicity of media used in modern advertising called for creative ability and Jews found outlets for their skills in this profession. Jewish agencies include Caplan's Advertising, Progress Advertising, and Richard Cope and Partners. Probably the best-known contemporary British advertising agency is Saatchi & Saatchi, founded by the two *Saatchi brothers. In general, however, Jews play only a limited role in British advertising.

On the continent of Europe advertising developed slowly until after World War I when the growth of methods of communication was rapid, but Jewish participation was brought to an abrupt close by the Nazi Holocaust. Since World War II expanding American agencies and to some degree British agencies have extended their operations to the continent to compete with their European counterparts and it is here that Jews have begun to play a creative role.

In Israel

There was little organized advertising in Mandatory Palestine. The first advertising agency was set up in Jerusalem in 1922 by Benjamin Levinson, who was followed by a handful of others. Several more modern agencies were established by newcomers from Germany in 1933–39. Large-scale advertising started only with the rapid development of industry and the creation of a growing consumers' market in Israel, especially after the Sinai Campaign (1956). Today, Israeli advertising is indistinguishable in its methods and pervasiveness from advertising in any other Western-style consumer society.

The favorite medium is still the daily press: In 2003 Israel's newspapers received 53% of advertising revenues (\$293

million). Next came television with 33% and radio with 7%. Internet advertising, the new frontier, had a modest 2%. The Israel Advertising Association, established in 1934, has 60 agencies as members.

[Jack Barbash]

AELIA CAPITOLINA, name given to the rebuilt city of Jerusalem by the Romans in 135 C.E. Following the destruction of Jerusalem by the Romans in 70 C.E. the city remained in ruins except for the camp (*castrum*) of the Tenth Legion (Fretensis), which was situated in the area of the Upper City and within the ruins of the Praetorium (the old palace of Herod the Great), protected, according to the first-century historian Josephus (War, 7, 1:1) by remnants of the city wall and towers on the northwest edge of the city. Although Jews were banished from the city (except apparently during the Ninth of *Av), some Jewish peasants still lived in the countryside, and remains of houses (with stone vessels) have been found immediately north of Jerusalem (close to Tell el-Ful). Following the disastrous *Bar Kokhba Revolt, the emperor *Hadrian began rebuilding Jerusalem, from 135 C.E., naming

it after himself (Aelius Hadrianus) and the god Jupiter Capitolinus. Some scholars believe that an impetus for the break-out of the Bar Kokhba revolt was the pagan construction activities in the city, but archaeological finds would appear to indicate that most of the principal building activities there (including those on the Temple Mount) took place only after the revolt had been quashed and when a colony was already established there. Jews were no longer allowed access to the city and it was populated by foreigners and settled Roman veterans. Aelia (approximately 120 acres in size) rapidly took on the character of a pagan city with special gates, civic centers (*demosia*), bathhouses, latrines, sanctuaries, and shrines, and pagan equestrian statues were even set up on the Temple Mount. The whereabouts of the Capitoline Temple is debated, with some scholars placing it in the area of the present Church of the Holy Sepulcher, while others suggest situating it in the area of the destroyed *Antonia Fortress on the north side of the Temple Mount. Shrines to Aphrodite and Serapis are also known. Most of the building activities took place in the northern sectors of the Old City of today (in the Christian and Moslem Quarters), and around the southwestern foot of the Temple Mount. The city remained unfortified until after the Tenth Legion had been transferred to Aila (Elloth), with a fortification wall built in the third century around the northern part of the city only. The name Aelia was perpetuated in the Early Islamic period as *Ilia*.

[Shimon Gibson (2nd ed.)]

°AELIAN (Claudius Aelianus; c. 170–235 C.E.), Greek sophist. Aelian mentions the Jews in several places. In *Varia Historia*, 12, 35, he includes the Jewish Sibyls (see *Apocalypse) in a list of *Sibylline oracles. In his *De Natura Animalium*, 6, 17, he tells of a snake enamored of a girl in Judea during the reign of Herod. He also mentions the deer on Mount Carmel.

AERONAUTICS, AVIATION, AND ASTRONAUTICS.

An early contribution by a Jew to aviation was the cigar-shaped airship with an aluminum framework designed in 1892 by the Zagreb timber merchant David *Schwarz. His designs were sold to Count Zeppelin, who carried them through to produce the airship known as the "Zeppelin." Another pioneer of flight-theory was Josef *Popper (1838–1921), who as early as 1888 considered the problems of flight-theory in his *Flugtechnik*. The development of French aviation was furthered by Henri *Deutsch de la Meurthe (1846–1919), who donated the first prize won by the Brazilian Santos-Dumont

Aelia Capitolina.

in October 1901 for flying an airship around the Eiffel Tower. After establishing an experimental aeronautics station at Sartrouville, Deutsch founded the Aeronautic Institute at Saint-Cyr in 1909. His daughter Suzanne (1892–1937) continued his work. In 1901 Arthur *Berson, director of the Prussian Aeronautical Observatory and a major personality in contemporary investigations of the upper atmosphere, navigated a balloon to what was then a record height of 35,100 feet (10,700 meters), and in 1908 he made a flight over the equator in East Africa at great heights. Other Jewish aviation pioneers were Emile *Berliner, the first man to make lightweight revolving-cylinder internal-combustion engines and to equip airplanes with them; Eduard *Rumpler, whose “*Rumplertaube*” was used by Germany in World War I; August Goldschmidt of Vienna, an inventor of a novel type of balloon in 1911; the Russian pilot Vsevolod Abramovich, who held the world record in 1912; Fred Melchior of Sweden, an expert pilot who won many awards; Arthur L. *Welsh, U.S. aviation instructor and test pilot, who died in 1912 while testing a new load-carrying military biplane; Ellis Dunitz (1888–1913), chief instructor in the German Naval Air Service; Victor Betman, winner in 1914 of the speed flight between Vienna and Budapest; Arthur Landmann of Germany, holder of the world endurance record for 1914; and Leonino Da Zara, the father of Italian aeronautics.

Interwar Period

Marcel Bloch (later *Dassault) became a major aircraft manufacturer in France from the period between the two world wars. Harry F. Guggenheim (see *Guggenheim Family) was a U.S. pilot in World War I, and later a lieutenant-commander in the U.S. Navy (and U.S. ambassador to Cuba). His father, Daniel Guggenheim, established the Guggenheim Foundation, at that time the leading private organization in the aeronautics field, and in 1925 he created a pioneer school of aeronautics at New York University. Still active after World War I, Emile Berliner, with the help of his son Henry Adler *Berliner, designed and built three different kinds of helicopters (1919–26). Karl Arnstein was chief construction engineer with the Zeppelin Company; in 1924 one of his airships flew the Atlantic. With the coming of the Nazis he left Germany for America, and from 1934 was employed by the Goodyear-Zeppelin Corporation as chief engineer and vice president. Among the many airships he designed were the dirigibles “Los Angeles” and “Akron,” which were used by the U.S. Navy. America’s first civilian superintendent of airmail was Captain Benjamin B. Lipsner, and Harold Zinn of Savannah was the first flying mail carrier in North and South Carolina. Sergeant Benjamin Roth was the mechanic in the aeronautic squad in the Byrd expedition to the Antarctic in the 1920s. Professor Aldo Pontremoli, head of the department of physics at the University of Milan, was in charge of meteorological research in the 1928 Italian expedition to the North Pole, an expedition which cost him his life. Charles A. Levine (1897–1991) was the first flight passenger over the Atlantic. In 1927 he trav-

eled 3,903 mi. (6,295 km. – a world record at the time) from New York to Eisleben, Germany. Levine himself financed this pioneer flight. In 1930 the Viennese Robert Kronfeld created a world record by gliding 93 mi. (150 km.) and in 1931 he won the London *Daily Mail* prize by gliding over the English Channel. Jewish women pilots included Mildred Kauffman of Kansas City, Peggy Salaman of England (winner of the third prize in the King’s Cup Race in 1931 who established a record in the same year by her flight from England to Cape Town with Gordon Score), and Lena Bernstein of France. A number of Jews were also academic authorities on aerodynamics.

Postwar Aeronautics

Sir Ben *Lockspeiser was deputy director at the British Ministry of Aircraft Production in the critical years of the war from 1941. In France, René Bloch was director of aviation in the French Navy and later in the Ministry of Defense. Erich Schatzki was a pilot and then chief engineer of Lufthansa in pre-Nazi days, and an early general manager of Israel’s El Al. Benedict Cohn was head aerodynamicist for the Boeing Company, and Benjamin Pinkel headed the Rand Corporation’s aero-astronautical department. Richard Shevell (1920–2000) helped design the DC-10 at Douglas Aircraft and taught aeronautics at Stanford.

Astronautics

Jews were involved in the activities of the National Advisory Council for Aeronautics in the U.S.A., and many are concerned with some aspect or other of its successor organization, the National Aeronautics and Space Administration (NASA), which operates the U.S. astronomical program. Three directors of large divisions of NASA were Abe *Silverstein (Lewis Research Center), Abraham Hyatt (program planning and evaluation), and Leonard Jaffe (Communications Systems of Satellites). Daniel Saul *Goldin was the longest-serving director of NASA (1992–2001). Astronaut Jeffrey *Hoffman (1944–) participated in five space missions in the 1980s and 1990s. Two Jewish astronauts who met tragic ends were Judith *Resnik, who died on January 28, 1986, on a space shuttle mission when her Challenger spacecraft blew up on launch, and the Israeli Ilan *Ramon, lost on re-entry in the Columbia mission of January 16–February 1, 2003.

Little is known of the personalities involved in the technical management of the Soviet space program. While it is quite likely that some of them are of Jewish origin, this cannot actually be proved. However, the Soviet cosmonaut Lieutenant-Colonel Boris Volynov, commander of spaceship “Soyuz-5” which in January 1969 performed the first link-up in space with a transfer of cosmonauts from one spaceship to another, was reported to be Jewish.

[Samuel Aaron Miller]

AESCOLY (Weintraub), AARON ZE'EV (1901–1948), Hebrew writer, historian, and ethnologist. Aescoly studied in

Berlin, Liège, and Paris, where for a short time he taught at the Ecole Nationale des Langues Orientales Vivantes. In 1925 he immigrated to Palestine, although he did scholarly research in Paris from 1925 to 1930 and from 1937 to 1939. From 1939 he directed the I. Epstein Training College for kindergarten teachers which he had founded. During World War II he served in the British Army and, as chaplain, in the Jewish Brigade. Aescoly's contributions to Jewish scholarship cover a wide field. In the introduction to his critical edition of *Sippur David Reuveni* ("Story of David Reuveni," 1940), and in a number of other studies, he dealt with messianic movements. His edition of Hayyim Vital's *Sefer ha-Hezyonot* (1954) and his *Ha-Tenuot ha-Meshihyyot be-Yisrael* ("Messianic Movements in Israel," 1956) were both published posthumously. His ethnological writings include *Geza ha-Adam* ("The Human Race," 1956²), *Yisrael* (1953²), and a number of studies on the *Beta Israel (*Sefer ha-Falashim*, 1943; *Habash*, 1936; *Recueil de textes falashas*, 1951). Aescoly's historical studies include *Ha-Emanzipazyah ha-Yehudit*, *Ha-Mahpekhah ha-Zarefatit u-Malkhut Napoleon* ("Jewish Emancipation, the French Revolution and the Reign of Napoleon," 1952); a history of his native community of Lodz (1948); and an edition of S. Luzzatto's book on the Jews of Venice (published with D. Lattes' translation, 1951). On literature he wrote *Ma'amar ha-Sifrut* (1941) and translated writings of Lao-Tse (1937). He also edited S.D. Luzzatto's *Yesodei ha-Torah* (1947).

AFENDOLO, CALEB BEN ELIJAH (1464?–1525), Karaite scholar and poet. Born probably in Adrianople, he lived most of his life in the village of Kramariya near *Constantinople, and ultimately in *Belgrade where he died. A pupil of his brother-in-law, Elijah *Bashyazi, Afendopolo remained an Orthodox Karaite of the school of *Aaron b. Elijah of Nicomedia, although he was on friendly terms with several Rabbanite scholars. He acquired much of his knowledge of arithmetic, geometry, astronomy, and Greek-Arabic philosophy, including the works of Maimonides, from the Rabbanite Mordecai *Comtino, and learned modern languages, such as Italian, Greek, and Arabic. Maimonides' views on the messianic era and on the purpose of the commandments proved a formative influence. Afendopolo taught and wrote on a variety of subjects. Most of his numerous treatises remain in manuscript, now in various collections, and often treat diverse unrelated topics.

While surpassing his Karaite contemporaries in the depth and breadth of his scientific studies, Afendopolo lacked originality. A talented eclectic, he mastered the wealth of past and contemporary scholarly material at his disposal, and his writings are a valuable source of reference concerning scholars and works whose existence would otherwise remain unknown. He owned an extensive library of original manuscripts as well as copies he made himself. His works include (1) an unfinished supplement to *Adderet Eliyahu* by Eli-

jah Bashyazi (1532); (2) *Iggeret ha-Maspeket*, on dietary and other laws; (3) *Patshegen Ketav ha-Dat*, on the reading of the Pentateuch and *haftarot*; (4) *Asarah Ma'amarot*, sermons reflecting his religious views (fragments are included in *Dod Mordekhai* by *Mordecai b. Nisan ha-Zaken, Hamburg, 1714); (5) indices to *Ez Hayyim* by Aaron b. Elijah and to *Eshkol ha-Kofer* by Judah b. Elijah *Hadassi; (6) *Avner ben Ner*, a discourse on ethics in the style of the Arabic *maqāmāt*; (7) *Gan ha-Melekh*, poetry and prose, containing autobiographical and historical details as well as two elegies on the expulsion of the Jews from Lithuania in 1495; (8) *Mikhlah Yofi*, on the principles of astronomy, with relation to the calculation of the calendar (9) liturgical poems, included in the Karaite prayer book; (10) a commentary on the Nicomachean arithmetic; (11) *Gal Einai*, on astronomy (known only by the title); and (12) *Iggeret Maspeket*, mainly a glossary of astronomical terminology.

[Moshe Nahum Zobel]

°AFFONSO. Name of several kings of Portugal. **AFFONSO HENRIQUES** (1139–1185), the first king of Portugal, continued the relatively tolerant policy to the Jews of his Castilian forebears, giving the Jews autonomy in civil as well as criminal cases. His *almoxarife* or treasurer was Yaḥia ibn Ya'ish, to whom he granted considerable privileges. His grandson, **AFFONSO II** (1211–1223), also had Jews in his employment in responsible offices, though he confirmed the anti-Jewish provisions of the *Lateran Council of 1215 and endorsed the resolutions passed by the Cortes at Coimbra encouraging baptisms. **AFFONSO III** (1245/8–1279) on the other hand, almost systematically disregarding many ecclesiastical restrictions against the Jews, employed them widely in the financial administration, and reorganized the internal affairs of the Jews of the kingdom. He was responsible, among other matters, for the organization of the office of chief rabbi (*Arraby moor) of Portugal, with its far-reaching powers. **AFFONSO IV** (1325–1357) was unfavorably disposed toward the Jews, enforced the wearing of the Jewish *badge, and restricted the right of emigration for any person of property. **AFFONSO V** (1438–1481) relaxed the enforcement of the anti-Jewish regulations. He is memorable for having in his service Isaac *Abraham and Joseph ibn Yaḥia, with whom he is said to have had learned discussions on science and philosophy. He attempted with only qualified success to suppress the anti-Jewish riots of 1449 and punish the ringleaders. In his compilation of laws, collected under the title *Ordenações Affonsinas*, the regulations concerning the Jews occupy a prominent place (book 2). In

an edict of 1468, while renewing the restriction of the Jews to their *judárias*, he permitted them to do business at the fairs elsewhere.

[Cecil Roth]

AFGHANISTAN, Muslim state in central Asia (**Khorasan** or **Khurasan** in medieval Muslim and Hebrew sources).

History

Early Karaite and Rabbanite biblical commentators regarded Khorasan as a location of the lost *Ten Tribes. Afghanistan annals also trace the Hebrew origin of some of the Afghan tribes, in particular the Durrani, the Yussafzai, and the Afridi, to King *Saul (Talut). This belief appears in the 17th-century Afghan chronicle *Makhzan-i-Afghān*, and some British travelers in the 19th century spread the tradition. Because of its remoteness from the Jewish center in Babylonia, persons unwanted by the Jewish leadership, such as counter-candidates for the exilarchate (see *Exilarch), often went to live in or were exiled to Afghanistan.

Medieval sources mention several Jewish centers in Afghanistan, of which *Balkh was the most important. A Jewish community in Ghazni is recorded in Muslim sources, indicating that Jews were living there in the tenth and eleventh centuries. A Jew named Isaac, an agent of Sultan Mahmud (ruled 998–1030), was assigned to administer the sultan's lead mines and to melt ore for him. According to Hebrew sources, vast numbers of Jews lived in Ghazni but while their figures are not reliable, Moses *Ibn Ezra (1080) mentions over 40,000 Jews paying tribute in Ghazni and *Benjamin of Tudela (c. 1170) describes "Ghazni the great city on the River Gozan, where there are about 80,000 [8,000 in a variant manuscript] Jews..." In Hebrew literature the River Gozan was identified with Ghazni in Khorasan from the assertion of Judah *Ibn Ba'lam that "the River of Gozan is that river flowing through the city of Ghazni which is today the capital of Khorasan."

A Jewish community in Firoz Koh, capital of the medieval rulers of Ghūr or Ghuristan, situated halfway between Herat and Kabul, is mentioned in *Tabaqāt-i-Nāširī*, a chronicle written in Persian (completed around 1260) by al-Jūzjānī. This is the first literary reference to Jews in the capital of the Ghūrids. About 20 recently discovered stone tablets, with Persian and Hebrew inscriptions dating from 1115 to 1215, confirm the existence of a Jewish community there. The Mongol invasion in 1222 annihilated Firoz Koh and its Jewish community.

Arab geographers of the tenth century (Ibn Ḥawqal, Iṣṭakhrī) also refer to Kabul and Kandahar as Jewish settlements. An inscription on a tombstone from the vicinity of Kabul dated 1365, erected in memory of a Moses b. Ephraim

Map of Afghanistan showing places of Jewish settlement in the Middle Ages and modern times.

Bezalel, apparently a high official, indicates the continuous existence of a Jewish settlement there.

The Mongol invasion, epidemics, and continuous warfare made inroads into Jewish communities in Afghanistan throughout the centuries, and little is known about them until the 19th century when they are mentioned in connection with the flight of the *anusim of Meshed after the forced conversions in 1839. Many of the refugees fled to Afghanistan, Turkestan, and Bokhara, settling in Herat, Maimana, Kabul, and other places with Jewish communities, where they helped to enrich the stagnating cultural life. Nineteenth-century travelers (*Wolff, *Vámbery, *Neumark, and others) state that the Jewish communities of Afghanistan were largely composed of these Meshed Jews. Mattathias Garji of Herat confirmed: "Our forefathers used to live in Meshed under Persian rule but in consequence of the persecutions to which they were subjected came to Herat to live under Afghan rule." The language spoken by Afghan Jews is not the Pushtu of their surroundings but a *Judeo-Persian dialect in which they have produced fine liturgical and religious poetry. Their literary merit was recognized when Afghan Jews moved to Erez Israel toward the end of the 19th century. Scholars of Afghanistan families such as Garji and Shaul of Herat published Judeo-Persian commentaries on the Bible, Psalms, *piyyutim*, and other works, at the Judeo-Persian printing press established in Jerusalem at the beginning of the 20th century. The Jews of Afghanistan did not benefit from the activities of European Jewish organizations. Economically, their situation in the last century was not unfavorable; they traded in skins, carpets, and antiques.

[Walter Joseph Fischel]

Recent Years

Approximately 5,000 Jews were living in Afghanistan in 1948. Of these, about 300 remained in 1969. They were concentrated in Kabul, Balkh, and mainly Herat. (See Map: Jews in Afghanistan.) Jews were banished from other towns after the assassination of King Nādir Shāh in 1933. Though not forced to live in separate quarters, Jews did so and in Balkh they even closed the ghetto gates at night. A campaign against Jews began in 1933. They were forbidden to leave a town without a permit. They had to pay a yearly poll tax and from 1952, when the Military Service Law ceased to apply to Jews, they had to pay ransoms for exemptions from the service (called *harbiyya*). Government service and government schools were closed to Jews, and certain livelihoods forbidden to them. Consequently, most Jews only received a *heder* education. There were only a few wealthy families, the rest being poverty-stricken and mostly employed as tailors and shoemakers. Until 1950 Afghan Jews were forbidden to leave the country. However, between June 1948 and June 1950, 459 Afghan Jews went to Israel. Most of them had fled the country in 1944, and lived in Iran or India until the establishment of the State of Israel. Jews were only allowed to emigrate from Afghanistan from the end of 1951. By 1967, 4,000 had gone to Israel. No Zionist activity was permitted, and no emissaries from Israel could reach Afghanistan. There was a *hevrah* (“community council”) in each of the three towns in which Jews lived. The *hevrah* was composed of the heads of families; it cared for the needy, and dealt with burials. The *hevrah* sometimes meted out punishments, including excommunication. The head of the community (called *kalāntar*) represented the community in dealings with the authorities, and was responsible for the payment of taxes.

According to the *New York Times*, one Jew remained in Afghanistan in 2005.

[Haim J. Cohen]

Folklore

A survey of local Jewish-Afghan folk tales and customs reveals the influence of both Meshed (Jewish-Persian) and local non-Jewish traditions. This is especially true of customs relating to the year cycle and life cycle. The existence of several unique customs, such as the presence of “Elijah’s rod” at childbirth, and several folk cures and charms are to be similarly explained. Jewish-Afghan folk tales have been collected from local narrators in Israel and are preserved in the Israel Folk Tale Archives. A sample selection of 12 tales from the repertoire of an outstanding narrator, Raphael Yehoshua, was published in 1969, accompanied by extensive notes and a rich bibliography.

AFIA, AARON (16th century), Sephardi physician and philosopher in practice in Salonika. With wide linguistic and scientific knowledge, he collaborated in the Hebrew translation by *Daniel b. Perahyah of the “Perpetual Almanac” of Abraham *Zacuto (Salonika, 1543), and in Moses *Almosnino’s still unpublished version of the “Treatise on the Sphere” by Johannes de Sacrobosco and other works. His own treatise on the nature of the soul (*Opiniones sacadas de los philosophos sobre la alma...*) was appended to *Los dialogos de Amor* (Venice, 1568), the Spanish translation of Judah *Abrabanel’s (Leone Ebreo) “Dialogues of Love.” Afia was friendly with the great physician *Amatus Lusitanus, who records (Centuria 7, 24th cure) how they discussed together with a colleague recently arrived from Portugal the source of laughter, which Afia, following Aristotle, placed in the heart. Afia is a remarkable exemplification of the fashion in which European culture in its broadest sense continued to flourish for a time among the descendants of the exiles from Spain.

AFIKE JEHUDA (Heb. אֶפֶיִקֵי יְהוּדָה), society for the “advancement of study of Judaism and of religious consciousness,” founded in Prague in 1869 on the initiative of Samuel Freund, and named in memory of Judah Teweles. It supported the *talmud torah* (until taken over by the community in 1879), and Teweles’ yeshivah. The society organized lectures (to which women were admitted from 1879) by outstanding scholars and published them, mainly in the two anniversary volumes, *Afike Jehuda Festschrift* (1909 and 1930). A project initiated in 1919 by the society to publish a Jewish biographical lexicon did not materialize. The society continued to exist until the German occupation of Prague in 1939.

AFIKIM (Heb. אֶפֶיִקִים; “stream courses,” referring to the Jordan and the Yarmuk Rivers), kibbutz in the central Jordan Valley, in Israel. Afikim, affiliated with Ihud ha-Kevuzot ve-ha-Kibbutzim, was founded in 1932 by pioneer youth from Soviet Russia, who were among the last organized groups able to leave that country in the 1920s. In 1967 Afikim had 1,290 inhabitants from many countries, making it one of the largest communal settlements in Israel. In 2002 its population

was 1,030. In addition to engaging in intensive farming (irrigated field crops, fodder, milch cattle, poultry, carp ponds, bananas, dates, grapefruit), the kibbutz economy was based on a large plywood factory, producing principally for export. It also became a partner in the nearby factory for cellotex and similar materials. The prehistoric site of al-'Ubaydiyya is situated near the kibbutz.

[Efraim Orni]

AFIKOMAN (Heb. אֶפִיקוֹמָן), name of a portion of *mazzah* (unleavened bread) eaten at the conclusion of the Passover evening meal. In most traditions, early in the evening, the person conducting the *seder* breaks the middle of the three *mazzot* into two pieces, putting away the larger portion, designated as *afikoman*, for consumption at the conclusion of the meal. Some Yemenites, who use only two *mazzot*, break off a part of the lower *mazzah* just at the beginning of the meal. The word *afikoman*, of Greek origin but uncertain etymology, probably refers to the aftermeal songs and entertainment (cf. TJ, Pes. 10:8, 37d), accompanied by drinking, which was common after festive meals in ancient times. The Mishnah states: "One may not add *afikoman* after the paschal meal" (Pes. 10:8), for the paschal meal was not to be followed by customary revelry (Pes. 119b–120a). This ruling was later understood to mean that the paschal lamb should be the last food eaten during the evening and, after the cessation of the paschal sacrifice, *mazzah* replaced it as the last food eaten during the evening. This *mazzah* is first referred to as *afikoman* in medieval times (cf. *Maḥzor Vitry*). This *afikoman* has become a symbolic reminder of the paschal sacrifice.

In many Ashkenazi communities it is customary for the children present to attempt to "steal" the *afikoman* from the person leading the *seder* (who therefore tries to "hide" it from them). A favorite time for such a "theft" is while the leader is washing his hands before the meal, and the "ransom" is usually the promise of presents. The custom encourages the children to keep awake during the *seder* (see Pes. 109a). This practice of stealing the *afikoman* is, however, nearly unknown in Sephardi Jewish communities.

It became a folk custom to preserve a piece of the *afikoman* as a protection against either harm or the "evil eye," or as an aid to longevity. The power attributed to this piece of *mazzah* is based on the assumption, in the realm of folklore rather than law, that its importance during the *seder* endows it with a special sanctity. Thus, Jews from Iran, Afghanistan, Salonika, Kurdistan, and Bukhara keep a portion of the *afikoman* in their pockets or houses throughout the year for good luck. In some places, pregnant women carry it together with salt and coral pieces, while during their delivery they hold some of the *afikoman* in their hand. Another belief is that this special *mazzah*, if kept for seven years, can stop a flood if thrown into the turbulent river, and the use of the *afikoman* together with a certain biblical verse is even thought capable of quieting the sea. At the *seder* Kurdi Jews tie this *mazzah* to the arm of one of their sons with this blessing: "May you

so tie the *ketubbah* to the arm of your bride." Sephardi Jews in Hebron had a similar practice. In Baghdad someone with the *afikoman* used to leave the *seder* and return disguised as a traveler. The leader would ask him, "Where are you from?" to which he would answer, "Egypt," and "Where are you going?" to which he would reply, "Jerusalem." In Djerba, the person conducting the *seder* used to give the *afikoman* to one of the family, who tied it on his shoulder and went to visit relatives and neighbors to forecast the coming of the Messiah.

[Dov Noy / Joseph Tabory (2nd ed.)]

AFRICA. The propinquity of the land of Israel to the African continent profoundly influenced the history of the Jewish people. Two of the patriarchs went down to *Egypt; the sojourn of the children of Israel in that land left an indelible impression on the history of their descendants; and the Exodus from Egypt and the theophany at Sinai, in the desert between Africa and Asia, marked the beginning of the specific history of the Hebrew people. Later, in the time of the judges and the monarchy, Palestine was periodically occupied by the Egyptian pharaohs, especially after Thutmose III, in their attempts to extend their influence northward. Important Egyptian archaeological remains have been found throughout Erez Israel, testifying to indubitable Egyptian influences in the background, literature, and language of the Bible. After the destruction of the First Temple in 586 B.C.E. some of the survivors took refuge in Egypt and the Jewish military colony at *Elephantine; ample records which survive from the Persian period seem to have originated at about this time. This settlement at Elephantine marked the beginning of the extension of Jewish influences toward the interior of the continent, and in all probability it was not the only colony of its kind.

Intensive Jewish settlement in Africa began after the conquests of Alexander the Great in the fourth century B.C.E. For the next hundred years or more, Erez Israel was intermittently under the rule of the Egyptian Ptolemies, alternating with the Syrian Seleucids; the country naturally gravitated toward Africa economically as well as politically. Moreover, in the course of their periodic campaigns north of the Sinai Peninsula the Ptolemies deported some elements of the local population to the central provinces of their empire, or brought there prisoners of war as slaves. According to ancient tradition, Alexander had specifically invited Jews to settle in his newly founded city of *Alexandria, and it is certain that early in its history they formed a considerable proportion of its population. Before long, Alexandria became a great center of Jewish

Main concentrations of Jewish population on the African continent at different periods.

culture expressed in the Greek language and largely in terms of Greek civilization culminating in the *Septuagint translation of the Bible and in the allegorical writings of *Philo. It is significant that inscriptions found near Alexandria provide the earliest positive evidence of the existence of the synagogue as an institution. From Egypt the Jewish settlement spread westward along the North African coast reaching *Cyrene at least as early as the second century B.C.E. According to some

scholars, Palestinian Hebrews had reached further west long before this, as early as the days of the First Temple, accompanying and helping the *Phoenicians in their expeditions and playing an important role in the establishment of the Punic colonies, including *Carthage itself. It is further suggested that these settlers had a considerable influence in the interior of Africa and were ultimately responsible for the vaguely Jewish ideas and practices that may still be discerned in certain areas. In any case, in the Roman imperial period there were Jewish settlements throughout the Roman provinces as far west as the Strait of Gibraltar. In some areas the Jewish colonies were of great numerical importance and were able to play an independent political role. In Egypt the friction between the Alexandrian Jewish colony and its neighbors was so marked that it developed into a perpetual problem and seems almost to have anticipated the 19th-century antisemitic movement. After the fall of Jerusalem in 70 C.E., *Zealot or Sicarii fugitives from the Palestinian campaigns fled to Egypt, where they instigated a widespread revolt among the Jewish population. The rebels succeeded in dominating large stretches of the countryside, though they were unable to capture the fortified cities. A similar revolt on a smaller scale, about which less information has survived, seems to have occurred simultaneously in Cyrene.

Although swiftly subdued by the Romans, these outbreaks were soon followed by the Great Revolt of 115–7 all along the North African coast, at least as far as Cyrene, as well as in Cyprus and Mesopotamia. This revolt, organized apparently by some directing spirit of real genius, momentarily achieved sweeping success, with the insurgents dominating Cyrene and large tracts of the Egyptian countryside. It was, however, bloodily suppressed, and the Jewish settlements in

the area of revolt never fully recovered from this blow. When Christianity was adopted as the official religion of the Roman Empire, Judaism was at a further disadvantage. Force as well as blandishment was exerted against the Jews; there were bloody anti-Jewish riots in Alexandria, and the significance of North African Jewry for a time waned almost to vanishing point. When in the sixth century the Byzantines reoccupied the former Roman provinces of North Africa, organized Jewish life was systematically suppressed. On the other hand, Jewish influence during the preceding period had not been restricted to the coastal strip, or to persons of Jewish birth. There is some evidence that suggests conscious proselytizing efforts by the Jews in the African interior, or at least extensive imitation of Jewish rites and beliefs there. Traditions of Jewish origin and traces of Jewish practice are to be found among Berber tribes and black peoples well into the continent and it may well be that the *Beta Israel of Ethiopia survive as testimony to a proselytizing activity that once attained considerable proportions. The curious tales told in the ninth century by the Jewish traveler *Eldad ha-Dani of independent Jewish tribes apparently in the African interior, may be a romanticization of what he had actually seen and experienced. The Arab invasions of the seventh century seem to have found only very small scattered Jewish communities along the African coast. The story of the "Jewish" Berber queen Dahiya al-Kahina seems to be largely legendary although it may be that at that time a woman ruled over a Judaizing Berber tribe. After the Arab conquest these communities were revived and probably reinforced by new immigrants, mainly from Asia, who accompanied the Arab conquerors, or who came to take advantage of the new economic opportunities. The new communities were completely Arabized in language and social life; hardly an echo or trace of the previous Greco-Roman Jewish culture can be discerned among them. The newly founded city of Fostat (Old *Cairo) became the largest Jewish center in Egypt; further west *Kairouan in *Tunisia was of primary importance and, indeed, from the eighth to the 11th centuries was perhaps the greatest center of rabbinic culture outside Babylonia. The documents found in the Cairo *Genizah* make possible a reconstruction of the economic, social, and religious life of the Jews throughout this area in graphic detail. It is significant that in the ninth century *Saadia Gaon, who may be credited with the revitalization of Jewish scholarship in Mesopotamia, was born, and apparently educated, in the Fayyum district of Egypt. The work of the physician and philosopher Isaac *Israeli, who lived in Kairouan, typified the contribution that the Jews of this area made to contemporary science. The condition of the Jews in Africa under Muslim rule was generally favorable, subject to the usual discriminatory provisions of the Islamic code, which were sporadically enforced; there was a surge of violent persecution in Egypt in the early 11th century, but it was an isolated episode. The triumph of the fanatical, unitarian *Almohad rulers in the 12th century proved disastrous to the Jews; the practice of Judaism was prohibited in *Morocco and the neighboring lands, and they were forcibly converted to Islam.

The result was that for a long time Judaism could be observed only in clandestine circumstances. A considerable number of Jews, including the family of Moses *Maimonides, migrated east, making Egypt a major center of Jewish cultural life. After the Almohad domination ended, Jewish life in northwest Africa recovered slowly, but on a restricted and culturally retrograde scale. The wave of massacres and expulsions in Spain and the Balearic Islands in 1391 resulted in a large migration across the Strait of Gibraltar; first there were refugees from these onslaughts and later, on a larger scale, those who had been baptized by force and now desired to revert to Judaism. Thus, especially in the coastal towns of what was later called *Algeria, alongside the old established, quasi-native "Berber" communities, fresh "Spanish" colonies with their own rites and traditions and of a far higher cultural standard arose. The number of Spanish (and later Portuguese) fugitives reaching Africa, primarily Morocco, again increased after the expulsion from Spain in 1492. Their sufferings at the hands of marauders and rapacious local rulers were sometimes appalling. However, in the end they were able to adjust themselves, and henceforth a well-organized Spanish-speaking community, observing the religious regulations provided by "takkanot of Castile," dominated Jewish life as far east as Algiers. Further along the Mediterranean coast and in the interior (except in the largest towns), the Spanish element was less significant.

The Jews generally continued to live under the universal Muslim code, in many places compulsorily confined to the Jewish quarter, their lives hemmed in by discriminatory regulations. They were often compelled to wear a distinctive garb, they had to show respect to Muslims in the street, and they were excluded from certain occupations. On the other hand they were at least allowed to reside at will, except in one or two "holy" cities such as Kairouan, and the periodic Christian incursions on the coastal towns frequently entailed disaster for them. In the ports especially, the Jews played an economic role of great importance, and, with their linguistic versatility, were the principal intermediaries for transactions with European merchants. Occasionally, Jews were dispatched as ambassadors or envoys to the European powers. Sometimes, a person of outstanding ability would become minister of finance or even vizier, wielding much influence until the disastrous fall which was generally in store for him, sometimes involving his coreligionists as a body.

This description characterizes the history of the Jews almost throughout the Barbary States from the 16th century until well into the 19th. Conditions were somewhat but not conspicuously better in the areas farther east, particularly in Egypt, especially after the establishment of Turkish rule at the beginning of the 16th century. It was only with the introduction of European influences, beginning in Algeria in 1830 and culminating in Morocco and Tripolitania after 1912, that the North African Jews were relieved to a great extent of their medieval status. Nevertheless, except in Egypt and some coastal towns, the process of modernization within the communities was slow. On the other hand, in the upper classes the outward occiden-

talization of the Jews in language and social life became very marked, while the French administration in Algeria formally recognized the Jews as a European element, the Crémieux decree in 1870 giving Algerian Jews French nationality.

Meanwhile occidental Jews had established themselves in areas of European settlement at the southernmost tip of the African continent. Isolated settlers are recorded here in the early 19th century; a community largely of English origin was founded in Cape Town in 1841, spreading from there to other places. The Kimberley diamond field, which opened in the 1860s, was a considerable stimulus to new settlement. With the discovery of gold in Transvaal in the 1880s many Jews emigrated there from Eastern Europe, founding important communities in and around Johannesburg. After World War I, immigration, especially from Lithuania, assumed relatively large proportions, and the South African Jewish community of some 100,000 was among the most affluent in the world. From South Africa the Jewish settlement spread northward into Rhodesia (Zimbabwe), as soon as that territory was opened up in the 1890s. During the period between World War I and World War II there was a Sephardi influx as well, mainly from Rhodes, which spread to the Belgian Congo. There were also small European Jewish colonies in the British East African territories, joined by immigrants from Egypt and even Yemen.

The Vichy regime in France during World War II brought a temporary setback in Jewish status in the French-dominated areas of North Africa and the revocation of the Crémieux decree. The subsequent Nazi military occupation had distressing, although not enduring, consequences. The European withdrawal from Africa after World War II, coupled with economic changes in that continent, profoundly affected the Jewish communities, all the more so with the wave of anti-Jewish feeling that spread throughout the Arab world after the foundation of the State of Israel. A large portion of the Jewish community of Tunis and almost the whole Jewish community of Algeria left (mostly for France) when the French period of domination ended. The changed circumstances resulted in the migration also of the Jews of Egypt and Cyrenaica, in great part to Israel. *Aliyah* to Israel, immigration to France, and other countries also reduced the Jewish settlement in Morocco, numerically the largest in Africa, to one-fifth of its former number, approximately 50,000 in 1969; political conditions there did not deteriorate formally. The only part of the continent in which the Jewish communities did not initially diminish was South Africa, although gradually with the end of apartheid the community dropped significantly in numbers. By 2005 the community had fallen to about 75,000 with some 1,800 Jews a year emigrating to other countries largely because of the dramatic rise in violent crime.

The most remarkable example of Black Judaizing movements is to be found in South Africa and Zimbabwe among the Lemba tribe, and there are similar movements throughout the continent which range from movements which depend on perceived shared origins – sometimes invoking the myth

of the Ten Lost Tribes of Israel – to movements of conversion such as the Bayudaya in Uganda.

The establishment of the State of Israel brought a renewal of the movement to bring the Beta Israel of Ethiopia into closer relations with world Jewry. The State of Israel also established cordial relations with the emergent African states, entering into diplomatic relations with them and sending economic, military, and agricultural experts to assist them in solving their problems (see Israel, Historical Survey, Internal Aid and Cooperation). However, under pressure from the Arabs after the Yom Kippur War of 1973, 29 African countries broke off diplomatic relations with Israel, though in the course of the years, starting with the Democratic Republic of the Congo (formerly Zaire) in 1982, most reestablished relations.

[Cecil Roth]

AFRICA, NORTH: MUSICAL TRADITIONS. Geographically, North Africa (the countries of the Maghreb, i.e., Morocco, Tunisia, Algeria, and Libya) belongs to Africa, but culturally it is a part of the Islamic world. Some scholars have set up a twofold division of the entire area: the musical culture of the coastal region and that of the interior, roughly corresponding to “urban” and “rural” or “Andalusian” (i.e., Spanish-influenced) and “Berber” (i.e., autochthonous) music. Neither of these areas however, is homogeneous, and there are sometimes considerable differences in musical style between one coastal or interior district and another. North Africa is therefore a musical crossways of many traditions: old Mediterranean, Berber, Bedouin, Near Eastern (including Turkish, and recently Egyptian), Andalusian (or “Moorish”), and Saharan. Not all of these are present at the same place and time, and often one is faced with stylistic blends, which are difficult to define.

The Jews, historically among the oldest elements of the population, have taken an active part in each stage of the area's musical history. They have also preserved more elements

from older traditions, with the conservation typical of “fringe cultures,” and, in addition, have absorbed still other outside influences through factors in their own history. Both before and after the appearance of Islam there was close and permanent contact with Palestinian, Babylonian, and Egyptian Jewry. During the *reconquista* and after the expulsion of the Jews from Spain, Spanish, Portuguese, and later also Italian Jews settled in North Africa. The musical usages of the immigrants were influenced by the local ones and influenced them in return. This blending of styles and openness to influence has remained typical of North African Jewish music.

Thus, the musical traditions and practices of the North African Jews represent a conglomerate of a variety of old and new, sacred and secular, folk and art, local and shared musical styles. One can also add the advent of recent innovative stylistic blends representing the attempt to modernize the old tradition. Interestingly, talented Jewish musicians in all four countries were intimately involved in the creation and promotion of the new styles. As a rule, one can state that the musical traditions and practices of the North African Jews are interconnected in various ways with those of the non-Jewish environment. However, comparisons between the Jewish and non-Jewish musical styles are particularly difficult to make, since each is in itself a complex of historical and cultural entities, not to mention the serious obstacles characterizing any other oral tradition – the lack of musical documents and the lack of accuracy in oral transmission. This makes it impossible to state what derives from a Jewish and what from an Arab source. Nevertheless, one can speak of certain specific traits.

It seems nevertheless that the distinguishing traits should be essentially sought in the linguistic, thematic, and functional particularities. First and foremost are the musical rendering of biblical readings and prayers, and the singing of liturgical Hebrew poems, *piyyuṭim*, written by the most famous poets of the Jewish people as well as by locally distinguished ones. These include hymns of praise, supplications, lamentations, and the celebration of holidays. The French specialist in Moroccan music, Alexis Chottin, mentions the remarkable fact that when Hebrew texts are adapted to replace the original, they maintain the Arab metric and prosody, which, he points out, is not translation. In addition to the setting of the borrowed melodies to Hebrew texts, this type of arrangement usually leads to melodic and rhythmical changes, so their functional use in Jewish-specific circumstances may be considered as factor highlighting their Jewishness. A special category of bilingual poetry called *maṭrūz* (combined Hebrew and Arab verses and strophes) should also be noted. The question of Jewishness in the Oriental music appeared in connection with the intriguing phenomenon which arose from the broad-based ethnic movement of the 1980s in Israel. Challenging the widely held belief that Oriental musical traditions have a folk and indigenous background, representatives of the latter responded by arguing that the erudite mystical-religious ceremonial music known as **bakkashot*, should be placed on the same level as western classical music.

The singing of *bakkashot* and *piyyuṭim* always refers to North African classical music, which, itself, is identified with the Andalusian compound and multi-sectional form of the *nūba* in all of the African centers. Established in Spain, the basic components and characteristics of the Andalusian *nūba* have survived in the major traditions of Fez, Tlemcen, Algier, and Tunis where they are called respectively: *āla*, *gharnāṭī*, *ṣan'a*, and *ma'lūf*. Some differences notwithstanding, they are very similar in spirit and structure. The individual *nūba* is named after the mode or *ṭab*^c (nature or temperament); for example *nūba dīl*, *nūba raṣd*, etc. The overall physiognomy of the *nūba* in all centers is more or less alike: it comprises an instrumental prelude or preludes and a series of pre-composed vocal pieces that represent autonomous phases of the *nūba*, each having its own set of poetic texts as well as melodic and rhythmic characteristics. Most of the poems sung in this repertory consist of *muwashshahāt* and free-measured pieces that intersperse the various phases. The overall structure as well as the individual phases are governed not only by modal unity but also by rhythmic acceleration that reaches its peak toward the end of the *nūba*.

Morocco

Travelers who record their impressions usually display exceptional intellectual curiosity and their observations can supply important evidence. By an extraordinary coincidence, three different travelers recorded their impressions of wedding ceremonies held in the same community of Tangier: the Jewish Italian writer Samuel *Romanelli in 1787; the French painter Delacroix in 1832; and the French author Alexandre Dumas in 1832. All three travelers describe Jewish women dancing, and the traditional group of three musicians, which accompanies the dancing and singing: the *'ūd* (the classical Arab short-necked lute), the *kamanja* (short-necked bowed lute) or the modern violin which has come to be its substitute, the *darbūka* (pottery vessel-drum) or the *ṭār* (frame drum). The *kamanja* or violin is played in the medieval fashion, with the body of the instrument resting on the knee. Delacroix, who also recorded in his journal that the Jewish musicians of Mogador were the best in all Morocco, depicted this traditional ensemble along with a dancer. Romanelli records that the instrumentalists, poet-singers, and preachers were remunerated in two ways. In the synagogue, the intended payment was only announced out loud, but outside the synagogue the coins were immediately put on the instrument or on the performer's breast.

Jewish musicians also distinguished themselves as entertainers in local gentile society, either in company with Muslim musicians or as special “Jewish bands.” One folktale tells how such a Jewish ensemble was commanded to give a concert before the sultan on the Ninth of Av (see *Av, Ninth of). Since they could not refuse to appear, they played the melodies of the traditional **kinot*, and henceforth were known as “The Singers of Woe.”

The art of the *payṭan* (religious poet, and by extension, singer of religious poetry) is also rooted strongly in the Andalusian

lusian tradition. In almost every synagogue there is a *payṭan* in addition to the *ḥazzan*. His principal task is to sing prayers such as *Nishmat* and **Kedushah*, and all the *piyyuṭim*. A *payṭan* may take part in the performance of the *bakkashot*, but not every *payṭan* possesses the necessary knowledge for this special art, so that a vocally and musically gifted layman will often function as the “leader” there. Since the *bakkashot* were performed early on Sabbath mornings, the instrumental part is completely avoided. As a result, the singers evolved the habit of adding passages sung to the syllables *na na na* in which the role of the accompanying instrument is thus imitated. These syllables and the wealth of vocalizes (textless ornamented phrases) is in fact a remarkable feature of the North African art of singing. When the *bakkashot* and *piyyuṭim* are sung on a weekday, they are usually accompanied by the traditional instrumental ensemble.

In the realm of folk music one should mention the folk tradition of group performance, especially in the Atlas Mountain regions, often in the form of women’s ensembles. Their music and dances are not different from those of the Berber tribes.

Music plays an important role in the pilgrimage festivals at the numerous *hillulot* (sing. **hillula*). It marks and enhances the celebration of a revered public figure and the mass pilgrimage to the site of his burial, which, in some cases, is venerated by both Jews and Muslims. The ritual of sainthood is deeply entrenched in all strata of the people.

A special Moroccan custom is the *taḥdīd*, a ceremony conducted the night before circumcision when it is believed that the newborn, subject, prior to circumcision, to harm by evil forces, is at the highest vulnerability. In this event a sword is used to banish the evil spirits while a selection of appropriate biblical verses is chanted.

Another well-known celebration marked by singing and dancing is the **Maimuna* (which has been transferred to Israel). At these gatherings many original creations of the *qaṣīda* type can be heard. The *qaṣīda*, a popular song in Hebrew or in the vernacular, is sung both by the educated and the lower classes. Some *qaṣīda* songs are anonymous and well-known poets created others. In the framework of the *bakkashot* were introduced dozens of *qaṣīdas* composed by local poets borrowing their tunes from Arab *qaṣīdas*. Their texts include praises of the saints, ethical and religious subjects, and comments on historical and present or recent events. They are sung with or without accompaniment, and the tunes are mostly adaptations of well-known melodies. Such *qaṣīda* songs are found in all North African countries. One of the most talented poets of this genre was David Elkayim (1851–1940), and among the most celebrated *payṭanim* were David Ḥasin (1727–1792), David Iflah, and David **Buzaglo* (1903–1975).

Tunisia

The first and earliest documents focusing on the eternal debate concerning the permissibility of music are the two responses of **Hai Gaon* to questions addressed by representatives of

Tunisian Jewry. One of them, perhaps addressed to the community of **Kairouan*, forbids the *ḥazzanim* to sing poems in the “language of the Ishmaelites,” even at banquets. Another one, often quoted in later literature, is addressed to the community of **Gabès*, and discusses whether the traditional prohibition (Git. 7:1) against singing with instrumental accompaniment and which restricts all secular songs in memory of the destruction of the Temple also applies to wedding celebrations. *Hai Gaon* approved of singing pious hymns of praise on such occasions, but secular Arab love songs were strictly forbidden, even without accompaniment; “and so to what you have mentioned . . . that women play the drums and dance [at such festivities], if this is done in public there is nothing more grave; and even if they . . . only sing, this is most unseemly and forbidden.” The free and unsegregated participation of women singers in wedding festivities, family rejoicings, pilgrimages to saints’ tombs, and their prominence as professional mourners, were probably related to similar usages in Berber society and have survived until the present.

The Tunisian term *la‘b* (lit. amusement but used for dancing) is mentioned in two **Genizah* documents: in one, the birth of a boy in Fostat, Egypt, is celebrated with *la‘b* by his family at Mahdia in Tunisia; in another, a poor Tunisian teacher alludes, surprisingly, to *la‘b* at the burial of his son.

In proximity to Gabès lay the famous Island of **Djerba*, home to a quite old Jewish community. It was there that in 1929 Robert **Lachmann* carried on important fieldwork research with the hope of disclosing in their liturgical cantillation older stratum of Jewish music. His important analytical study of this tradition was published after his premature death (see *Bibl.*).

The output of *piyyuṭim* and songs the Jewish poets wrote in Hebrew and Judeo-Arabic is considerable and played an important educative and socio-cultural role. They cover numerous song genres and themes related to Jewish life.

Toward the end of the 19th century and during the first decades of the 20th Jewish musicians played an essential role in the indigenous cultural reform movement as well as in the crystallization of a new musical style. They were involved in the growth of the cinematographic and record industries and the introduction of the modern Egyptian musical style, and distinguished by the remarkable involvement of numerous talented female musicians. Some of those female musicians established their own café-concert halls, which attracted numerous Jewish and non-Jewish music fans. *Leila Sfez*, who owned a popular café-concert hall, was the aunt of the legendary actress and singer *Ḥbibba Msika*, whose tragic premature death was the subject of a film produced by the Tunisian *Slama Bachar*. Interestingly, the first records of Tunisian music, published in 1908, included the interpretations of the Jewish female musicians: *Louisa the Tunisian*, and the sisters *Semama*, *Fritna*, and *Ḥbibba Darmon*.

In an article dedicated to Jewish musicians published in 1960, the Tunisian author *‘Alī Jandubī* warmly extolled the valuable contribution they made to Tunisian music and musical life. He mentions the special skills of many famous

Jewish female and male musicians, including a few of Libyan origin. Among the famous singers and instrumentalists he mentions are Isaac, Abraham Tibshi, Khaylu al-Sghir, Mridakh Slama and his son Sousou, Gaston Bsiri, H̄biba Msika, and Raoul Journo.

In 1928, the Jerusalemite cantor, *payṭan*, and composer Asher Mizrahi arrived in Tunis, staying until 1967, the year of his return to Israel. He soon became a dominant figure, particularly in the realm of synagogal and paraliturgical music, thus enriching the musical life of the community.

Algeria

Following the riots against the Jews in Spain in 1391, a wave of refugees found shelter in Algeria. Among the newcomers was the rabbinic authority, philosopher, and kabbalist Simeon ben Tzemah *Duran (b. Majorca, 1361), who was elected chief rabbi of Algeria in 1408 and died in 1444. Duran was the author of a comprehensive book, *Magen Avot*, which deals with religious philosophy and diverse sciences, including an important section on the science of music. In addition to generalities he wrote on music, its nature and influence, the bulk of his exposition concerns the biblical accents, which are “genera of melodies,” extolling their importance for the understanding of biblical texts and their rhetoric-musical meanings. Regarding the melodies used for the *piyyuṭim*, he tends to admit that they were adopted from other nations.

We find years later interesting and unique evidence of the involvement of Jewish musicians in indigenous music. It occurs in the book of a young Russian pianist, Alexandre Christianowitch (1835–1874): *Esquisse historique de la musique arabe*, published in 1863. The author, an officer in the czar’s navy, was compelled, for reasons of health, to stay in Algiers. For two years he did research on the local classical music. He reports that his first encounter with indigenous music took place in a Moorish café-concert hall where he heard a group of Jewish musicians, and that later on his Muslim mentor was critical concerning the authenticity of the classical music played by the Jews. This is, however, not the case in recent Muslim sources, which, on the contrary, warmly extol the role played by Jewish musicians such as Maalem Benfarachou, Laho Seror, and Mouzinou in the preservation of the old classical Andalusian tradition. This approach characterizes in particular the book of Algerian musicologist Nadya Buzar-Kasbadji: *L’Émergence artistique algérienne au xx^e siècle* (published in 1988). The first chapter of this book is, to a large extent, dedicated to the Jewish musician Edmond Nathan Yafil. The author describes him as “an outstanding personage who has been the pivotal actor in an artistic Renaissance movement wherein Arab-Andalusian music constituted the leaven.” She adds that Yafil remained faithful to the Arab-Andalusian tradition, which connected Jews and Arabs, endowing them with a feeling of common identity. Yafil also founded in 1911 the al-Moutribiyya music society, most of whose members were Jewish musicians.

Like their Moroccan, Tunisian, and Libyan Jewish col-

leagues who immigrated to France, Jewish Algerian musicians pursued a successful career in their new environment, often in close collaboration with non-Jews. This is, for instance, the case with the blind female singer and ‘ud player Sultana Da’ud, alias “Reinette l’Oranaise,” who, after she achieved remarkable success in Algeria, continued to be admired by her numerous fans in France for her expressive and poignant art. Samples of her repertory were issued in several cassettes and CDs. Another example is the recent comeback of the popular singer Enrico Massias to the classical music of Algeria. This occurred after the assassination of his master and father-in-law, the celebrated Jewish musician Raymond Leiris.

AFRICAN JEWISH CONGRESS. The African Jewish Congress was founded in 1992 as a representative coordinating body for the Jewish communities in Sub-Saharan African countries. Its main aims are (a) to enable smaller Jewish communities to establish and maintain contact with larger Jewish communities, which in turn provide them with access to various facilities, and (b) to give Africa and African Jews a voice in international Jewry through a properly constituted forum. The establishment of the AJC was made possible by the demise of white minority rule in South Africa, which ended South Africa’s isolation on the international stage and enabled its large Jewish community to take the lead in setting up a representative body for African Jewry. The AJC has its head offices in *Johannesburg, *South Africa, located within the administrative structure of the South African Jewish Board of Deputies (SAJBD) and is affiliated to the *World Jewish Congress. The main professional officer of the AJC is its spiritual leader, who regularly travels to the affiliated countries to, amongst other things, officiate at religious services and life-cycle events, visit individual Jews living in isolated areas, and oversee the maintenance of Jewish cemeteries. Rabbi Moshe Silberhaft has fulfilled this role since the organization’s creation while founder-member Mervyn Smith, a former national president of the SAJBD, has served as its president and represented the orga-

nization at the World Jewish Congress. The AJC holds annual meetings on a rotational basis in the various affiliate countries. These include Botswana, Democratic Republic of the *Congo (Zaire), *Kenya, Lesotho, *Madagascar, Malawi, *Mauritius, Mozambique, Namibia, South Africa, Swaziland, Tanzania, *Uganda, *Zambia, and *Zimbabwe.

[David Saks (2nd ed.)]

AFTALION, ALBERT (1874–1956), economist, born in Bulgaria. Aftalion acquired distinction through his work on the theory of crises, which he attributed to cyclic trends in economic growth. His teaching at the universities of Lille and Paris reflected the influence of the economic theories of the Viennese school. His work represents an analysis of the events of the interwar period, an examination of French inflation from 1919 to 1924, and the movements of gold and international currency in relation to the balance of payments. Aftalion's writings include *Les crises périodiques de surproduction* (1913), *La valeur de la monnaie dans l'économie contemporaine* (1948³), *L'or et sa distribution mondiale* (1932), *L'équilibre dans les relations économiques internationales* (1937), and *L'or et la monnaie, leur valeur. Les mouvements de l'or* (1938).

[Joachim O. Ronall]

AFTERLIFE. Judaism has always maintained a belief in an afterlife, but the forms which this belief has assumed and the modes in which it has been expressed have varied greatly and differed from period to period. Thus even today several distinct conceptions about the fate of man after death, relating to the immortality of the soul, the resurrection of the dead, and the nature of the world to come after the messianic redemption, exist side by side within Judaism. Though these conceptions are interwoven no generally accepted theological system exists concerning their interrelationship.

In the Bible

The Bible is comparatively inexplicit on the fate of the individual after death. It would seem that the dead go down to *Sheol, a kind of Hades, where they live an ethereal, shadowy existence (Num. 16:33; Ps. 6:6; Isa. 38:18). It is also said that Enoch "walked with God, and he was not; for God took him" (Gen. 5:24); and that Elijah is carried heavenward in a chariot of fire (II Kings 2:11). Even the fullest passage on the subject, the necromantic incident concerning the dead prophet Samuel at En-Dor, where his spirit is raised from the dead by a witch at the behest of Saul, does little to throw light on the matter (I Sam. 28:8ff.). The one point which does emerge clearly from the above passages is that there existed a belief in an afterlife of one form or another. (For a full discussion see Pederesen, *Israel*, 1–2 (1926), 460ff. A more critical view may be found in G. von Rad, *Old Testament Theology*, 2 vols., 1962.) Though the talmudic rabbis claimed there were many allusions to the subject in the Bible (cf. Sanh. 90b–91a), the first explicit biblical formulation of the doctrine of the resurrection of the dead occurs in the book of Daniel, in the following passage:

"Many of them that sleep in the dust of the earth shall awake, some to everlasting life, and some to reproaches and everlasting abhorrence" (Dan. 12:2; see also Isa. 26:19; Ezek. 37:1ff.).

In Second Temple Literature

In the eschatology of the apocryphal literature of the Second Temple period, the idea of heavenly immortality, either vouchsafed for all Israel or for the righteous alone, vies with the resurrection of the dead as the dominant theme. Thus IV Maccabees, for instance, though on the whole tending toward Pharisaism in its theology, promises everlasting life with God to those Jewish martyrs who preferred death to the violation of His Torah, but is silent on the subject of resurrection. II Maccabees, on the other hand, figures the latter prominently (cf. II Macc. 7:14, 23; IV Macc. 9:8; 17:5, 18). The doctrine was, however, stressed by sectarian groups and is vividly expressed in the New Testament. For Philo the doctrine of the resurrection is subservient to that of the immortality of the soul and is seen by him as a figurative way of referring to the latter. The individual soul, which is imprisoned in the body here on earth, returns, if it is the soul of a righteous man, to its home in God; the wicked suffer eternal death (see H.A. Wolfson, *Philo*, 2 vols. (1947–48); index, s.v. *Soul, Resurrection*).

In Talmud and Midrash

When a man dies his soul leaves his body, but for the first 12 months it retains a temporary relationship to it, coming and going until the body has disintegrated. Thus the prophet Samuel was able to be raised from the dead within the first year of his demise. This year remains a purgatorial period for the soul, or according to another view only for the wicked soul, after which the righteous go to paradise, *Gan Eden*, and the wicked to hell, *Geihinnom* (Gehinnom; Shab. 152b–153a; Tanh. Va-Yikra 8). The actual condition of the soul after death is unclear. Some descriptions imply that it is quiescent, the souls of the righteous are "hidden under the Throne of Glory" (Shab. 152b), while others seem to ascribe to the dead full consciousness (Ex. R. 52:3; Tanh. Ki Tissa 33; Ket. 77h, 104a; Ber. 18b–19a). The Midrash even says, "The only difference between the living and the dead is the power of speech" (PR 12:46). There is also a whole series of disputes about how much the dead know of the world they leave behind (Ber. 18b).

In the days of the messianic redemption the soul returns to the dust, which is subsequently reconstituted as this body when the individual is resurrected. It is somewhat unclear whether the resurrection is for the righteous alone, or whether the wicked too will be temporarily resurrected only to be judged and destroyed, their souls' ashes being scattered under the feet of the righteous. A view supporting the doctrine of eternal damnation is found, but this is disputed by the claim, "There will be no Gehinnom in future times" (RH 17a; Tos. to RH 16b; BM 58b; Ned. 8b and Ran, *ibid.*; Av. Zar. 3b). The doctrine of the *resurrection is a cornerstone of rabbinic eschatology, and separated the Pharisee from his Sad-

ducean opponent. The Talmud goes to considerable lengths to show how the resurrection is hinted at in various biblical passages, and excludes those who deny this doctrine from any portion in the world to come (Sanh. 10:1; Sanh. 90b–91a; Jos., Wars, 2:162 ff.). The messianic reign is conceived of as a political and physical Utopia, though there is considerable dispute about this matter (Ber. 34b; Shab. 63a; and the glosses of Rashi). At its end will be the world to come (*olam ha-ba*), when the righteous will sit in glory and enjoy the splendor of the Divine Presence in a world of purely spiritual bliss (Ber. 17a). About this eschatological culminating point the rabbis are somewhat reticent, and content themselves with the verse “Eye hath not seen, O God, beside Thee” (Isa. 64:3; Ber. 34b), i.e., none but God can have a conception of the matter. In the world to come the Divine Presence itself will illuminate the world. (For a general discussion see “The Doctrine of the Resurrection of the Dead in Rabbinic Theology” by A. Marmorstein in *Studies in Jewish Theology*, 1950.)

In Medieval Jewish Philosophy

The medieval Jewish philosophers brought conceptual and systematic thought to bear on the more imagist rabbinic eschatology, and one major problem they faced was to integrate the notions of immortality and resurrection. *Saadia Gaon was perhaps the most successful among them, since he conceived of the state of the reunited soul and body after the resurrection as one of spiritual bliss (*Book of Beliefs and Opinions*, 9:5). Due to the nature of Greek psychology, however, the emphasis among the other Jewish philosophers, both Platonist and Aristotelian, is on the soul’s immortality – the resurrection being added only because of doctrinal considerations. It is clear in the case of *Maimonides, for instance, that the immortality of the soul is paramount (*Guide*, 2:27; 3:54). Though he makes the belief in the resurrection, rather than in the immortality of the disembodied soul, one of his fundamental principles of Jewish faith (cf. Mishnah, Sanhedrin, introd. to Helek), it is only the latter which has meaning in terms of his philosophical system. Indeed the resurrection does not figure in the *Guide of the Perplexed* at all.

In general the neoplatonists saw the soul’s journey as an ascent toward the Godhead, and its beatitude as a purely spiritual bliss involving knowledge of God and spiritual beings and some form of communion with them. Their negative attitude toward the flesh, in favor of the spirit, left no room for a resurrection theology of any substance. The Jewish Aristotelians, who thought of the acquired intellect as the immortal part of man, saw immortality in terms of the intellectual contemplation of God. Some of the Jewish Aristotelians held that in their immortal state the souls of all men are one; while others maintained that immortality is individual. This emphasis on salvation through intellectual attainment was the subject of considerable criticism. Crescas, for example, claimed that it was the love of God, rather than knowledge of Him, which was of primary soteriological import (*Or Adonai*, 3:3).

In Kabbalistic Literature

Kabbalistic eschatology, more systematic than its rabbinic predecessor, is, if anything, more complex in structure and varied as between the several kabbalistic subsystems. The soul is conceived of as divided into several parts, whose origin is in Divine Emanation, and is incarnated here on earth with a specific task to fulfill. The soul of the wicked, i.e., of he who has failed in his assigned task, is punished and purified in hell or is reincarnated again (**gilgul*) to complete its unfinished work. In certain cases, however, the wicked soul is denied even hell or reincarnation and is exiled without the possibility of finding rest. Much of the literature is devoted to detailing the various stages of ascent and descent of the soul and its parts. (For a discussion of the various kabbalistic systems, and the variety of views held, see G. Scholem, *Major Trends in Jewish Mysticism*, particularly ch. 6.)

In Modern Jewish Thought

Orthodox Judaism has, throughout, maintained both a belief in the future resurrection of the dead as part of the messianic redemption, and also a belief in some form of immortality of the soul after death. The former figures in the liturgy at a number of points, including the morning prayer (Hertz, *Prayer*, 18), expressing the believer’s trust that God will return his soul to his body in time to come. It is also a central motif of the second benediction of the **Amidah* (*ibid.*, 134). The belief in the soul’s survival after death is implicit in the various prayers said in memory of the dead and in the mourner’s custom of reciting the *Kaddish* (*ibid.*, 1106–09, and 212, 269–71). Reform Judaism has, however, given up any literal belief in the future resurrection of the dead. Reform theology concerns itself solely with the belief in a spiritual life after death and has modified the relevant liturgical passages accordingly.

AFULAH (Heb. עִיר יִזְרְעֵאל; עֵפּוּלָה, *Ir Yizre’el*), city in the Jezreel Valley, Israel. It lies at the foot of both the southwestern and northwestern slopes of Givat ha-Moreh and received municipal status in 1972. Afulah was founded in 1925 by the American Zion Commonwealth, which planned to make the town the urban center of the Jewish settlements in the Jezreel Valley. Old Afulah’s location on a highway and railroad crossroads (N. and N.W. to Nazareth and to Haifa, N.E. to Tiberias, S.E. to Beth-Shean, S. to Jenin and Nablus, S.W. to Megiddo and Haderah) was seen as a promising asset. The hopes attached to Afulah, however, only materialized to a small degree, because the kibbutzim and moshavim of the valley rarely used its facilities, except for the regional hospital of Kuppat Ḥolim (the first in the country). Instead they developed their own services or preferred to use those of Haifa. In addition, the speculative sale of building plots to absentee, mostly overseas, proprietors hampered the town’s development. In 1948 Afulah had a population of 2,500.

After the establishment of the State of Israel, however, many immigrants were housed in Afulah, and a new sec-

tion, Afulah Illit (Upper Afulah), was laid out at a distance of 1.8–3.1 mi. (3–5 km.) from the older part of the town on Givat ha-Moreh, climbing to about 984 ft. (300 m.) above sea level. Industries – principally textile as well as a sugar refinery and a plastics factory – were opened in the city, which became the seat of the Jezreel subdistrict, its territory extending over 11 sq. mi. (28.6 sq. km.). The population of Afulah grew to approximately 17,000 in the late 1960s and 38,500 in 2002. Among the city's residents are recent immigrants from the former Soviet Union, Latin America, and Ethiopia.

The name Afulah, preserved by a small Arab village al-'Afula (which lay at the site until World War I), may come from the Canaanite-Hebrew root *ofel* ("fortress tower"), possibly mentioned in the list of Thutmose III. In excavations carried out at the ancient tell of Afulah, remnants of the Middle and Late Canaanite and Early Israelite periods were discovered. A settlement of the transition period from the Chalcolithic to the Early Bronze Ages (c. 32nd century B.C.E.) was discovered in the vicinity. Near the site of the present-day town Napoleon's army defeated the Turks in 1799. The place became a station on the narrow-gauge railway built in 1905, from Haifa to Damascus, and a second railway was laid from Afulah to Jenin and Nablus in 1913. The former ceased operating in 1948, and the latter in 1936.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

AGA, family name of Crimean Karaites, originating in the title given to the holder of an important office (Turk.). The first person to go under this name was Samuel ben Abraham (1717–1770), the son of *Abraham ben Josiah Yerushalmi, the prominent Karaite scholar of the Crimea. Samuel lived in Chufut-Kale and was the leader of its community, also known by the title *rosh ha-golah* (exilarch). He was a "court Jew" in the court of Tatar Khan Qirim Giray, who appointed Samuel to mint coins for the Khanate in 1768. Samuel protected the interests of his community before the officials. He wrote a number of liturgical poems and some of them were included in the Karaite *siddurs*. Unknown persons murdered him on his way from Bakhchisarai, the capital of the Khanate, near Chufut-Kale. He had three sons: Eliezer, Benjamin, and Simḥah.

His son BENJAMIN AGA (d. 1824) was a leader and intercessor for the community of Chufut-Kale. He also was appointed to mint coins for the Khanate in the court by the new Khan, Shahin Giray. In 1781 Benjamin leased the custom duties on the sale of wine. He became one of the Khan's unofficial court advisers. Like his father, he protected his community's interests. In 1777 he succeeded in annulling a harmful decree of Devlet Giray, the pretender to the Khan's throne, who falsely accused the Karaites of stealing the Khan's money. Benjamin corresponded with Karaite leaders of Poland, Lithuania, Constantinople, and Jerusalem and financially supported their communities in times of distress. Following the Russian annexation of the Crimea he continued to serve as the official

head of the community and to represent it before the Russian authorities. In 1795 Benjamin was chosen together with two other community leaders of the Crimean Karaites to travel to St. Petersburg on a special mission to the government. Their delegation won exemption for Crimean Karaites from the double taxation imposed on all the Jews of the Russian Empire, and to secure other rights, such as the purchase of immovable property. In 1806 Benjamin reestablished, together with his brother Simḥah, a publishing house in Chufut-Kale. Benjamin was an expert in Karaite *halakhah* and an authority on the Karaite calendar.

AGADATI (Kaushanski), BARUCH (1895–1975), dancer, visual artist, filmmaker, and cultural animateur. Agadati was born in Bessarabia (Russia). As a teenager, he arrived in Jerusalem and enrolled in the Bezalel Academy for Fine Arts, founded and run by the sculptor Boris *Shtatz. He was then one of many students from abroad (mainly Russia) who enrolled before World War I in Bezalel or in the Herzliyyah Gymnasium in Tel Aviv. In the summer of 1914 when WWI broke out, Agadati was visiting his parents abroad and could not return for the next term.

In Odessa he studied visual arts as well as ballet. At the age of 18 he became soloist of the ballet company of the municipal theater there. He was interested in Jewish culture and prepared a series of cartoon portraits of types of men of the *shtetl* which he performed with great success.

Agadati returned to Erez Israel in 1919. After a few months he began to perform what he called concerts, dancing solos with the accompaniment of a piano. He was deeply influenced by the "constructivist" abstract painting style prevalent in Russia at the time, making his movements slow but powerful, sculptural, and cubistic, and designing his own costumes in abstract forms. He soon added new "portraits in movement" to his *shtetl* characters, such as an effeminate Arab dandy from Jaffe and a Yemenite agricultural worker from Petaḥ Tikvah.

In the mid-1920s he published a book on "The Hebrew Dance," calligraphically handwritten in a limited edition of only 100 copies, with many photos and illustrations. He also began organizing Purim balls, which developed into the Tel Aviv **Adloyada* – a procession of floats and much dancing.

Every year Agadati would tour in Europe, to great critical acclaim. His attitude to the musical accompaniment was radically new: sometimes he would let his accompanist play the music and only after the end of the music would he dance in silence – to the music he had just heard. In 1929 he decided to go a step further and composed a dance to be performed in

total silence – an approach used many decades later by Jerome *Robbins (in *Moves*) and Merce Cunningham. In 1929, however, the audience was unprepared for such a radical experimental approach and after Agadati finished the performance there was no applause. Agadati felt he had lost contact with his audience and decided to stop dancing altogether.

He turned to films and directed and produced (with others) the first Hebrew-speaking movie. He also returned to painting. His wooden shack in Tel Aviv became the unofficial center of modernist artists active in Erez Israel in the 1930s and 1940s. “Agadati’s Shack” was later torn down by small-minded municipal officials.

AGADIR, Atlantic seaport and important tourist resort in southwestern Morocco; the site of the ancient Roman Portus Risadir. It lies near the Haha province and the Sous, the latter region having served in past centuries as an important marketplace (*suq*) on the fringes of the Sahara Desert. Because Agadir was strategically located on both the Atlantic seaboard and near the Sous Valley, it became a vital trade depot for European and local merchants. Important caravans passed through Agadir into the Sous from the earliest times to the 19th century. They brought African slaves, gold dust from western Sudan, and ostrich feathers from the southern Sahara Desert. Textile products and leatherwork from *Marrakesh also found their way to the Sous through Agadir, as did European medicines and gums.

In the latter half of the 15th and early 16th centuries the Portuguese penetrated Morocco – then ruled by the Wattasid dynasty – and took control of the coastal areas. In 1505, they occupied Agadir and held on to it until 1541, when the new Sa‘adian kings of the Sous, who then founded the Moroccan Sharifian Sa‘di dynasty, liberated the city. Under the Portuguese occupation and subsequently, Agadir and the Sous attracted Genoese merchants who traded in Sudanese gold and in local products like wax, hides, gum, and indigo.

Agadir’s importance as a trade/transit route reached its zenith in the 1760s. Until then the trade activities of the local merchants, many of whom were Jews, gained considerable support in Moroccan ruling circles. In 1764, however, that city lost out to the new port of Essaouira (*Mogador), which was constructed by the Sharifian Alawite sultanate with the aim of replacing Agadir as the outlet for the Sous trade. Essaouira then became the most important port in Morocco until the end of the 19th century.

To attract merchants from different parts of Morocco to Essaouira, including Jewish entrepreneurs, known as *tujjar al-sultān* (“Sultan’s merchants”), the *makhzan* (governmental administration) built, or allowed the merchants to build, houses, extended credit, and lowered customs duties for the new arrivals. Not only did prominent Jewish merchants from

Agadir relocate to Essaouira, moving their businesses to the new town, other members of the Jewish community settled there permanently.

Agadir captured the attention of European diplomacy during the colonial period, as Morocco was about to be divided into French and Spanish protectorates. At the time, local Moroccan opposition culminated in revolts against the French. France responded by sending an occupation force to *Fez in May 1911. Germany, which then regarded itself as a serious contender for influence inside Morocco, saw in French aggression an effort to curtail Moroccan independence and sought to challenge it. In a veritable show of force and under the pretext of “protecting our interests and the safety of our citizens,” the Germans dispatched the gunboat *Panther* to the shores of Agadir (July 1911). It was done with the clear intent of pressuring France to reduce her territorial aspirations in Morocco to a minimum. In November, a Franco-German accord was signed. The agreement stipulated that the Germans would not oppose the imposition of a French protectorate over Morocco in return for some French sub-Saharan territories to be ceded to Germany. Two years later the French were in full control over Agadir.

Under the French Protectorate (1912–56), growth in Agadir began with the construction of a major port (1914), the development of the Sous plain, and exploitation of inland mineral resources as well as the fishing and fishing-canning industries. After the 1930s, the French turned Agadir into an attractive tourist resort and encouraged extensive urbanization, laying the groundwork for modern infrastructures.

Agadir has also known tragedies. Early in March 1960 two earthquakes, killing 12,000 people, destroyed the city. Among those killed were several hundred persons belonging to Agadir’s 2000-strong Jewish community, buried under the rubble of the collapsed buildings. As many as 800 Jewish survivors were lodged temporarily at an army base on the outskirts of *Casablanca. After prolonged negotiations with the authorities, the Casablanca Jewish community took many refugees into their homes. Orphans whose parents were killed in the earthquake were adopted by Casablanca’s leading families. A new central city, including an international airport, was built in the 1960s to the south of the old town, linked by road with *Safi and *Marrakesh. As many as 110,000 people subsequently lived in Agadir; few among them were Jews.

AGAG (Heb. אָגָג), the name of an *Amalekite king who was captured by *Saul (1 Sam. 15). By sparing Agag’s life Saul dis-

obeyed *Samuel's order to annihilate the Amalekites. This occasioned the final break between Samuel and Saul. Later Samuel killed Agag at Gilgal "before the Lord" (*ibid.* 33).

One of Balaam's oracles sets Israel's king "higher than Agag" (Num. 24:7). The Septuagint adds "Agag" as the subject of another short oracle (*ibid.* 23). The name may have served as a recurrent designation for Amalekite chieftains or a clan.

Agagite (Heb. אַגָּיִט) is the gentilic name of *Haman, in the *Scroll of Esther (3:1; 10:8, 5, etc.). It connects the arch-enemy of the Jews in Persia with the Amalekites. It has been suggested that designation of Haman as an Agagite sounds legendary. It may represent a nickname, applied to this persecutor of the Jews because the Amalekites are denounced as the arch-enemy of Israel in the Torah (Deut. 25:17–19). Some scholars prefer the Septuagint's reading: Βουγαίος ("Bugaeian" instead of "Agagite"), a Persian gentile name, *baga*, meaning "God."

[Hanna Weiner]

In the *Aggadah*

Agag's death came too late. Had he been killed by Saul during the course of the battle, a later generation of Jews would have been spared the troubles caused by Haman. It is taught that in the short span of time between the war and the execution of Agag, he became the ancestor of Haman (SER 20). The delay is attributed to the powers of persuasion of Doeg the Edomite over Saul. He argued that the law prohibits the slaying of an animal and its young on the same day. How much less permissible was it to destroy old and young at one time (Mid. Ps. 52:4).

When Agag was eventually sentenced to death, it was according to heathen, and not Jewish, law. Thus, there were no witnesses to his crime, and he was given no warning of his punishment (PDRK 3:6).

ÁGAI, ADOLF (A. Rosenzweig; 1836–1916), Hungarian novelist, editor, and physician. Born in Jánoshalma, Ágai was the son of a prominent physician. After studying medicine in Vienna, he accepted a hospital appointment in Budapest. He also turned to writing, and his features in Budapest dailies, written under the pen-name "Porzó," were extremely popular. In 1868 Ágai abandoned medicine when he began the publication of a successful satirical weekly, *Borsszem Jankó*. Three years later he launched and became editor of the first long-lived Hungarian children's newspaper, *Kis Lap* ("Little Paper"), which appeared until 1904. Although he was opposed to Zionism, Ágai contributed to Herzl's Zionist journal, *Die Welt*. In his essays, he frequently depicts scenes from provincial Jewish life, based on memories of his childhood. Collections of his feuilletons are included in *Porzó tarcalevelei* ("Porzó's Feuilletons," 1876) and *Utazás Pestről Budapestre* ("Trip from Pest to Budapest," 1908). His collected novels appeared under the title *Igaz történet* ("True Story," 1893).

AGAM, YAACOV (1928–), Israeli painter and sculptor. Born Ya'akov Gibstein in Rishon le-Zion to an Orthodox Jewish family. His father, a rabbi, sent him to religious schools. Agam was arrested in 1945 by the British on suspicion of being a member of the Jewish underground and kept in prison for 18 months. He received his professional training at the Bezalel Academy of Arts and Design in Jerusalem under the influence of his modernist teacher Mordecai *Ardon. Agam continued his art studies in Zurich with Johannes Itten and at the Atelier d'Art Abstrait in Paris. In 1953 he had his first one-man show at the Galerie Craven, in Paris, where he presented his preliminary Kinetic Art. These works went under the general title of "Transformable Pictures" and characterized his style during the 1970s (*Pace of Time*, 1970, Tel Aviv Museum of Art). The works featured parallel triangles painted with abstract forms. Through the movement of the spectator the views changed and the kinetic quality of the work came to the fore. Agam said that his interest in concepts of time derived from Jewish spirituality, in which the world is seen as involved in a perpetual dynamism.

With his kinetic sculpture the spectator was required to be more active, to touch and move the sculpture's components. More than once Agam referred to these works in the terminology of the world of games. The images appearing in them were mostly derived from Jewish symbolism (*The Hundred Gates*, 1972, President's Residence, Jerusalem). Over the years, Agam enlarged his repertoire of works. His involvement with the environment was expressed through his decoration of building facades and interiors. His famous kinetic fountain combining water, fire, and music altogether, is a very impressive and complex piece of art (*Fire and Water*, 1986, Dizengoff Square, Tel Aviv).

In 1996 Agam was awarded the UNESCO Prize for Education on his didactic plan for combining art and science.

°**AGATHARCHIDES OF CNIDUS** (second century B.C.E.), Hellenistic historian and scholar. A native of Cnidus, Agatharchides lived in Egypt (Alexandria) during the reigns of Ptolemy VI Philomater (181–145) and Ptolemy VII Euergetes (145–116). His principal works are a history of Asia in ten books and a history of Europe in 49 books, neither of which is extant. There is no evidence that he referred to Jews very much in his work, except for a passage quoted twice by Josephus (Apion, 1:205–11; Ant. Jud., 12:5–6) referring to the "superstition" of the Jewish defenders of Jerusalem which prevented them from fighting on the Sabbath: "The people known as Jews ... have a custom of abstaining from work every seventh day; on those occasions they neither bear arms

nor take any agricultural operations in hand, nor engage in any other form of public service, but pray with outstretched hands in the temples until the evening.”

AGDE (Heb. אַגְדֵּי or אֲגֵדֵי), town 13 mi. (20 km.) E. of *Béziers in southern France. Jews are mentioned in Canon 40 promulgated by the Council of Agde held by the church there in 506. By the middle of the 13th century Jews had settled permanently in Agde under the jurisdiction of the bishop. The majority of these became liable to the crown tax in 1278. The Jews of Agde buried their dead in the cemetery of nearby Béziers. After the general expulsion of the Jews from the Kingdom of France in 1306, some of the Agde community found refuge in Perpignan and *Carpentras, then not under French suzerainty. At the beginning of World War II about 2,000 Jewish refugees from Austria and Germany were sent to a forced labor camp near Agde, the number increasing to 3,000 after the Franco-German armistice in June 1940. Most of them were deported on Aug. 24, 1942.

AGE AND THE AGED.

Old Age

IN THE BIBLE. Extreme longevity is attributed to the Fathers of Mankind (e.g., Methusaleh, 969 years) and the Fathers of the Israelite People (Abraham, 175; Isaac, 180; Jacob, 147; Moses, 120). By some, Genesis 6:3 is taken to mean that God has set a limit of 120 years to human life (Hizzekuni, cf. Ibn Ezra); in accord with this notion is the popular Jewish reckoning of a long life. However, sober reality is reflected in Psalms 90:10: “The days of our years are 70 years, and if by reason of strength, 80 years.” The Bible regards longevity (Isa. 65:20; Zech. 8:4; Ps. 92:15), a long life followed by death at “a good old age” (Gen. 15:15; et al.), as a blessing; whereas the opposite is regarded as a curse (1 Sam. 2:31–32). Long life is promised as a reward for observing certain commandments (Ex. 20:12; Deut. 22:7; 25:15), or for obeying the Law as a whole (Deut. 6:2). But there are also some grim descriptions of old age (11 Sam. 19:33–38). Especially instructive are the descriptions of old age in Ecclesiastes (12:1–7) in which old age is “the calamitous days” in which a man takes no pleasures. It may be noted that a similar view of old age can be found in the Epic of Gilgamesh (See *Flood). A realistic observation prompted the moving prayer: “Do not throw me away in the time of old age; when my strength is failing me, do not forsake me” (Ps. 71:9).

The experience of the aged caused the belief that old age and wisdom went together (Job. 12:12; cf. *ibid.*, 20). Nev-

ertheless, the Book of Job also stresses that there are young men who are wiser than old men (Job 32:6ff.; Eccles. 4:13). The Bible enjoins respect for the aged: “You shall rise before the aged and show deference to the old” (Lev. 19:32). This was probably the custom throughout the whole ancient Middle East (Ahikar 2:61). Consideration for old age and its disabilities is mentioned frequently in the Bible. Disrespect for the aged was regarded as a sign of a corrupt generation (Isa. 3:5). Ruthlessness toward the aged is a manifestation of extreme harshness by an enemy: “... who will show the old no regard” (Deut. 28:50); “Upon the old man you made your yoke very heavy” (Isa. 47:6); and “He has shown no favor to the elders” (Lam. 4:16; cf. 5:12). The actual chronological age of a man was not an absolute factor in regard to the disabilities of old age; thus, Samuel says of himself “I have grown old and gray” (1 Sam. 12:2) when he is only 52. And King David is described as “very old” (1 Kings 1:15) when he was 70. There are few descriptions of the physical signs of old age in the Bible: that of Isaac when his eyes were dim (Gen. 27); that of the manner of Eli’s fall, “because the man was old and heavy” (1 Sam. 4:18); and Barzillai’s deafness (11 Sam. 14:33–38). By contrast with these descriptions, there are idyllic descriptions of old age: “There shall yet be old men and women in the public squares of Jerusalem” alongside “boys and girls playing in her public squares” (Zech. 8:4). The biological process of aging is seen as the depletion of the body’s “natural heat” as, for instance, in the case of King David. (“King David was now old, advanced in years; and though they covered him with bedclothes, he did not feel warm” (1 Kings 1:1)). This view was a basic premise with Galen and was accepted by preceding generations almost until modern times.

Ecclesiastes (12:1–6) gives an outstanding description of old age. Later geriatric literature was based on this section. Many Jewish commentators found biological symbolism in its details and in the 16th to 18th centuries John Smith and others also explained these verses in medical terms. In its crisp and concentrated metaphorical style, Ecclesiastes contains one of the most striking descriptions in world literature of the infirmities of old age. It appears to be entirely expressive of the state of mind and view of life of an aging or old man, and it was thus interpreted by the sages. King Solomon, who in his youth is supposed to have written The Song of Songs, in his maturity Proverbs, and in his old age Ecclesiastes, was regarded by them as a symbol of the changes which take place in the being and in the experiences of a man in the course of his life: “When a man is young, he quotes poetry; when he matures, he quotes proverbs; when he grows old he speaks of futilities ...” (Song R. 1:10). Similarly, A. Schopenhauer states, “Only in his 70th year does a man understand the full meaning of the [second] verse of Ecclesiastes.” In the Second Temple era old age was regarded as a blessing and the aged as worthy of respect (Eccles. 8:9; 11 Macc. 6:23, 27; 14 Macc. 5:4ff.; 7:13–15). Yet it was stressed, that not the number of years was important but wisdom and honesty (Wisdom of Solomon 4:8–9, 16). Ben Sira (30:24) recognized that anxiety ages a man, while in the Book

of Jubilees (23:11) premature aging accompanied by mental confusion is caused by sin. That is why in the Dead Sea Sect nobody above 60 years of age could act as judge (Damascus Covenant X:7–10); yet in general the Sect and the Essenes respected old men (Manual of Discipline VI:8; Philo, Prob. 81, 87; Josephus, Wars, 2:9–10).

RABBINIC PERIOD. According to the Talmud, old age (*zikhnah*) begins at 60, ripe old age (*seivah*, “grey hairs”) at 70 (Avot 5:21), though oldness may appear prematurely (Shab. 152a; Eruv. 56a; Tanḥ., Ḥayyei Sarah 2). Like Ecclesiastes, the rabbis viewed the later years of life as unattractive (Shab. 151b); the old resemble apes (Lam. R. 1:2), they cannot reason (Shab. 89b). The afflictions of the old are described, as in Ecclesiastes, metaphorically: “The rocks have grown tall, the near have become [too] distant [to visit], two [legs] have become three [with a cane], and the peacemaker of the house has ceased [to function as such].” So it is said, “Youth is a crown of roses; old age a crown of [heavy] willow rods” (Shab. 152a). A man must pray that in his later years “his eyes may see, his mouth eat, his legs walk, for in old age all powers fail” (Tanḥ., Mi-Kez 10).

There are some rare instances of praise for oldness itself. R. Simeon b. Eleazar valued the advice of the old: “If the old say ‘tear down’ and the children ‘build’ – tear down, for the ‘destruction’ of the old is construction; the ‘construction’ of the young, destruction” (Meg. 31b). According to R. Johanan, only elders sat in the Sanhedrin (Sanh. 17a). These statements reflect the ancient view that age, with its experience, is a guarantee of wisdom, and without age there is no understanding. The general opinion, however, is that with age comes loss of intellectual capacity. Elisha b. Avuyah said, “What does learning when old resemble? It is like writing on blotted-out paper” (Avot 4:20). Oldness itself is not a virtue – wisdom and knowledge of Torah determine its value (Kin. 3:15). Even the opinions of the old were not universally preferred to those of the young. When R. Abbahu claimed authority in a given dispute due to his age, R. Jeremiah answered, “Is the matter decided by age? – It is decided by reason” (BB 102b). Targum Onkelos also reflected this view when translating “You shall rise before the aged” (Lev. 19:32) as “Arise before those knowledgeable in Torah.” The rabbis held that even a young scholar is called *zaken* (“elder”) and should be honored, while no honor is due the ignorant or sinful, though old (Sifra, Kedoshim, 7:12). However, Isi b. Judah differed: “You shall rise before the aged’ – all the aged”; R. Johanan agreed, even concerning gentile elders; but R. Nahman and Rav did not act in this manner (Kid. 32b–33a). According to Maimonides, one must honor the exceedingly old, even if they are not wise, by rising (Yad, Talmud Torah 6:9).

An age limit existed, past which one was not to hold a responsible position. Already in biblical times, the levites’ service in the Tabernacle was limited: “At the age of 50, they shall retire from the work force and serve no more” (Lev. 8:25–26). The retired could do less strenuous work, either assisting their fellows, or guarding. In talmudic times, it was forbidden – for

psychological reasons – to have the very old serve as Sanhedrin members (Sanh. 36b. Maim., Yad, Sanhedrin 2:3). In kabbalistic literature and tradition, those well-versed in mystic knowledge are represented as aged; many of the names in the Zohar are followed by “elder” (*saba*).

[Moshe David Herr]

Care of the Aged

In the society of ancient Israel the aged and elderly were highly respected, and accorded a central position in family life and the tribal structure. This continued after a national organization based on kingship was adopted. This attitude is essentially linked with the biblical precept enjoining fear and honor of, and obedience to father and mother (*kibbud av va-em*, cf. Lev. 19:3, 32). Barbarism in an alien nation is described by denouncing it as one “that shall not regard the person of the old” (Deut. 28:50). A state of anarchy in Israel is characterized by the fact that “the child shall behave insolently against the aged” (Isa. 3:5; 47:6). The term “elders” appears throughout the Bible, Mishnah, and Talmud as a synonym or designation for judges, leaders, or sages. The Jewish image of the aged was therefore originally one denoting leadership and rule. Of course, physical facts asserted themselves and horror of weakness and senility was frequently acknowledged. In talmudic times the problem of earning a livelihood in old age was faced: “Every profession in the world is of help to a man only in his youth, but in his old age he is exposed to hunger” (Kid. 82b). Respect alone was of little assistance to the aged in the changed circumstances of late antiquity and the transformation which society had undergone. However, no attempt was made to issue specific regulations or create institutions to help the aged or care for them as such. If not living among the family, as was customary, destitute aged people were treated as part of the general social problem created by poverty and weakness and the precepts concerning *charity and alms giving (*zedakah*) applied to them. Thus, although old age was originally invested with strength and majesty, people of the lower strata of society who had lost the support and care provided by the family underwent much suffering, if not humiliation, in their old age. The transition from the position of the powerful elder to that of an aged pauper requiring special assistance outside the frame of the family is an outcome of the heritage of Judaic-Muslim-Christian civilization.

IN THE MIDDLE AGES. The aged are singled out in medieval Jewish ethical works and general halakhic regulations (*takkanot*) as worthy objects for special charity and tender treatment. In the 11th century *Rashi defined the age requiring assistance as “when I shall be 60 or 70” (commentary to Ps. 71:17). Persecutions and massacres in the Middle Ages led to the breakup of families, and large-scale migrations brought additional suffering for the aged. A resolution passed at the Council of Lithuania (see *Council of the Lands) in 1650, after the *Chmielnicki massacres, stressed the duty to support “... in any case married and unmarried women and old persons” and reflects the breakup of the family under catastro-

phe. About the same date, the Jewish community in Rome introduced care of the aged as one of the four divisions of its charitable activity. A home for the aged was founded in Amsterdam by the Sephardi community in 1749.

EIGHTEENTH TO NINETEENTH CENTURIES. From the second half of the 18th century the need for introducing special treatment and care of the aged was felt more strongly in Jewish societies which were beginning to experience the breakup of the traditional family cohesion. These were more prepared to view old age as a social problem separate from poverty. In this period the time-honored concept of respect for the aged began to combine with new feelings of estrangement between the generations together with compassion and understanding for the weakness of the old as part of social responsibility. Thus an increasing number of Jewish foundations to care for the aged were established. The *Mishenet Zekenim* ("Support of the Aged") society, established in Hamburg in 1796, made weekly provision for the needy aged. An old-age home was founded in Berlin in 1829, and in 1839 the Hamburg community set aside a building for old men and women where they received lodging, support, and clothing. The Frankfurt community founded a home in 1844 for men and women aged over 60 without means of support. A Viennese family donated several houses for accommodating aged Jews of the community. The number of Jewish homes for the aged increased from the middle of the 19th century, as social care of the aged developed. By the present century most large communities in Europe included a home for the aged (often called *Moshav Zekenim*) among their welfare institutions. In 1938, there were in Germany 67 homes for the aged with 3,568 beds.

The revolutionary changes in society affecting the general attitude toward the aged and provisions for their welfare which began at the end of the 19th century are deepening and becoming increasingly pronounced and complicated. Among general factors responsible for this change are the modern appreciation of youth and understanding of its specific psychological and social needs, coupled with a corresponding understanding of the needs of the old, their psychology and social requirements; the demographic changes, first throughout the western world and later in other countries, resulting from birth control on the one hand and the prolongation of life expectancy on the other; and the introduction of pension laws and schemes as the problems of the aged emerge as a political factor in appealing to electorates with an increasing percentage of aged persons.

CONTEMPORARY PERIOD. In addition, factors specific to Jewish society are the huge emigration from Europe from the end of the 19th century, the Nazi Holocaust, and forced emigration from Arab countries in the Near East and North Africa after the creation of the State of Israel. The impact of these general changes is most clearly seen in the main Jewish centers of today, and in the experiments currently being attempted to solve the problems to which they have given rise.

U.S. CARE FOR AGED. In the United States, the cultural and social estrangement that developed between "second-" or "third-generation" Jews and their "first-generation" immigrant parents and grandparents inevitably strained the close, tightly knit Jewish family life that was a legacy of Europe. The first homes of the aged, therefore, often tended to be institutions of "last resort." Care of the aged in America was also originally hindered by a resistance to paid social workers. Similarly, family agencies displayed a reluctance to deal with the aged. Over the years this pattern has significantly altered so that care for the aged is largely in professional hands. Family agencies served about 20,000 persons aged 60 and over in their homes in 1966.

The general tendency in the United States is to avoid employing terms or arrangements traditionally linked with old age and care for the aged; aged persons are referred to as "senior citizens," for whom "towns" and "resorts" have been established. Emphasis has been placed on providing services to enable the aged to remain in their communities where they can retain the satisfactions of normal community life. At the same time experiments to meet the specific needs and inclinations of the aged are made while attempting to provide them with accommodation apart from the family. This trend is gaining ground in Jewish society. The concept of institutional care for the aged has changed from one of a permanent retreat to a resource to be used as needed.

IN ISRAEL. Two basically different traditional patterns of family life are encountered: the Oriental in families from the Near East and North Africa, and the European in families from Europe and the United States. The Oriental family has retained much more of the traditional veneration for the aged and is much less influenced by the modern attitude toward youth than the western family. However, the mass exodus from the Arab countries created a problem of care for the aged in families who have been broken up by forced migration. Thus, the traditional Oriental family also encountered modern problems concerning its old people in Israel. Provision also had to be made for the survivors of the Nazi Holocaust and concentration camps. The combined problems of abandonment, physical weakness, illness, premature aging, and old age were dealt with by the *Malben organization, founded and maintained by the *American Jewish Joint Distribution Committee and its institutions. In addition, a new social phenomenon in Israel was that of family life in the kibbutz, which had specific problems concerning aging and the relationship between the generations. Although the kibbutz provided collective support and care of the individual member irrespective of his family status, health, or psychological problems, the strain on the aged and the aging was particularly great since it was a society originally created by the senior members themselves, founded on the ideal of physical labor and appreciation of the supreme and eternal value of youth.

In this framework the spiritual and psychological side of aging is present in its “pure form,” i.e., separate from the usual physical and material problems.

In Israel in 1964, 5.5% of the male population and 5.9% of the female population were aged over 65 (the age of retirement). The majority were living within the family or independently. About 7,500 old persons were in special institutions. These consisted of the traditional old-age homes (*moshav zekenim*) and the more modern living centers for the aged, of which there are different forms. By the early 2000s, 10% of Israel's population was aged over 65, with 250,000 Israelis aged over 75. The consequence has been a great strain on public facilities and a proliferation of upscale retirement homes and the fashion of employing live-in Filipino caretakers among the well-to-do. The care of the aged in 21st century Israel therefore fully reflected the economic imbalances that prevailed in the country. The poor among the aged have become a marginal group barely able to survive.

AGEN, capital of the Lot-et-Garonne department, southwestern France. A charter of 1263 specifies the charges imposed on Jewish residents in Agen for all articles brought into the city, in addition to dues they owed to the bishop. In 1309 (not 1250, as stated by U. Robert) the seneschal of Agen was directed to seize copies of the Talmud and other Jewish works, probably left behind after the general expulsion of the Jews in 1306. A number of Jews returned to Agen in 1315 and perished in the *Pastoureaux massacres of 1320. The “Rue des Juifs,” first documented in 1342, certainly existed earlier. Remains of the synagogue were still visible in the 16th century. In 1968 the Jewish community in Agen, which consisted of approximately 500 persons, mostly immigrants from North Africa, had a synagogue and community center.

[Bernhard Blumenkranz]

AGENCY, legal concept whereby the lawful acts of someone authorized by, and acting on behalf of, another are as effective as if performed by the principal; recognized in Jewish law from ancient times. A basic concept in the Talmud is that “a man's agent is as himself,” i.e., that a man is bound by the acts of his duly constituted agent as if he himself had acted. Throughout the ages Jewish law developed a complex and sophisticated civil law of commerce and finance in which the law of agency played an important part, being the subject of many talmudic discussions and halakhic rulings. For example, the contrary principle was enacted that there can be no agency to do a wrongful act; the sender is not held accountable for the deeds of his agents. The law also laid down rules governing the manner of constituting an agency, its limitations, its mode of execution, and its revocation or termination. The appointment, competence, and powers of an agent are also dealt with. Because of their contractual aspects, agency was also recognized in matters of marriage and divorce, whereby an agent could legally acquire a wife for his principal or effectively deliver to her a bill of divorce on his principal's behalf. Generally the Jewish law of agency was developed to meet the social and commercial needs of the community as it constantly changed from age to age; therefore it was inclined to be more flexible and adaptable than some other legal subjects, which, consequently, did not always enjoy the same degree of contemporary relevance. In the State of Israel agency is a matter of civil law and is governed by a principal statute of 1965.

Details

As a result of agency, the possible field of legal activity is extended beyond the normal physical and other limitations.

The concept of agency was not recognized in ancient legal systems. Only in the later stages of Roman law did agency achieve a limited form of recognition – a phenomenon ascribed to the powerful status of the Roman *pater-familias* (“family head”) on whose behalf all acquisitions by his kinsmen or servants were made in any event, thus obviating any urgent need for developing a doctrine of agency. In Jewish law the principle of agency was, however, already recognized in ancient times. While there is no express scriptural provision for it, the *tannaim* applied the doctrine of agency in various halakhic fields, i.e., to the laws of *mamonot* (“commercial law”), *terumah* (“heave offering”), sacrifices, divorce, and betrothal, and established the rule that “a man's agent is as himself” (*Sheliḥo shel adam kemoto*). According to the Tosefta (Kid. 4:1), Bet Shammai and Bet Hillel agreed that a person appointed to carry out a specific mandate is disqualified from acting as a witness in a case involving such mandate, whereas amoraic sources quote a tannaitic tradition to the opposite effect (Kid. 43a) and the talmudic *halakhah* was decided accordingly. The agent is not regarded as the principal, in the full sense of the term “as himself,” since the agent is competent to testify with regard to the subject matter of his

mandate in circumstances where the principal is disqualified from being a witness.

CRIMINAL LAW. In this field a contrary rule was laid down, namely, that “there can be no agent to do a wrong” (*Ein shali’ah li-devar averah*; Kid. 42b). The reasoning behind the rule is derived in answer to the hypothetical question: “Whose words does one obey? Those of the master” (i.e., the Almighty) “or of the pupil” (i.e., the mandator)? The legal import of the rule is that the agent himself is the transgressor, and liable, whereas the principal is exempt in respect of any transgression committed by the agent in execution of the former’s mandate. There is, on the other hand, a tradition that a person who says to his agent, “Go forth and kill that soul!” (Kid. 43a), is personally liable, but the *halakhah* was decided to the effect that “in all matters a person’s agent is ‘as himself’ except with regard to wrongdoing ...” (Isserles to Sh. Ar., ḤM 182:1). However, the scholars laid down that in three fields the doctrine of agency applied also to transgression: (1) misappropriation of a deposit (*sheliḥut yad*); (2) slaughtering and selling (of stolen animals – see *Theft and Robbery); and (3) conversion of consecrated property (see **Hekdesh*) to profane use (*me’ilah*).

In addition to these three specifically excepted cases, there are also a number of general exceptions to the rule that there can be no agent to do a wrongful act. According to the *amora* Ravina, the rule does not apply if the prohibition does not extend to the agent himself, e.g., where a priest commissions an Israelite to celebrate *kiddushin* with a divorcee on the priest’s behalf (a marriage prohibited to a priest). Similarly, the *amora* Samma is of the opinion that an agency is constituted when the agent, in committing transgression, fails to act of his own free will; e.g., when he is unaware that his act amounts to a transgression (BM 10b; Isserles to Sh. Ar., ḤM 182:1 and 348:8). Furthermore, an agency to do a wrong is constituted whenever an agent delegated to commit a wrong must be presumed likely to execute his assignment because he is known to commit such wrongs (Sh. Ar., ḤM 388:15, gloss; see also Siftei Kohen, *ibid.*, 67 for a contrary opinion). Whenever the law recognizes agency in the commission of a wrong, the agent himself will be liable (Siftei Kohen sub. sec. 4 to Sh. Ar., ḤM 292; see also Netivot ha-Mishpat to Sh. Ar., ḤM 348:4).

LIMITATIONS. The rabbis of the Talmud, relying on the scriptural text, excluded the operation of the maxim that a person’s agent is as himself in certain instances (TJ, Kid. 2:1; Yev. 101b). Some of the *posekim* exclude agency when the mandate cannot be carried out at the time of the agent’s appointment (Darkhei Moshe to Tur, ḤM 182:1, based on Naz. 12b); but others differ (Responsa Maharit 2:23; Arukh ha-Shulḥan to Sh. Ar., ḤM *ibid.*). On the question of the husband’s competence to annul the vows of his wife on the day of hearing them (Num. 30:9), the rabbis decided that it would not be the same if the vows were heard by an agent, and that the latter was not competent to annul them since “the appointment of an agent is not

appropriate to a passive act” (*be-midi de-mi-meila*; Ned. 72b). Similarly, there can be no agency with regard to a precept (*mitzvah*) which one is personally obliged to perform, such as laying *tefillin* or sitting in a **sukkah* (Tos. to Kid. 42b). So, too, the rabbinical enactment permitting *assignment of debt by way of *ma’amad sheloshtan*, has been interpreted as requiring the participation of the parties themselves and the assignor could not appoint an agent for this purpose (Sh. Ar., ḤM 126:20). Some scholars hold that an agent can not deliver an oath on behalf of his principal (Responsa, *Noda bi-Yehudah*, first series, YD 67 and last series YD 147).

It is not a requirement of agency that the manner of carrying out the mandate should be specifically detailed; the principal may grant his agent a degree of discretion, e.g., in celebrating *kiddushin* on his principal’s behalf, an agent may be authorized to treat either with a specific woman or with one of a larger group (Maim., Yad, *Ishut* 3:14). Or, the principal can instruct his agent, “Go and purchase for me a field which you consider suitable,” in which case the choice of the field is left to the full discretion of the agent. To be properly constituted, agency requires that the parties thereto are both legally competent and it was laid down that *einam benei da’at* (“persons who lack proper understanding,” i.e., *Heresh, shoteh, ve-katan* (“deaf-mutes, idiots, and minors”)) were disqualified from acting as either principal or agent (Git. 23a; Sh. Ar., ḤM 188:2).

APPOINTMENT AND POWERS. It appears from tannaitic and amoraic sources, neither of which specifically discuss the manner of appointing an agent, that such appointment may be done orally. The *halakhah* was so decided, it being held that there was no need for a formal *kinyan* (see Modes of *Acquisition). In various places it nevertheless became the practice to assign by way of a formal *kinyan*. This was partly due to the influence of an analogous procedure in certain matters where an act of *kinyan* was required by law, such as the appointment of an agent in a lawsuit or for the purposes of agency in divorce – although the *kinyan* is not essential to the underlying agency itself but rather for the purpose of *bittul moda’ah* (see **Ones*). It was also due in part to the desire of the parties to express in a formal act that the decision to conclude an agency was a serious one, and not one undertaken irresponsibly (Maim., Mekhirah 1, 12–12).

The agent is required to act strictly within the scope of his mandate, and if he exceeds his authority, all his actions are rendered null and void. The same result follows if the agent errs in any detail of his mandate, since the latter is appointed “to uphold and not to depart from the mandate” (Maim., Yad, *Sheluhin* 1:3, Sh. Ar., ḤM 182:2). The possible consequences of a complete nullification can, however, be averted by especially stipulating for such a contingency (Maim. and Sh. Ar., *ibid.*). Thus it became the practice for a condition of this kind to be inserted in written instruments (see Hai Gaon, *Sefer ha-Shetarot*, 65–67).

Some authorities went so far as to hold that even in the absence of such a condition, there was a presumption – if the mandate were carried out – that the principal had authorized the agent to “uphold and to depart from the mandate,” unless the contrary could be proved by the principal (Sh. Ar., *ḤM* 182:4). An agent who departs from the terms of his mandate and deals with a third party without disclosing that he is acting as an agent, will be liable for his actions (Maim., *Sheluhin* 2:4; Sh. Ar., 182:2 and 6).

REVOCATION. The mandate of the agent may be revoked by the principal. The Talmud records a dispute between the Palestinian *amoraim*, Johanan and Resh Lakish, as to whether or not revocation can be done orally (TJ, Ter. 3:4, 42a and Git 4:1, 45c; see also Kid. 59a), and the *halakhah* was decided in favor of such revocation. Where a formal *kinyan* accompanies the agent’s appointment, some take the view that the “act” of *kinyan* cannot be revoked orally, but the general opinion is in favor of it. In order to prevent the principal from withdrawing his agent’s mandate, it became customary to submit the former to an oath to this effect. This procedure normally served as an effective deterrent, but if, despite the oath, the principal revoked it, the revocation is effective. Agency is also terminated upon the death of the principal.

It was recognized that a revocable mandate could prejudice a third party who was unaware of it, e.g., a debtor who paid his debt to the creditor’s agent would continue to be indebted to the creditor or his heirs if it subsequently transpired that the agent’s mandate had previously been revoked. It was determined, on various grounds, that in such circumstances the debtor would be released from his obligation. Isaac b. Abba Mari expressed the opinion that a defendant who received a deed of authorization from the agent, would suffer no damage even if it later transpired that the mandate had been revoked (*Sefer ha-Ittur, harsha’ah*). Abraham b. David of Posquières justified the debtors release on the ground that the creditor’s revocation of the mandate was tantamount to negligence. Later the above rule was justified on the further ground that, even if by the laws of agency the defendant had dealt with a person who was no agent, the transaction was nevertheless afforded legal validity by virtue of the laws of suretyship (Arukh ha-Shulhan to Sh. Ar., *ḤM* 122:2).

BROKERAGE. On the question of the agent’s failure to observe the terms of his mandate, Jewish law distinguishes between an agent who acts in a voluntary capacity (*shali’ah*) and one who does so for payment called a *sarsur* (“broker” or “factor,”) e.g., one who receives property for the purposes of sale, the latter being required to make good any consequent loss to the principal. Maimonides adds that in a case where the broker sells property at less than the authorized price, the purchaser must restore the goods to the owner if he knows that it was being sold by a broker on behalf of the true owner (*ibid.*, 2:6; and see Sh. Ar., *ḤM* 185:1). Similarly, in case of theft or loss the liability of the broker is equal to that of a bailee for reward (Maim.

and Sh. Ar., *ibid.*). An agent may not purchase for himself the property which he has been authorized to sell, even at the authorized selling price (Sh. Ar., *ibid.*).

NON-PERFORMANCE OR IMPROPER PERFORMANCE BY THE AGENT. The principal has no claim for pecuniary compensation against an agent who relinquishes his appointment without fulfilling his mandate (Sh. Ar., *ibid.*, 183:1). However, one opinion says that the principal has a claim for “loss of profits” against an agent who acts for payment, e.g., for the profits likely to have been earned by the principal had the mandate been properly carried out (Netivot ha-Mishpat to Sh. Ar., *ibid.*, *Be’urim*, 1).

When the agent is given money by his principal in order to purchase property, and such property is purchased by the agent for himself with his own money the transaction is valid, “although the agent is a rascal,” but the transaction will be for the benefit of the principal if the agent purchased for himself with the money of the principal (Sh. Ar., *ibid.*, and Isserles).

AGENCY FOR THE RECOVERY OF DEBTS. (See *Attorney). The appointment of an agent for the recovery at law of a debt owing to a claimant, is the subject of particular problems. The rabbis of *Nehardea decided (BK 70a) that the claimant’s representative must be equipped with an “instrument of permission” (*ketav harsha’ah*, “power of attorney”), bearing the following written instruction by the claimant: “Go and take legal action to acquire title and secure for yourself.” Unless this is done the defendant may plead that the representative has no standing in the matter. The possibility of a plea of this nature arises from the talmudic principle that a creditor’s representative cannot seize property in settlement of a debt owing to his principal, if there are additional creditors (Ket. 84b). This principle was construed at the commencement of the geonic period as applying whether the action of the agent is likely to prejudice other creditors, or merely the debtor or himself (She’iltot *de-Rav Aḥai Ga’on*, 150). Another explanation offered for the aforesaid plea is the possible suspicion that the mandate was no longer in force, because of the principal’s death or because it had been revoked by him. The aforesaid wording of the authorizing instrument rendered the agent a party to the legal proceedings, which in turn gave rise to the fear that the agent would keep whatever he recovered for himself. It therefore became customary at first to supplement the authorization with a further formality such as the principal’s declaration before witnesses that he was appointing the agent as his representative (Hal. Gedolot, BK 88, col. 3), and in other ways. Gradually these additional measures were abandoned, and the instrument of authorization itself was accepted – without further formality – as constituting the agent a party, along with the defendant, to the proceedings and at the same time as safeguarding the rights of the principal (Temim De’im, 61; Or Zaru’a, BK 4:300). Since, according to the abovementioned wording of the authorization, or power of attorney, the principal in effect assigned (*hakna’ah*) to the agent the subject mat-

ter of the power of attorney, it was impossible – according to talmudic *halakhah* – for such power of attorney to relate to matters which could not validly be assigned. Thus the rabbis of Nehardea decided that no power of attorney could be written relating to movables, in respect of which the defendant denied the claim. In the post-talmudic period these restrictions were removed – by way of interpretation, custom and rabbinical enactment – and Jacob b. *Asher records the practice of giving a power of attorney unrestricted as to subject matter (Tur., הַמ 123:2). A convenient act of *kinyan* employed to accompany the authorization, was assignment of the subject matter of the claim *aggav karka* (incidental to land; see Modes of *Acquisition).

In the geonic period, when most Jews had ceased to be landowners, it became necessary to find ways of employing the method of *kinyan aggav karka*, making it applicable to those who possessed no landed property. Thus arose the custom of assignment by way of **arba ammot be-Erez Israel* (“four cubits of land” which every Jew was considered to own in Erez Israel; Responsum Nahshon Gaon, Responsa Geonica, ed. 1929, p. 31; see Modes of *Acquisition). In post-geonic times, diminishing reliance was placed on this method, and Maimonides was of the opinion that an assignment (i.e., power of attorney) so effected was not binding on the debtor (Yad, Sheluḥin 3:7). In Germany and France it became customary to rely on *hoda'ah* (i.e., an admission by the principal that he owned land; see *Admission; Modes of *Acquisition). Naḥmanides suggested *kinyan* or assignment incidental to a synagogue seat or a place in the cemetery, common to all (Novellae to BB 44b) and further modes of assignment are discussed by other scholars.

ACQUISITION OF PROPERTY THROUGH A THIRD PARTY OTHER THAN AN APPOINTED AGENT. This may arise through an application of the rule that “a benefit may be conferred on a person in his absence” (Eruv. 7:11). Thus A may acquire property from B on behalf of C without the latter's knowledge, if this is to his benefit – for instance, a gift. C becomes the owner of the property as soon as A's acquisition thereof is complete, unless C, upon hearing of the matter, rejects such ownership, in which event the transaction is void ab initio (Maim., Yad, Zekhiyyah, 3:2; Sh. Ar., הַמ 243:1; see also Modes of *Acquisition).

In the State of Israel the laws of agency are governed by the “Agency Law, 5725–1965,” which confirms the doctrine that “a man's agent is as himself” and further provides that the actions of the agent, including his knowledge and intention, are binding on and benefit the principal – as the case may be (sec. 2).

[Nahum Rakover]

Legal Acts that Are Not a Subject for Agency

There are certain acts that by definition cannot be an object of agency and others in which it is the law that proscribes their performance by way of an agent.

AN ACT WHICH BY DEFINITION REQUIRES PERSONAL PERFORMANCE. In principle, any legal or religious act can be performed by way of an agent, provided that performance of the act is not also its purpose. This is the case, for example, with the betrothal of a woman, in which giving the money is not the goal as such, but is rather a means for altering the woman's status from that of an unmarried woman to that of a married woman. However, when the actual performance of the act is also the goal, such as donning *tefillin* or dwelling in the *sukkah*, such an act cannot be an object of agency (Responsa, *Iggerot Moshe*, EH. 1 #156).

AN ACT WHICH BY LAW REQUIRES PERSONAL PERFORMANCE. By way of example, the law does not permit the agent to act on the principal's behalf when his act involves the violation of third party rights (Ket. 84b; Piskei ha-Rosh, Gittin, 1:13). There are certain acts regarding which opinions are divided as to whether the law permits their performance by way of an agent, such as the abandonment of an asset (Bet Yosef, OH. 434:4; cf. Commentary of Gra (Vilna Gaon) *ibid*); an undertaking (Netivot ha-Mishpat, 45:2. cf. *Kezot ha-Hoshen, ibid.* 2); admission (Resp. Ribash, 392, cf. Resp. Maharshdam, הַמ, 439); oath (summary of positions in Resp. Maharsham, 5:26).

“THERE IS NO AGENCY FOR [THE COMMISSION OF] AN OFFENSE.” The codifiers disputed the legal import of this rule. According to some, this rule is exclusively relevant in the criminal realm. In other words: One does not punish a person for an offence committed by another person operating as his agent, despite the fact that in the civil sense the legal consequences of the act are the same as they would have been had the principal performed it himself (*Netivot ha-Mishpat* 182:1). On the other hand, there is a view that extends this rule to the civil dimension too, arguing that a prohibited action performed by an agent also lacks any legal effect on the civil level too, because by definition the act was not a subject of agency (Resp. *Nodah bi-Yehudah*, 1st ed., EH, 64, 75).

The halakhic authorities disputed the applicatory scope of the rule “there is no agency for [the commission of] an offence”. According to Rabbina, there can be agency for an offence wherever the agent “does not incur liability” (“*eino bar hiuva*”) (BM 10b). In reliance on this view, there are authorities who rule that there can be agency for an offence wherever the agent does not hesitate over whether to obey the teacher (= God) or the student (the principal) and the principal can rely on him to perform the agency, as in the case in which the agent acts on the basis of a mistake (*shogeg*) (Rema, הַמ, 182:1, and 348; and see Sema, *ibid.*).

According to R. Sama, the possibility of agency for an offence is restricted to cases in which the agent does not exercise free will or discretion regarding whether or not to commit the act. In reliance on this view, other authorities ruled that can be agency for the commission of an offence in cases in which the agent acted under duress. However, other authorities dispute

this view too, and in their opinion the denial of agency for an offence even applies where an act is committed under duress, because the agent's act itself is nonetheless volitional, hence the principal will not incur liability. On the other hand, the agent too is exempted from liability for the same act by force of the rule in Jewish Law, that a person acting under duress is exempt from liability (Resp. *Nodah bi-Yehudah*, 1st ed., EH, 75; *ibid.*, 80:16).

LEGAL CAPACITY. Apart from the disqualification of the deaf, the mute, and minor from serving as an agent or a principal, there is also a requirement that the agent and his principal be of the same religious identity, even for the performance of a legal action which is not of a religious character, such as purchasing and selling. As such, one who is not Jewish (*ben brit*) is disqualified from serving as the agent of another Jewish person, or as his principal (Bavli, Kiddushin 41a). However, these restrictions were only established in relation to agency for the performance of a legal act, but where it concerns the performance of a material act (*nuntius*), even if that act has legal ramifications, such as the paying of debt, nothing prevents its performance by one who is not Jewish (Resp. Ḥattam Sofer, OH 201).

DIGRESSION FROM AUTHORIZATION AND DAMAGE TO THE PRINCIPAL'S INTERESTS. If the agent fundamentally digresses from the terms of his authorization, his action is invalid *ab initio* (Maim, Yad. Hilkhot Sheluḥin ve-Shutafim, 1:2). If he discharged his agency in a manner that harms the economic interests of the principal, his agency can be annulled by the principal, who may claim "I sent you to repair and not to damage" (Maim, Yad. Hilkhot Sheluḥin ve-Shutafim, 1:2-3; Sh. Ar. ḤM, 182:2-3, 6). As a rule, regardless of whether the agency was invalidated *ab initio* or annulled by the principal, the third party must restore to the situation to what it was initially.

On the other hand, there are cases in which even if the agent digressed from his authorization, or harmed the principal's interests, it is impossible to invalidate his actions in respect of a third party or to return to the original situation. In these cases the agent must indemnify the principal for the damage he caused. For example: Where the agent did not present himself as an agent in his dealings with a third party, in other words, where the agency was hidden (Maim, Yad. Hilkhot Sheluḥin ve-Shutafim, 2:4; Sh. Ar. ḤM, 182:2); where the principal does not succeed in proving that the agency was only for the purpose of repairing and not to damage (Sh. Ar. ḤM, 182:6, and Sema *ibid.*, s.10); and according to some authorities, where the agent intentionally mislead the third party into thinking that he was acting under authorization (*Shitah Mekubezet*, BM 74b, in the name of the Ra'abad).

In this context, the liability of an unpaid agent does not differ from that of a paid agent (a *middelman*) (Sema., ḤM 185:1: "For even when not paid, the agent is liable when he digresses"), however, if the agent has possession of the principal's asset, then the liability imposed on him is that of a paid

bailee, if he was a paid agent; and of an unpaid *bailee if he was an unpaid agent.

Secondary Agency

An agent can appoint a secondary agent, whose action will directly credit and obligate the principal (Kid. 41a), provided that the principal himself has no opposition (to the appointment) and the agency itself is not defined as 'words' (*mili*). There is a dispute regarding the precise definition of the concept '*mili*', but all agree that an action defined as *mili* is one that does not achieve a legally valid result. For example, an agent for the writing of a *get* (divorce bill) cannot appoint a secondary agent, because the actual writing of a *get* has no legal consequences (Mordechai, Gittin, 420)

The death of the principle agent does not annul the secondary agency (Git. 29b). From this it may be inferred that the secondary agent operates as the extended arm of the principal. Even so, it is still disputed whether the main principal can annul the agency of the secondary agent (Taz, EH 26, and on the other hand, Keẓot ha-Ḥoshen, 188:2)

The Decisions of the Israel Supreme Court

The provisions of Jewish law regarding agency served as a basis for the decision of the Israel Supreme Court in the case of *Moverman* (CA 604/77 *Moverman v. Segal*, PD 32(3) 85). In that case the Court was required to make a determination regarding the validity of an agreement that the executor of an estate made with a woman who was designated as a beneficiary of the estate. The agreement provided for a waiver of the woman's rights under the will in exchange for the receipt of a fixed monthly payment from the executor of the estate. The Court found that the agreement contained a number of legal flaws, such as a suspicion that the executor of the estate exerted undue influence on the woman prior to her signing the agreement. The Court (Justice Menachem Elon) did not rely on that suspicion as the only reason for invalidating the agreement, and ruled that according to Jewish law, a transaction that the executor of an estate carries out regarding the estate for his personal needs, requires prior approval by the court, and if the executor did not take steps to obtain such approval prior to carrying out the transaction, the court must engage in a "thorough examination of the reasonableness and fairness of the transaction, *vis-à-vis* the estate and the beneficiary (*ibid.*, p. 97). The Court ruled on the question from the perspective of the laws of agency:

The question of invalidating a legal transaction because of a suspicion of conflict of interest has been dealt with thoroughly in Jewish law ... regarding the sale of the object of the agency ... 'an agent cannot buy it for himself even for the price at which the owner has authorized him to sell it' (Sh. Ar., ḤM, 185:2).

According to the view of some of the sages ... the reason is one of suspicion, in other words, a conflict of interest between his acting on behalf of the principal and his acting on his own behalf (see, e.g., Beit Yosef on the Tur, ḤM. *ibid.*; Prisha on the Tur, ḤM 175:30, and Bach. *ibid.*; Sema, Sh. Ar. ḤM 175:26).

According to the view of other sages, the flaw inherent in an agent buying for himself is rooted in the fact that in such a case there has been no transfer from one domain to another:

‘For an agent cannot buy for himself, even at the price that the owner has authorized him to sell it, inasmuch as he was made an agent to sell the land to a client, but he cannot authorize himself to buy it for himself, for a man cannot sell to himself; for the definition of a sale is the transfer of the object from one domain to another, and this hasn’t left his domain insofar as he is acting in place of the owner’ (Tur, *ḤM*, 185.3, in the name of *Rashba*)” (*Ibid*, p. 98).

In accordance with the above, in addition to a similar conclusion that is arrived at from the perspective of the laws of inheritance and guardianship in Jewish Law (see under Apotropos), Justice Elon rules that the validity of the transaction that the executor has carried out for himself with regard to the estate that he is administering is contingent upon the prior approval of the court. Because no such approval was given, the transaction is subject to judicial review and the court must “examine the nature and the essence of the transaction from the perspective of what is in the best interests of the beneficiary” (*ibid*, p. 101).

AGGADAH or **HAGGADAH** (Heb. אגדה, הגדה; “narrative”), one of the two primary components of rabbinic tradition, the other being *halakhah*, usually translated as “Jewish Law” (see: Kadushin, *The Rabbinic Mind*, 59f.). The term *aggadah* itself is

notoriously difficult to define, and it has become the custom among scholars to define *aggadah* by means of negation – as the non-halakhic component of rabbinic tradition (Fraenkel, *Midrash and Aggadah*, 20). While fair enough, one must be careful in adopting this approach not to define the parallel term *halakhah* too narrowly. The *halakhah* of the rabbinic tradition can be described in part as a system of laws, but not infrequently it also has the character of a personal moral and spiritual discipline. It can be expressed in the form of concrete judgments about specific cases, but also in rules involving varying degrees of abstraction and generality. Talmudic tradition often uses stories to express a *halakhah*. This is obviously so when the story reports an explicit legal precedent. But it may also be true when a story merely describes the behavior of a notable sage, if it is understood that this behavior is worthy of imitation. Despite the varied forms in which the *halakhah* is expressed, the rules, judgments and precedents included in talmudic literature all have one thing in common: they all categorize specific forms of behavior and well defined areas of experience in line with formal dichotomies, such as “permissible” or “forbidden,” “pure” or “impure,” “holy” and “profane,” etc. *Aggadah*, on the other hand, investigates and interprets the *meaning*, the *values*, and the *ideas* which underlie the specific distinctions which govern religious life. In line with the accepted tendency to define *aggadah* as “that which is not *halakhah*,” one could say that the relation between *aggadah* and *halakhah* is similar to the relation between theory and practice, between idea and application, and, in the area of ethics, between character and behavior.

[Stephen G. Wald (2nd ed.)]

The aggadah is first and foremost the creation of Palestinian Jewry, from the time of the Second Temple to the end of the talmudic period. Throughout that time, Palestine was the meeting ground of different religions and cultures as well as the field of violent political clashes. Its Jewry, confronted incessantly by bitter struggles with a variety of foes from within and without, evolved in the *aggadah* an ingenious instrument for deriving guidance from the Torah, for educating the people, strengthening their faith, and bolstering their pride and courage. Though much aggadic material has been preserved in the Babylonian Talmud, it, too, is predominantly of Palestinian origin, as are all the older Midrashim. The contribution of Babylonian Jewry in the field of *aggadah*, although often reworking earlier Palestinian aggadic themes, often achieves new levels of imagination and originality, frequently striking, engaging, and earthy. Sometimes a “mere” linguistic clarification can be the occasion for developing and elaborating a fragmentary tradition in new and unexpected directions (see: Friedman, *BT Bava Mezi’a VI, Commentary*, 148).

According to Bacher the word *haggadah* is derived from the expression *higgid* (or *maggid*) *ha-katuv*, “Scripture related [or relates],” with which an aggadic discourse often opened. However, the *aggadah* did not always derive from biblical exegesis, but often arose independently of it. The word *aggadah*

is rather to be understood as meaning simply “relating,” i.e., events which have occurred, and in *Sotah* 7b “*devarim shel aggadah*” is used in this sense (cf. B. Lifshitz, *The Jewish Law Yearbook*, 22, 233–328, and the debate between Lifshitz and J. Fraenkel in *Netuim*, 11–12 (2004), 63–91). The important consideration here is the “telling,” the narration, the wording, the style. The “telling,” in this instance *aggadah*, however, is designed to touch the human heart (*Yoma* 75a), “so that one should recognize Him who created the world, and so cling to His ways” (*Sif. Deut.* 49). Its purpose is “to bring Heaven down to earth and to elevate man to Heaven” (Zunz).

Content and Form

The *aggadah* comprehends a great variety of forms and content. It includes narrative, legends, doctrines, admonitions to ethical conduct and good behavior, words of encouragement and comfort, and expressions of hope for future redemption. Its forms and modes of expression are as rich and colorful as its content. Parables and allegories, metaphors and terse maxims; lyrics, dirges, and prayers, biting satire and fierce polemic, idyllic tales and tense dramatic dialogues, hyperboles and plays on words, permutations of letters, calculations of their arithmetical values (*gematria*) or their employment as initials of other words (*notarikon*) – all are found in the *aggadah*. “Whatever the imagination can invent is found in the *aggadah*, with one exception: ‘mockery and frivolity’” (Zunz), the purpose always being to teach man the ways of God. The *aggadah*’s variegated contents and multiplicity of forms can be accounted for by a consideration of its sources and its manner of growth.

The Folkloristic Aggadah

Although the aggadic literature as known is an expression of the ideas and feelings of the *tannaim* and *amoraim*, in many instances it merely adapted ancient material to its needs. Ready at hand were myths dating back to biblical times, popular legends of national heroes – patriarchs, prophets, and kings – and fanciful stories, some the product of the Jewish imagination and “wisdom,” and others remnants of the folklore treasury of nearby and faraway peoples, which had become judaized in the course of time. The sages, however, were interested in establishing a connection between the current, popular *aggadah* and the Bible. Many *aggadot* seem to stem solely from Bible exegesis or a penetrating examination of the text; yet modern scholarship has been able to determine the place and time of their origin and so to separate the original layers from the later additions of the sages. The study of the epic literature of the ancient Orient, the apocrypha, and the legends of other peoples has helped greatly in this regard, as the following instances show. “R. Judah stated in the name of *Rav: ‘When the Holy One blessed be He sought to build the world, He said to the Prince of the Sea “Open your mouth and swallow all the waters in the world.” He said to Him “Master of the World, it is enough that I should retain my own.” Immediately He struck him with his foot and he died, as it is said:

“He breaks the sea with His power; with His understanding He smites through *Rahab”” (BB 74b). Similar statements (Ginzberg, *Legends Jews*, 5 (1925), 17–18, 26–27) are merely the traditional myths of the revolt of the sea which were preserved in popular memory, and which parallel, fundamentally, the Mesopotamian myth of the war of the god creator against Tiamat, and Canaanite legends recorded in the Ugaritic inscriptions (Cassuto, in: *Keneset*, 8 (1943), 141–2).

It is related in a *baraita* that when an accused adulteress was being summoned to confess, she was reminded of biblical parallels for confession, as when not only *Judah but *Reuben too, “confessed and were not ashamed” (*Sot.* 7b; *Sif. Deut.* 35:5). With regard to Reuben this is not evident from the biblical narrative itself, but in the Talmud it is derived from the text by homiletical exegesis, by comparing it with the passage, “May Reuben live and not die.... And this he said for Judah” (*Deut.* 33:6–7; *Sot. ibid.*). The details of the story, however, appear in the apocryphal Testaments of the Twelve Patriarchs (*Reu.* 3). The influence of universal folklore on the *aggadah* is especially evident in the proverbs and fables. Late talmudic and post-talmudic sources ascribe to *Hillel the knowledge of the “conversations of trees and clouds, and of the beasts and animals” (*Sof.* 16:9), an element common to the folklore of all peoples. Another relatively late tradition (*Suk.* 28a) states that his pupil, Johanan b. Zakkai, knew the parables of laundrymen and fox fables. The *amora*, Johanan, related that R. Meir had known 300 fox fables. On the other hand, there is no confirmation from tannaitic sources for this claim, and it seems that the real “hero” of this tradition is the early *amora*, Bar Kappara, whose talents in this field may have been transferred to the earlier figure R. Meir by the *aggadah* (see: Friedman, *The Talmudic Parable*, 28). For his own part Johanan states that he himself knew only three such fables (concerning which he quotes only three biblical verses): “The fathers have eaten sour grapes, and the children’s teeth are set on edge” (*Ezek.* 18:2); “Just balances, just weights” (*Lev.* 19:36); “The righteous is delivered out of trouble” (*Prov.* 11:8). The Talmud (*Sanh.* 38b–39a) takes it for granted that the fables to which these verses correspond were known to all. When *Hai Gaon was asked to expatiate upon Johanan’s statement, he said: “Know that these fables contain moral lessons which are presented as if they emanated from the mouths of the beasts of the fields, like the writings of the Hindus which are called *Kitab Kalila wa-Dimna* and which contain moral lessons, wise sayings, and metaphors in the forms of animal fables. As for these fables of R. Meir, each was attached to a biblical verse which expressed a similar idea. So the story would be told: ‘It happened that a lion caught a fox and wanted to eat it. The fox said to him: What do I possess that can appease your appetite ...’” (B.M. Levin, *Ozar ha-Geonim*, 6, pt. 2, on *Sukkah* (1934), 31–32).

A more Jewish version of the fable is quoted by Rashi (in *Sanh.* 39a). Sometimes only the proverb or moral teaching is given, the story itself being known from Aesop or from Indian fables. At other times only the title of the story is mentioned: “Said R. Ammi: ‘Come and see how great are the men

of faith. From what is this derived? – from the incident of the weasel and the well. If it is so with one who trusts a weasel and a well, how much more so with one who trusts in God” (Ta’an. 8a and Rashi *ibid.*). Yet other stories which were widely known among all peoples have no known earlier source than the *aggadah*. Although these are recorded as incidents in the lives of the sages, they have a folk origin (PDRK 7 – the story about R. Simeon b. Yohai – this tale of the wise farmer’s daughter has spread among the Germanic, Slavic, and Romanian peoples). “The Jews may well be described as the great disseminators of folklore. Many a legend that originated in Egypt or Babylonia was appropriated by the European peoples, and many a European fairy tale found its way to Asia through the medium of the Jews, who on their long wanderings from the East to the West, and back from the West to the East, brought the products of Oriental fancies to the occidental nations, and the creations of occidental imagination to the Oriental peoples” (Ginzberg, *Legends Jews*, 5 (1925), vii).

The Discourse

From the earliest times the public reading from the Torah and the prophetic books occupied a prominent place in the synagogue service (BK 82a; TJ, Meg. 1:1, 70b). “They read in the book, in the Law of God, distinctly; and they gave the sense and caused them to understand the reading” (Neh. 8:8). At the conclusion of the reading, an exposition adapted to the level of the listeners would be delivered. This exposition contained the seeds of the *derashah* or discourse, which may be regarded as a continuation of the activities of the prophets “who reprovved in the gates” (Isa. 29:21; Amos 5:10). The ordinance requiring the appropriate exposition to be delivered before the festivals was regarded as of the greatest antiquity, the sages asserting: “Moses ordained that Israel should enquire and expound concerning the Festivals” (Sif. Num. 66). Philo mentions the discourse many times (*De Somniis* 2:127; *Apologia* 7:12). On the Sabbath that Paul came to Antioch, after the Torah and *haftarah* reading, the congregants turned to him and asked him whether he wished to preach (Acts 13:14–15). Gamaliel, Joshua, Eleazar b. Azariah, and Akiva delivered discourses in Rome (Ex. R. 30:9). There is also an account of Akiva’s address in the town of Ginzak in Media (Gen. R. 33:5). These discourses were delivered to the common people, in some instances gentiles being present in the audience. “At the time the elder sits and discourses, many strangers become proselytes” (Song R. 4:2). The “words of admonition” spoken on fast days were none other than a *derashah* (Ta’an. 2:1; Tosef., Ta’an. 1:8). Addresses were also delivered on the occasion of family joys and sorrows (Ket. 8b). People flocked to these addresses (Sot. 40a), and enjoyed listening to them. It was accurately said: “The delights of the sons of man’ – these are the *aggadot*, which are Scripture’s delight” (Eccl. R. 2:8). The *aggadah* eventually became the core of the discourse, the preacher utilizing the occasion to point to the virtues and faults of his audience, to voice their feelings and aspirations, to scrutinize the events of the time, and to judge their deeds and those of their enemies. Whatever he had

to say would be linked to the portion of Scripture they had just heard. At times it is difficult to determine whether the biblical exegesis is the source of the aggadic idea or whether the idea was read into the Scriptural passage. This, however, is immaterial. The spirit of the Bible pulsates in these *derashot*. Only individuals permeated with this spirit, in whom the words of the Bible had become alive, could relate their thoughts and feelings so closely to the text as to emerge with an exegesis and aggadic idea which seem, at times, to have arisen simultaneously. This total involvement with Scripture also explains why, despite the wide differences in the form, style and content of aggadic literature, and the vast distances in time and often in space which it spanned, no radical differences in its essential nature are perceivable.

In addition to its role in the public address, *aggadah* was studied and taught in the academies. Periods of instruction and study would be enlivened by aggadic interludes. When R. Zeira, on one occasion, was not up to delivering a halakhic discourse, he was besought, “Let the Master deliver an aggadic exposition,” the latter requiring less exertion (Ta’an. 7a). The exegesis of some word in the course of a halakhic investigation would often lead to an aggadic discourse (BB 78b). The wording of a *halakhah* would sometimes recall a popular maxim (BK 92b). Obviously the aggadic expositions of the sages in the academies were subsequently made use of by popular preachers, just as those of the public sermons found their way back to the academies. The *aggadah* is a fusion of both.

Aggadic Methods

The freedom of interpretation allowed to the *aggadah* is given expression in the 32 hermeneutical principles included in the *Baraita of the Thirty-two Rules attributed to Eliezer b. Yose the Galilean (appearing in the printed editions of the Babylonian Talmud after the tractate *Berakhot* and in *Mishnat Rabbi Eliezer* (ed. by H.G. Enelow (1933), 10 ff.)), but probably post-talmudic in its present formulation. Some of these principles are the same as those used in halakhic exposition, such as the seven principles of Hillel and the thirteen of R. Ishmael. Others are either exclusively or generally intended for the *aggadah*. Not invented by the sages, they closely resemble the exegetical methods used by the Greek orators and the grammarians of the ancient world (see: Lieberman, *Hellenism*). The talmudic sages employed these principles in finding scriptural allusions to and support for their ideas and in holding the attention and interest of their audiences. To personify the relationship between God and the people of Israel, the talmudic sages like the interpreters of Homer, from Anaxagoras onward, and like Philo of Alexandria, used parables as allegories. The *aggadah* knows of no conflict between literal and figurative explanations. The verb “*pashat*” is used both in reference to the plain or literal meaning (*peshat*) and to interpretations which are obviously homiletic (*derash*). Only toward the end of the amoraic period does the rule appear: “A verse cannot depart from its plain meaning” (Shab. 63a; Yev. 11b; cf. Bacher, *Exegetische Terminologie der Juedischen Traditions literatur*, 2 (1905),

170–3; R. Loewe in: *Papers of the Institute of Jewish Studies, London* (1964), 140–85) and a distinction was thus established between the two. (See also *Midrash.)

The Structure and Style of the Discourse

The *derashot* or discourses of the *tannaim* and *amoraim* have rarely come down in their original form. Ideas that were once coherent are now separated and scattered. In the extant Talmuds they are fragmented, joined with other elements, and removed from their original order. To the words of the early expositors the remarks of the later sages on the same topic have been added. Most evidence on the arrangement of the addresses dates back to amoraic times. The Talmud states that R. Meir would devote one third of his discourse to *halakhah*, one third to *aggadah*, and the rest to parables (Sanh. 38b). Since the discourses were based primarily on the weekly Torah and *haftarah* readings, some preachers would link elements from both. Indeed, the linking together of verses from all three divisions of the Bible and the exposition of Torah verses through verses in the other books was an integral part of the discourse. The Midrash relates that “R. Eliezer and R. Joshua ... sat and occupied themselves with Torah ... and they linked (the correct reading is *horzin*) words of the Torah to the Prophets, and of the Prophets to the Hagiographa ...” (TJ, Hag. 2:1, 77b; cf. Lev. R. 16:4).

A striking feature of most extant Midrashim is the proem or introduction (*petihah*). A verse from a remote source, usually the Hagiographa or the later Prophets, is adduced. This verse is then interpreted and eventually associated with the section to be expounded, at which point the preacher concludes by repeating the original verse. In some aggadic Midrashim, a series of proems (*petihot*) serve as introductions to the systematic exposition of an entire portion of the Torah. Although it seems that each *petihah* served as the introduction to a specific sermon, some were, very likely, complete sermons in themselves (Heinemann, in: *Fourth World Congress of Jewish Studies*, 1968). Vestiges of such sermons as delivered by the *tannaim* have been preserved. The *petihah*, though primarily an expository instrument, also served the purpose of emphasizing the unity of the Bible.

It was customary to conclude aggadic discourses with words of comfort. The sages took note that “all the prophets began with words of reproof and ended with words of comfort” (PDRK ed. Mandelbaum, 238). Sometimes the conclusion of the discourse flowed naturally from the content of the discourse; sometimes it was a deliberate addition. There are many stylistic resemblances between the *derashah* and the stoic and cynic diatribe, both being rich in dramatic description, anecdote, and antithesis. In these discourses, dialogues are created within the context of biblical events, e.g., “The Egyptians said, ‘Let us flee from the face of Israel.’ The wicked and foolish among them said: ‘Shall we flee from before the afflicted and degraded people? Shall we flee from before Israel?’ The wise among them replied: ‘Let us indeed flee from the face of Israel!’” (Mekh., Be-Shalah, 8).

The aggadic expositors focused their attention upon topics of everyday life, not hesitating to color their remarks with popular maxims, some translated from Greek to Aramaic while others were retained in the original. Aggadic homilies, often faithful reflections of actual customs and institutions of the Roman Empire, are rich in analogy: “This may be compared to a king ...” “To a prince ...” and the like.

Two styles may be discerned in the *aggadah*, one simple and the other ornate. In the first, the folklore basis is clearly evident. There is no striving after refinement; no embellishment is added and the language itself is sharp, and even coarse. In the second, the refined and the pleasant, the arresting and the attractive, are consciously sought after. In most aggadic works both styles are indiscriminately represented. Points of contact between the *heikhalot* literature and rabbinic sources may occasionally be detected in the Talmuds and Midrashim (see: G. Scholem, *Jewish Gnosticism, Merkabah Mysticism and Talmudic Tradition* (1962), 23–27), as well as rudiments of poetry (Mirsky in: YMH51, 7 (1958), 1–129). The tannaitic homilies may be seen as representing the first stirring of the **piyyut* style, the later *amoraim* refining and polishing until the *piyyut* form was finally assumed (see: Mirsky, *ibid.*, passim).

Historical Aggadah

This category consists of additions and supplements to the Bible narrative and ancient *aggadot* preserved among the people, some dating back to Bible times themselves. Incidents and deeds only hinted at in Scripture serve as the kernels of dramatic accounts. Minor biblical figures become leading heroes. Biblical heroes become prototypes, for instance Abraham is the archetype of all proselytizers, Esau the fashioner of violence and deceit. In aggadic history, the limitations of space and time are transcended and anachronisms abound. Shem and Eber, for example, founded academies (*battei midrash*) where Jacob studied Torah (Gen. R. 63:9). Biblical heroes and their deeds are freed from the restraining bonds of time, the aggadic authors striving to discover in them meaning for their own and for their subsequent generations. The verse: “The voice is the voice of Jacob but the hands are the hands of Esau” is seen as the contrast not only between Jacob and Esau but also between their descendants, Israel and Rome, for “the deeds of the fathers are a sign to the children.” In the *aggadah* can be found side by side a tendency to clear national heroes of all guilt, to exalt and glorify the nation and its past, and harsh criticism of even the patriarchs and the prophets. What is more, these two attitudes do not necessarily represent opposing views of different sages, but may even appear in the dicta of the same rabbi. Yet there is no contradiction or lack of consistency. For when they spoke of the past, their eyes were fixed on the present. Just as they desired to comfort and encourage by their words of praise, so were their critical observations intended to reprove and chastise. Yet their attitude to the present did not always determine their outlook on the past (see: Urbach, in: *Molad* (1961), 368–74). Aggadic literature even preserved stories and legends which were “foreign

growths in the vineyards of Israel.” Some of these had traveled far before reaching the Jewish people; others were the creations of propagandizing sects and parties now extinct. Later generations, while still maintaining their fierce hatred of the sects, accepted vestiges of their doctrines without being aware of their origins. Parallels in the apocryphal literature, in Philo and Josephus, and in the early Church Fathers attest to the antiquity of *aggadot* of this type. In the course of time the historical *aggadah* was expanded. To the portrayal of the history of Israel in the distant past, was added a description of the sufferings and disasters and the gratifications and consolations of the present. Alongside the stories of Bible heroes, biographical details of the *tannaim* and *amoraim*, their deeds, virtues, conduct, and manners, were introduced. With the obvious pleasure taken by the aggadists in the actual telling of a story, it must not be forgotten that their principal motive was not to create works of art, but to aid man, to instruct him “to know how to fear God and walk in His ways.”

Doctrines

Systematic philosophies or theological doctrines are not to be found in the *aggadah* (see: Kadushin, *The Rabbinic Mind*, 280–81). Nevertheless, numerous attempts are made to provide well considered, if fragmentary, answers to questions concerning God, His attributes, the secret of Divine Providence, His rule over man and creation, the nature of idolatry, the source, character, and purpose of human existence, the relationship of man to God and to the world, the problem of the righteous and the wicked, reward and punishment, the position of the Jews among the gentile nations, the mission of the Jews, the Messianic era, and the world-to-come. It is true that the esoteric doctrine of “what is above and below; what came before and will come afterward” only concerned the elect, who were bold enough to enter the world of mysticism and to occupy themselves with the “Creation” and “Chariot” chapters of the Bible (Gen. 1 and Ezek. 1), but many esoteric teachings became part and parcel of the *aggadah*. The older works of the *aggadah* are also the most ancient sources of Jewish mysticism (Urbach, in: *Studies in Mysticism and Religion Presented to G. Scholem* (1967), Heb. sect. 1–28).

On all other topics most of the *tannaim* and *amoraim* expressed their views freely. There is hardly a generation which did not submit contradictory solutions to the problems mentioned above. To mention a few examples: Bet Shammai and Bet Hillel differed on whether the heavens or the earth were created first. Four generations later, R. Simeon delivered his opinion: both were created simultaneously, like a pot and its lid (Gen. R. 1:15). The *amora*, Resh Lakish, differs and offers a compromise: “When they were created, He created heaven first and afterward the earth; when He stretched them forth, He stretched forth the earth first and afterward the heaven” (Hag. 12a).

Again, in respect to proselytes, the Talmud contrasts Shammai’s impatience with them to the well known patience of Hillel (Shab. 31a). These opposing attitudes are ascribed to

amoraim as well. R. Eleazar, in the third century, declared: “God dispersed the Jews among the nations only that proselytes should join them” (Pes. 87b). R. Ḥelbo, a generation later, made the biting remark: “Proselytes are as hard for Israel to endure as a scab (*sappaḥat*), as it is written (Isa. 14:1): ‘And the stranger shall join himself with them, and they shall cleave (*nispaḥ*) to the house of Jacob’” (Yev. 47b).

The verse, “This book of the law shall not depart out of thy mouth all the days of thy life” (Josh. 1:8) was interpreted by R. Ishmael to mean “Make them follow the way of the world” i.e., engage in normal occupations. Simeon b. Yoḥai objected: “Is it possible that man should plow in the proper season, sow in the proper season, reap in the harvest season? What will happen to the Torah? But when Israel obeys the will of the All-Present, its chores are performed by others.” On this, the *amora* Abbaye commented: “Many followed the advice of Ishmael and it worked well, of Simeon b. Yoḥai and failed.” Abbaye’s colleague, Rava, forbade the sages to gather at the academy during the harvest seasons (Ber. 35b).

R. Eliezer and R. Joshua disagreed as to whether the redemption of Israel is conditional upon its repentance, the controversy reappearing in a different version several generations later, between Rav and Samuel. “Rav said: ‘All predestined dates have passed. Everything now depends on repentance and good deeds.’ Samuel said: ‘It is sufficient for the mourner to keep his period of mourning’” (i.e., they will be redeemed even without repentance; Sanh. 97b). Special emphasis was given to those *derashot* dealing with the Messiah, the world to come, resurrection, the redemption of Israel and of the world. Here too, controversies abound, some sages adopting the apocalyptic trend and others a more realistic approach. All, however, share a common conviction – the eventual triumph of the Jewish people over all their sufferings, and the ultimate victory of Judaism over all the world’s evils and abominations. All that has been said in this regard revolves around two poles: the nation and its land, on the one hand, and the universal, the perfection of the world on the other. It would be surprising if aggadic literature, which grew over a period of over 1,000 years in lands of different religions and cultures, did not bear the imprint of time and place. Foreign languages (Greek in Erez Israel, Persian in Babylonia) enriched the Hebrew and Aramaic vocabularies; elements of Platonic, Stoic, and Pythagorean philosophies, and concepts which had gained currency in the prevalent Hellenistic culture infiltrated into the *aggadah*. Political and religious events also influenced trends of beliefs and doctrines in certain areas of the *aggadah*. On certain issues of religious thought, there were many-sided polemics which persisted for many generations. The later sages revived the discussions of the problems from the changed perspective of their own times (Urbach, in: *Y. Kaufmann Jubilee Volume* (1960), Heb. sect., 122–48) with even greater vigor and boldness. The editors of the *aggadah* collected the various views pro and con, and left them side by side, since in their opinion all were “the words of the liv-

ing God.” The ethical doctrines in the *aggadah*, the teaching and preaching of virtuous conduct to the public, clearly reflect not only the views and opinions of the sages who strove for human betterment, but also the political, social, and cultural environment of the generations to whom they addressed themselves. They brought all classes, without prejudice, under critical review. Even the sages themselves were not spared. The spiritual trends and the various sects, whether they remained within the Jewish fold or abandoned it, left their impress on the *aggadah*. Stories, interpretations of verses, and many dicta are eminently polemics against Sadducean, Gnostic, Christian, and especially Judeo-Christian sects. The aggadic sages rebut the charges of emperors, various heretics, and even philosophers against the Torah – and then go over to the attack.

Whatever the Jewish people, including its sages, scribes, teachers, and preachers, thought or felt during a period of more than 1,000 years is reflected in the *aggadah*. Later generations found in this great treasury the expression of their own deepest feelings. On the one hand they derived support and proofs for their views and concepts, and on the other, they were able, when necessary, to declare that the aggadic view contrary to their own was not binding, or that it constituted a foreign addition. The attitudes of scholars and rabbis toward the *aggadah* – its literary or free interpretation, its evaluation as binding doctrine or as imaginative, literary creation – differed widely at various periods in history. Even after the *aggadah* had ceased to grow and other modes of creative expression had replaced it (i.e., *piyyut*, philosophy, Kabbalah), it remained a perennial source of inspiration and insight.

The Aggadists

Although most of the masters of the *aggadah* excelled in *halakhah* as well, there were sages, *tannaim*, and *amoraim*, who specialized in *aggadah*. Although it was said of Akiva that he “composed halakhic and aggadic interpretations” (TJ, Shek. 5:1, 48c), the Talmud ascribes to one of his contemporaries, Eleazar b. Azariah, a negative evaluation of his expertise in *aggadah*: “Akiva, what have you to do with the *aggadah*? Cease your talk, and turn to the laws of *Nega'im* and *Oholot*” (Hag. 14a). R. Tarfon is reported to have said of R. Ishmael: “He is a great scholar and expert in homiletic exposition” (MK 28b). R. Johanan stated in the name of R. Eleazar b. R. Simeon, “Wherever you find the words of R. Eleazar b. R. Yose the Galilean, shape your ear like a funnel” (Hul. 89a). Among the Palestinian *amoraim* were many masters of the *aggadah*; R. Jonathan, R. Samuel b. Nahman, R. Isaac Nappaḥa, R. Levi, R. Abba b. Kahana, R. Berechiah, and R. Tanḥuma are especially famous as aggadists. Some of them apparently, are referred to by the collective name, *rabbanan de-aggadeta* (“the rabbis of the *aggadah*,” TJ, Ma'as. 1:2, 48d; TJ, Yev. 4:2, 5c). They were not immune to criticism, however. It is told of R. Ze'ira that he used to rebuke the aggadic expositors, calling them “magician scribes” and characterizing their interpretations as turning over and over and conveying nothing (TJ, Ma'as. 3:9, 51a).

R. Johanan's thrust, “There is a tradition transmitted by my fathers not to teach *aggadah* to a Babylonian or a southerner since they are uncouth and not learned in Torah” (TJ, Pes. 5:3, 32a; Pes. 62b), is no more than a rejoinder to remarks such as those expressed by R. Ze'ira.

[*Encyclopaedia Hebraica*]

Women in Aggadah

The many aggadic images of females and the feminine offer a complex, nuanced portrait of women. Through midrashic expansions of biblical narratives and rounding out of biblical characters, biblical women are given a voice, albeit a voice filtered through the minds of men. In *aggadah*, one hears Sarah protesting her imprisonment in the house of Pharaoh (Gen. Rab. 41:2), Leah praying that her last child will be a daughter (b. Ber. 60a), and Rachel describing how she assisted her father in his deception of Jacob in order to protect her sister from embarrassment (Lam. Rab. Proem 24). Biblical women, like their male counterparts, are constructed in *aggadah* as paradigms and models for all Jews; thus Tamar's willingness to be burnt unless Judah identified his seal, staff and cord serves to teach that “it is better that a person throw himself into a fiery furnace than shame his fellow in public” (b. Ber. 43b). The range of *aggadah* illustrates that there is no monolithic rabbinic view of women; classical *aggadah* includes both accolades and sharp critiques. While the women of the generation of the Exodus are praised for their faith and devotion (*Midrash Tanhuma* Pinhas 7), Eve is blamed for “corrupting Adam” and “extinguishing his soul” (Gen. Rab. 17:8). Just as there are *aggadot* that praise the good qualities of the matriarchs, so too there are *aggadot* that highlight their shortcomings. In many *aggadot* that describe some aspect of the relationship between God and the people Israel, Israel is portrayed in the feminine. When God is compared in parables to a “flesh and blood king,” Israel may be portrayed as the king's consort or his daughter. These parables are used to describe the divine-human relationship as one marked by love, anger, betrayal and reunion. The use of the feminine to symbolize Israel is inconsistent; parables are equally likely to characterize Israel as God's son. It would be incorrect to read the emotional turmoil of the king-parables as an indication of rabbinic dislike of women or as a critique on family life among the ancient rabbis. Instead, these *aggadot* demonstrate the rabbis' willingness to identify, as part of collective Israel, with the feminine. Scholars who have attempted to compare or contrast attitudes toward women in *halakhah* and *aggadah* have drawn no clear-cut conclusions. At times, aggadic traditions attempt to explain or justify women's legal status and obligations. Some discussions of the three commandments especially associated with women (separation of dough, separation during menstruation, and lighting the Sabbath lights) describe these responsibilities as punishment or atonement for the shortcomings of Eve (Gen. Rab. 17:8). In other cases, *aggadah* may serve to soften or critique a law that touches on the lives of women, as in the case of divorce (Gittin 35a).

[Dvora E. Weisberg (2nd ed.)]

WOMEN'S OTHERNESS. Although aggadic views about women vary, they are generally based on the conviction of women's essential alterity from men. "Women are a separate people" (Shabbat 62a) asserts the predominant supposition that the physical characteristics, innate capacities, and social functions of females are inherently dissimilar and generally less valued than those of males. Niddah 31b points out that males are welcomed at birth because of their physical potential for generativity and because they enter the covenant through circumcision. Females, on the other hand, are not a cause for celebration; they are empty wombs requiring male insemination, their birth delays their parents' resumption of sexual relations by an additional week, and their menstruation requires them to be separated from their husbands for almost half of each month. Woman's otherness is said to originate in the secondary nature of her creation. The final segment of Niddah 31b suggests that the preferred position for sexual intercourse is that in which the man, on top, looks towards his origins in the earth (i.e., to the cosmic substance from which God created him) while the woman, facing upward, looks toward the man from whose body she was created. The assumption that the initial human creation was a solitary male from whose body a woman was subsequently built is the view that most commonly appears in the rabbinic *aggadah* (e.g., Ketubbot 8a; Gen. Rab. 18:2). Several extended aggadic narratives catalog and justify a series of female disabilities as consequences of the lesser nature of female creation and the first woman's subsequent deleterious moral choices (Gen. Rab. 17:8; ARN B 9; Eruvin 100b). Aggadic passages reflect anxiety regarding women's sexual unreliability; unaccompanied women in the public sphere are suspect and may be divorced (Ketubbot 7:6; Gittin 90b); women gathering in groups are connected with witchcraft (Pesaḥim 8:7; Avot 2:7; Pesaḥim 110a, 111a). Having to wear a veil outside of the domestic sphere (Sotah 3:8) is seen as a female burden connected with guilt and shame (Gen. Rab. 17:8; Eruvin 100b); ARN B 9 comments: "In the same way Eve disgraced herself and caused her daughters to cover their heads." A woman who remains veiled even within the home is truly pious and will be rewarded (Yoma 47a). Foreign women, like Hagar (Gen. 16–21) and Cozbi (Num. 25), are usually understood to exemplify unrestrained sexuality and ill will towards Israel and are represented with particular hostility in aggadic sources (*Gen. Rab.* 53:13–14; Me'ilah 17b; b. Sanhedrin 82a; Num. Rab. 21:3). Rahab, the noble harlot of Joshua 2 and 5:25, and Ruth, the Moabite ancestress of King David, are among the few women from outside the Israelite community who are praised, essentially because each is understood to have joined herself to the community of Israel through faith and marriage (Zevahim 116a–b; Megillah 14b; Sifre Num. 78; Ruth Rab. 2:1).

[Judith R. Baskin (2nd ed.)]

The Aggadah in Modern Scholarship

Leopold Zunz's classic work, *Die Gottesdienstlichen Vortraege der Juden* (1832), marks the beginning of modern research

in the field of *aggadah*. Ever since then, scholars, prominent among them Nachman Krochmal, S. Rapoport, S. Buber, A.H. Weiss, A. Epstein M. Friedmann, J. Theodor, W. Bacher, H. Albeck, and I. Heinemann, have concentrated on three tasks: (1) to publish critical and corrected editions and also such material as was still in manuscript, (2) to compile the aggadic treasury in some systematic form; and (3) to examine the contents, ideas, and methods of the midrashim and thus to determine the dates of the various works. An especially significant and original contribution was made by Bacher, who gathered and arranged in chronological order, the aggadic material of all the *tannaim* and *amoraim*, thus making the aggadic creation of each sage accessible, and enabling us to assess his particular approach and "world of ideas." Bacher's works: *Die Agadah der Tannaiten* (1878) and *Die Agadah der Palaestinensischen Amoraer* (1892–99) were published in German and translated into Hebrew. Louis Ginzberg, in his *Legends of the Jews* (1909–38), arranged the *aggadot* around a chronology of biblical personalities and events. His collection is extraordinarily rich and broad in scope, and his notes and explanations are a gold mine of information on the history of the *aggadah*, especially in its relation to the Apocrypha and Patristic Literature. The *Sefer ha-Aggadah* of Bialik and Rawnitzki is a popular work which has achieved a very wide circulation. It includes most of the important branches of the *aggadah*, (in Hebrew translation, where the sources are in Aramaic). The first section is arranged in chronological order, the second, according to topics. The compilers found it necessary to graft versions to one another, and also to omit material offensive to the modern reader. A subject index is appended to the work. First published in 1910, the *Sefer ha-Aggadah* has gone through eighteen impressions, including an enlarged edition published in 1936.

[*Encyclopaedia Hebraica*]

Later Studies

Since the 1970s, when literary theory emerged as a burgeoning field of interest, intersecting with other areas of inquiry, studies in *aggadah* have been marked by an increasing awareness of its literary features. Scholars, primarily in North America, but also in Israel, have come to pay less attention to the historical veracity of aggadic texts, and to focus their attention more on the "literariness" of classical rabbinic texts. Underlying this new trend in the study of *aggadah* is the notion that rabbinic stories not only reflect beliefs, values, and customs, but also possess the earmarks of literature and should thus be examined in light literary motifs, themes, and structure. Many contemporary scholars are thus no longer interested, for example, in how a story about a certain rabbi may be utilized in constructing his historical biography. Instead, rabbinic narratives are analyzed in terms of their literary quality. At the same time, however, they are regarded as artifacts that function as conveyors and mediators of rabbinic culture. The historical import of narratives is therefore undiminished to the extent

that they yield insight into the milieu of those who recorded, transmitted and lived by them.

The following is a précis of some of the many works that have affected contemporary studies of *aggadah*.

Neusner's *The Development of a Legend* has proven to be a turning point in the field of rabbinics. Here he methodically demonstrates how stories depicting the life of Rabbi Johanan Ben Zakkai evolved into what is considered the "normative tradition," and how they tell us more about those who produced the narratives or deemed them authoritative than about the actual personage. Rather than viewing the corpus of rabbinic literature as monolithic, Neusner's source and form-critical analyses highlighted the importance of the diachronic, as well as structural aspects of rabbinic texts. More fundamentally, his work called attention to the need to explore basic assumptions about the nature of rabbinic literature. Neusner's underlying assumptions, shared by his compatriots in biblical studies – Hebrew Scriptures and New Testament – provided the basis for much future study in rabbinics.

Advancements in literary studies and theory attracted such scholars as Boyarin and Stern, whose work exemplify the interdisciplinary approach to *aggadah* and Midrash that broadly speaking characterizes the general trend in North American research into rabbinics today. Boyarin's *Intertextuality and the Reading of Midrash*, dealing primarily and explicitly with Midrash through a postmodern critical lens, is a significant contribution to the field of academic rabbinic research. Here Boyarin discusses rabbinic interpretation as discourse that is historically and ideologically situated. Through a study of the *Mekhilta* and its use of quotations, he illustrates how rabbinic interpretation is both the continuation and disruption of tradition. Although the work does not deal with *aggadah* per se, it provides a methodological framework for analyzing rabbinic narratives, and as such it has been regarded by many scholars as groundbreaking. Stern's *Parables in Midrash* is an in-depth analysis of the function of the *mashal* (parable) in rabbinic literature that explores its compositional and exegetical techniques, its rhetoric and role in midrashic discourse. Stern draws the conclusion that parables about kings constitute the preeminent form of narrative in rabbinic texts. Although he emphasizes the *mashal*, Stern also examines other literary forms such as the *petihta* (the proem of the homiletic Midrash), and the *ma'aseh* (reportage). Stern's later work, *Midrash and Theory*, investigates rabbinic texts theoretically and deals squarely with the impact of literary criticism on rabbinic exegesis. Kugel's *In Potiphar's House* examines a series of stories that elaborate on the Joseph narrative in Genesis. Here he traces the development of *aggadah vis-a-vis* traditions found in sources as diverse as early Christian writing, *piyyut*, and the Qur'an, in light of the manner by which exegetical motifs are created and evolve. In addition to examining the historical development of rabbinic narratives, in the final chapter of his book, "Nine Theses," he reflects on several aspects of Midrash and *aggadah*, and formulates general conclusions about the workings of early biblical exegesis.

Kugel's *The Bible as it Was*, an expansive collection of biblical interpretation, also contributes significantly to the study of rabbinic narratives in so far as it offers erudite commentary on the ancient interpretive traditions, and elucidates how they in turn gave rise to crucial transformations in the meaning of a biblical story.

Talmudic scholars, such as Kalmin and Rubenstein, have focused on the study of *aggadah* in the Talmud. In *The Sage in Jewish Society of Late Antiquity*, Kalmin compares stories produced more or less at the same time but in different locations. By doing so, he demonstrates how the differences between Babylonian and Palestinian rabbinic social structures help explain distinctions between depictions of biblical heroes in aggadic texts. In the same vein of attempting to read narratives for their cultural significance, in *Talmudic Stories: Narrative Art, Composition and Culture*, Rubenstein closely examines six talmudic stories with an eye toward both literary aspects and cultural contexts.

Israeli scholarship has also contributed to the study of *aggadah* from a literary and interdisciplinary perspective. First and foremost, the comprehensive works of Isaac Heinemann (*Darkhei Ha-Aggadah*) and Jonah Fraenkel (*Darkhei Ha-Aggadah ve-Ha-Midrash* and *Midrash ve-Aggadah*) have shaped the ways in which generations of Israeli scholars and students have approached and understood the aggadic literature (see below). Dov Noy, whose folkloristic approach in general, and his listing of rabbinic folkloric motifs, *Motif Index of Talmudic-Midrashic Literature*, in particular, signaled a serious shift in the study of *aggadah*. These scholars in turn paved the way for a new generation of scholars whose are deeply engaged in aggadic studies. Noteworthy Israeli contributors to literary analysis of *aggadah* include Ofra Meir, who examines the relationship between rabbinic biblical exegesis and narrative from a literary perspective, Avigdor Shinan, who engages the nexus between *aggadah* and *targum*, Galit Hasan-Rokem, who approaches the study of rabbinic folktales from a cultural poetics perspective, and Joshua Levinson, who examines rabbinic narrative expansion and reformulation of biblical stories in the light of contemporary critical literary theory.

[Carol Bakhos (2nd ed.)]

The tendency toward interdisciplinary methodology and theoretical generalization described above has for the past two decades been accompanied by a parallel and probably related tendency toward the erosion of accepted and authoritative cultural canons in both literary and religious studies. While primarily characteristic of North American scholarship, these trends have also had their followers in Israel (see above). Nevertheless, it would be fair to say that in many Israeli circles the classical literature of the *aggadah* has largely retained its canonical status as well as much of its cultural and (for some) its religious authority. As a result, the fundamental assumption underlying much study and research into the aggadic literature in Israel (and similar Hebrew language research outside of Israel) is that the study of aggadic texts in their original

languages (Hebrew and Aramaic) and the detailed explication of the form and content of these texts are fully justified for their own sake, and are of interest to a wide audience of professional and non-professional students. This assumption has shaped much of the direction and focus of recent Israeli studies of the *aggadah*.

By the early 1970s Israeli scholarship had already produced a number of seminal works in the field of *aggadah*. First of all, Zunz's *Gottesdienstlichen Vortraege* had been translated into Hebrew, and richly annotated and updated by Hanoach Albeck (1946) thus placing a fairly comprehensive, reliable and accessible introduction to aggadic literature in the hand of every student. Second, Isaac Heineman published in 1950 (second edition 1954) his revolutionary typology of the rabbinic *aggadah*, *Darkhei ha-Aggadah*, which provided a detailed description of the methods of rabbinic aggadic under two general headings: "creative historiography" and "creative philology". The significance of this work lay in focusing the reader's attention for the first time on the ways in which the rabbis actually interpreted biblical texts and narratives, thus largely replacing the age-old polemical and apologetic discussions of how the rabbis "should have" interpreted the scripture. Thirdly, Ephraim Urbach published in 1969 his monumental work, *Ḥazal* (translated: *The Sages: Their Concepts and Beliefs*, 1987), which restated the entire theological, ethical, and eschatological content of the world of the *aggadah* in a modern format easily accessible to student and scholar alike. By 1970 the student of *aggadah* also possessed, in addition to the classic critical edition of *Genesis Rabbah*, begun by Theodor and finished by Albeck, critical editions of *Levitcus Rabbah* (M. Margulies) and *Pesikta de-Rav Kahana* (B. Mandelbaum), comprising, together with *aggadah* in the Talmudim, the basic corpus of the classical amoraic aggadic literature. Viewing aggadic literature as an integral part of talmudic rabbinic literature as a whole, the work of J.N. Epstein, H. Albeck, and S. Lieberman was seen to have laid firm foundations for the historical and philological analysis of the textual traditions in which the literature of the *aggadah* was preserved.

Without a doubt, the most important Israeli figure in the study of *aggadah* for most of the last three decades has been Jonah Fraenkel. One cannot overestimate the profound and pervasive impact of Fraenkel's work, both as a scholar and as a teacher. His influence is in some ways even stronger today, despite the fact that many of his former students have moved in new and different directions. This is due to the publication of his two comprehensive and synthetic works, *Darkhei ha-Aggadah ve-ha-Midrash* (1996) and *Midrash ve-Aggadah* (1996), which have appealed to a wide audience, and are not limited to a small circle of professional scholars. Similarly the recent publication of *Sippur ha-Aggadah – Aḥdut shel Tokhen ve-Zurah* (2001) has made many of his classic studies, along with a number of new articles, easily accessible to the general public. Aside from popularizing the fruits of modern research into the *aggadah*, Fraenkel's own contribution lies in two areas. First of all, building upon the work of Isaac Heine-

mann, Fraenkel further developed and elaborated the typology of the *aggadah* viewed from the perspective of the isolated act of rabbinic scriptural interpretation. More importantly, however, Fraenkel described and analyzed the macro-forms in which these interpretations are imbedded: the expanded biblical narrative, narratives relating to the talmudic sages themselves, the parable, the aggadic *memra* (amoraic statement), etc. Moreover, he shows the articulation and explication of these forms, understood in the light of modern literary theory, to be essential to the appreciation of the ideational content of the *aggadah* itself, thus continuing the work of his teacher, Ephraim Urbach. In one respect, however, Fraenkel made a clear break with Urbach's methodology, a point which he has repeatedly emphasized. Urbach tended to compare and contrast parallel versions of a given tradition, and after philological and higher-critical analysis to posit a reconstructed original, which he then used as the basis for his analysis. Fraenkel's insistence on the unity of form and content in each and every version of a tradition led him to reject Urbach's approach and to refrain from conflating – and even from comparing – alternative versions of a tradition, basing his exposition on a detailed and exhaustive analysis of data present in a given talmudic text.

At the same time the scholarly tradition of Epstein, Albeck, and Lieberman has not been ignored. Scholars such as Jacob Elbaum, Menahem Kister, Chaim Milikowsky, Avigdor Shinan, Menachem Hirshman, Joseph Tabory, Paul Mandel, Menachem Kahana, M.B. Lerner, and Hananel Mack have written hundreds of studies both analyzing particular passages and addressing broader critical and methodological issues. Most of these scholars are also deeply involved in long term projects of preparing the next generation of critical editions and commentaries on the classical and post classical aggadic works. Shamma Friedman's work on the historical *aggadah* of the Babylonian Talmud is noteworthy, because, on the one hand, it provides a radical alternative to one of Fraenkel's most fundamental notions, and, on the other hand, it may also be seen as complementary to Fraenkel's approach as a whole.

Friedman has produced a series of studies concerning a wide range of topics within the field of talmudic research, treating both *halakhah* and *aggadah*, and frequently of the reciprocal relation between them. One theme runs through all these studies: the notion of "development" or "evolution" – that later talmudic scholars often self-consciously reinterpreted and reformulated earlier versions of a given tradition. Applying the results of these studies to the historical *aggadot* of the Babylonian Talmud, Friedman has shown that the elaborate and colorful descriptions of events in the lives of both the *tannaim* and the more significant *amoraim* do not reflect ancient and independent traditions, but rather are the product of a synthetic literary process of deliberate and considered editorial revision. While Jacob Neusner deserves credit as a pioneer in this field of research, Friedman's exacting philological and higher-critical studies allow one to go beyond the

largely negative conclusions of Neusner and his school, and to proceed to the positive task of reconstructing the substantial and formal considerations which went into this elaborate process of editorial revision. Stories originally told of one sage are transferred to another. Several independent and fragmentary traditions are combined into an extended and integrated whole, whose narrative and ideational aims far transcend the relatively limited scope of the original sources.

On the one hand Friedman's method contrasts with Fraenkel's emphasis on viewing each text as an integral whole – and studying it in isolation from other parallel versions of the tradition. On the other hand Friedman's comparative and developmental analysis of parallel traditions also represents an equally explicit rejection of conflating parallel texts, in that it demands a rigorous distinction and demarcation of the boundaries between parallel traditions, in order to determine the causal and interpretive links which hold between them.

[Stephen G. Wald (2nd ed.)]

In Islam

Aggadic Bible tales and views were disseminated in pre-Islamic *Arabia by Jews. A. *Geiger first showed in his pioneering treatise *Was hat Mohammed aus dem Judenthume aufgenommen?* (1833) that the *aggadah* had an important bearing on the shaping of ideas about Allah and the history of mankind held by *Muhammad and the hanifs, his monotheistic-minded contemporaries (cf. e.g., Koran 22, 32; 30, 79; 98, 4). In the *Koran Muhammad preferred to use vague expressions, often avoiding the mention of names of biblical personalities or even changing them. The earliest commentators endeavored to explain such passages and tales, which they did with the help of the *aggadah*. Muslim authors prepared special books called *Qiṣaṣ Al-Anbiya* ("Legends of the Prophets"), something similar to later *Midrashim, in which aggadic tales from the Bible – which also for the Muslim includes the New Testament – have been gathered. (For further information see: *Bible (in Islam); *Koran; and sections on biblical personalities (such as Abraham) in Islam.)

[Haim Z'ew Hirschberg]

Aggadah in Illuminated Manuscripts

Recent investigations have revealed that many aggadic motifs appear in the illuminations of Christian Old Testaments, such as the sixth-century *Vienna Genesis*, the seventh-century *Ashburnham Pentateuch*, and the 11th/12th-century Byzantine *Octateuchs*. These manuscripts are all assumed to be based on lost earlier models. The appearance of these aggadic motifs has led some scholars to put forward the theory that an ancient illustrated Jewish manuscript tradition served as inspirations for the Christian manuscripts. This theory is not conclusive, as no illustrated Jewish manuscripts are known before the ninth century. In addition, knowledge of early Christian biblical illuminations is very limited, since the earliest preserved Christian Old Testament manuscripts date from the sixth century. Furthermore, the writings of the Church Fathers incorporated

many aggadic motifs which may have inspired the Christian aggadic illustrations.

Aggadic motifs in the *Vienna Genesis* include the accounts of how Joseph encounters the angel Gabriel on his way to find his brethren, Potiphar's wife visits Joseph in prison; and Asenath, Joseph's wife, is present at Jacob's blessing.

In the *Ashburnham Pentateuch* Adam and Eve build a hut after their expulsion; the giants drown during the flood; Rebekah inquires at the academy of Shem and Eber; Joseph and his brothers dine together at the same table in Egypt; and The Angel of Death slays the Egyptian firstborn. In the *Octateuchs*, the serpent walks upright in the Garden of Eden; Lamech kills Cain and Tubal-Cain; the raven sent out by Noah feeds on human carcass; and God, Himself, intervenes in the sacrifice of Isaac. Some other legends appearing in manuscripts are: Nimrod casting Abraham into the fiery furnace; Pharaoh's daughter, bathing in the nude, finds Moses; the test of Moses, Moses' imprisonment, and his wedding to Zipporah; Pharaoh bathing in the blood of Jewish children; Mount Sinai hovering over the children of Israel; the legendary throne of Solomon; and Mordecai stepping on Haman's back and Haman's daughter emptying a chamberpot on her father. C.O. Nordström has pointed out many Jewish legends in Byzantine, Spanish, and French art, mainly in the life of Moses, and his miracles. In his book on the *Alba Bible* he refers to many aggadic motifs in this very important manuscript. For a critical analysis of this book, see *The Art Bulletin*, 51 (1969), 91–96.

amīrs invested funds in public works to conserve and distribute water, contributing to the prosperity of their country. Their fleet was supreme in parts of the Mediterranean and their corsairs captured ships at sea. Captured persons and property were subsequently redeemed for profit. The Aghlabids also gained temporary control over Sicily, Malta, and Corsica.

The data on the Jews of this principality are scant. It is known, however, that the Jews of Kairouan began to expand and prosper under the Aghlabid *amīrs*. They fostered and preserved intimate and strong bonds with the Babylonian *geonim* and the Jewish communities of Palestine and Egypt. A medical school existed in Kairouan. One of its noted teachers was Isaac *Israeli, the physician to the last Aghlabid *amīr* Ziyādāt Allah III.

[Michael M. Laskier (2nd ed.)]

AGHMATI, ZECHARIAH BEN JUDAH (late 12th and early 13th centuries), North African talmudist. He apparently came from Agmat in southern Morocco. His name has only recently become known, and there are hardly any data on his life and work. Aghmati wrote a comprehensive work, *Sefer ha-Ner*, on the *halakhah* of *Alfasi. He uses geonic material extensively and quotes statements of *Baruch b. Samuel of Aleppo, *Hananel, Isaac *Ibn Ghayyat and Joseph *Ibn Migash, for which *Sefer ha-Ner* is sometimes the sole source. The book also quotes from other early scholars, among them Ashkenazi luminaries, such as Rashi and *Gershom b. Judah. The variant versions of the Talmud quoted by Aghmati are of great importance. The author himself seldom introduces his own opinion. His commentaries on the tractates *Berakhot* (Jerusalem, 1958), *Bava Kamma*, *Bava Mezia*, and *Bava Batra* (London, 1961, facsimile edition) have been published, while those on *Shabbat* and *Eruvin* are still in manuscript. His book was probably completed between 1188 and 1190.

[Israel Moses Ta-Shma]

AGMON (Bistritski), NATHAN (1896–1980), Israeli dramatist and publicist. He began his literary career while still in Russia, publishing articles of literary criticism in Hebrew journals. In 1920 he arrived in Palestine, and from 1922 until his retirement in 1952 worked in the central office of the Jewish National Fund in Jerusalem, directing its Youth and Information Departments. His early writings in Palestine described life in collective agricultural settlements. Among the first original Hebrew dramatists to be presented on the Palestinian stage, his first play *Yehudah Ish-Keriyot* (“Judah

Iscariot”) was published in 1930. In 1931 he wrote *Shabbetai Zevi*, which was produced by the Ohel Theater in 1936. Messianism, which he considers a symbol of humanity’s struggle to achieve a just society, is the central motif in his dramas, especially the two above-mentioned plays. He also published articles and books on South American Jewry and on Zionism. His collected plays appeared in 1960 in three volumes. In 1964 Agmon published a philosophical work, *Hazon Adam* (“Human Vision”); his autobiography, *Be-Sod ha-Mitos* (“Knowing the Secret of the Myth”), appeared in 1980.

[Getzel Kressel]

AGMON, SHMUEL (1922–), Israeli mathematician. Born in Tel Aviv, Agmon is the son of writer Nathan *Agmon (Bistritski). He received his doctorate from the University of Paris in 1949. His work focused on the theory of partial differential equations of elliptic type and on spectral and scattering theory of Schrodinger operations. He was a member of the Israel Academy of Sciences and Humanities from 1964 and received the Rothschild Prize in mathematics in 1959 and the Israel Prize in exact sciences in 1991.

AGNON, SHMUEL YOSEF (Czaczkas, Samuel Josef; 1888–1970), Hebrew writer; Nobel Laureate in literature. One of the central figures in modern Hebrew fiction, his works deal with major contemporary spiritual concerns: the disintegration of traditional ways of life, the loss of faith, and the subsequent loss of identity. His many tales about pious Jews are an artistic attempt to recapture a waning tradition. He was born in Buczacz, Galicia, where his father, an erudite follower of the Ḥasidic *rebbe* of Chortkov, was a fur merchant. Rabbinic and Ḥasidic traditions as well as general European culture influenced the home. Agnon’s education was mainly private and irregular. He studied the Talmud and the works of Maimonides with his father; read much of the literature of the Galician *maskilim*; and studied Ḥasidic literature in the synagogue of the Chortkov Ḥasidim. He learned German from Mendelssohn’s translation of the Pentateuch (the *Biur*) as well as from a tutor and read books from his mother’s small German library, where he also found German translations of Scandinavian writers. He began writing at the age of eight in Hebrew and in Yiddish. In 1903 he published his first work, a Yiddish poem on Joseph Della Reina and a rhymed “*haskamah*” (preface) in Hebrew to Zevi Judah Gelbard’s *Minḥat Yehudah*. In 1904 he began to publish regularly, first poetry and then prose, in *Ha-Mizpeh*, edited in Cracow by S.M. Laser, who continually encouraged him. In 1906 and 1907, he also contributed several poems and stories in Yiddish, primarily to *Der Juedische Wecker*, which appeared in his own town. Up to his departure

from Buczacz he published some 70 pieces in both languages – poems, stories, essays, addresses, etc., that were occasionally signed Czaczkes but more often appeared under a pseudonym. His most comprehensive Yiddish work of that period, *Toyntants* (1911), attests to the development of his literary talent and to a definite affinity with German neo-romanticism. But once he left Buczacz, he no longer wrote in Yiddish.

When Agnon left for Erez Israel, in 1908, he was already a well-known young author. His emigration removed him from *shtetl* life, which no longer answered his spiritual needs and placed him in the midst of a new and evolving creative Hebrew literary center. However, he was atypical of the pioneers of the Second Aliyah; those who espoused the “conquest of labor” considered him bourgeois, while the Russian Jews scorned him as a Galician. He supported himself by tutoring and occasional literary efforts. He also worked intermittently in a number of clerical positions and resided in both Jaffa and in Jerusalem. While he abandoned his religious practices during these years, he was not completely identified with the modernism of the new settlers. On the contrary, he was charmed by the old *yishuv* and was drawn more and more to Jerusalem, where the Jewish historical milieu nurtured his creative imagination. In “*Agunot*” (“Forsaken Wives”), his first story published in Palestine during the Jaffa period (*Ha-Omer*, Fall 1908), he first used the pseudonym “Agnon”; and in 1924 it became his official family name. Many other stories followed (appearing mostly in *Ha-Poel ha-Za’ir*). Although most of his works from this period are unknown, those few that were later republished, such as “*Agunot*,” were radically reedited by Agnon. One of his stories, “*Ve-Hayah he-Akov le-Mishor*,” was republished separately by J.H. Brenner (1912) and became his first book. Like many of his youthful contemporaries, Agnon was drawn to Germany. Arriving in midsummer of 1912, he remained there until the fall of 1924. His presence in Germany during those years was a major influence on Zionist youth, who found in him a change from the accepted circle of Hebrew writers in Germany, who were contemptuous of Agnon and his style. During his first years in Germany he supported himself by tutoring and by editing for the *Juedischer Verlag* with Aaron Eliasberg. Finally he met the wealthy businessman S. *Schocken who became his admirer, supporter, and publisher. In Berlin and Leipzig he associated with Jewish scholars and Zionist officials. He read widely in German and French (in German translation) literature and expanded his knowledge of Judaica. He also began to acquire and collect valuable and rare Hebrew books. Some of his stories, in the German translation of M. Strauss, appeared in Martin Buber’s journal, *Der Jude*, and spread his fame among German Jews. The most productive of Agnon’s creative years in Germany were spent in Wiesbaden and Bad Homburg near Frankfurt. He was unburdened by the quest for livelihood: during the inflationary years he lived quite comfortably, as did other Hebrew writers of that day, due to the support of A. Stybel. In Homburg he was a member of a circle of Hebrew writers. He also began to prepare with M. Buber a collection of Hasidic

stories and lore. However, this radiant period ended in 1924, when fire swept his home and destroyed most of his books and manuscripts, including *Bi-Zeror ha-Hayyim* (“In the Bond of Life,” whose imminent publication by Stybel had already been announced), a long novel depicting the flow of modern Jewish history against an autobiographical background. The destruction by fire of his writings makes it difficult to assess the scope of his creativity in this crucial period. However, a scrutiny of the other published works of that time and of some published subsequently reveals several basic facts: (1) Most of the stories are set in Poland in the world of pious Jews (new versions of stories of the Jaffa-Jerusalem period appear, as do other distinctive works such as “*Bi-Ne’reinu u-vi-Zekeneinu*,” “*Ovadyah Baal Mum*,” and “*Bi-Demi Yameha*”). (2) In most stories of this period Agnon’s characteristic style approximates that of the world depicted: the Hebrew of the pietistic books of the last centuries whose linguistic structure is influenced by Yiddish. (3) Because of the suspension of many Hebrew publishing ventures in Europe during World War I, Agnon published no Hebrew stories during the early war years, although some appeared at that time in German translation. (4) He had already acquired a circle of readers who eagerly read three collections of his stories: *Sippurei Ma’asiyyot* (1921), *Be-Sod Yesharim* (1921), and *Al Kappot ha-Manul* (1922).

In 1924, Agnon returned to Palestine and settled in Jerusalem. In the riots of 1929, his home in the Talpiyyot suburb was plundered and many books and rare manuscripts dealing with the history of the Jewish settlement in Palestine were destroyed.

The first edition of Agnon’s collected works in four volumes (1931) included selected stories published until mid-1929, as well as the second version of *Hakhnasat Kallah* (*The Bridal Canopy*, 1937), which had been lengthened to a novel. This folk-epic was recognized as one of the cornerstones of modern Hebrew literature, and the entire collection established Agnon as one of its central figures. The impression of Agnon as a pietistic writer was enhanced by the collection of stories *Be-Shuvah va-Naḥat* (1935) and strengthened by two non-fiction collections: *Yamim Noraim* (1938; *Days of Awe*, 1948), an anthology of High Holiday traditions; and *Sefer, Sofer ve-Sippur* (1938), about books and writers. Even the novel *Sippur Pashut* (1935; *A Simple Story*, 1985), which is set at the close of the previous century and depicts the clash between the older and younger generations, did not openly convey to the readers the profound tension which underlies Agnon’s “serenity.” A cycle of five stories called *Sefer ha-Ma’asim* was published in 1932, followed a year later by *Pat Shelemah* (*A Whole Loaf*, 1956). Readers were astounded by the nightmarish environment of these short works of fiction which artistically articulated the confusion of the author standing on the threshold between the new world and the old. The eradication of boundaries between fantasy and reality, the inner monologue, and the perplexing environment exist also in “*Panim Aherot*” (1933), “*Afar Erez Yisrael*,” and “*Ba-Ya’ar u-va-Ir*.” These stories were collected only in 1941 in *Ellu ve-Ellu*. In addition,

in the 1930s three narratives appeared which subsequently became the nucleus of *Temol Shilshom* ("Rabbi Geronim Yekum Purkan" in 1931; "Tehillato shel Yizhak" in 1934; "Balak" in 1935). In spite of this evidence of the darker side of Agnon, the critics and readers were not attuned to this new mode until the early 1940s. Agnon rose to a new level of artistic creativity in his book *Ore'ah Natah Lalun*, which was originally published in serial form in *Haaretz* (Oct. 18, 1938, to April 7, 1939) and then appeared in his collected works (1939; *A Guest for the Night*, 1968). In this novel an anonymous narrator visits his town in Galicia after an absence of many years and witnesses its desolation. Although the factual core of the story was Agnon's short visit to Buczacz in 1930, the novel mirrors the hopelessness and spiritual desolation of the Jewish world in that decade in Europe and in Palestine. A grotesquely nightmarish scene of the city is presented: its synagogues are empty; its people are shattered; and its society, generally, is moribund. Although Agnon was directly motivated to write this novel by the events of the 1930s, it is noteworthy that even in his youthful writings he envisioned his town as a "city of the dead." At times the narrative technique of *Ore'ah Natah Lalun* is similar to that of *Sefer ha-Ma'asim* where the despair is often recorded by shocking portrayals. Thus, at the onset of the 1940s, the readers learned to react not only to Agnon's story of the lives of the pious but also to a wide variety of subjects and narrative techniques. Critics such as G. Krojanker, B. *Kurzweil, and Dov *Sadon began to give Agnon the interpretation he merited. They demonstrated that, however indirectly, his works were concerned with the deep psychological and philosophical problems of the generation. His greatest novel, *Temol Shilshom*, made its appearance in 1945 (*Only Yesterday*, 2000). The setting and time of this work are in Palestine in the days of the Second Aliyah, but its spirit parallels the period in which it was written, the years of the Holocaust. The novel focuses upon an unsophisticated pioneer, who returns to the ways of his forebears, but after being bitten by a mad dog, dies a meaningless death. The complex situations and interlocking motifs of his novel, as well as its moral concern, marked a new peak in Hebrew fiction.

Agnon collected some of his stories in two volumes, *Samukh ve-Nireh* (1951) and *Ad Hennah* (1952); re-edited *Hakhnasat Kallah*, *Ore'ah Natah Lalun*, and *Temol Shilshom*; and, in 1953, published the second edition of his collected works in seven volumes (an eighth volume, *Ha-Esh ve-ha-Ezim*, was published in 1962). However many stories were omitted, including *Shirah*, a novel set in the academic community in Jerusalem (see below). With the publication of this last edition, the scope of his writings could be evaluated for the first time: novels, folktales, and "existentialist" stories. Following the appearance of the 1953 edition, Agnon published about half a dozen new short works every year, mainly in the Israeli newspaper *Haaretz*, the majority of them dealing with Buczacz. As separate books he published *Attem Re'item*, a collection of rabbinic commentaries related to the revelation at Sinai (1959), and *Sifreihem shel Zaddikim*, tales of the Ba'al

Shem Tov and his disciples (1961). The modern nightmarish theme is evidenced during these years, by the stories "Ad Olam" (1954; "Forevermore," 1961), "Hadam ve-Kisse" (1958), "Ha-Neshikah ha-Rishonah" (1963), and "Le-Ahar ha-Se'udah" (1963). Agnon received many awards including the Israel Prize (in 1954 and 1958). The crowning honor was the Nobel Prize for literature (1966), the first granted to a Hebrew writer.

[Arnold J. Band]

Posthumous Publications and Works on Agnon

Since Agnon's death many volumes of his literary remains, prepared for publication by his daughter, Emunah Yaron, have appeared. These volumes include stories which appeared during Agnon's lifetime, but which were not included in editions of his collected writings.

Shirah (1971; *Shira*, 1989) is a novel about Manfred Herbst, a lecturer in Byzantine history at the Hebrew University in Jerusalem. Approaching middle age, and the father of two grown daughters, Herbst is torn between his affection and loyalty to his devoted wife, who has just borne him a third daughter, and his passion for the nurse Shirah. The novel unfolds in Jerusalem of the 1930s and 1940s.

Ir u-Melo'ah ("The City and the Fullness Thereof," 1973) is a collection of tales about Buczacz, Agnon's native city. The stories cover 600 years of life in the city and are, in effect, the history of Poland and its Jews.

Ba-Hanuto shel Mar Lublin ("In Mr. Lublin's Shop," 1974) is an account of Agnon's years in Leipzig during World War I. A rich gallery of personalities from all strata of the population, both Jewish and German, passes before our eyes.

Lifnim min ha-Homah ("Within the City's Wall," 1975) comprises four major stories. The first, the title story, demonstrates in poetic style Agnon's deep attachment to Jerusalem; the second, *Kisui ha-Dam* ("The Blood Screen"), is replete with incidents that occur within and beyond the land of Israel; the third, *Hadam ve-Kisse* ("The Footstool and the Chair"), is a mythological account of the author's birth and his previous life; the last story in the volume, *Le-Ahar ha-Se'udah* ("After the Feast"), in which Agnon describes his own departure from the world, represents the apex of his writings.

Me-Azmi el Azmi ("By Myself for Myself," 1976) is a collection of Agnon's articles, speeches, and sundry other matters, while *Pithei Devarim* ("Opening Remarks," 1977) is a volume of stories, most of which were previously unpublished. *Sefer, Sofer, ve-Sippur* ("The Book, the Writer, the Tale," 1978) is an expanded version of the 1938 edition with new material.

In 1977 the Hebrew University issued a volume of stories and poems of juvenilia written by Agnon in Yiddish, entitled *Shmuel Yosef Agnon, Yiddish Work*. It consists of stories and poems that appeared in various periodicals from 1903 to 1912, i.e., from when he was 15 years old until he settled in Erez Israel, and it contains an extensive introductory chapter in Yiddish by Dov Sadon.

Korot Bateinu ("History of Our Families," 1979) contains two stories, one about Jewish family life in Galicia and the

other tracing the history of Agnon's own family beginning with the Middle Ages, interweaving imagination and historical truth. *Esterlein Yekirati* ("Estherle My Dear," 1983) contains the correspondence between Agnon and his wife, Esther, in the years 1924–1931. *Sefer ha-Otiyyot (Agnon's Alef Bet)*, 1998) is an abecedary in verse written in 1919 at the behest of the Culture Committee of the Zionist Organization and for some reason never published. The manuscript was a late discovery.

Takhrikh shel Sippurim ("A Shroud of Stories," 1984) contains stories published in periodicals in Agnon's lifetime as well as some found among his literary remains, mostly about the life of the Jews in Poland and Erez Israel. Another two, about the Jews of Germany, were added for the 1989 printing: "*Gabriella*" and "*Leregel Iskav*" ("For Business Reasons").

Sippurei ha-Besht ("Tales of the Ba'al Shem Tov," 1987) was part of the Codex Hasidicum planned by Agnon and Buber when Agnon was still in Germany. It was ready for press in 1924 but was destroyed in the fire in Agnon's Bad Homburg home. The present volume was put together by Emuna Yaron and her husband from material in the literary remains.

S.Y. Agnon – S.Z. Schocken, Hillufei Iggerot 1916–1959 (1991) is the correspondence between Agnon and his publisher. *Attem Re'item (Present at Sinai)*, 1994) adds new material to the 1959 edition. *Mi-Sod Hakhamim* ("From the Circles of the Wise," 2002) contains the correspondence of Agnon with Brenner, Y. *Lachower, Sadan, and Berl Katznelson.

Also appearing were two volumes of *Kovetz Agnon*, edited by Reuven Mirkin, Dan Laor, Rafael Weiser, and Emuna Yaron and containing, among other writings, unpublished chapters of *Shirah*, a 1909 story called "*Be'erah shel Miriam o Keta'im mi-Hayyei Enosh*" ("Miriam's Well, or Chapters from Human Life"), and chapters from *Sefer Ma'asim* not included in the original edition. In addition, there are letters to Martin Buber from the years 1909–24 and correspondence between Agnon and Hanokh *Yalon as well as essays on Agnon.

Dramatizations of Agnon's work have proliferated. Habimah presented *Hakhnassat Kallah (The Bridal Canopy)*; the Cameri Theater performed *Ve-Hayah he-Akov le-Mishor* ("And the Crooked Shall Be Made Straight"); and the Khan Theater of Jerusalem staged *Ha-Rofe u-Gerushato* ("The Doctor and His Divorcee"), *Panim Aherot* ("Metamorphosis"), and *Bi-Demi Yameha* ("In the Prime of Life").

In 1980 Habimah Theater produced *Sippur Pashut* and Orna Porat's Youth and Children's Theater adapted five of Agnon's stories for the stage. *Shirah* and *Esterlein Yekirati* have also been put on stage, a number of stories have been adapted for the screen ("*Farnheim*," "*Ma'aseh ha-Oz*," etc.), and two films have been made about Agnon's life.

After Agnon's death the author's family donated his private archives to the Hebrew University. They include manuscripts and drafts of most of his works, his published writings in all existing editions, and translations of his works into numerous languages. The archives also contain everything that has been written about Agnon: books, essays, and articles as well as letters written by and to Agnon, and a collection of

photographs and photocopies. The material is kept up-to-date and an annual evening of study of Agnon's work has been held. It also issued a book: *Anthology of Shai Agnon, Research and Documents on His Work* edited by Gershon Shaked and Raphael Weiser (1978). In 1982, the Jerusalem Municipality opened Agnon's Talpiyyot home to the public. The library was catalogued and researchers can consult the books. Various activities focusing on Agnon and his work are held in the house for schoolchildren and adults.

A complete bibliography of Agnon's works was published by Yohanan Arnon in 1971 as well as a comprehensive bibliography of books and articles on his works by Dr. Yonah David (1972). After Agnon's death, critical studies of his work gained new momentum, taking a new turn. Arnold Band, in his book *Nostalgia and Nightmare*, opened new vistas in analyzing Agnon's work by examining his stories in their various versions, although Dov Sadan previously used this method of analysis on some of the stories. The bibliography at the end of Band's book contributed greatly to the study of Agnon in that it was the first comprehensive bibliography of Agnon's work from its early beginning up to 1967. Agnon has been translated into 34 languages, including Persian, Chinese, and Mongolian, and written about critically in dozens of books and well over a thousand articles and essays. In 1996, the Institute for the Translation of Hebrew Literature issued a bibliography of his work in translation, including selected publications about Agnon and his writing.

AGOBARD (779–840), archbishop of Lyons from 814. Agobard, who was born in Spain, was canonized by the Catholic Church. His metropolitan province included some of the most important Jewish settlements in Western Europe. A prolific writer and active church leader, he sharply opposed the Jews, both in his deeds and in his writings, out of religious, political, and social motives. Six of Agobard's pamphlets are devoted to the Jewish question: (1) *Epistula de baptizandis Hebraeis* ("On the Baptism [of the children] of Jews"); (2) *De baptismo judaicorum mancipiorum* ("On the Baptism of Jewish-owned Slaves"); (3) *Contra praeceptum impium de baptismo judaicorum mancipiorum* ("Against an Impious Precept Concerning the Baptism of Jewish-owned Slaves"); (4) *De insolentia Judaeorum* ("On the Insolence of the Jews"); (5) *De judaicis superstitionibus* ("On the Superstitions of the Jews"); (6) *De eavendo convictu et societate judaica* ("On the Necessity of Avoiding Association with Jews"). His writings are of interest not only as the earliest outspoken anti-Jewish document of the Carolingian period, but even more because of the comprehensive nature of his attacks on the various aspects of Jewish life. In 820 Agobard attempted to convert by force Jewish children in Lyons as well as in Chalon, Macon, and Vienne. From his letter to Emperor Louis the Pious in justification of his efforts, it appears that the imperial authorities had previously protected Jews against this design. The problem of the religious adherence of pagan slaves owned by Jewish merchants was raised by Agobard. He complained that the way to the Christian faith was closed to them because, in contrast to the principles of canon law regarding Christian slaves, the church was not given jurisdiction over pagan slaves. His attempt to exert ecclesiastical influence in such cases, however, was frustrated by the intervention of the *missi dominici* (plenipotentiary emissaries of the emperor). Agobard also attempted to preach a trade boycott of staples of wine and meat brought to market by Jewish landowners. His writings contain information about the influence that Jewish preachers had over some Christians. To counterbalance intellectual sympathy with the religious activities of the synagogue, Agobard took up the theme of Jewish superstition as a topic of controversy. He maintained that the Jews were falsifying their own tradition by mythological interpretations of the Bible and urged the severance of existing social contacts between Christians and Jews. His

pupil Amulo continued his anti-Jewish policy and propaganda.

AGORANOMOS, inspector of market transactions in Greek cities. This office was imported into Erez Israel during the Hellenistic period and existed during the whole Roman period. The *agoranomos* supervised the making of weights and measures, the quality of goods and the transactions between buyers and sellers. The sources give no indication as to whether he regulated matters between employee and employer, as was the case in Hellenistic cities. Several inscribed lead and stone weights (from Maresha, Scythopolis, Ashdod, Tiberias, Gaza, and Jerusalem), as well as a standard of measures for liquids (from Maresha), are the material evidence of the responsibility of this office in regard to weights and measures during the Hellenistic, Herodian, and Roman periods. In Jerusalem, the controversy between Onias, the high priest, and Simeon in regard to the office of the *agoranomia* was one of the causes of the civil war in the early 70s of the second century B.C.E. (11 Macc. 3:4ff.). This episode may refer to the responsibility of the *agoranomos* levying the taxes of the Temple. The authority to appoint the *agoranomos* was apparently vested in the high priest, and later in the king: the known weights of the Herodian period are dated according to the regnal years of Herod the Great, Herod Antipas, Agrippas I, and Agrippas II. According to Josephus the tetrarch Herod Antipas appointed Agrippa I as *agoranomos* of Tiberias before he was appointed king by Caius Caligula in order to provide him with an income (Ant., 18:149). Josephus also refers to the *agora* in Jerusalem, where the *agoranomos* probably sat (Ant., 14:335; Wars, 1:251). There are several rabbinic sources that provide evidence about the office of the *agoranomos*. However, the word was variously altered: *agronimon*, *agardemis/agardemin*, *hagronimos*, *igranamin*, and so on. Interestingly, although the Old Testament refers to the obligation of using accurate weights and measures, nothing is known about how this law was enforced, or about the persons responsible for it, before the Hellenistic period. In Jerusalem, before 70 C.E., the holder of this office had authority only over measures, but in Babylon he could also fix the prices of commodities (Tosef., BM 6:14; BB 89a; TJ, *ibid.* 5:11). In Babylon the appointment of this official in the cities, where commerce was concentrated in Jewish hands, was a function of the exilarch. For some time Rav filled this role. The *agoranomos* had authority to inspect merchandise such as wine or bread in order to evaluate its quality. When the *agoranomos* appeared in the marketplace, merchants would sometimes hide and the shopkeepers would lock their doors for fear of punishment. The importance of the *agoranomos* is attested by a passage (Lev. R. 1:8) which notes that a king, on

visiting a province, would first discuss matters with the *agoranomos*. The name of the office seems to have been translated from the third century C.E. on as *ba'al ha-shuk*, and also assimilated with the office of *logistes* (accountant), itself translated as *khashban*. Other offices related to the management of the supply on the market of Greek cities are evidenced in rabbinic sources: the *astynome*, a parallel to the *agoranome* (TJ, Ma'aser Shenit 5:2, *istononsin*), and the *sitones*, supplying the grain (*ibid.* 4:1, *khatonaya/sitonaya*).

AGRAMUNT, town in northeast Spain, belonging to the former county of Urgel. Jews living in Agramunt in the 13th century were liable to the same fiscal duties as the Christian townspeople but were also obliged to pay taxes to the count of Urgel and the king of Aragon. In 1272 Solomon b. Abraham *Adret was appointed arbitrator of a disagreement between the Agramunt and *Lérida communities. The infant Alfonso received permission to settle 40 Jewish families in Agramunt in 1316. Agramunt was a cultural center. Ezra b. Solomon b. Gatiño (see *Gatigno) completed his glosses on Abraham *Ibn Ezra's biblical commentary there in 1372. In the early 15th century Solomon *Bonafed corresponded with friends in Agramunt. Shealtiel Isaac Bonafos practiced as a physician there toward the end of the 1420s. A tombstone with a Hebrew inscription, probably of the 13th century, is preserved in Agramunt. In the 1980s one of the streets traditionally known as the medieval Jewish quarter was renamed carrer del Call.

AGRANAT, SHIMON (1906–1992), third president of the Supreme Court of Israel. Agranat, who was born in Louisville, Kentucky, went to Palestine in 1930, and settled in Haifa, where he entered private law practice. He was appointed a magistrate in 1940 and president of the Haifa District Court in 1948. In 1950 Agranat was appointed justice of the Supreme Court, becoming its deputy president in 1960 and president in 1965, retiring from the position in 1976. From 1954 until 1960 he was visiting professor of criminal law at the Hebrew University in Jerusalem, and, from 1960 to 1966, president of the court of the World Zionist Organization. He wrote *Dinei Oneshin* ("Penal Law," 1960). Agranat was awarded the Israel Prize in 1968. In November 1973 he was appointed chairman

of a commission (named the Agranat Commission) to investigate and report on the civil and military aspects of the *Yom Kippur War. Its findings led to the resignation of Chief of Staff David *Elazar, and though it exonerated government leaders for the country's lack of preparedness, Prime Minister Golda *Meir subsequently resigned as well.

AGRARIAN LEAGUE (in German "**Bund der Landwirte**"), extreme conservative German organization for the defense of agrarian interests, formed in 1893. Its membership included most of the Protestant farmers and farm laborers in the period of the German *Kaiserreich*. Ideologically, the League constituted a bridge between the tenets of Christian German nationalism ("Das Christliche Deutschtum") and romantic and racialist tendencies. It was outspokenly antisemitic, although in a religious rather than a racialist sense. This did not prevent it from cooperating with the racialist antisemites of the Berlin Movement (Berliner Bewegung, see *Antisemitism). Non-Christians were explicitly excluded from the League by its program. The League waged a campaign against what it considered the three enemies of the "true Germany: the Liberals, the Social Democrats, and the Jews." In 1921, the Agrarian League was united with other agrarian associations in the Reichslandbund, which took part in the "national opposition" against the Weimar Republic. From 1931 on, the Reichslandbund supported Hitler's National Socialist Party.

AGRAT BAT MAHALATH, "Queen of the Demons" in talmudic legend. It was taught that "a person should not go out alone at night, on Wednesdays and Sabbaths, because Agrat bat Mahalath and 180,000 destroying angels go forth, and each has permission to wreak destruction independently." Hanina b. Dosa limited her power to these nights; Abbaye further reduced it (Pes. 112b). Another authority states that the following sentence, whispered repeatedly, is effective against witchcraft: "Agrat bat Mahalath came and caused the death, by arrows, of [two other female demons,] Asya and Belusia" (Pes. 111a; see *Ein Ya'akov* version). According to *Numbers Rabbah* 12:3: "Thou shalt not be afraid of the terror by night" (Ps. 91:5), refers to Agrat bat Mahalath and her chariot. Some scholars hold that Agrat bat Mahalath is identical with *Lilith. The view that the name "Agrat" is derived from the Persian "A(n)gra," meaning enemy or demon, and Mahalath from the root *mhl* (מחל; "dance") meaning therefore "the dancing witch," has been shown to be without foundation. The kabbalists identify Mahalath with the daughter of Ishmael (Gen. 28:9), who gave

birth to demons and evil spirits. The midrashic source for this is now lost (cf. Maharsha Pes. 112b).

For recent views of the meaning of the name "Agrat," see Sokoloff (*Dictionary of Jewish Babylonian Aramaic*), pp. 110a and 233b. The name also occurs in Jewish magic amulets; see Shaked and Naveh, pp. 78–81. For Agrat bat Mahalath in the Zohar, see Margaliot, p. 205.

[Israel Moses Ta-Shma / Stephen Wald (2nd ed.)]

AGREST, DIANA (1945–), architect. Agrest was born in Buenos Aires and received her degree in architecture from the University of Buenos Aires in 1967. She studied in France with Roland Barthes, known for his work in semiotics. Agrest and Mario Gandelsonas, her husband, together designed a trio of apartment houses in Buenos Aires (1977) that responded to modern tradition but also explored issues such as scale, typology, and material within the classical traditions and contemporary conditions within the city. Agrest came to New York in 1971, where she became a fellow of the Institute of Architecture and Urban Studies (1972–84). She taught at Cooper Union for the Advancement of Science and Architecture, New York, where she was an adjunct professor from 1976, and at Columbia University. She was a worldwide lecturer and also taught at Princeton and Yale universities. Her theoretical ideas are expressed in a wide variety of publications such as *Skyline* and *Oppositions*. Her books include: *Architecture from Without, Theoretical Framing for a Critical Practice* (1991), and *The Sex of Architecture* (1996). These volumes explore the symbolic performance of architecture in relation to the urban condition, the formal and ideological development of building types, the relationship between architecture and other visual discourses, including film, and, most uniquely, the position of gender and body in Western architecture. In 1980 she went into partnership with Mario Gandelsonas to form the firm A & G Development Consultants, Inc. The firm became a leader in a field which refines late modernism with semiotics and Freudian theories. A & G also designed office and apartment interiors, including furniture. A Park Avenue apartment interior (c. 1990) used materials such as pink marble, granite, and exotic woods combined in a geometric severe design. The firm built an unusual house, *Villa Amore*, in Sagaponack, Long Island, New York. It is made up of a cluster of buildings designed to reflect farmland that is fast becoming tracts for housing. The 8,000-sq. ft. home, completed in 1991, built partly on stilts, connects by walkways to other components. The master bath is a glass cylinder and there is a waterfall and a pool. In 2000, the firm completed the Melrose Community Center in a low-income neighborhood in the Bronx, New York. It was designed to accommodate the 3,000 youngsters who live in neighboring housing projects.

The main low building is oval-shaped and the exterior is silver and red. These colors continue in the interior of the building. The 14,000-sq.ft. building took six years to complete and contains a full-size basketball court, a dark room, a restaurant-style kitchen, and a computer lab.

[Betty R. Rubenstein (2nd ed.)]

AGRICULTURAL LAND-MANAGEMENT METHODS AND IMPLEMENTS IN ANCIENT EREZ ISRAEL.

Erez Israel is a small country with a topographically fragmented territory, each geographical region having a distinctive character of its own. These regions include: the coastal plain, the lowlands, the hilly country, the inland valleys, the north-south rift valley, and the arid and desert areas. The whole of the country, excluding the desert regions, has an area of a little over 10,000 sq. miles (26,000 sq. km.) and it has been estimated that of this only 2,500 sq. miles (6,544 sq. km.) are capable of cultivation. The country's semi-tropical climate, with a hot and dry season (between April and October) and a cold season with an unpredictable rainfall (between November and March), its varying altitudes, terrain, and soils, all imposed limitations on the type of land management which could be undertaken in the different parts of the country. There were very few springs of water, so dry farming was practiced in most parts. Agriculture in semi-arid regions, for instance the Negev, depended entirely on run-off irrigation. As a result, certain regions were suited for the cultivation of grain crops, others for fruits and vegetables, and some for animal husbandry. The writer of Deuteronomy was under no illusion regarding the restricted agricultural potential of the land. Speaking to the People of Israel before the entrance to Canaan, Moses said: "For the land, whither thou goest in to possess it, is not as the Land of Egypt, from whence ye came out, where thou sowest thy seed, and wateredst it with thy foot, as a garden of herbs. But the land, whither ye go to possess it, is a land of hills and valleys, and drinketh of the rain of heaven" (Deut. 11:10–11).

While the geographical fragmentation of the country would seem to encourage political and cultural regionalism, the diversity of the economic pursuits within the country resulted inevitably in heightened commercial interaction between people from one part of the country and the other, rather than isolationism. During the Bronze and Iron ages, more than 50 percent of the population in Erez Israel were agriculturalists living in the countryside. The rest lived in towns or small cities and dealt primarily with administrative and commercial and industrial activities. Almost all farmers lived in small villages or hamlets, since the isolated farmstead was not known until the eighth century B.C.E. In the vicinity of these settlements they established fields and grew their crops and orchards. Numerous agricultural land-management techniques and implements were used over the millennia. By the Byzantine period (sixth to seventh centuries C.E.) crop

yields appear to have reached levels that have only been approached in modern times.

Topographical

In ancient times the rural countryside was divided into vineyards and olive groves, arable fields, orchard plantations, vegetable gardens, and areas of public land given over to pasture and industrial activities (e.g., lime and charcoal burning, and stone quarrying). Topographically, the vineyards and olive groves were more suited to sloping ground or to the highlands. Vines are unable to grow with ease above 2750 ft. (900 m.) above sea level. Olives are also said to be difficult to grow above 2450 ft. (800 m.) or below 1225 ft. (400 m.). However, olive presses have been found on Mount Hermon at sites with elevations up to 3,300 ft. (1000 m), as at Kafr Dura. Olive trees could even be grown in areas with an annual rainfall of only c. 200–300 mm., as in northern Africa. Grain was best adapted to the plains, the broad valleys, and some of the internal valleys. Vegetables and certain types of fruit trees were grown in areas with access to permanent sources of water, springs, wells, or cisterns.

The location of many fields reflect traditional answers to the problems of the natural environment. Hence, field boundary walls were established along the same lines as those built thousands of years earlier, simply because they were the most topographically convenient. North-facing slopes were particularly favored for the establishment of new fields and this is because they were less exposed to the sun and their soils were able to retain moisture for longer. The size and shape of fields was usually affected by the steepness of the ground, with smaller and narrower fields on extremely steep slopes. The appearance of the field could also be dictated by the rockiness of the terrain. In Samaria and in the Modi'in foothills, for example, vines and olive trees were cultivated in "boxlike" pockets of deep soil scattered in certain areas of rocky outcrops. Whether or not the field was used for arable purposes or for fruit trees would very much depend on the type of soil available, the rockiness of the ground, aspect, drainage, and so forth. The position of natural sources of water used for irrigation, whether a spring or well, would have an effect on the location, shape and function of nearby fields.

Land Management

Agricultural fields and their crops are mentioned in a number of ancient written sources, principally the Bible and the early Jewish writings from the Roman period. Information about fields may also be found in some of the Classical sources, but these are usually not directly relevant to Erez Israel. A smaller amount of information may also be derived from ancient inscriptions and various other epigraphic materials.

The Bible contains a wealth of information about agricultural practices and the landscapes of the country during the Iron Age II period, although some of the passages may contain strands of information relating to earlier periods. Each town and village had its own surrounding territory of fields

and common land. Most of the agricultural land was in private ownership and the family inheritance was referred to as the *nahalah* or *aḥuzah*. Royal estates also existed and *oẓarot* ("storehouses") were built in the fields (1 Chron. 27:25). Landmarks were set up between the various plots of land. The general term for cultivated land was *sadeh* (Lev. 27:16). The word was used to designate cultivated pieces of land next to the towns as well as open areas used for pasturage. The area of land which could be plowed with a pair or team of oxen during the course of a single day was referred to as the *ẓemed sadeh* (1 Kings 19:19). A *ma'anah* was half of that area (1 Sam. 14:4). The *kerem* referred to vineyards and olive groves (*kerem zayit*, Judg. 15:5). Mixed fruit trees were grown in the *gan* or *ginnah*, usually next to the houses (Song 5:1; 6:2; 14:12), or in the *pardes* (Song 14:13). Plantations of fruit trees (the *mat-tah*) were grown further afield and were sometimes irrigated (Ezek. 31:4).

Isaiah 5:1–8 has a description of terraced fields being prepared for a vineyard: the vegetation was uprooted (*ʿzq*), stones were cleared (*sql*) and then stone fences and an observation tower were built: "My well-beloved hath a vineyard in a very fruitful hill. And he fenced it, and gathered out the stones thereof, and planted it with the choicest vine, and built a tower in the midst of it, and also made a winepress therein: and he looked that it should bring forth grapes..." (Isa. 5:1–2). A subsequent verse (5:5) implies that the stone fence (*gader*) surrounding the terraced unit was surmounted by a thorny hedge. This was used to protect the grapes from animals and also from people walking along the *mishol ha-keramim*, the "path between the vineyards" (Num. 22:24). Some of the terraced slopes were not plowed but dug with hoes (Isa. 12:11). The heaps of stone visible in the terraced areas are referred to in Hosea 12:11 as the *gallim* ("heaps") "in the furrows of the fields" and in Micah 1:6 as the *ai* ("pile") in the field.

It has been suggested that one of the terms used in the Bible for terraces (especially for vineyards but also for orchards) is *sadmot* (11 Kings 23:4; Jer. 31:40; Deut. 32:32; Isa. 16:8). Hence, Habakkuk 3:17 should perhaps now be read as follows: "The fig tree does not blossom/ There is no produce on the vines/ The yield of the olive fails/ The *shadmot* ("terraces") do not produce food." The *shdm*t are also mentioned in two Late Bronze Age Ugaritic texts. The first, CTA 23: 8–11, is rendered: "Let them fell him [the god Mot] on the terrace like a vine." The second, CTA 2.1.43, is a damaged text and the context is not as clear. Another suggestion that has been made is that *gbi* (Jer. 39:10; 52:16) was an alternative word for "terrace" and that *yogevim* referred to the workers/owners of irrigated terraces. This seems unlikely and the reference is probably to the vats of winepresses located in vineyards (cf. King 1993, 159). Additional references to terraces in the Bible include the *meromei sadeh* mentioned in the premonarchic Song of Deborah (Judg. 5:18) and the *sadeh teromot* in David's Elogy for Saul and Jonathan (11 Sam. 1:21), both of which seem to refer to "built fields" on hillslopes. Terraces are more commonly referred to as *madregot*, and in Ezekiel 38:20 it is written: "...and

the mountains shall be thrown down, and the *madregot* ('terraces') shall fall, and every wall shall fall to the ground." (cf. sing. *madregah* mentioned in Song of Songs 2:14).

The surfaces of fields were fertilized with manure, household rubbish, and ashes. Strict laws existed about fallowing land on the seventh year (Ex. 23:11). Roads are mentioned passing next to vineyards and fields of wheat (Deut. 19:14; Num. 22:30). Fields were sometimes expropriated and given by the ruler as presents to his supporters (1 Sam. 8:14; 22:7). The process of buying a field was described in Jeremiah 32:44: "Men shall buy fields for money and subscribe evidences, and seal them, and take witnesses in the land of Benjamin, and in the places about Jerusalem..." Recent archaeological evidence indicates that during the Iron II period, specifically from the eighth century B.C.E., there was an unprecedented expansion of agricultural territory with extensive terracing in the highlands. Terracing later spread into the Negev and Judean Deserts. Similarly, various biblical passages indicate a hunger for land during the course of the Divided Monarchy with the break-up of family inheritances and the creation of large estates owned by rich landlords. These landlords were cursed in Isaiah 5:8, where it is said that "woe unto them that join house to house, that lay field (*sadeh*) to field, till there be no place (left)..." Micah 2:2 spoke out against those who "...covet fields, and take them by violence..."

Fields were frequently mentioned in early Jewish sources from the Roman period. Fields were of different sizes, from the small plot known as the *beit roba* (approximately 336 sq. ft. 32 sq. m.) to the *bet se'ah* which had an area of 940 sq. yds. (784 sq. m.). The agricultural holding, the *bet kor*, was about 23.5 dunam in size, but most peasants probably had holdings of a much greater size than this. Boundaries for fields were sometimes indicated by a road, a path, a *wadi* – bed, an expanse of water, or even a water channel (Pe'ah 2:1–3). Much information is provided in these sources about the surface treatment of fields (plowing, manuring, and fallowing) and their yields. The depth of plowing achieved during this period was mentioned in *Bava Kamma* (2:5) as 3 *tephaḥim* (about 11 in., or 27 cm.) which is far greater than the maximum depth of 8 in. (20 cm.) known from recent traditional farming. This indicates that either a heavier form of plow was used or that the line of the furrows was plowed twice over to achieve the required depth. An area plowed during one day with a yoke of animals was known as *bet hafarash*. Fields with different types of soils were known by different names, for example *sadeh mardin* and *sadeh kaskasin*. Fields were even established on the summit of hills where the soil was so thin that "the oxen cannot pass over with the plow" and they had to be cultivated with mattocks (Pe'ah 2:2). The yield of a field was frequently estimated while the crop was still standing. The land of an orchard could belong to one person and the trees to another (see Pe'ah 3:4), a practice which still existed at the beginning of the 20th century. A distinction was made between fields used for dry-farming (*bet ba'al*) and for irrigation (*bet selahin*).

There were two kinds of gardens in Erez Israel during

antiquity: the horticultural garden and the decorative garden. There is no evidence that a combination of the two ever existed. Vegetable gardens were usually located near a source of water, a spring or a cistern. Important archaeological evidence for irrigated garden plots has come to light during the investigation of Byzantine monasteries in the Judean Desert and elsewhere. Decorative gardens and groves of trees probably existed adjacent to temples and palaces from very early times, but direct archaeological evidence is still lacking. For the later periods, remains of decorative gardens have been discovered at the Herodian palace complex at Jericho. Plants and bushes were planted in ceramic pots with holes in their sides. Similar pots were found in the first-century gardens at Pompeii and in the second-century gardens at Hadrian's villa at Tivoli. Planting pots with holes in their sides are mentioned in Demai 5:10 and in connection with a vineyard in Kilayim 7:8. Cucumbers are said to have been grown in planting pots made of cattle-dung and unfired clay. The latter also had round holes in their sides, the size of which is debated in Ukẓin 2:9–10, "How great should be the hole?" the answer being, "such that a small root can come out."

Very few ancient epigraphic finds have been made concerning agricultural land management in Erez Israel. Most of the inscriptions and documents which have been found deal with matters of economic administration and only very indirectly with work in agricultural fields. However, some evidence does exist and a number of examples will be given. The Gezer calendar is probably one of the earliest and most interesting of the documents preserved relating to agricultural activities. It lists information about the activities which needed to be undertaken at different points during the agricultural year. The text was clearly written by an inexperienced hand, perhaps by an apprentice scribe, and can be dated to the end of the 10th century B.C.E. Information on fields exist in a number of other Iron Age inscriptions. For example, the Tel Siran inscription from Jordan, dated to c. 600 B.C.E. which mentions a vineyard (*krm*) and gardens (*gnt*).

A larger amount of material exists for the Roman and Byzantine periods. Interesting information on agricultural plots in the lower Dead Sea region has emerged from the Babatha archive, deposited in c. 132 C.E. in a cave in the Judean Desert. The largest of the plots owned by Babatha measured 20 *bet seahs* or 12.5 dunam. One of the Greek papyri (BB 21) deals with the sale of a date crop and indicates the names of three orchards in the area of Maoza from which the dates came: the Pherora orchard, the Nikarkos orchard, and the Molkhaios orchard. Another document (BB 16) is the land registration for four other groves of palm trees owned by Babatha at Maoza. Two of them are described as extending down towards the Dead Sea. For each grove an identifying name was given, the size of the grove, the taxes paid on it and the names of lands or features abutting the groves.

An important batch of non-literary papyri dating from the sixth and seventh centuries C.E. came to light during the Colt expedition to Auja Hafir (Nessana) in the central Negev.

They include a vast amount of information on the agricultural lands belonging to the settlement, on sown land, vineyards, gardens, reservoirs, water channels, rights to water, and data on crops of wheat, barley, *aracus*, olives, and dates.

Terracing

Very little is known about the earliest forms of agricultural terracing in the highlands of Erez Israel. It seems reasonable to assume that the technology of creating flat areas on hillsides by building walls and leveling fills was invented by various rural groups acting in cooperation at a local level, in different parts of the Levant and at different times. Hence, various centers of origin for terrace construction may have existed, with Erez Israel being one of them. Incipient forms of terracing, such as soil held in place by logs of wood, by rows of wooden stakes, or piled rocks, would be very difficult to detect in the archaeological record. It was probably recognized early on that obstructions placed across a stream channel would eventually help towards stopping the movement of eroded soils and would induce a process of alluviation. Early slope terracing may have taken place initially in the lower parts of hills with newer terraces later being built further up the slopes. Another suggestion which has been made is that the natural steplike appearance of many of the slopes in the highlands, with thin layers of chalky marl interposed between limestone or dolomite strata, may have prompted man's first attempts at terracing. However, no evidence supports the assumption made by some investigators that the earliest terraces with stone walls must have been crudely executed, low in height, and built on relatively slight slopes. Indeed, the earliest terrace found at Sataf, which is of Early Bronze Age date (late fourth millennium B.C.E.), was relatively well constructed and was built on a very steep slope. It has also been suggested that the origins of terracing should be sought in the marginal semi-arid regions of the Near East. The suggestion is that the "channel-bottom, weir terrace" type was possibly the earliest form of terrace. However, terracing in the Negev and in the Judean Desert cannot be shown to be older than the Iron Age II (seventh century B.C.E.), even though flood farming itself existed in the Negev from as early as the Chalcolithic or Early Bronze Age. Studies of New World terracing have also shown that the earliest terraced sites must have been in the *less* arid areas first.

Another important point which needs to be taken into account is that the idea of creating leveled areas on hillslopes for agricultural purposes is not dissimilar from the basic technology of architectural terracing or slope stabilization. At settlement sites in Erez Israel, architectural terracing can be traced back to as early as the Natufian period. A system of four architectural terraces supporting 13 hut dwellings, are known from the Natufian site of Nahal Oren. These terraces were 80 ft. (24 m.) in length and 6–17 ft. (2–5 m.) in breadth, and their retaining walls were built of field stones. At many Early Bronze Age sites, architectural terracing supported houses and other structures on the slopes of hills. Examples of EB architectural terracing are known from Tel Yarmut, Tell

el-'Umeiri, and sites in the Wadi el-Hasa. Architectural terracing continued to be used throughout the rest of the Bronze Age. At Jerusalem, a remarkable series of architectural terraces were unearthed by Kenyon on the east slopes of the City of David, probably dating from the very beginning of the Iron Age. Since the technology of architectural terracing in Erez Israel can be traced back to late prehistoric times, it is possible to assume that terracing for agricultural purposes likewise had a similar antiquity in the hilly areas of the country.

Archaeological evidence indicates that terracing was introduced into the highlands of Erez Israel at the beginning of the Early Bronze Age. It is not surprising that the earliest known use of terracing in the highlands should coincide with the introduction of plow agriculture in that area. However, terracing was clearly only practiced on a limited scale during the Early Bronze Age and as late as the eighth century B.C.E. No evidence supports the theory that the early Israelites (or Proto-Israelites) were responsible for inventing or introducing terracing into the highlands during the early Iron Age. They simply made use of an existing technology without any special adaptations or innovations. This refutes the stand taken by some scholars who have suggested, without any supporting evidence, that terracing prior to the early Iron Age was "un-systematic." Archaeological work has shown that the major expansion of terracing in the highlands took place at a number of times over a period spanning some 1600 years, from the Iron Age II (eighth century B.C.E.) to the *Abbasid period, with cycles of contraction operating in the landscape at intervals of between 250 and 350 years. A decline in the use of the terraced areas appears to have set in around 750 C.E. and apart from some signs of renewed terracing activities during the *Mamluk and *Ottoman periods, especially in areas of irrigated terraces, this decline continued until the present century.

Demarcation of Agricultural Territory

The demarcation of agricultural territory was quite frequently referred to in biblical passages. The boundary, or territory, was referred to as *gevulah*. In Deuteronomy 19:14 the injunction is that "thou shalt not remove thy neighbour's *gevul* (landmark), which they of old time have set in thine inheritance..." (see also Prov. 22:28). The practice of tampering with landmarks, especially with those in the "fields of the fatherless" – abandoned fields – was apparently prevalent during the Iron Age, and if caught the perpetrator was cursed and punished (Deut. 27:17; Job 24:2; Prov. 23:10). The physical appearance of these "landmarks" is unknown but they were probably permanent and immovable. A boundary stone at the edge of a field of grain is depicted in a New Kingdom tomb painting from Egypt. These boundary markers were often swept away by the inundations of the Nile and had to be replaced by reference to documented cadastration. This problem did not exist in Erez Israel, but markers could be moved during disputes between neighboring farmers. There is no evidence, however, to suggest that the exact locations of the markers were documented in any way. Josephus, writing in the late first century

c.e., warned: "Let it not be permitted to displace boundary marks, whether of your own land or of the land of others with whom you are at peace; beware of uprooting as it were a stone by God's decree laid firm before eternity." (Ant. IV, 8:18).

Very little archaeological evidence exists for the demarcation of territory in Erez Israel during ancient times. Hence, there are difficulties in defining the extent of cultivation and pastureland belonging to a settlement at any given period. But some evidence does exist. The lands of *Gezer, for example, were marked out during the late second or early first century B.C.E. with inscribed boundary stones. Some of these markers also refer to the adjoining estates of Alkios, Alexa, and Archelaus. Boundary stones are known to have been set up to delimit taxable properties between cities, towns, and villages in the Roman provinces. Inscribed boundary stones delimiting agricultural territories, dating from the time of Diocletian (late third century), have been found in the Hauran, the western Golan, and in the Huleh Valley.

Less information exists on the use of stones or markers to demarcate the ownership over lands of a specific farm or individual plots of land. The more permanent type probably took the form of prominent natural rocks, ancient trees, large piles of stones, posts, fences, or walls (see Or. 16:5). Boundary markers in the form of monoliths were found along roads bordering areas of fields in Samaria and Modi'in and dated to the Hellenistic and Roman periods. In *Bava Batra* (4:8) it is stated that "if a man sold a field he has sold also the [boundary] stones that are necessary to it."

Temporary markers made of piles of stones were the easiest to create and they can be seen all over areas of ancient and traditional field systems. In the highlands near Jerusalem such landmarks were known in Arabic as *rassem* or *hejar et-tuhm*. The latter term was also used for the pile of stones located at both ends of a cultivation strip in the plains. One commentator of the 19th century noted that the lands of the Sharon were marked out with small lumps of stone. Mark Twain in his description of agriculture in the Lebanon (1869) wrote that he saw "rude piles of stones standing near the roadside at intervals, and recognized the custom of marking boundaries which obtained in Jacob's time. There were no walls, no fences, no hedges – nothing to secure a man's possessions but these random heaps of stones." Wilson in 1906 reports that to mark off two plots a double furrow was driven between them and piles of stones were set up at short intervals within the furrow. These piles were usually quite small.

Care has to be taken not to identify all stone piles seen in the fields as markers delimiting ownership. Many of the larger piles in the fields are clearance heaps of surplus stones (see Shev. 2:3; 4:1). Others covered the ruins of ancient structures and this was referred to in Oho. 15:7. The remains of numerous structures were found beneath piles of stones during archaeological surveys around Jerusalem. Some of these may have been memorial heaps, for example the large stone pile (*gal avanim*) mentioned as having been erected over the place where Achan was stoned and set on fire (Josh. 7:26). A

group of large stone piles investigated in southwestern Jerusalem, dating from the Iron II, may have been memorials of this sort, or perhaps they were connected with harvest rites since agricultural installations, including a wine press, are known in their immediate vicinity. Many piles of stones on the top of hills were perhaps connected with peasant rituals, and Rabbi *Akiba (second century c.e.) warned that "where-soever thou findest a high mountain or a lofty hill and a green tree, know that an idol is there!" (Av. Zar. 3:5). Aborted fetuses were sometimes buried within cairns (Oho. 16:12). At the beginning of this century, stone cairns (*rujm*) were being set up at sites where murders had taken place. A stone heap of this kind was known in Arabic as *meshad*, i.e., a "witness."

All individual fields were originally marked out in one way or another, even if only in a very rudimentary fashion. It was only then that the clearing and plowing of the land could begin. All agricultural work carried out with plows or with hoes produce scarps or banks of soil along the edges of the plots being prepared for cultivation. Loose stones from the surface of the field, which are a hindrance to plowing procedures, would have been thrown to the edges of the plots, thus creating boundary lines of low piled stones. In areas where there was very little competition for the land, this way of marking out the plot was clearly sufficient. Alternatively the plot of land could be marked out with a ditch (which had to be at least 3 ft. (0.93 m.) deep and about 1 ft. (0.37 m.) wide according to Kilayim 4:1). Ridged or dug-out boundaries of this sort may be detectable on the ground but field boundaries made out of perishable materials, such as piled logs of wood or reeds, will usually not be archaeologically evident.

In areas where there was pressure on the land or where there was a possibility of disputes between neighboring farmers, a proper system of field boundaries became necessary. Such fences tended to be built of stone where rocky outcrops were available to the farmer. In areas where stone was not freely available, especially in the plains and in the broad valleys, the field boundary was probably defined by a furrow in the ground, a wooden fence, a row of fruit trees (see Or. 1:1), or a thorny hedge. Archaeological evidence for such boundaries is rarely found. Stone fences, however, survive quite well and traces can still be seen in many parts of the country, as well as in the arid areas of the Negev and Judean Deserts.

Thorny hedges are referred to in various biblical passages. In the Parable of Jotham there is mention of plots of fruit trees edged by the *atad* bush which, if unattended, would easily grow wild (Judg. 9:15). It has been suggested that this was the thorny bush (*Lycium europaeum*) which still grows in the Kisuphim area where it originally was used during the Byzantine period as a hedge around fields. The *mesukat hedek* (identified as *Solanum incanum* L.) is another type of thorny hedge, sometimes mentioned in association with stone walls (Isa. 5:5; Prov. 15:19; Hos. 2:6). Hedges surrounding fields were also mentioned in the Mishnah (BK 3:2). The hedge was referred to as the *hasav* in TB, BB 55a. The thorny bush *Sarcopeteria spinosum* is presently used by traditional farmers as a

hedge around cultivated fields. The practice of surrounding fields with cactus bushes (Arabic *sabreh*) dates back only to the Ottoman period when the cactus was first introduced into Erez Israel. In the 19th century, rectangular fields were cleared within the woodland of northern Golan, leaving rows of oak trees standing as boundaries between the various plots.

Stone fences were usually built to a height of about 3 ft. (1 m. and with an average width of over 2 ft. (0.75 m.). This wall (known in Arabic as *jedar*) was built without the use of mortar. It has been estimated that a modern builder could construct a dry-stone wall around 15 ft. (4.5 to 5 m.) in length, 1.5 ft. (0.50 m.) thick and 4 ft. (1.4 m.) high (using 115 cu. ft. – 3.3 cu. m.) of stone) in the space of one working day. Principally the walls served to keep animals (dogs, foxes, and jackals) away from the crops. Frequently the tops of such walls were reinforced with a thorny bush (*netsh* in Arabic; usually this was the *Poterium spinosum* in the central highlands). The bush would project a few inches beyond the upper edge of the wall and was kept in place with the weight of a few stones. Repairs to these walls were always made in time for the period leading up to the vintage. In the Bible, the stone fence around a vineyard is referred to as the *gader avanim* (Prov. 24: 31; cf. Isa. 5:5; Ps. 62:4). Special builders known as *goderim* were employed for the task of building stone fences (cf. Ezek. 22:30).

The stone fence was also known as a *gader* among Jewish farmers in the Roman and Byzantine periods (Matt. 21:33; Pe'ah 2:3; Oho. 17:3). The *hayis* apparently referred to the secondary partition wall in the field systems and the *gader* to the main enclosure wall. The boundary path between two plots of land was referred to as the *mesar* (מסר, Kid. 1:5). It was apparently not customary to build stone fences in the flat lands of wide valleys (BB 1:2). The minimum measurements that this fence had to have according to the Mishnah, was a height of 3 ft. (0.93 m.) and a width of 1 ft. (0.37 m.) (Kil. 2:8). If it was less than this height then it could be regarded as a "quarry" and its stones dismantled and taken away. However, its foundations (to a height of about 4 in. (10 cm.) always had to be left intact (see Shev. 3:6). The boundary markers were set up outside the line of the fence so that if the wall collapsed the farmer still could claim ownership over the place and the fallen stones. However, in the case of two separately owned plots of land, the boundary stones were set up on either side and if the wall collapsed then the stones belonged to both of the farmers (BB 1:2). Ditches were sometimes dug along the foot of the fences (BB 7:4) and in a vineyard a border 7.35 ft. (2.24 m.) wide was left uncultivated between the fence and the vines (Kil. 6:1).

The use of stone fences around fields has been found dating back to the period of the Iron Age II. The fact that they have not yet been found does not mean, however, that stone fences were not built during earlier periods as well. Iron Age stone fences have been documented at sites in the Judean Hills, but fewer in Samaria. A possibility to consider is that stone fences around fields may originally have been derived from the type of stone walls used to surround animal pens,

for example those from the Iron Age I which are known from Mount Ebal and Giloh.

Roads can be most useful in outlining the borders of agricultural lands or in separating one group of fields from another, particularly in defining the extent of fields which were not in any other way demarcated with stone fences. Three types of roads are known from the rural countryside of Erez Israel: highways, regional roads, and local rural roads. A border of about 25 ft. (8 m.) was left uncultivated on either side of the highway, which was of no prescribed width (BK 6:4). The local roads were the access routes which linked the farms and villages with their fields and areas of pasture. They also gave farmers access to the regional roads leading to the market settlements. Produce would have been conveyed to market using beasts of burden. Wheeled transport was rarely used as roads were too narrow and stony. Most local roads extended between sites with prominent water sources (such as springs) and served as "corridors" between blocks of fields. Cisterns and wells are frequently found alongside both types of roads. High walls built of stone were erected on either side of roads, to separate the public space from the agricultural land. They prevented animals from entering unattended fields and damaging crops, especially the flocks of sheep and goats which were shepherded along these roads from the animal pens next to the settlement to the area given over to pasture which was usually located some distance away. The walls also served to discourage passing travelers from entering the fields and picking fruit during the harvest seasons.

Natural "gates," or private roads, led from the local roads into the field systems. Local roads were either for public use or were under private ownership and a clear distinction was made between the two during Roman times (see Pe'ah 2:1 and Kil. 4:7). A private road (*derekh ha-yahid*) was prescribed as having a width of about 6.5 ft. (2 m.) and a public road (*derekh ha-rabbim*) a width of about 25 ft (8 m.) (BB 6:7). A road ending at a cistern, lime kiln, cave, or wine press was usually a private road (Toh. 6:6). In some cases blocks of fields may be observed laid out within a pre-existing network of local roads. When such roads can be dated, they can then provide a *terminus ante quem* date for the field systems. Datable roads when encroached on by field systems will provide a *terminus post quem* date. Bowen (1961) wrote that the "integration of fields with any trackway leading into a settlement seems the best assurance of contemporary relationship, or at least in some phase, though the individual fields might of course have suffered considerable subsequent alteration and not necessary be characteristic of the period of the settlement."

Shape and Size of Fields

Agricultural fields in Erez Israel were usually very small and approximately rectangular. There were, of course, exceptions to the rule as well as regional and local variations. The fields in the flat areas of the plains and broad valleys were on the whole proportionally larger and more rectangular than the fields located on sloping ground. Fields in extremely rocky

terrain were even smaller in size. The shape of an individual field on sloping ground was quite often determined by topographical and lithological factors. The edges of the fields were either defined by natural features (such as a *wadi*, a gully, rocky outcrops, etc.) or by man-made boundaries (such as stone markers, stone fences, or terrace walls). The size of the fields also depended on the type of farming technology available to the farmer. Plowed land was always larger than land cultivated only with hoes. This was also true of the digging and clearing equipment which were essential in the highlands for clearing stones, breaking up the ground, and flattening the field surfaces. Different sized fields are to be found in the areas around the villages. Some of this may be the result of the fragmentation of land owing to the division of property at different times. The fields associated with farms, however, appear to have been much more uniform in size and were sometimes part of integral systems that were quite well defined. Compared to the fields used for dry farming, irrigated plots of land tended to be smaller and extremely regulated, with flatter surfaces and well-defined boundaries.

Fields also tended to be of rectangular shape because they were easier to measure for the purpose of estimating surface area or the quantity of crops grown in them. Measuring lines (*kavei ha-middah*) or cords (*hevelim*) are mentioned in a number of biblical passages referring to the measuring of lands and fields for the purpose of division (11 Sam. 8:2; Isa. 34:17; Jer. 31:39; Micah 2:4–5; Amos 7:17; Ezek. 47:3; Ps. 16:6). The “line” or “cord” had knots at specified intervals along its length. The measurement of the distance between the knots of the biblical cord is unknown. Perhaps it was the length of the *kaneh* (“measuring reed”) mentioned in Ezekiel 40, which was used for measuring small areas and expanses. A tax assessor who is seen measuring standing crops with a knotted cord to determine the yield was skillfully depicted in a painting on the wall of a New Kingdom tomb in Egypt. The knotted cord is shown extended horizontally across the top of the crops and held between the assessor and his assistant. A roll of additional cord is shown slung across the assessor’s left shoulder.

In Roman Erez Israel, land which was to be sold had first to be “measured by the line” (BB 7:2–3; see also the methods of measuring differently shaped fields as explained by Columella v, 1,13–2, 10). It is reported that the farmers of Beth Namer “used to reap their crops by measuring-line and leave *pe’ah* (gleanings) from every furrow” (Pe’ah 4:5). The division of agricultural land by surveying is mentioned in one of the Nessana papyri (*P. Ness.* 58) dating from the late seventh century. Measuring cords are also mentioned in a passage from *Pirkei de-Rabbi Eliezer*, dated to between the eighth and early ninth century, which deals with the Muslim conquest of Erez Israel in the seventh century C.E. It says that the conquerors will “measure the land with ropes, and make the cemetery into a dunghill where the flock rests, and they will measure them and from them unto the tops of the mountains . . .” The knotted cord during the Roman and Byzantine periods was

probably marked out with a measuring rod of a standard size used in Erez Israel (cf. Kel. 7:6), perhaps identical to the *orgua* or *kalamos* measures. An iron measuring rod, five cubits in length and dating to the seventh century, has been discovered during excavations at an ecclesiastical farm at Shelomi in Western Galilee. This rod may have been a *kalamos* measure of 11 *spithamai*, 8.5 ft. (257.4 cm.) Long cords for the purpose of measuring village lands for taxation purposes were still used by the Ottomans in the 19th century. In Southern Erez Israel, lands were divided up with a measuring line (*havaleh*) before plowing. This line was made of goat’s hair and was a little more than one centimeter thick.

The earliest archaeological evidence for the general appearance of the layout of field systems in Erez Israel dates from the Iron Age II. This may have been the period during which widespread field systems were first laid out as blocks of rectangular-shaped plots on high ground and along the valleys. In some areas, it would appear that these blocks of fields developed piecemeal, but in the highlands and in the semi-arid regions a number of these systems appear to have been planned in advance. However, it is only during the Roman and Byzantine periods that fields were laid out in a specific pattern in different parts of Erez Israel and Syria. Some even follow Roman land-partition principals.

The size of the individual field used for arable purposes during antiquity was usually the area of land which could be plowed with a yoke of oxen during the course of one day’s work. According to Bava Batra (1:6) the practical size of sown ground in dry farming was an area of 11,000 sq. ft. (1,176 sq. m.) (but according to R. Judah – 2nd century C.E. – this could be reduced to as little as 5,500 sq. ft. (588 sq. m.)). The size of plots used as vegetable gardens and vineyards were even smaller. The size of plots were apparently progressively reduced in the course of the third and fourth centuries. In Samaria, at Khirbet Buraq most individual plots were between 1 and 7.5 dunam in size, with the largest not exceeding 15 dunam. The size of individual plots is in fact not helpful in an attempt to reconstruct the area of smallholdings, since most families in the Roman period would have owned more than several plots and these could very easily have been scattered. Furthermore, a family could also have controlled areas of pasture and woodland outside the field system.

Various suggestions have been put forward regarding the size of the lands cultivated by the individual peasant smallholder in Roman and Byzantine Erez Israel. As a result of his archaeological surveys in Samaria, Dar has estimated the size of the typical family holding around a number of Byzantine village sites at between 25 and 45 dunam (note that four dunam are the equivalent to one acre). At Khirbet Buraq the holdings were estimated at 25 dunam each and around Qarawat bene Hassan at between 39.7 and 45.6 dunam in size. These figures do not take into account the possibility of the scattered ownership of land. At sites in the Galilee, holdings averaged between 6 and 11 dunam and around Nablus between 15 and 18 dunam (compare these figures with the average of

16 dunam for a block of enclosed fields noted by some scholars for the Galilee).

In a study of the economy of Roman Erez Israel, Safrai proposed that an average family of four individuals, practicing subsistence agriculture, would have required lands covering an area of approximately 11 dunam (or 13.7 dunam for a family of five). However, with the burden of taxes and the need for outside purchases a minimum of 20 dunam seemed to him to be a far more realistic figure. Safrai's figures are based on calculations regarding the possible harvest yields of plots used for the cultivation of wheat, olives, figs, grapes, and legumes. However, such yields could have varied quite substantially from one part of the country to another, depending on the type of soils available, location and precipitation levels.

Broshi in another study has suggested that a family of five needed an area of 50 dunam for subsistence, a figure which seems quite reasonable compared to estimates of the sizes of traditional holdings during recent times. This also fits well with the estimated minimum requirement of 20 iugera (= 50 dunam) for a farm in Roman Italy which cultivated land with the plow and kept animals. However, Broshi does not believe that manuring was carried out in the sown areas and so in antiquity the smaller areas did not produce yields which were any greater than those of traditional agriculture of the 19th century.

A number of ancient sources exist dealing with the question of the size of the peasant holding in antiquity (note the following equivalents are used here: 25 dunam = 2.5 hectare = 10 iugera = 20 plethra). In his *Historia Ecclesiastica* (III, 20:1), Eusebius mentions Judas's nephews cultivating an area of 39 plethra (= 48.7 dunam). Thus each farmer would have had a holding of about 24 dunam. Talmudic sources also contribute much information, but more about the quantity of yields and the measurement of individual plots of land than about the size of the individual holding. Additional figures are available regarding the sizes of holdings in other ancient Mediterranean countries and Egypt. Apparently the smallest and largest allocation of land in Roman Italy was from 2 iugera (= 2.5 dunam) to 200 iugera (= 5,000 dunam) or more. Since 2 iugera was clearly insufficient to support a family even on a subsistence level, this allotment must have been additional to areas used for pasturage. In 133 B.C.E., allotments for the poor in Italy measured between 10–30 iugera (= 25–75 dunam). In Greece, in the Metaponto area, plots varied between 48 and 530 dunam, with 50 percent of these totaling about 138 dunam in size. In Egypt, the average property size varied during the mid-fourth century: 76 iugera (190 dunam) at Hermopolis and 37 iugera (92.5 dunam) at Antinoöpolis).

The above figures make it quite clear that there are many difficulties in estimating the size of the average small peasant holding in antiquity, prior to the Abassid period when there was a general decline in the agricultural productivity of the land lasting until modern times. However, the size of a holding will have differed considerably from one type of environment to another, with larger holdings in the more rugged en-

vironments having poorer soils, and smaller allotments in the flat fertile plains and internal valleys where there was much more pressure on the land. At times when there was a serious fragmentation of holdings, with lands being absorbed by larger estates, such as during the 3rd–4th centuries C.E., there would have been pressure on privately owned ancestral holdings and these would naturally become smaller with individual fields being sold off piecemeal. The size of the holding also depended on the type of agricultural regime being practiced and whether or not it included the replenishment of soil fertility with proper manuring and fallowing procedures. The lack of such procedures could well have restricted the size of the areas being cultivated. Finally, the minimum size of a subsistence holding will differ considerably between one which had to support a family and one which supported an extended family. Furthermore, a peasant farmer could have held more than one holding. The attempts made by Dar and Safrai to divide up the fields surrounding ancient villages into holdings of theoretical sizes, seems to be fundamentally flawed when one considers the evidence regarding the lands owned by Rabbi Yohanan in the 3rd century, whose fields were not concentrated at one location at all but scattered at different locations in the countryside between Tiberias and Sepphoris.

However, the existence of such problems should not mean that scholars should abandon the attempt to delimit the minimum size of peasant holdings in Erez Israel during the different periods. The maximum cultivable land in Erez Israel in 1931 amounted to 6.54 million dunam which, subdivided by the population number of 600,000 for that general period, provides an average of 11 dunam of land per inhabitant. This figure can be compared favorably with Broshi's suggested 10 dunam of land per individual in antiquity. However, two facts need to be taken into consideration regarding the 1931 figure: first, not all the population at that time were involved in agriculture and, secondly, a large percentage of the available cultivable land was not necessarily being cultivated. For example, records show that up to 55 percent of the hills around Nablus-Tulkarm had neglected terraces in the Mandate period. Hence, a more realistic minimum of 5 dunam per individual seems likely. A family of five would therefore have had a holding of approximately 25 dunam or more. Hence, the suggested size of a peasant holding in Erez Israel during the time preceding the Abassid period, i.e., before 750 C.E., probably varied considerably between 25 and 50 dunam.

It is interesting to compare these figures with information known about the size of the average smallholding in different parts of the Near East during more recent times. An average of 50 dunam per peasant family has been estimated according to figures taken from an Ottoman census of 1909, for the lands in the three sanjaqs of Jerusalem, Nablus and Acre; 85 percent of landowners from Hebron cultivated areas ranging between 1–20 dunam. The sizes of average holdings in three present-day agricultural villages in the Zarqa River basin in Jordan range between 19 and 68 dunam. In Syria, however, a peasant holding in an area of dry farming was much larger,

averaging 50–70 dunam. At Episkopi in Cyprus, the village was estimated to have had a total of 10,000 dunam of land and a maximum population of 700 individuals; thus a holding for a family of five would have averaged at about 71.5 dunam. At Ashvan in Anatolia the total landholding per family averaged 122 dunam but 40 dunam of this was used for pasturage.

The systematic study of field systems during archaeological work, combined with a critical examination of evidence gathered from a variety of sources, provides very important information on the history of rural land management in different parts of Erez Israel. One of the major problems in establishing a typology of field systems for Erez Israel is that the best evidence comes from hilly areas and from the marginal semi-arid areas, and it is questionable whether these patterns were also the same in areas of flat land. While the tenurial organization of land cannot be worked out solely from the archaeological remains of the fields themselves, the archaeological work is able to provide historians with empirical data on the appearance and extent of ancient field systems of different periods. In some field systems the evidence points to continuity, with the position of boundaries being respected and retained from period to period. In some cases substantial changes have occurred and this may have been the result of the dispossession of lands, new property relationships, or new forms of exploitation.

Dating fields is still an acute problem for archaeologists. One scholar wrote in 1984 in a pessimistic vein that in his opinion “it is very rarely possible to attribute an ancient agricultural field or system of old terraces to a specific period.” Research in the 1990s and early 2000s shows that this is no longer the case and methods of landscape archaeology enable scholars to disentangle field systems belonging to several periods. The first step, of course, is to evaluate the degree of association between a system of fields and adjacent villages and farms, and the network of communications (paths, roads, etc.). Field boundaries and their relationships with earlier features, from dolmens to earlier fields, must be examined. Some of these earlier features may have been respected or dismantled. The extent of a field system also needs to be determined. It is not always an easy task to establish where one system stops and another starts. Attempts should also be made to examine patterns of field boundaries and the stages of construction of stone fences defined through structural analysis. Some field systems are of an aggregate pattern and others may have a planned parcelation arrangement with a more rectilinear design. Some systems are responsive to the local terrain, others are not. Ancient boundaries are frequently “fossilized” in modern boundaries. A comprehensive study subsequently needs to be made of sherd scatters located next to the settlements, around cisterns, wine and oil presses, alongside the edges of fields and across the field surfaces. Many of these sherd scatters may turn out to be the result of ancient manuring practices. This will provide the surveyor with a general idea as to the date of the fields which are being examined. The excavation of test pits within the settlement and

next to the various features seen within the area of the fields, can serve as a “control” over the results from the survey. The overall results will show whether or not there has been cultural continuity or discontinuity within a given landscape of agricultural fields.

Recent work has shown that a variety of ancient land-management systems were operating in different parts of Erez Israel in antiquity. These reflect the many different ways that the rural population responded to environmental and climatic constraints. The quality of these responses depended on the level of social and economic organization achieved by the different farming communities and on the level of farming technologies available to them. The tactics of village communities differed considerably from those of individual farmers, and this had a clear effect on the general layout of fields in a landscape. The earliest known evidence for the imposition of a regular and widespread cultivation pattern in Erez Israel can be dated to the Iron II period. The parcelation of land was consolidated during the Hellenistic to Roman periods. Thereafter, areas of field systems expanded and in time, particularly during the Byzantine and Umayyad periods, became much more complex and fragmented than before.

Today, the shape and character of fields in Erez Israel have changed dramatically. Mechanized equipment now allows for the cultivation of extremely large tracts in areas of flat land. Terraces can be cut into the slopes of hills with bulldozers and soil can be transported by truck from one place to another. The use of artificial fertilizers has meant that fields no longer need to lie fallow and yields can be constantly high. A wide variety of weeds, however, are thus being banished to the margins of fields and complete wildlife habitats are being destroyed. Large areas of fields in the traditional landscape have already been eradicated. Their boundaries and fences have now been erased forever and can only be seen in aerial photographs. The morphology of the agricultural landscape is no longer the same and the growing of cash crops has replaced the economic variability of ancient times. While it is sad to observe the rapidly disappearing traditional landscapes, harvests in Israel, the West Bank, and Jordan are now much greater and more plentiful than they ever were in antiquity and this can only be to the advantage of the local farmers of today.

Manuring Procedures

In ancient Erez Israel, an enormous amount of effort was dedicated to the proper organic fertilization of fields and periodic fallowing. The archaeological evidence for ancient manuring is represented by the very large quantities of sherds which can be found scattered in the fields all over the country. In many cases they represent frequent farming procedures undertaken to improve the fertility of the soil, especially in areas where frequent cropping was undertaken with very little fallowing. The fertilizers and manure had to have the right composition of potassium, phosphorus, lime, magnesium and nitrogen, allowing for the proper growth of the crops in the fields.

Fertilizers and manure of all sorts were extremely valued in antiquity as soil-improving agents. The most frequently-used manure was the dung of cattle, sheep and goats which was collected from the mangers and animal pens and distributed in the fields with household rubbish. The term *domen* was used in the Bible when referring to manure left in the field as an organic fertilizer (11 Kings 9:37; Ps. 83:11; Jer. 9:21). When animal dung was mixed wet with straw, it was known as *madmena* (Isa. 25:10). Household rubbish and sherds were probably added to the dung while wet and this would have helped break down the dung before being scattered in the fields. Human excrement was not apparently used and was clearly forbidden by Jewish custom, unlike in China where human faeces, diluted and fermented, was one of the principal manuring agents used in the fields. However, ashes (*efer*: cf. Ezek. 28:18) and burnt ashes from animal sacrifices (*deshen*: cf. Isa. 34:7) were probably used. This was certainly the case during the Roman period when ashes of a sacrificed animal were "sold to gardeners as manure" (Yoma 5:6). A dove-raising industry existed in Erez Israel in the Hellenistic and Roman periods and is represented by the discovery of numerous *columbaria* caves and structures. The dove droppings from these *columbaria* were highly sought after especially for fertilizing valuable garden plants. The rule was that *columbaria* had to be located at a distance of 25 m. from the farm or village (BB 2:5). Organic waste materials such as the cakes resulting from the pressing of olives, were pulverized and then added to the compost heaps which were then later scattered on the orchards and gardens. In Roman times, an importance was attributed to fertilization procedures with organic materials and compost produced from organic waste (BK 3:3; Shev. 2:14, etc.). The importance of fertilizer is shown by the comparison of dung to precious stones (Sanh. 59b). Blood (Yoma 5:6), ash, and fine sand (Tosef., Shab. 8:9) were all used. Sheep droppings were applied by enclosing the flock in a temporary fold ("*sahar*"). The enclosure would be set up for some time and then be moved from place to place in the field (Tosef., Shev. 2:15, 19).

Manure was used in orchards, gardens, and sown fields. The best time to manure the fields was after the first rains in time for the winter crops and in the spring for the summer crops. The rains softened the ground as well as the manure itself. In irrigated areas, manuring was continued throughout the year. Manure was distributed to the fields in special baskets (known in Latin as *sirpeas*; cf. Kel. 19:10; 24:9) which were loaded on beasts of burden. It has been estimated that 235 cu. ft. (6.7 cu. m.) of manure were used per dunam of land. The manure was first deposited in heaps in the field and was then scattered by a process of plowing or hoeing (cf. Shev. 3:1–4). Seeds from weeds could sometimes get into the soil of a field through animal dung and this was something which concerned Jewish farmers during the Roman period (Kil. 5:7). A field that had undergone manuring was known as a *bet ha-zevalim*. Movable enclosures were sometimes set up in the fields to help localize the dung of grazing animals.

In dry soil, manures could effect the movement of water between the surface of the ground and the subsoil, and so manures had to be only lightly covered. But care had to be taken to make sure that the manure was dug in properly, since unrotted manure could burn crops (White 1970: 129). Manure was heaped around individual trees and then dug in. In Luke 13:8 reference is made to the manuring of a fig tree so that it should bear fruit.

Broshi has suggested that manure was mainly used in orchards and gardens during the Roman and Byzantine periods and not at all in the fields that were used for the growing of grain. The claim has also been made that because of pressure on the land only one third of it was actually allowed to lie fallow during that period, but this would have been contrary to the Jewish rulings of the time (BM 9:7). The true extent of the manuring practices at that time is clearly demonstrated by the enormous distribution of sherd scatters in areas used for the growing of grain across the country. Manuring at a distance of more than a mile (1.5 to 2 km.) from the village would probably have been uneconomical without the use of carts.

The phenomenon of sherd scatters representing manuring regimes is known from ancient fields investigated in many of the Mediterranean lands, from Spain to Greece, and as well as in other parts of the world. Various methods have now been developed for the study of the distribution of sherd scatters within agricultural lands and around settlements. In Erez Israel, organic household, and courtyard rubbish was gathered and used as a fertilizer for the fields, and this rubbish frequently included broken pottery. Household refuse was sometimes mixed with animal manure to make it easier to scatter in the fields. In Samaria, sherds have been found in the fields around Qarawat bene Hassan, up to 2–3 km. from the village center, as well as around Khirbet Buraq and in other fields. Sherd distributions have also been studied in the fields around agricultural settlements in the Golan. Soil was sometimes taken from the ruins of ancient sites and scattered on the fields as a fertilizing agent. Archaeologically, this is known only from sites with plots used for irrigation purposes, as at Sataf west of Jerusalem.

In the Ottoman period sown fields were very rarely manured and in many areas this eventually resulted in the substantial exhaustion of the land during the 19th century and the early part of the 20th century. Manure was mainly kept for use in vegetable gardens and some orchards, or dried and used for fuel. However, Baldensperger in 1907 does mention the manuring not just of orchards but also of sown ground. Karmon and Shmueli have also pointed out that unlike other parts of the country, the regular manuring of terraced plots was being carried out around Hebron until the 1970s. Reifenberg in 1947 complained that organic manure was often very badly handled in Erez Israel: "the heaps being exposed not only to the intense sun but also to the torrential winter rains. The dung is very often left for weeks in small heaps on the field instead of being plowed in as quickly as possible."

Irrigation

Although Erez Israel was described as possessing “brooks of water, of foundations and depths, springing forth in valleys and hills” (Deut. 8:7), the reality is that there were very few permanent sources of water that could be used for agricultural purposes, namely a number of perennial rivers, and springs and wells, and mostly what local farmers could rely on was winter rainwater (Deut. 11.10–11); otherwise their lands would remain dry (forlorn like “the garden that hath no water,” Isa. 1:30). The few permanent sources of water that did exist were therefore exploited to the fullest and the danger of drought was always present (Deut. 11:17). Water rights and ownership of access to water led to serious disputes in antiquity (e.g., the disputes with the Philistines regarding wells of water, Gen. 21:25; 26:15–22). Rabbinic legislation covered many aspects of the distribution of water among those who shared in water rights. “Water turns” were assigned (מק 11b) to those entitled to use the supply. Some individuals were compelled to buy or lease seasonal rights (תל, מק 1:2, 8ob). Many biblical passages make use of the well, spring, and river as symbols of abundance and security (Isa. 58:11; Jer. 31:11). Orchards, too, grow better when partially irrigated. Hence the comparison made between the person who puts his trust in God to “a tree planted by streams of water” (Jer. 14:8; Ps. 1:3).

Irrigation methods were many and diverse. In those parts rich in rivers and springs, as in the Jordan and Huleh valleys, water flowed into the fields by gravitation and was directed through channels dug with shovels or pressed down by foot (cf. Deut. 11:10). Trees were similarly irrigated (Ezek. 17:7; Song 5:13): a shallow pit dug around a tree was filled with water, which would sink deep into the ground and moisten the roots (Kal. R. 3:52, 4). However, mechanical means were sometimes needed to lift water into the fields. The most simple of containers was the *deli* (“pitcher”) of earthenware or metal attached to a rope or chain (Shab. 15:2; Kel. 14:3). A similar utensil was the *havit* or jug, which was also used for water drawing (Mak, 2:1). A larger device for lifting water was the *kilon* of mishnaic times (Makhsh. 4:9, etc.), which was also frequently depicted in ancient Egyptian and Babylonian representations; it has survived up to the present time in the traditional agricultural practices of Egypt (known there in Arabic as the *shaduf*). It consists of a vertical pillar on which a long horizontal bar is placed. To the one extremity of the bar, a jug is attached by rope or pole, while the other extremity is weighted down by a stone to balance and facilitate the raising of the full container. Herodotus described the Egyptian use of this device (Gr. κηλωνήιον, “keloneion”; cf. *History* 1:139). The bucket wheel was used at wells for irrigation and was turned by a horse, mule, or ox. Water was conveyed to the fields by conduits on high stone walls, sometimes arched. Examples of waterwheels used to raise water from rivers and wells of the “Persian” type with ceramic jars attached to them (*antila*), are known in Erez Israel dating back to the Roman period. The *antila* is essentially a vertical wheel to which earthenware pitchers or wooden containers are attached. An animal rotates

a shaft whose attached, wooden-toothed gear in turn engages the wheel to which the drawing pails are tied. According to the *halakhah*, water drawn by an *antila* invalidates a *mikveh*, since the waters are separated from their source during the process. The Tosefta (Makhsh. 3:4; Mik. 4:2) designates another vessel, the “*kevulin*” or “*kehulin*” whose use does not invalidate the *mikveh*, since the water is not detached from its source during the operation. This *kehulin* (Lat. *cochlea*, “snail”) consists of an Archimedean screw in a pipe. The screw, turned by an animal, forces the water to rise. Strabo (17:807) reported that water for the Roman camps was drawn from the Nile by means of κοχλια. The *galgal* or *gullah* described in Ecclesiastes (12:6), with a wheel turning an axle to which a pail or two were attached by rope or chain, may have been an earlier type of *antila* device. Such a device was frequently mentioned as μηχανή άντλοϋσα (i.e., “drawing machine”) in Hellenistic Egyptian papyri. Evidence of its use has been found in the south of Israel in a Byzantine Greek inscription that reads: “This excellence too of μηχανή, the glorious father Helarion invented.” The horizontal waterwheel may have been developed in the Upper Galilee during the second century B.C.E., but clear archaeological evidence for this is still lacking. The large upright wheel operated by water power (*na'urah* in Arabic) was first developed in Syria, the most famous examples being those at Hama. It was later introduced into Erez Israel, where it was used to draw water from some of the perennial rivers and is referred to in the *halakhah* as a device with “self-drawn water from the sea or river” (Tosef., Mik. 4:2, so in correct texts). The Jerusalem Talmud designates this instrument by the name “*agatargatkaya*” (תל, מק 1:2, 8ob), which is related to the Greek term καταρράκτης, “cataract” or “waterfall.” It refers to the cataract effect created by the water-driven wheel. In addition to these water wheels, underground *Qanat* systems were constructed to exploit the shallow groundwater in the arid basins of the Arabah and the lower Jordan Valley. Examples of these systems have been surveyed by Porath, who has suggested, on the basis of his fieldwork, that the knowledge of *qanat* construction may have been introduced into the region from Iran either during the late fourth century B.C.E. or (and this seems much more likely) during the Umayyad period in the seventh century C.E. However, the use of these chain wells did not last beyond the Abassid period.

The most important source of water in the hilly regions are the springs, and an estimated 800 exist in Erez Israel. In ancient times the lands adjacent to the springs were mainly used for irrigation purposes. Only a handful of these springs, namely the Dan, Yarkon, and Naʿaman springs, have a flow of more than one cubic meter of water per second. A little more than 40 produce a volume of between 100,000 and 1,000 liters per second. The rest produce much smaller amounts of water, sometimes as little as one liter per minute. Irrigated plots of land tended to be located fairly close to routes giving ease of access for those conveying their produce (such as vegetables) to the markets or back to the village or farm. Irrigated plots tended to be fairly close to the settlement for security reasons.

Most springs in the hills of Erez Israel had various installations attached to them, including flow tunnels and large water-storage pools. The irrigated fields were located below the pools and water was conveyed to the fields along channels by a process of gravitation (it would “leave higher ground and go to the lower,” Ta’an. 7a). Each terrace area received water once every cycle of specified number of days, according to the size of the terraces owned. Spring-irrigated lands have been investigated during archaeological surveys in Samaria and in the Judean Hills. Spring-irrigated system of terraces have been investigated at Ain Yael, Sataf, and Suba.

Artificially watered or irrigated fields were frequently mentioned in the Mishnah. Irrigated land was known as *bet ha-selahin* to distinguish it from the areas of rain-fed land known as *bet ba’al*. The smallest irrigated allotment was between 350 and 700 sq. ft (32.5 and 65 sq. m.) (BB). It is interesting to compare this with the allotment of 1 dunam of irrigated terraced land which every family farms in present-day Battir. Title over irrigated lands was given to anyone who could prove three years undisputed possession (BB 3:1). The surface of the irrigated field was divided up into square plots of about 5 × 5 sq. ft. (0.56 × 0.56 m.), separated one from the other by an earthen border (*gubal*) about 4 in. (10 cm) in height (Kil. 3:1). Irrigated plots were heavily manured and the frequent manuring of beds of cucumbers and other vegetables was mentioned in Shevi’it 2:2. Soil taken from ancient ruined sites was frequently used to top-up and fertilize irrigated fields. The furrow or channel which brought water to these plots had a width and depth of about 10 cm wide and 10 cm deep (Kil. 3:2). Channels led from tree to tree (MK 1:3). In large areas of irrigated lands, small plastered tanks were frequently built at the end of the main irrigation channels. Because of evaporation rates, these small tanks were the first to be filled with water: “The cistern nearest to a water-channel is filled first – in the interests of peace” (Git. 5:8). It was only then that the plots between the spring and the tanks could be directly irrigated from the main channel. Springs in areas of irrigated fields were known to suddenly dry up (BM 9:2). A distinction was made in *Mo’ed Katan* 1:1 between old springs and “newly flowing springs.”

Irrigation plots were frequently established next to aqueducts leading from the springs. Plots of land irrigated in this fashion existed next to the aqueduct which led water to the settlement of Na’aran in the Golan. An interesting Greek inscription of Justinianic date was found near the principal aqueduct leading to Jerusalem. It prohibited the use of the land on either side of it, up to 15 ft. (4.6 m.), for cultivation purposes. This was to prevent water from being siphoning off for irrigation. This prohibition reminds one of the ban in Roman Erez Israel regarding the cultivation of plots of land on either side of highways.

Cistern irrigation was also practiced in Erez Israel and dates back at least to the Iron Age (e.g., Isa. 27:3). Vines watered by irrigation are mentioned in a field with furrows (*arugot*) in Ezekiel 17:5–7. Cistern-irrigated plots are mentioned in

Jewish sources of the Roman period (see MK 1:1) and in Pe’ah 5:3 a field was irrigated “with a pitcher.” Cistern-irrigated plots of land have been investigated by Dar at a number of sites in Samaria (1986a, 200–2). A cistern in an orchard is mentioned in one of the Nessana papyri (Kraemer 1958).

Traditional irrigation in Erez Israel clearly perpetuates ancient practices as Dalman was able to show in his publications. Many of the Arabic toponyms in Erez Israel are linked to the word *ain* (“spring”) indicating the importance of the spring even when it was located a few kilometers away from the settlement. Descriptions of traditional spring-irrigated plots and watering procedures were frequently published by 19th and early 20th century travelers. Water was divided up for irrigation either by degrees or by hours. General research on irrigation has been carried out by Avitsur and at springs in the terraced Judean Hills by Ron. The irrigated areas investigated by Ron comprised only 0.6 percent of the total of the terraced areas west of Jerusalem. This percentage is probably true for all of the terraced areas of the hills of Erez Israel.

Installations and Implements

Associated with each system of ancient agricultural fields, in addition to the villages and farms, are the remains of solitary structures, towers, caves, cisterns, *columbaria*, wine and oil presses, threshing floors, and animal pens. Pools for steeping flax and fig-drying installations are also mentioned in the sources. Many of these features were linked by roads and paths. Near them were lime kilns and quarries.

The existence of rural towers in areas of terraced fields has been frequently commented on by travelers and scholars since the 19th century. A detailed study of these structures was carried out by Ron in the terraced zones of the Judean Hills. Approximately 50 percent of these stone towers were associated with vineyards and 39 percent with orchards. In general terms, the layout of the tower resembled the organized space of the traditional village house, with the lower area serving for storage and the upper part for habitation. Towers were usually located at a distance of 500 meters and up to a kilometer from the village or according to Wilson writing in 1906 up to 6 or 8 km. from the village. The interior was perfect for the cool storage of agricultural produce, since its temperature was 8 to 13 degrees cooler than outside it. Water cisterns and wine presses were frequently found next to the towers. Ron believes that these towers indicate private family ownership of land with cultivation taking place in small plots, thus reflecting a traditional subsistence economy. A detailed study of towers associated with fields in Samaria dating from Hellenistic and Roman times was made by Dar. Similar structures have been examined in terraced areas around Jerusalem, some of them dating back to the Iron Age II. Additional tower-like structures in areas of terracing, also dating from the Iron Age II, have been examined in the Tell el-’Umeiri area in Jordan, to the southwest of Amman. This kind of structure should perhaps be identified with the stone-tower (*migdal*) mentioned

in Isaiah 5:2. Additional structures located in fields are mentioned in the Mishnah, including “cone-shaped huts, watch booths, and summer huts” (Maʿas. 3:7; cf. Kil. 5:3). The sale of a field also meant the sale of the watchman’s hut and its stones, unless it was made of perishable materials and “if it was not fastened down with clay” (BB 4:9). The differences between these ancient structures and the more recent ones are not as outstanding as Dar believes. Dar argues that these structures differ architecturally, with the ancient examples built of hewn stone without built stairs and with the recent examples built of surplus stone cleared from the fields. The ancient towers, however, could easily have been supplied with wooden ladders and this would have given them a much better defensive edge than having built stairs. Furthermore, surveys around Jerusalem have shown that many of the traditional towers were in fact built of stone supplied from quarries and not cleared from fields at all. The similarities between the ancient and traditional towers are much greater: both sets of towers were located in fields at a distance from the settlement, they had cool interiors suitable for storing agricultural produce and they could have been used as watchtowers during the harvest seasons. In antiquity, the social standing of the farmer was probably indicated by the size and appearance of the tower. Even some of the more recent towers can be quite imposing. Extremely flimsy structures could also be erected in the fields during harvest times, such as the traditional structures in the fields near Beth Shean (Dalman 1932, Pls. 12–13). The Bible refers to temporary structures of this sort; the *melunah* in an irrigated plot of cucumbers and the *sukkah* in a vineyard (Isa. 1:8; 4:6; 24:20).

Fenced-off animal pens are frequently found adjacent to field systems, since arable farmers in Erez Israel usually also kept stock. These were grazed on the common lands and on arable fields when fallow. At harvest the crops were protected by tethering animals or keeping them within fenced enclosures. The study of animal pens is instructive in regard to the relationship in antiquity between livestock to arable activity in a given landscape.

The excavation of rural sites, such as farms and villages, has brought to light the remains of agricultural installations, farming equipment, and food-processing equipment. These provide information on the level of technology and farming methods available to the farmers at different periods. Indirectly they also provide information on what was grown in some of the surrounding fields. Agricultural installations may include wine and oil presses, and large flour mills. The dating of a specific type of installation within a settlement can help towards dating similar installations found associated with the fields outside a settlement. Important studies of wine and oil presses have been undertaken in recent years by various scholars, notably by Frankel. Examples of farming equipment may include digging sticks, plows, mattocks, hoes, sickles, pruning knives, and so forth. These may be compared with traditional farming equipment used in Erez Israel (see, for instance, the work of Avitzur and more recently by Ayalon). Examples of

food-processing equipment may include pestles and mortars, querns, rotary mills, and so forth.

[Shimon Gibson (2nd ed.)]

Plowing

The light plow (or ard) was one of the most important farming implements used in the fields of Erez Israel for the breaking up of ground and preparing it for cultivation. The introduction of this implement into Erez Israel at the end of the fourth millennium BCE. probably had a revolutionary effect on the appearance of the earliest fields and the size of the average plot probably increased considerably (the earliest evidence for plowing in the Near East are the plow marks dating to the fourth millennium B.C.E. which were found at Susa A, and the Uruk pictograms of plows which date from the late fourth millennium B.C.E.).

Traditional plowing helps to understand the ancient procedures. Proper plowing ensured a successful harvest. Before plowing was commenced, especially in a mountainous area, the plots were cleared of stone with the use of a hoe or mattock (in a process known in Arabic as *naqb*). The manner in which the plot of land was plowed has been described by a number of different authorities, among them Wilson, Turkowski, and Avitzur. This operation had to be undertaken properly to ensure a successful harvest, otherwise the crop could be ruined (Job 4:8). Continuous plowing of the entire field was never attempted. Instead, the area was divided into separate plots (each plot known in Arabic as a *maʿanah*) usually one-third or one-fourth of a *faddan* and with a length of between 90 and 120 ft. (27 and 36 m.). According to Wilson, a furrow (Arabic *tilm*) was first run on the ground “and others plowed parallel to this, until a piece of ground of that length and about half the breadth is finished; then a similar piece is plowed next; and so on until the whole is completed.” Not only the type of plow but also the type of draft animal used for the plowing could affect the overall depth of the resulting furrows. The maximum depth of plow in modern times was 8 in. (20 cm.) according to Dalman. In antiquity the plowpoint penetrated the soil to a depth of three handbreadths (Gen. R. 31; BB 12:2), i.e., 27 cm., and this helped to maintain the overall fertility of the land (TJ, Taʿan. 4:8, 68b).

The relatively small area plowed by the farmer per day in antiquity has been estimated by Feliks (see *Agriculture) to be about 1,170 sq. m. (cf. Tosef., BM 11:9), which is about one third of what is usually covered using traditional Arab methods of plowing. The prophet Isaiah noted that the soil had to be plowed twice before it was sown: the first time to expose the soil to the penetration of rainwater, and the second to level the ground for the planting (Isa. 28:24). The Mishnah, however, enumerates four separate plowings: one in the summer, after the harvest, in the form of broad lines or plots that were set far apart (referred to as the “furrows of *paiʿah*” in the language of the Mishnah; Kil. 2:6). The second plowing took place after the first rains, and then, too, the furrows were not placed close together. Spaces were left intentionally between the fur-

rows to prevent torrential downpours from eroding the soil. In this way each field would have the appearance of alternate furrows and ridges (“*gedudim*” in the Bible). Rain leveled the ground and was soaked into it. The Psalmist (45:11) prayed for a good year in which rain would soak into the soil and level the “*gedudim*” in the ground. Following this, the main deep plowing was commenced in which the furrows were placed close together (the “*shiddud*” of the Bible) and in this way the soil was ready for sowing. Finally, the fourth plowing was undertaken in order to cover the seed itself (Tosef., Kil. 1:15).

To preserve the fertility of the soil, a rotation system was practiced in which land was sown and left to fallow alternately. In the fallow year, the field was plowed five to seven times to rid it of noxious weeds and to restore its fertility. These plowings were called “*tiyyuv*” or “*nir*” (Tosef., Shev. 3:10; Men. 85a). A well-plowed field attracted attention owing to its cleanness (Avot 3:7). It was not easy for the farmer to adapt himself to this cycle, since it meant he was only able to plant his field during three years out of seven, the seventh (*shevi'it*) being the Sabbatical year (Mekh. de-Kaspa 20), but he knew that this was the only way to ensure continuous, abundant harvests. Only artificially-fertilized fields may be plowed year after year with fairly good results.

The plow used in antiquity was not essentially different from that used in traditional Arab farming, except that the earlier implement was sturdier and was capable of penetrating deeper into the soil. The main parts of the plow were made of wood with the plowshare (biblical “*et*”; talmudic “*yated*” or “*kankan*”) made of metal (bronze in earlier times; later of iron). Numerous examples of such implements have been uncovered in archaeological excavations in Israel. The metal part was funnel-shaped, ending in a sharp point. The plowshare was attached to the sharp wooden tailpiece (“*herev*”) which in turn was joined to the “knee” (“*borekh*”) and was tied to the handle, a long pole (“*yazul*”) attached to the yoke (see Kelim 21:2).

The plowman depressed the handle with one hand. In the other he held a long staff or goad (“*malmad ha-bakar*”), one end of which held a nail and was used to goad the oxen and hold them in line, while the other end was shaped like a shovel and served to clean the plow (“*maḥareshet*” in the Bible; “*ḥarhur*” in talmudic literature; see I Sam. 13:21; Kelim 13:3). The oxen were tied to the plow by the yoke, which was a pole (the biblical “*motaḥ*”) placed on the neck of the ox or cow. To yoke a pair of oxen, an additional pole was drawn under their necks while pegs (“*simyonim*”) joined the two poles together and thereby enclosed the heads of the oxen in frames. A broken pole could not be repaired, and the animal would have to be released. Hence breaking the yoke symbolized liberation (Jer. 2:20, etc.). Generally the yoke was made of wood; only in exceptional cases was it made of metal, so accordingly an “iron yoke” represented abnormal or tyrannical oppression (Deut. 28:48). A single ox was tied to his yoke by ropes (“*moserot*,” “*aguddot motaḥ*”). The snapping of these bonds, too, became a metaphor for liberation (Jer. 2:20; Isa. 68:6).

A sturdy strain of oxen capable of bearing a double-poled yoke was used for plowing. Evidence points to the Zebu oxen, capable of sustained exertion, as being in common use in Talmudic times. The Torah regards the ox and the donkey as plowing animals (Deut. 22:10), and Isaiah mentions the use of donkeys for tilling the soil (30:24). Rabbinic literature, however, names only the ox and the cow as plowing animals.

Sowing and Planting

The main crops were the winter grains, which were planted at various times prior to the rains, and especially following the first rain. Usually the farmer spaced his sowing activities at intervals over the winter season as a protective measure (cf. Eccles. 11:6), for if he planted all his crops together, a single adverse natural phenomenon could ruin them all at one blow. The normal planting season lasted from Tishri (October) to the end of Tevet (December; Tosef., Ta'an. 1:7). In some instances, planting also took place in Shevat (January), as was the practice with the barley for the *Omer* offering (Men. 8:2).

A distinguishing feature of local agriculture in Roman times was the small quantity of seed sown per unit of land, approximately 4–8 kg. of grain per 1,000 sq. m. (Tosef., Kil. 1:16). This is much less than the average amount planted in traditional Arab farming. This probably explains the meaning of the saying: “Thou shalt carry out much seed into the field and shalt gather little in” (Deut. 28:38). The yield of an Arab farmer is 3–4 times the amount of seed, while the Jewish farmer during Roman times reaped 30 or 40 fold, sometimes even obtaining a harvest of “a hundred measures” (BM 105b; Pes. 87b; see also Matt. 13:8; Varro, *Rerum Rusticarum Libri*, 1:44). These high yields were a result of rational and intensive methods of cultivation.

Hoeing and Weeding

The usual cycle in crop cultivation was plowing, planting, hoeing (TJ, Shek. 68:4), with the last activity designed to remove noxious weeds. The main implement involved, the “*ma'ader*,” is somewhat different from the modern hoe. It consisted of two sticks tied together by a cord (Tosef., Kelim, BB 1:8) to form an acute angle. At the end of the shorter stick, a metal “tooth” was inserted (Kelim 13:2). Such hoes frequently appear in Egyptian drawings. For deeper plowing and hoeing, the *kardom* (Peah, 6:4; Kelim 29:7; cf. *ibid.*, 13:3) was used. An implement resembling the modern hoe, the *magrefah*, served for moving earth or fruit (Gen. R. 16; Kelim 13:4). The *ma'ader* was used for digging in mountain areas which could not be successfully plowed (Isa. 7:25; Peah 2:2). The process of deep digging to prepare the earth for saplings was known as “*izzuk*” (Isa. 5:2; cf. Sif. Deut. 355).

Harvesting

No special importance was ascribed to summer planting in ancient times. *Kazir* applied to winter crops. There were two such harvests: first, the early ripening of the grain, the various types of *barley; later, the *wheat and rice-wheat harvest

(Ex. 9:31). At Passover, the *Omer* of barley was offered (Lev. 23:10; cf. II Sam. 21:9; II Kings 4:42). The Gezer calendar also lists the barley as the first of the cereal harvests. Before the *Omer* was offered, the new season's grain was not to be eaten (Lev. 23:14). Only in the Jericho Valley, was harvesting permitted before Passover (Men.10:8). Seven weeks later, the wheat harvest began with the offering of "the two loaves of bread" (Lev. 23:17).

At harvest time, the climate in Israel is hot and dry. More than once the reaper was felled by sunstroke (cf. II Kings 4:18–20; Judith 8:2–3). He rose early to take advantage of the cool, morning hours (Prov. 10:6), and he had to work quickly to avoid plunder, pests and the scattering of the grains. He sought, in addition to his family, to employ hired hands. The division of labor is depicted in the Book of Ruth. A supervisor would watch the workers. Girls were occupied with gleaning and also in making sheaves. The owner supplied part of the food to his workers, namely bread dipped in vinegar. Only the wicked who exploited their workers failed to provide food (Job 24:10–11).

Even though the work was backbreaking, it was performed to the accompaniment of joyous shouts (Ps. 126:5–6; Isa. 9:2). The poor, who gathered their gifts, also contributed to the festive atmosphere. Sometimes, joy would be absent and especially when the land was afflicted by drought (Deut. 11:17, etc.) or when an enemy had attacked the reapers and pillaged the harvest (Isa. 16:7).

Various implements were used during the harvesting procedures. The "*Hermesh*" (Deut. 16:9) and "*maggal*" (Jer. 2:16) are two such implements mentioned in the Bible. The latter is the usual term appearing in rabbinic literature, and it is almost certain that the two names signify the same object, the sickle. The scythe, the long handle of which was grasped with both hands, was not known in ancient Erez Israel. The sickle had a short handle, in which there was inserted a curved blade with its short teeth bent backward. (Hul. 7:2). Archaeological excavations in Israel have uncovered flint, bone, bronze and iron sickles. Some sickles extend back in time to the Natufian and Neolithic periods. When harvesting, the reaper grasped the stalks in his left hand. In his right he held the sickle, which he would "send out" (Joel 4:14) and pull back, so severing the stalk (Isa. 17:5; Ps. 129:7). When his left hand was full, he would lay the grain on the ground in united bundles ("*zavitim*"; Ruth 2:16) or else tie them together with a straw ("*kerikhot*"; Men. 10:9). The small heaps (*zevatim* or *kerikhot*) laid along the harvested rows would be gathered up by the sheaf-binder and held in his bosom ("*Hozen*"; Ps. 129:7). They were then put together in larger bundles, which had no fixed size, fluctuating between three and 30 pints ($\frac{1}{2}$ and 17 liters) of kernels (Pe'ah 6:6). The bundles were left lying on the ground or else tied together in sheaves (Gen. 37:7–8; BM 22a). The next step, which took place once the grain was dry, consisted of collecting the grain in a large stack ("*gadish*"). An alternative practice was to heap the grain in various types of stacks to hasten or retard the drying process as desired (Pe'ah 5:8). This stacking was the

final destination of the grain prior to its being transported to the *goren* or threshing floor.

The *goren* stood close to the city or village (I Kings 22:10). To prevent the chaff from being blown into houses, the rabbis ruled that the threshing floor should not be nearer than 50 cubits (i.e., approximately 25 metres) from the city (BB 2:8). The location could neither be on high ground nor exposed to strong winds which would scatter the grains during winnowing (Ruth R. 5). Usually, the threshing floor was in a broad public place. It was surrounded by a fence of thornbushes (Sot. 13a). Trampling (Jer. 51:35) and sprinkling water hardened and leveled the floor. Then the grain was brought and spread out in a circle. During the threshing, the straw and ears were pounded to separate the kernels from the husks. This could be accomplished in several ways. A wooden board, about 0.70 m. wide and 1.20 m. or more long, was used. Its underside was set with stones, mainly of basalt (sometimes of flint), so that when dragged by a pair of oxen, the board would separate the grain. The device, the *morag*, is still used in traditional Arab farming (Arabic "*norg*"). Since this tool was only adopted much later in Greece and Rome, some scholars have suggested that it might have been an invention of the farmer in Erez Israel. This assumption may explain the exclamation of Isaiah (end of ch. 28): "This also cometh from the Lord of hosts; wonderful is His counsel and great His wisdom," for in the preceding verses the prophet enumerates the threshing tools then in use: the *haruz*, i.e., the *morag haruz* (*ibid.* 41:15), the normal *morag* with saw-like strips of iron in addition to the stones set in it. Isaiah also referred to the "*ofan agalah*" and "*galgal agalah*" ("cartwheels") which were stone wheels or iron discs sharpened like saws, examples of which are still extant among the Arab farmers of today. The last type of tool was introduced into Hellenistic Egypt and Rome. The chronicler of Roman agriculture called it "*plostellum poenicum*" (Varro, *Rerum Rusticarum Libri*, 1:52). In contrast to mechanical means, another threshing method was the running of several oxen tied together ("*revekah*"; Tosef., Par. 2:3) over the grains. Seemingly other animals were also used in this type of threshing, for the rabbis interpreted the Pentateuchal prohibition against muzzling an ox while threshing (Deut. 25:4) to include other animals as well (BK 5:7). The heavy implements described above were suitable for wheat and legumes. More delicate grains were normally threshed with a stick (Isa. *ibid.*) as were smaller quantities of wheat (Judg. 6:11; Ruth 2:17). While the threshing was in progress, additional quantities of grain would constantly be thrown in the path of the threshers by means of a wooden-pronged implement resembling a pitchfork ("*eter*"; Tosef., Uk. 1:5).

Winnowing

Threshing separated the three components of the grain: kernels, chopped straw, and chaff. Winnowing, which consisted of throwing the threshed substances into the wind, caused the lighter elements to be carried away while the heavier kernels fell into a heap. The implement used for this process, the

mizreh (Isa. 30:24), resembled a pitchfork with broad prongs. Following this the kernels would be thrown up by means of a shovel-like implement, the *raḥat* (cf. Tanh. to Isa. *ibid.*). Once this operation was over, the stack was considered to be complete. The farmer would measure its size (Haggai 2:16) and stand guard over it until it was transferred to the barn (Ruth 3:7).

The chopped straw left over from the winnowing was kept as livestock feed or compost, or was used as an additive in mortar. The chaff was useless except for making fire (Gen. R. 83:3). Yet even after the final winnowing, the kernel heaps still retained waste matter. The grains would then be shaken horizontally in a sieve (“*kevarah*”), a round device, to whose bottom a fiber net was attached. The heavier waste would fall through the threads, and the lighter material gathered on top of the kernels. The top waste would constantly be removed, until only the clean kernels remained within the sieve (cf. Amos 9:9; Ma’as 15:6). The kernels were then milled or crushed, and further cleaned with the aid of sieves with perforations of various sizes, depending on the required size of the finished product (Avot 5:15).

IN THE LAND OF ISRAEL

The study of the history of ancient agriculture in the Land of Israel has been the focus of a great amount of research in recent decades. Much more data is now available as a result of an intensification of data-collection and the use of new methodologies during archaeological excavations and surveys, especially in regard to the development of rural settlements (villages, hamlets and farms) and their landscapes (fields, terraces, access routes to markets), and the technology of agricultural implements (digging tools, ground stone objects) and installations (wine and oil presses). The intensive gathering of plant and wood remains at sites using flotation procedures has helped to enlarge knowledge about the variety of cultivations and fruits trees available during different archaeological periods. Botanical remains are frequently found on the floors of houses and storage buildings, on the surfaces of courtyards, in fire-pits and in silos. Inventories of crops are thus produced and this helps towards a reconstruction of agrarian practices and dietary patterns. Further insights into the history of agriculture have also emerged as a result of inter-disciplinary work with geomorphologists, agronomists, and botanists. The analysis of Phytoliths – fossilized mineral particles produced biogenetically within plants – under microscope, has been

found to be useful in the study of cultivated cereals. Palynological studies have also contributed to the investigation of landscape changes and the overall effect humans have on their environment, though usually only on a regional scale. Pollen studies are less helpful in elucidating changes on a micro-environmental level. Pollen cores have hitherto been taken from the Dead Sea and from the Sea of Galilee.

For a survey of agricultural methods and the conclusions of recent archaeological research, see preceding entry.

[Shimon Gibson (2nd ed.)]

In Prehistory

Some archaeologists date the beginnings of agriculture in Palestine to the Mesolithic period, when the Natufian culture made its appearance with its bone and flint artifacts, some of which have survived to the present day. In the Kabara caves on Mt. Carmel, a flint sickle with its handle shaped to represent a fawn's head has been found. To that same period belong the sickles, mortars, and pestles which have been discovered in other localities in Palestine. According to these scholars, all these artifacts indicate the cultivation of cereals. According to others, however, these utensils were used merely to reap and mill wild grain. Archaeological finds testifying to soil cultivation and cattle raising become more numerous in the Neolithic Age, the period of caves and huts, agricultural implements, and cleaving tools. All these are evidence of settled communities which produced and stored food. To this period, likewise, belong excavated, prehistoric locations such as the Abu Uzbah cave on Mt. Carmel, the Neolithic cave near Sha'ar ha-Golan in the Jordan Valley and the lower strata of Jericho. In the Chalcolithic period, the transition between the Neolithic and the Bronze Age (4000 B.C.E.), agricultural settlements in the valleys, especially in the proximity of water sources, increased. Settlements were established in the plains of Moab (N.E. of the Dead Sea) where the Telleilat el-Asul (Ghassul) were found – mounds covering simple buildings, grain storages, agricultural implements, and artisans' tools made of calcareous or flint stone. By the later Chalcolithic period copper vessels like those found in Tel Abu-Matar near Beersheba appeared. In this area and at nearby Khirbet al-Bitar, excavations have unearthed ricewheat (*Triticum dicoccum*), einkorn (*Triticum monococcum*), two-rowed barley (*Hordeum distichum*), and lentils (*Lens esculenta Moench*). Elsewhere, olive and date kernels, grape seeds, and pomegranate rinds have been discovered.

From the Beginning of the Bronze Age to the Conquest of Joshua

This period includes the early (3000 B.C.E.), middle (until 1550 B.C.E.), and part of the late Bronze Age. The earliest literary evidence of local agricultural activity is provided by an inscription on the grave of the Egyptian officer Weni, who conducted a military expedition in Palestine during the reign of Pepi I (beginning of 24th century B.C.E.) "The army returned in peace after smiting the country of the sand dwellers [the

inhabitants of the coastal plain]... after he had cut down its figs and vines." At that time the King's Highway running along the coastal plain and through the Jezreel and Jordan valleys became increasingly important, and many settlements were established along its length. Settlements were also founded in the south of the Judean mountains, for example at Tell Beit-Mirsim, apparently the biblical Debir. The Sanehat Scroll (20th century B.C.E.) described the travels in Palestine of this Egyptian officer and the document proves that, in the southern regions of the country, there were settlements which supported themselves by farming and cattle raising. Evidence of many settlements during the 18th century B.C.E. is furnished by the Egyptian "Execration Texts." During the Hyksos occupation, the Habiru, apparently the Hebrew tribes of the patriarchal era, are first mentioned. They were nomads who did not establish any permanent settlements. Some occupied the marginal grasslands and occasionally sowed there. Thus Isaac planted in the Naḥal Gerar region "in that year," and, as a result of plentiful rain fall, reaped a "hundredfold" harvest (Gen. 26:12). Other scriptural references suggest that the land was closely settled and highly valued at this time. Abraham's and Lot's shepherds quarreled with each other while the "Canaanite and Perizzite dwelt then in the land" (Gen. 13:7). For a burial plot he wanted to purchase, Abraham had to pay Ephron, the Hittite, the full price (*ibid.*, ch. 23), and Jacob similarly had to pay a large sum for the section of the field in Shechem where he pitched his tents (*ibid.*, 33:19). The depiction at the Temple of Amon of Thutmose's expeditions in Palestine (c. 1478 B.C.E.) and his famous victory at Megiddo includes reliefs of the plants he brought from Palestine (the Karnak "Botanical Garden"). An inscription states that "the amount of harvest brought... from the Maket [plain of Jezreel] was 280,000 heqt of corn [150,000 bushels] beside what was reaped and taken by the king's soldiers."

Early Israelite

In contrast to scriptural references, external evidence on the state of local agriculture just before and after the Israelite conquest is rather meager. Yet from all sources, the incontrovertible fact emerges that no radical climatic changes occurred. Huntington's theory of the country becoming increasingly arid from the biblical time until today must, therefore, be rejected. It is not supported by any examination of the sources or archaeological discovery. These indicate that the areas sown and planted then coincide with the regions watered by rain or irrigation today. An intensively farmed, settled area existed in the irrigated regions of the Jordan Valley and another along the Mediterranean coast (where the annual precipitation exceeds 300 mm.), but there were no stable agricultural settlements in the northern Negev. The land there was cultivated once in several years, when plentiful rainfall would yield abundant harvests. The southern Negev and Arabah were waste, except for desert oases and irrigation projects where waters flowing down from the mountains were collected in dams. Such projects were limited during the kingdom, but increased in

the Nabatean era (see below). The condition of afforestation was no different then than at the beginning of Jewish colonization in modern times. Forest and woods spread over the hill and rocky regions which were difficult to cultivate and in areas where the lack of security made soil cultivation and the erection of agricultural installations too hazardous. The “vines and figs” of the regions bordering the routes of the traversing armies were pillaged. This explains the presence of woods in the Naḥal Iron (Wadi ‘Arah) district mentioned in the expedition of Thutmose III (and later the “large forest” on the Sharon Plain mentioned by Strabo). Broad forests also extended along the north and northeast boundaries of the country – in Gilead, Bashan, and the Lebanon. There, in the vegetation along the Jordan and in the deserts, lurked wild beasts (see Fauna of *Israel). During the intervals when the land lay desolate, animals would invade the ruins where forests had begun to grow. Several times the scriptural warning against the danger of a too rapid military conquest had been issued “thou mayest not consume them too quickly, lest the beasts of the field increase upon thee” (Deut. 7:22; Ex. 23:29; Num. 26:12). Having wandered in the desert for many years, the children of Israel were unfamiliar with local conditions and could hardly have been expected to succeed in mastering the intensive farming which obtained, for the most part, in the newly conquered territory. Furthermore, the neglect caused by wars and conquest had temporarily devastated large farming tracts, and these had been overrun by natural forests – a condition later recalled in Isaiah 18:9. Scrub and woods became widespread, and farmland degenerated into pasture (cf. *ibid.*, 7:28).

During the transition period, the children of Israel, presumably, were primarily engaged in tending flocks, as in patriarchal days. The Song of Deborah yields no trace of extensive occupation with agriculture, even though the soil was tilled. The tribe of Reuben is described as living “among the sheepfolds, to hear the pipings of the flocks” (Judg. 5:16). Scripture also testifies to the existence of broad grazing lands in Gilead, and Bashan in Transjordan, the areas settled by the tribes of Reuben and Gad and half the tribe of Manasseh, all of whom owned much livestock (Num. 32; Deut. 3:19; Josh. 1:14). Although the Bible does portray the land of Canaan as “flowing with milk and honey” (date syrup), no conclusions can be drawn from this expression as to the relative importance of grazing land (“milk”) as opposed to soil cultivation (“honey”). Livestock was raised to a limited extent in the border grassland regions and deserts, or was fed on the stubble of the grain fields and the stalks of the vegetable gardens. During the period of the conquest, sheep and cattle were also grazed in the forests which had covered the farm lands. The talmudic sages undoubtedly relied on an ancient tradition when they included, among the ordinances enacted by *Joshua, one permitting the grazing of flocks in the wooded areas (BK 81a).

The agricultural prosperity of Israel, however, is determined by the rainfall. This fact is emphasized already in the Bible which praises the country as a land that “drinketh water as the rain of heaven cometh down” (Deut. 11:10–11), in con-

trast to Egypt which was irrigated. This blessing, however, also entails the danger, repeated several times in the Bible and rabbinical literature, that, on account of sin, rainfall could be withheld, with drought and famine resulting. Although the country is described as “a land of brooks of water, of fountains and depths springing forth in valleys and hills” (*ibid.*, 8:7), there is no evidence that in ancient times there were more than the hundreds of small springs and the few moderate and large fountains which now exist. Scripture praises the plain of the Jordan as “well watered,” and so it is, even today (Gen. 14:10).

Either through experience or by borrowing the agricultural skills of the indigenous population, the Israelites gradually mastered the cultivation of the soil. The Talmud describes their predecessors as “well versed in the cultivation of the land,” saying, “Fill this amount with olives; fill this amount with vines,” and interprets their names accordingly: “Hori they that smelled the earth; Hivi they that tasted the earth like a serpent” (Shab. 85a). Even the spies admitted that Israel was a land “flowing with milk and honey and this is its fruit” (Num. 13). The Pentateuch states that the conquerors would enter a land with a highly developed agriculture, fertile soil, and established agricultural installations (Deut. 6:11). Special reference is made to hill cultivation where terraced fields were planted with vines and fruit trees and contained water cisterns, oil and wine presses, and tanks. Since the Canaanites had not yet been ousted from the fertile valleys, the wheat fields were not available to the Israelites (Judg. 1:19, 27–36).

Hill cultivation is intensive by nature; land holdings are small, and knowledge and experience are needed for such farming to yield a livelihood. These conditions apparently explain why the descendants of Joseph (Ephraim and half the tribe of Manasseh) complained to Joshua that the mountain of Ephraim was too small to maintain them. Joshua advised them to go to the forests of Gilead and Bashan (the land of the Perizzites and Rephaim), fell the trees, and settle there; upon the assumption that in securing the dominating heights, they would succeed in dislodging the Canaanites from the valleys (Josh. 17:14–18). Clearing the forests was by no means easy, and was not yet completed in the reign of David, for this region included the “Forest of Ephraim” where the armies of David and Absalom fought each other (11 Sam. 18:6–8). The Israelites did gradually succeed not only in mastering agricultural skills but also in organizing permanent town and village settlements. The nomads, enemies of the Israelites from the desert period, now envied the successful Israelite colonization. Together with their flocks, they raided Israelite territory and plundered the fields. Between each wave, the Israelites harvested their fields in haste and stored the produce in hidden receptacles (Judg. 6:2). Rather than use an exposed threshing floor, Gideon was forced to thresh his harvested wheat in a barn where fleeces were dried (*ibid.*, 6:37–40). He was a well-to-do farmer, owning cattle and sheep, vines, and wheat fields. The ordinary Israelite farmer, however, seems to have been poor. His main diet consisted of barley, and consequently

the children of Israel were contemptuously represented in the Midianite soldier's dream as a "cake of barley bread" baked on coals (*ibid.*, 7:13).

The state of agriculture at this time may be deduced from the laws of land inheritance in the Pentateuch, and the descriptions of the settlement of the tribes, the divisions of parcels of land among the various families, and the procedure of redeeming estates recounted in the Book of Ruth. These sources reveal Hebrew agriculture as based on the small single family holding. It depicts an idyllic prosperous village life, although workers were only hired at harvest time, and even the wealthy Boaz personally supervised the stacking of the grain after the winnowing. In the course of time, however, a poor, landless class arose – as Scripture itself had foreseen: "the poor shall never cease out of the land" (Deut. 25:11). The unfortunates were the recipients of the gifts to the poor: the gleanings, the forgotten sheaves, the corners of the fields, the poor tithe. To the priests and levites, the heave offerings and tithes were given. The Book of Ruth reflects this, as well as the redeeming of fields to insure the continuity of family ties with the land. This almost sacred bond tying the Hebrew farmer to his inherited land was characteristic of Israel agriculture in every period. Here, too, is a reason for the speedy recovery of the local agriculture after every period of desolation. It should also be noted that the Israelite farmer always maintained a distinctly high cultural level. This fact is attested to by the "Gezer Calendar", which gives a succinct but comprehensive account of the annual cycle of seasonal agricultural occupations. If the conjecture is correct that this calendar was a lesson transcribed by a boy, it is evidence that formal instruction in agriculture was imparted during the period of the Judges. The Hebrews also acquired agricultural techniques from their neighbors, as may be deduced from Shamgar the son of Anath's smiting the Philistines with an ox goad (Judg. 3:31) – not the primitive implement made entirely of wood, but one with a metal nail knocked through one end, and a metal spade attached to the other. In later sources, the *dorban* (also an ox goad) is mentioned as one of the few metal implements the Hebrews were allowed to take to the Philistines to be repaired and sharpened, metal work being prohibited to the Israelites lest they fashion arms to war upon their Philistine overlords (1 Sam. 13:19–22). It appears that the children of Israel adopted agricultural skills and the use of the new types of implements brought by the Philistines who invaded the country in the 13th century from the Aegean islands, and who settled in the southern coastal region and the lowlands of Judah. Their main gainful occupation was farming. Although they were the enemies of the Hebrews, they nevertheless refrained from attacking the farms on the hills and in the valleys. A period of agricultural stability ensued. This period provides the background for the Book of Ruth.

The Period of the First Temple

Israelite agriculture was based, as has been shown, on the autarchic family farm. With the rise of the monarchy, this order

was threatened with collapse. Samuel warned the assembled people: "He (the king) will take your fields and your vineyards, and your olive yards, even the best of them, and give them to his servants" (1 Sam. 8–14), but it is doubtful if the prediction came true. Although David owned royal estates over which he appointed officials (1 Chron. 27:26–29), they were apparently conquered and annexed territories, or else previously unworked areas which were developed by royal initiative. In the days of Solomon, boundaries were extended, and officials "who provided victuals for the king and his household" (1 Kings 4:7) administered the royal estates. Agriculture prospered, and the memory of that condition was perpetuated in Scripture: "Judah and Israel dwelt safely, every man under his vine and fig tree from Dan to Beer-Sheba..." (*ibid.*, 5:5). Uzziah, king of Judah, is called "lover of husbandry," and was noted for owning fields and vineyards, and for building "towers in the wilderness and hewing out many cisterns" (11 Chron. 26:10). Evidence corroborating this statement has been found in recent times through the excavation in the Negev hill region of an agricultural settlement, irrigated by an accumulation of rain water flowing down from the mountains. Settlements of this type were, apparently, guard posts and supply stations along the Negev caravan routes. In those days agriculture and agronomy reached their peak and were described by Isaiah as wisdom emanating from God, Who had taught the sons of man excellent methods of plowing and reaping (Isa. 28:23–29). It is noteworthy that these verses mention threshing implements which appeared only many generations later in Egypt and Rome. After the death of Uzziah security deteriorated and a decline set in among the Hebrew settlements in the lowlands. Against this background, Isaiah prophesied better days to come, when settlements would extend through the lowlands, when the farmer would sow his irrigated fields near the springs, and the shepherd tend his flocks without interference (*ibid.*, 32:19–20).

The story of Naboth's vineyard, which was coveted by King Ahab, who wished to convert it into a vegetable garden, reflects agricultural conditions in the Northern Kingdom. Whereas the Jewish king respected the sanctity of a paternal inheritance to an Israel farmer, Queen Jezebel, a Sidonian princess, could not appreciate it (1 Kings 21). With the passage of time, apparently, the poor and its widows and orphans were, in increasing numbers, likewise evicted from their holdings, and the prophet denounced those "who join house to house, that lay field to field" (Isa. 5:68). Nevertheless, in the main, the right of inheritance to patriarchal estates was upheld. When Jerusalem was actually under siege, Jeremiah, exercising his right of redemption, bought a plot of land (32:7–12). The remarkable agricultural prosperity of the land of Israel during the First Temple period is indicated in Ezekiel 27:17, which lists the exports of Judah and Israel to the market of Tyre as wheat of Minnith (probably a place in Transjordan), "pannag" (which cannot be clearly identified), honey, oil, and balm. With the destruction of the Kingdom of Israel at the end of the eighth century B.C.E. Samaria

was denuded of its Israelite population, and repopulated by the nations the King of Assyria transported from other districts of his empire. The new inhabitants – later called Samaritans and in the Talmud, “Kutim” – failed to farm their land properly. Perhaps the lions that attacked them (11 Kings 17:25–27) had found a lair in the forests which encroached on neglected farms. There is no further information on conditions in Galilee. Some Israelites must have remained, since Hezekiah communicated with them (11 Chron. 30), and Josiah extended his domain over them (*ibid.*, 34:6). A few biblical passages point to persisting desolation, and a prophecy predicted the restoration of cultivation in Samaria (Jer. 31:5).

The Period of the Return and the Second Temple

Having destroyed the Temple, Nebuzaradan left “the poorest of the land to be vinedressers and husbandmen” (11 Kings 25:12), apparently tenant farmers or hired workers of the royal estates. He may also have left behind those familiar with local methods in order to prevent the further deterioration of the farms by unskilled and inexperienced labor. The impoverished Jews and the foreigners who settled in abandoned Jewish territory could not, however, maintain the terraced hill farms and orchards. When the exiles returned, they found the land forsaken and desolate. They proceeded to repair the terraces, to restore the agricultural installations and to plant vines and fruit trees. Yet, due to their ignorance of how to exploit the rain water for hill cultivation, they failed to establish viable farms. Somewhat later, conditions improved. Farming prospered, and the prophet Malachi regarded the changed situation as a manifestation of God’s love for His people. Desolate Edom is contrasted with prospering Judah (1:2–3). From the books of Ezra and Nehemiah it appears, however, that this optimism was premature, particularly in view of the ensuing moral degeneration. Poor farmers were evicted from their lands by the rich, and a new landowning class emerged. The new conditions loosened the bonds of devotion tying the farmer to his patrimony, and Jewish agriculture suffered. Now the foreigners, who had been forced to restore the lands seized from the Israelites, began to raise their heads. They obtained employment from the new owners and were often able to buy back the lands they had forfeited. Fields, vineyards, and orchards were neglected, and the woods again spread. From these trees, the Jews were enjoined to cut branches and build tabernacles (Neh. 8:15). As a result of the social and agrarian reforms instituted by Ezra and Nehemiah the Jewish population became more securely settled. Although a significant portion of the land still belonged to the king of Persia, the Jewish settlement broke through its boundaries by extending northward toward Galilee. The meager historical source material for the period includes the Book of Judith, assigned to the early fourth century (the period of Artaxerxes II, 404–359 B.C.E.). The setting of the book is the hills overlooking Jezreel, and the Jewish settlements mentioned as existing in the vicinity (Judith 7:3–13) apparently formed the link between the inhabited

areas of Judea and the colonies that flourished in Galilee in later generations.

The level of Jewish agriculture in the Hellenistic period is not altogether clear. The author of the *Letter of *Aristeas* (pars. 112–118: early third century B.C.E.) praised the agricultural productivity of the country and the great “diligence of its farmers. The country is plentifully wooded with numerous olive trees and rich in cereals and vegetables and also in vines and honey. Date palms and other fruit trees are beyond reckoning among them.” He apparently exaggerated the extent of the irrigated areas and the importance of the Jordan River as a water source. He similarly referred to large parcels of land – “each a holder of one hundred aoura lots” – about 275,000 square meters. Perhaps he wanted to draw an analogy between the Nile and the Jordan, comparing the small lots of Judah with the large holdings of Egypt. Had Erez Israel been as densely populated as he claimed, the landholding of each family must have been much smaller than he estimated. His assertion might, however, indicate the growth of the landowning class on the one hand and a landless class on the other, conditions that arose soon after the return of the Babylonian exiles. The book of Ben Sira stresses such a contrast between the classes. In the *Zeno papyri (259 B.C.E.), Syria and Palestine are described as exporters of agricultural produce: grain, oil, and wine.

The Hasmonean Period

A period of further consolidation and expansion of Jewish settlement. The Hasmonean revolt relied mainly on the farmers, who received their just reward once the war had been won when many Gentile holdings fell into their hands. The farmers adhered closely to the Torah, especially to the precepts pertaining to the land, such as the year of release. Josephus relates (Wars, 1:54–66) that John Hyrcanus was forced to raise his siege of Ptolemy’s stronghold because of the scarcity of food occasioned by the sabbatical year. During the reign of Alexander Yannai the Hasmonean kingdom reached the peak of its expansion, Jewish colonization of Galilee increased, and it became the largest center of Jewish population outside of Judea.

The Mishnaic and Talmudic Period

Began a generation before the destruction of the Temple and ends at the time of the division of the Roman empire. Josephus describes an abundance and fertility in the land at the end of the Second Temple period. He lavishes praise on Galilee in particular where “the land is so rich in soil and pasturage and produces such a variety of trees, that even the most indolent are tempted by these facilities to devote themselves to agriculture. In fact every inch of soil has been cultivated by the inhabitants; there is not a parcel of wasteland. The towns, too, are thickly distributed and even the villages, thanks to the fertility of the soil, are all so densely populated that the smallest of them contains above fifteen thousand inhabitants” (Jos., Wars, 3:42–43). The last number is an obvious exaggeration, especially in view of the number of villages in Galilee, which

he elsewhere puts at 204 (Jos., Life, 235). He also describes Samaria and Judea: “Both regions consist of hills and plains, yield a light and fertile soil for agriculture, are well wooded, and abound in fruits, both wild and cultivated... But the surer testimony to the virtues and thriving conditions of the two countries is that both have a dense population”; but he is less enthusiastic about Transjordan which “is for the most part desert and rugged and too wild to bring tender fruits to maturity.” Yet, he continues, even there, there were “tracts of finer soil which are productive of every species of crop, country watered by torrents descending from mountains and springs” (Wars 3:44–50). He praises the valley of Gennasareth where “there is not a plant which its fertile soil refuses to produce” – both those “which delight in the most wintry climate” and those which “thrive on heat,” and concludes that “Nature had taken pride in this assembly, by a tour de force of the most discordant species in a single spot” (*ibid.*, 3:517–18). With equal enthusiasm Josephus regarded the valley of Jericho and the plentiful spring of Elisha which waters it. There grow “the most charming and luxuriant parks. Of the date palms watered by it there are numerous varieties differing in flavor ... here too grow the juicy balsam, the most precious of all local products, the henna shrubs and myrrh trees so that it would be no misnomer to describe this place as divine” (*ibid.*, 4:468ff.). Similar praise of the date palms of Jericho are found in the nature studies of Pliny, who gives the names and characteristics of the varieties of dates which were export items (*Historia Naturalis*, 13:9). He also mentions the balsam groves of Jericho and En-Gedi, and writes parenthetically: “But to all the other odors that of balsam is considered preferable, a plant that has only been bestowed by Nature upon the land of Judea. In former times it was cultivated in two gardens only, both of which belonged to kings of that country.... The Jews vented their rage upon this shrub just as they were in the habit of doing against their own lives, while, on the other hand, the Romans protected it; indeed combats have taken place before now in defense of a shrub ... the fifth year after the conquest of Judea, these cuttings with the suckers were sold for the price of 800,000 sesterces” (*ibid.*, 12:25, 24).

On account of the density of the population, holdings were quite small. The typical size may be estimated from Eusebius’s account (*Historiae Ecclesiae*, 3:20, 1ff.) of the two grandsons of Judah, brother of Jesus, who declared to the Roman government that they derived their sustenance from an area of 39 plethra (34,000 m².) which they cultivated with their own hands, from which it follows that the average family derived its livelihood from 17,000 m². Several passages in talmudic literature refer to the unit *bet kor* or 30 *se’ah* (about 23,000 m² in area) as a large field and a substantial inheritance (e.g., Mekh., *Be-Shallah*, 87–88). On the other hand, some individuals at the close of the Second Temple period possessed immense fortunes. Among them was the almost legendary R. Eleazar b. Harsum (Kid. 49b), a high priest, “of whom it was said that his father had left him 1,000 cities, yet he would wander from place to place to study Torah” (Yoma

35b). These cities were razed during the Bar Kokhba War (TJ, Ta’an. 4:8, 69a)

In those times, the state of agriculture fluctuated constantly in accordance with the policies of the Roman conquerors. Josephus relates that, after the destruction, Titus issued a decree expropriating Jewish landholdings which he ordered sold or leased out (Wars, 5:421). At first these lands were acquired mainly by Gentiles who leased the plots to the former Jewish owners, and these later tried to buy back their land. To assure the restoration of the lands to their former Jewish owners, the talmudic sages enacted ordinances forbidding competition and speculation in land (BB 9:4; TJ, Ket. 2:1, 26b; Git. 52a, et al.). On the other hand, a class of extremely wealthy landowners emerged at that time like the *nasi* dynasty, R. Eliezer b. Azariah, and others, who had acquired heirless estates from the Roman government. Asked what constituted a wealthy person, their contemporary R. Tarfon answered: “Whoever owns 100 vineyards, 100 fields, and 100 slaves to work them” (Shab. 25b). The response, it should be noted, is one of the isolated instances in rabbinic literature which refers to the employment of slave labor in agriculture (see also TJ, Yev. 8:1, 8d). Gentile (there were no Jewish) slaves were chiefly employed in housework and urban domestic services, whereas agriculture was the province of farmers, tenants, lessors, and hired workers. In the first years following the destruction, Gentiles still possessed and also worked many former Jewish farms. Rabbinic literature alludes to this situation in the gloomy *baraita*: “For seven years the Gentiles held vintage in the vineyards soaked with Israel’s blood without fertilizing” (Git. 57a). With the passage of time, however, the Jewish population resettled on the farms and regained ownership. Natural increase forced the size of each family’s holding to decrease, the average now being four-five *bet se’ah*, i.e., 3,000–3,500 m². of field crops, the area known as *bet ha-peras* (Oho. 17:2 – in Latin: *forus*). Plots of this size are mentioned in deeds of sale dating from the time of Bar Kokhba, found in Wadi Murabba’at in the desert of Judah (Benoit, Milik, de Vaux, *Les grottes de Murabbaat*, pp. 155ff.). These documents speak of the sale of “an area where five *se’ah* of wheat can be sown.” Presumably an area of 3,500 m² sufficed to supply the cereal needs of a family. In addition the farmer owned vines and orchards. Executed during Bar Kokhba’s rebellion, these deeds prove that even in the thick of war, Jews continued to buy and sell land.

The rebellion and its aftermath seriously affected Jewish agriculture. Certain localities were utterly devastated, “since Hadrian had come and destroyed the country” (TJ, Pe’ah 7:1, 20a). Especially in Judea, where the Roman government took possession of the lands of the thousands of war dead, the desolation was great. In the words of the *aggadah*: “Hadrian owned a large vineyard, 18 *mil* square, and he surrounded it with a fence of the slain of Bethar” (Lam. R. 2:2, no. 4). Galilee, too, sustained heavy damage. Before “the times became troubled,” the area had been so densely populated that R. Simeon b. Yoḥai found a way of measuring the distances between the villages

so that not one was beyond the Sabbath range (2,000 cubits) of its nearest neighbor (TJ, Er. 5:1, 22b–c). Its olive groves had previously been so numerous that one “dipped one’s feet in oil” there, yet later “olives [were] not normally found there” (TJ, Pe’ah, 7:1, 20a). Oppressive decrees and heavy taxes jeopardized the existence, both physical and spiritual, of the farmer. Before the revolt, Simeon b. Yoḥai, the disciple of Akiva, was particularly interested in the religious precepts applying to land; after it, he complained: “Is that possible? If a person plows in the plowing season and reaps in the reaping season... what is to become of the Torah?” (Ber. 35a). The suggested solution was employment in trade and in crafts in the city. Yet once again, agriculture recovered. Jewish settlement expanded and even penetrated to the northern coastal regions (Tosef., Kil. 2:16).

Further increases in population led to further decrease in the size of family holdings. In the next generation there is a conflict of opinion as to what constituted the minimum size of land divisible among heirs. The majority of sages held it to be a plot large enough to provide each heir with one and a half *bet se’ah* (1,176 m².) while Judah regarded a field even half that size as divisible among heirs (BB 7:6; Tosef., BM 11:9). Normally a single owner would have several fields of this size, yet there were cases where an individual farmer had to subsist on an even smaller plot of land. A certain Samaritan reportedly drew his sustenance from a field a *bet se’ah* in area (784 m²; Ket. 112a).

The period from the disciples of Akiva until the third amoraic generation (middle of second century to end of third century C.E.), was both spiritually and physically one of the most productive periods of all times. It saw an unprecedented progress in agriculture. Highly cultured, the Jewish farmer did not allow himself to stagnate and he was always ready to adopt new techniques and to experiment with new strains (see *Agricultural Methods). Many *aggadot* celebrate the abundance and fertility of the land of Israel at the time, and mention grape clusters as large as oxen; mustard as tall as fig trees; two radishes being a full load for a camel; turnips large enough to constitute a fox’s den; a peach large enough to feed a man and his animal to satiety, etc. Certain localities were designated as the referent in “the land of milk and honey,” as for instance, sixteen *mil* around Sepphoris in Galilee and the vicinities of Lydda and Ono (see Meg. 6a; Ket. 111b; TJ, Pe’ah 7:4, 20a–b).

Depression set in at the end of R. Johanan’s lifetime. “In his days, the world changed” (TJ, Pe’ah 7:4, 20a), either through natural causes (BM 105h) or else through Roman taxation. In any event the lot of the farmer became progressively worse. Farmers had, in earlier times, most strictly observed the prescriptions of the sabbatical year; now they became more lax (Sanh. 26a). Previously “one was not supposed to raise sheep and goats” in the land of Israel; now Johanan advocated sheep raising (Ḥul. 84a). It had obviously become increasingly difficult for the Jewish farmer to be self-supporting. In principle, R. Eliezer, who had previously laid down that whoever did not

own land was no man, now came to the cruel realization that there was no occupation less distinguished than agriculture. Only those farmers close to the rulers could maintain themselves, and he therefore concluded: “Land was only given to the powerful” (Yev. 63a; Sanh. 58b).

An exodus from village to city ensued in which the process of the displacement of the Jewish farmer began. Gentiles replaced them to such an extent, that the question arose as to whether most of the land of Palestine was in Gentile or Jewish hands. The new owners neither felt an attachment to the land nor possessed the skills of their predecessors. Especially in the hill regions, lands were now abandoned or turned into pastures, and once more the forests began to encroach on the deserted farms.

The Byzantine-Muslim Period

Under Byzantine rule, the situation hardly improved. However there is evidence, even for that time, of the existence of Jewish settlements in the Valley of Jezreel and in the Negev, as well, where remains of exquisite ancient synagogues are visible (Bet Alfa, Nirim, etc.). The Nabatean agriculture which flourished in the Negev mountain area is also noteworthy. This people had developed a highly perfected system of gathering runoff water and so irrigating arid, desolate regions. With the Moslem conquest, many Byzantine lands were laid waste, the owners fleeing or killed. These lands became state property and were leased out to tenant farmers. The Muhammadan rulers were totally ignorant of agriculture and their heavy taxes drove the owners from the land. Here and there, especially in Galilee, some Jewish settlements persevered. Later, there was an improvement. By the 11th century Ramleh figs had become an important export item, and cotton, sugar cane, and indigo plants were cultivated.

The Crusader conquest wreaked further damage on local agriculture. The Franks, who took possession, farmed large tracts extensively, using a combination of European and local techniques. The village population became serfs indentured to the land. There is almost no information available on Judea at that time. It is known, however, that Jews suffered less than the Muslim population at the hands of the crusaders. There is mention of Jewish settlements in Galilee (Gischala (Gush Ḥalav), Alma, Kefar Baram, etc.) where the population engaged mainly in handicrafts and trade. Little is known of Jews in Palestine in the time of the Mamluks. At the end of the 14th century, Jews expelled from France settled in Erez Israel, among them Estori Parḥi, whose work *Kaftor va-Ferah* describes the country and its agriculture. The author made his home in Beth-Shean, an area where Jews were living, as they did too, in Safed, Gischala, Lydda, Ramleh, and Gaza.

A marked improvement in agriculture and an increase in population occurred under Ottoman rule, at the end of the 16th century. Jews were engaged in the manufacture of finished products from agricultural raw materials: wine, textiles, and dyeing. They lived in Ein Zeitim, Biriyyah, Peki’in, Kefar Kanna, and elsewhere. In the 17th century the Jews in

the villages were harassed by both Bedouin tribes and government soldiers; the population there consequently declined. Dahir al-Amr who ruled over Galilee in the 1740s encouraged the settlement of fallahin, and Jews also came to live in the region, in villages like Kefar Yasif and Shefaram. After his death, another period of decline ensued. Only at the end of the 19th century was there noticeable improvement. The Jewish population increased, and Sir Moses Montefiore among others formulated plans for settling Jews on the land. The Mikveh Israel agricultural school was founded in 1870 and a little later the first Jewish colonies, Moza and Petah Tikvah sprang up. In 1881, the American consul in Jerusalem noted that 1,000 Jewish families were earning their livelihood from agriculture. Colonization gained new strength from the First Aliyah in 1882, and from then and until today the extent of Jewish agricultural settlement has been constantly expanding (see *Israel, State of: Agriculture).

[Jehuda Feliks]

IN BABYLON

The Jews in Babylonia enjoyed a considerable measure of internal autonomy under the rule of the *Exilarch, who was almost a tributary monarch; consequently the agricultural customs and usages appertaining to the land of Israel obtained in Jewish Babylonia and it is specifically stated that the ten enactments traditionally attributed to Joshua to protect the sometimes conflicting rights of cattle owners, farmers, and the ordinary public, obtained also in Babylon (BK 81b). On the other hand it was clearly laid down that when the civil law conflicted with Jewish law in these matters the former prevailed (cf. BB 55a). During the whole of the period of the *amoraim* and their successors the **savoraim*, i.e., from the third to the eighth centuries, the economy of Babylonia was essentially an agricultural one. From the end of the fifth century onward however, that agricultural economy gradually changed to a money one, and by the eighth century the latter prevailed. This important change is reflected in the **takkanah* enacted by R. Huna ha-Levi b. Isaac and R. Manasseh b. Joseph, the *geonim* of Pumbedita, together with their colleague Bebai of Sura, between 785 and 788 C.E. whereby the previous law that a widow could claim her *ketubbah* only on the landed property of her husband was changed to enable her to claim on his movable property also. Generally speaking the agricultural conditions in Babylonia were similar to those of Erez Israel, with the result that the Babylonian *amoraim* found little difficulty in applying the rules laid down in the Mishnah, which reflects conditions in Erez Israel, to those of their own country. Nevertheless, there were distinct differences, some of which are herewith noted. The land was more fertile than that of Erez Israel. Situated between the Euphrates and the Tigris, and intersected with numerous tributaries and man-made canals, there was an abundant water supply which was largely independent of rain, and on the verse of Jeremiah 51:13 "thou that dwellest upon many waters, abundant in treasures" the Palestinian *amora* *Hoshaiah commented

"Why are the granaries of Babylonia always filled with grain? Because there is an abundance of water," while the Babylonian Rav commented, "Babylonia is rich, because the harvest is gathered even when there is no rain" (Ta'an. 10a). Where in Erez Israel prayers for the relief of drought were characteristic, in Babylonia public prayers were offered against the peril of floods, and were even offered up on their behalf by their coreligionists in Erez Israel (Ta'an. 22b). The climate was also distinctly better than in Erez Israel (RH 20a). As a result Jewish Babylonia enjoyed exceptional fertility and the Euphrates is made to say "I cause plants to grow in 30 days and vegetables in three days" (Gen. R. 16:3). The date palm was the most characteristic of the trees of Babylonia. It grew luxuriously and extensively. Rav stated that their abundance enabled the Jews of Babylonia to find an easy livelihood there (Ta'an. 29b) and Ulla, of Erez Israel on a visit to Babylon, remarked that "the reason God exiled the Jews to Babylonia was that, having plentiful dates for food, they could devote themselves to the study of Torah" (Pes. 87b). At the time of the emperor Julian (361–63 C.E.) the whole of Mesene as far as the Persian Gulf was like one huge palm grove. The olive, which was one of the staple commodities of Erez Israel, did not flourish to any large extent in Babylonia. From a non-talmudic source it is learnt that it began to be more extensively cultivated in the fourth century but in the early period its place, both for lighting and for food, was taken by sesame oil. Thus when R. Tarfon wished to limit the oil for the Sabbath lamp to olive oil (Shab. 2:2) Johanan b. Nuri protested, "If so, what shall the Babylonians do, who have only sesame oil" (Shab. 26a), and so characteristic was this difference that whereas "oil" without any qualification was taken in Erez Israel to refer to olive oil, in Babylonia it was taken to refer to sesame (Ned. 53a). Cotton seed oil was also in common use (Shab. 21a). Hemp, which had to be imported into Erez Israel (Kil. 9:7), at least in mishnaic times (in the amoraic period it seems to have been successfully cultivated; cf. TJ, Kil. 32d) was grown extensively in Babylonia and cloth made from it was common and cheaper than linen (BM 51a). It was also used for ropes (Ket. 67a). A plant unique in Babylonia, as compared with Israel, was the *cuscuta* from which beer was manufactured. In some parts of the country it was regarded as the national drink as wine was in Erez Israel (Pes. 8a); R. Papa was a brewer (Pes. 113a). Where pepper was regarded as the most exotic of plants in Erez Israel (cf. Suk. 35a), it was freely grown in Babylonia, as was ginger (Ber. 36b; Shab. 141a).

Livestock

Despite the agricultural fertility of Babylonia, it would appear that the rearing and breeding of "small cattle"; sheep and goats, was even more profitable in Babylonia. Thus it is given as good counsel that one should sell one's fields to invest the proceeds in flocks, but not vice versa, and R. Hisda refers to the wealth this occupation brings to those who engage in it (Hul. 84a–b). From a statement that one should clothe himself with the wool of his own sheep and drink the milk of his own sheep and

goats (*ibid.*), it would appear that every householder had a few, and there is other evidence that the tendency was for small individual flocks. Cows and oxen were bred both for plowing and for slaughter (Naz. 31b). The ass was used for riding and the mule for transport (BM 97a). Horses were apparently used only for military purposes (Av. Zar. 16a; Rashi to Pes. 113a). Camels were also used for travel and the dromedary, the “flying camel,” is mentioned as a means of rapid transport (Mak. 5a). All the common domestic birds, chicken, ducks, and geese were extensively raised (cf. Bez. 24a) as was the breeding of pigeons (BB 23b), and the Jews of Babylonia were skilled agriculturists (BB 80a). Fish were abundant in the rivers and lakes of Babylonia and there is extensive reference to the various methods of catching them (see Newman, pp. 136–40).

[Louis Isaac Rabinowitz]

IN THE MIDDLE AGES

Ideals

The transition of the Jews in the Diaspora to an urban population mainly constituted of merchants and artisans began from about the end of the eighth century. Yet Jews continued to regard agriculture as the ideal and most important Jewish occupation, the basis of the way of life and social ethics emerging from the Bible and permeating the whole of talmudic literature. In 13th-century Germany the Jewish moralist *Eleazar b. Judah b. Kalonymus of Worms, in describing the primary, divinely ordained state of society, relates that God “created the world so that all shall live in pleasantness, that all shall be equal, that one shall not lord it over the other, that all shall cultivate the land ...” However, “when warriors multiplied, and every man relied on his might, when they left off cultivating the land and turned to robbery, He brought down on them the Flood” (*Hokhmat ha-Nefesh*, 22b). The utopian agricultural society is here described as being destroyed by knightly feudal behavior which brought divine retribution on the world. Ideals of this kind continued to persist and have inspired the return to the soil in Zionism and related attempts at Jewish colonization in modern times.

History

The place of agriculture in Jewish economic and social life steadily diminished from the fourth century. Increasingly severe edicts were issued by Christian emperors prohibiting Jews from keeping slaves, first applying to Christian slaves only and then to all slaves. These restrictions obviated any large-scale Jewish agricultural undertakings by depriving them of workers. The church also developed the conception that Jews should be denied any positions of authority or honor. This attitude later automatically excluded Jews from the feudal structure based on land ownership and the social structure which it combined. In these conditions, Jews were only fit for the lowest rank of serfs, but the religious and moral aspects of such a position made this impossible for all practical purposes.

Under Islamic administrations, both Jewish and Christian farmers bore the additional burden of a special land tax,

the *Kharaj*, and suffered from a policy by which the produce delivered in land taxes was excessively undervalued. In Iraq, where there was a large concentration of Jews engaged in agriculture, they suffered from the general neglect of irrigation in the first two generations of Muslim rule. On the other hand, urban life and trading as an occupation were respected in Islamic society; they were a powerful attraction in the Caliphate, in particular to the Jew who wanted to escape oppressive discrimination in the villages. From the second half of the ninth century, the cultural milieu of the great Muslim cities like Baghdad drew increasing numbers of the population. The expansion of the Caliphate and the diversification of its economy provided growing opportunities for Jews in urban occupations. Additionally, the requirements of organized religion formed a further incentive to urbanization for the majority of Jews.

Thus from the end of the eighth century agriculture became a marginal Jewish occupation in both Christian and Muslim lands. However, Jews continued as farmers wherever legal and social conditions permitted. Large groups of Jewish farmers are known in North Africa in the ninth century. They are mentioned in connection with irrigation, gardening, viticulture, and the commercial production of cheese (which is known to have been stamped with the word *berakhah*, “blessing”). Livestock breeding was apparently an unimportant branch in Jewish agriculture. In Egypt in the 12th century Jews entrusted cattle or sheep to non-Jews to be raised for meat. Similarly, they frequently handed over fields, vineyards, orchards, and gardens to Gentile sharecroppers, although Jewish *bustāni* (gardeners) are mentioned in documents of the Cairo **Genizah*. They perhaps worked in “the orchard of the synagogue of the Palestinians” in Old Cairo (Fostat). While cheese making and beekeeping by Jews have a large place in the *Genizah* records, they are overshadowed by the production of wine. Naturally “pressers” of grapes are mentioned, although these probably worked only on a seasonal basis. Another agricultural specialist frequently mentioned in the *Genizah* from the 11th to the 13th centuries was the *sukkari*, the manufacturer and seller of sugar, which was produced mostly from cane but sometimes from raisins or dates. In western North Africa (the Maghreb) Jews owned cultivated land in the villages and city outskirts. Some of the tales of R. *Nissim b. Jacob of Kairouan (first half of the 11th century) have a rural or semirural setting and are probably located in North Africa (cf. Hirschberg in bibliography).

After the Muslim conquest of Spain in 711, Jews there gradually entered the agrarian sphere taking advantage of changes such as the apportionment of land, liquidation sales, or the expropriation of rebels. Andalusia attracted a stream of immigrants from North Africa, including numerous Jews who were often skilled farmers. These possibly constituted the majority of Jewish landowners and peasants mentioned there in tenth-century records. Problems concerning cornfields and orchards are dealt with at length in the Spanish rabbinical responsa of the period, which also mention technical inno-

vations, for instance pumping methods. The Jewish *karram* (winegrower) had to see to every aspect of viticulture, from amelioration of the soil to grape pressing. After the Spanish territories passed to Christian rule, Jews continued to engage in agriculture. In Leon and Castile, Aragon and Catalonia, Jews are often recorded as settlers and developers of newly occupied areas, frequently in collaboration with the monasteries. Jews owned large tracts of land, in particular near the towns, since many members of the Jewish upper strata participated in the parcellation and recolonization of lands captured from the Muslims during the Christian Reconquest from the 12th century on. Some Jewish smallholders cultivated their own plots: fields and pastures, orchards and gardens are mentioned. Jews also employed hired labor. Some dealt in livestock and agricultural products, or engaged in crafts based on agricultural materials, such as hides and fibers. It is not known whether the raw material for the important Spanish-Jewish silk industry was produced locally or bought from Sicilian Jews.

In Italy, Jewish economic activity was not subjected to legal restrictions until the 16th century, but the majority of Jews there lived in the cities. However, their (probably uninterrupted) presence in rural areas, particularly in central and southern Italy, is evidenced. Jews were among the first to cultivate the mulberry in Italy, and the flourishing silk industry was largely controlled by Jews. In Sicily Jews owned and cultivated vineyards and olive groves. Some excelled in cultivating the date palm; Frederick II gave certain Jews the stewardship of his private grove. Beside these farmers there were Jewish fishermen. Sicilian Jews also owned land or herds which were looked after by non-Jews on a sharecropping basis. Many Jews in Sicily in the 13th and 14th centuries were engaged in commerce or crafts based on agriculture.

In southern France, especially in Provence, conditions were similar to those in Spain and Italy. Great Jewish *allogdia* are mentioned in the early Middle Ages, some near Narbonne are recalled in a legendary context. In the greater part of medieval France and Germany, however, the Jews who engaged in agriculture were the exception rather than the rule. In the time of Charlemagne (eighth–ninth centuries), some Jews still farmed large tracts of land. In suitable regions Jews are found specializing in viticulture, fruit growing, and dairy farming. These capital intensive and semi urban branches of agriculture could be combined with commercial activities. In addition, while vineyards or orchards required expert supervision, they did not demand continual labor, so that even scholars like *Rashi and Jacob *Tam could grow grapes for a living while devoting time to study.

In the Balkans and Greece, *Benjamin of Tudela (mid-12th century) found a Jewish community of 200 (families?) in Crissa, engaged in agriculture, and another near Mount Parnassus. Further east, Jewish farmers were already found in the tenth century. On the northern shores of the Black Sea they introduced advanced techniques of plowing and perhaps also new irrigation methods, and rice growing. Rice was in

fact widely grown in the Volga region under the *Khazars, but was discontinued after their downfall.

In Eastern Europe, Jews turned to the countryside more frequently from the 14th century. When expelled from many of the cities, they settled on the estates of the nobility and in villages. The transition was also due to their increasing connection with the growing and sale of wine (see *Wine and Liquor Trade). In Lithuania, Jewish settlement in the towns was early combined with agricultural activity. Thus Grand Duke Witold granted the Jews of Grodno in 1389 the right to “use the sown pasture land which they hold now or may acquire in the future, paying to our treasury the same as the gentile citizens.” With the development of the **arend*a (“leasehold”) system and trade in agricultural products, the Jews in Poland-Lithuania became increasingly involved in agriculture as leaseholders of agricultural assets, for instance of distilleries or mills, or as administrators of the rural estates; they also dealt in everything pertaining to agriculture and supplied the needs of both peasants and landlords. The Jewish leaseholder (*arendar*) of agricultural assets on a large scale gradually developed into a kind of capitalist farmer, entering agriculture by providing capital and business management. The large number of small-scale *arendars* also became increasingly involved in village life and affairs. Not only the many Jews living near or in the villages, but also those in the small Jewish townships that became characteristic of Polish and Lithuanian Jewry owned vegetable gardens and orchards near their houses. Their livelihood and way of life was closely bound up with peasant life and activities. However, the number of Jews who may be classified as belonging to the agricultural sector at any given time in the period remains a moot point. These connections to a certain degree enabled the renewal of Jewish agriculture in modern times. It is safe to generalize that the greater part of Eastern European Jewry was conditioned by semirural environment until well into the 19th century.

TRADE IN AGRICULTURAL PRODUCTS: MIDDLE AGES AND MODERN TIMES. In the early Middle Ages Jewish international trade mainly consisted of commerce in agricultural products from the Far and Middle East destined for luxury consumption in Western Europe. Jewish merchants traded in *spices at least from the sixth century (see *Radanites), and also in dyestuffs (see *Dyeing). Conducted on a large scale, this trade was naturally based on the contacts established by Jews in the Orient with local producers and merchants. Information from the end of the tenth century shows extensive activity in this sphere by Jewish merchants from Egypt, Tunisia, and Syria. During the 11th and 12th centuries trading in agricultural products was carried on by Jews in all the Mediterranean countries, either as individual enterprises or, when on a larger scale, frequently in partnerships, which sometimes also included Muslim merchants. The trade included sugar exported from Egypt, and dried fruits, especially from Syria, as well as condiments, dyes, oil, cheese, and wines throughout the area.

The small Jewish merchants at that time included peddlers who acted as intermediaries between the rural producers and the city. In the Near East as well as in the more backward European countries they traded their goods for agricultural products which they sold at the urban markets. Jews living in the Aegean islands of Byzantium sometimes leased the state revenues from the trade in grain and wines. Attempts to oust Jews from dealing in wines, grain, and other foodstuffs were made in France and Germany in the eighth and ninth centuries, for instance by the Synod of Frankfurt in 794. Bishop Agobard complained that the Jews of Lyons in his day dealt in wines and meat. Jews owned vineyards and dealt in wines in France up to the 12th century. In England, the *Statutum de judeismo* of 1275, after forbidding the Jews to engage in moneylending, authorized them to practice trades and crafts. A large number of wealthy Jews therefore turned to trade in grain and wool. While the Jewish merchants of Bristol, Canterbury, Exeter, and Hereford mainly dealt in grain, those of Lincoln, Norwich, and Oxford were wool merchants. In the states of Christian Spain, the Jewish trade in agricultural products was widely developed, and in some places ordinances regulating this trade were issued by the local communities. In Portugal in the 14th century the authorities restricted the activities of Jewish peddlers and traders who bought honey, oil, and wax from the mountain villages and sold these commodities in the cities.

Even when moneylending became the paramount Jewish economic activity in Western Europe the Jews in the West continued to deal in agricultural products, in particular in wines, wool, and grain, frequently in combination with their loan activities. This is attested in the responsa literature of the period. In the 15th century many Jews in the southeastern parts of the German Empire acted as middlemen in buying the products of the villages and landed estates (*Gut*) and selling them to the towns. Buying up, and especially horse-trading, became the specialties of Jews in *Bavaria and Franconia, in which they continued to engage well into modern times. The Jewish peddler later found in the United States was continuing a traditional Jewish occupation in Germany and Eastern Europe. However, the anti-Jewish enactments passed by the church frequently succeeded in preventing Jews from trading in agricultural products. The bull issued by Pope Paul IV in 1555 included a provision prohibiting Jews from dealing in grain. In Venice the *ricondotta* of 1777 prohibited Jews from trading in grain and foodstuffs. With the economic development of Western Europe after the great geographical discoveries of the 15th and 16th centuries, *Poland-*Lithuania became the chief supplier of agricultural products, cattle, and forest produce to the West. Up to the time of the partitions of Poland at the end of the 18th century Jews took a considerable part in the extraction and sale of the agricultural produce on which the *arenda* system was based, and thus became associated with the export trade to the West, using both the river and land routes. In the late 17th and during the 18th centuries the role of the *Court Jews as victuallers to the armies of the Haps-

burg Empire and princes of Germany was largely facilitated by their contacts with Jews in Poland-Lithuania who provided the necessary supplies. The financial success of Jews in this field often became the basis for the accumulation of large capital, as instanced by the career of S. *Zbitkower. Trade in cattle, and especially oxen, was one of the most important branches of the export trade in which Jews took part from the 16th century. It entailed the driving of cattle from Eastern Europe to the West, then the best way of transporting meat. The major part of the herd was bought in Moldavia; the cattle were fattened for a time in the Ukraine, and with the additions bought there were driven to Silesia, West Germany, and France. Jewish dealers sold part of their cattle at the large fairs in Brzeg on the Oder. After the partitions of Poland and up to the present century, the traditional Jewish trade in agricultural products continued, despite attempts by the Russian authorities to expel the Jews from the villages. In the **shtetls* of the *Pale of Settlement in *Belorussia, *Volhynia, and the *Ukraine the small-scale Jewish trader would buy goods from the peasants on market days, or through itinerant peddlers and dealers, and sell the village products in bulk to the larger Jewish merchants, who then exported them to Germany. In consequence, trade in essential agricultural products used in industry, such as bristles, flax, and hemp, was almost a Jewish monopoly in this area during the period. Identical in structure was the grain trade in Galicia and Poland in the 19th century, in which the *Dorfgaenger* or *Dorfgeher* were engaged. The Jewish traders traveled from village to village, visiting markets and fairs in the small towns where they bought grain and also cattle, despite official attempts to prohibit them from doing so.

The grain trade of Poland became almost exclusively a Jewish preserve during the 19th century. Many Jewish firms dealt in grain, and Jews also acted as the agents for German and French firms, some also in Jewish ownership. There were 36,907 Jews occupied in the grain trade in Poland in 1897, i.e., 6.9% of the Jewish merchants living in this area. Of the 224 grain merchants in business in Warsaw in 1867, 214 were Jews. In 1873, five Jews became members of the constituent committee of the Corn Exchange in Warsaw. Jewish grain dealers were also prominent during the establishment of the state grain stores in Prussia, Silesia, and Galicia in the 18th century. Jewish contractors undertook to provide approximately 74% of the grain during the shortage in Galicia in 1785–86. Several communities in East Prussia and Latvia, such as those of Koenigsberg and Riga, owe their origin and development to the expansion of Jewish interests in the grain trade. In the 18th century the bulk of the grain exported by the land route from Poland to Silesia was concentrated in Jewish hands. In Lithuania, Jews who exported grain to Silesia bought colonial goods in Breslau, which they supplied to the Lithuanian towns. A large part of the wine export trade of Hungary, which in the 18th and 19th centuries went largely to Poland, Ukraine, and Czechoslovakia, was in Jewish hands. The wine merchants sometimes organized armed caravans to defend the transports from marauders. Between the two world wars a large

number of Jews in Poland and the Baltic States continued to engage in the trade in agricultural products, from peddling to large-scale export business, although attempts were made on a governmental level to oust the Jews from this economic sector and, through the creation of state-subsidized agricultural cooperatives, to all but eliminate Jews from trading with the local agriculturists. Thus from the end of the Middle Ages Jews played an important role – and, in many regions, a pioneering one – in the development of trade between manor and village on the one hand and the city on the other, an essential factor in the rise of modern economy.

[Jacob Goldberg]

IN MODERN EUROPE

In the modern period, Jews in Europe developed direct contact with agriculture in various ways. Jewish businessmen in Western Europe entered the agricultural sphere as part of their share in the development of capitalist economy. Many of the merchants owning plantations in the West Indies, especially of sugar cane, were Jews. In continental Europe from the late 18th century Jewish merchant bankers frequently branched out into mining and industry, and also into forestry and capitalist farming. This type of activity, chiefly financial and commercial at least in origin, for example sugar beet growing, was developed by a significant number of Jews in southern Germany in the first half of the 19th century and in Russia in the second half of the century. The number of such pioneer businessmen who were actively involved in farm management by the end of the 19th century cannot be ascertained. Apparently at least in Galicia, Slovakia, and Romania, the class of Jewish capitalist owners or tenants of agricultural lands or assets had become quite large by 1900, and was directly concerned with farming.

It was in Eastern Europe that the movement to settle numbers of Jews on the land took place. From the middle of the 19th century the rapid growth of population and deteriorating economic conditions in Russia forced many of the Jews there out of their traditional occupations. A large minority turned to agriculture, chiefly the suburban type of dairy and truck farming. By doing so, the small-scale Jewish farmer could remain in the same locality, avoid the difficulties of obtaining larger areas of land, and concentrate on intensive cultivation of commercial crops.

Already from the 18th century the population increase and economic impoverishment combined with new ideologies which envisioned a more “natural” mode of existence for the Jews to press for changes in Jewish social life. The theoreticians proposed alterations in the Jewish occupational structure with the aim of achieving a more balanced Jewish social stratification. This, they considered, would make Jews less open to the attacks of antisemites who condemned Jews for their pursuit of “non-productive” economic activities (see *History, Jewish Medieval and Modern; *Haskalah, *Antisemitism; *Zionism). Various schemes were proposed on both governmental and private initiative for the “productivization” of

the Jewish masses and included plans for Jewish agricultural settlement. These were either confined to the country concerned, or combined programs for emigration and colonization with broader social and political issues. Among these the most notable are the Zionist movement and the projects of Baron *Hirsch, as well as the *Birobidzhan scheme.

Jewish researchers estimate that the number of Jewish agriculturalists of all types in Eastern Europe reached a maximum of between 400,000 and 500,000 in the early 1930s, i.e., forming up to 6% of the total Jewish population there. They varied both in the form of agricultural organization and the type of farming undertaken. They included the Jewish shepherds in the Carpathian mountains, beekeepers, owners of milch cows, or vegetable growers in the small Galician and Bessarabian towns, and the mixed farming colonists in Ukraine. Although the Jewish output was insignificant in the total agricultural sector, Jews took an important part and even predominated in certain branches. In northern Poland, Jewish farmers predominated in vegetable growing, including hotbed crops, notably cucumbers. In certain districts in Poland and Bessarabia, tobacco was practically a Jewish speciality.

The recent development of a Jewish agricultural sector has undergone many vicissitudes both in direction and scope, through ideological and political changes, both within Jewish society and in the attitudes of the environing societies and states. These are revealed in the history of the Zionist movement in Erez Israel and of the settlements in *Crimea and Birobidzhan. The greatest interruptions were caused by the Russian revolution of 1917 and the British Mandate in Palestine.

Ukraine

Although proposals for Jewish agricultural colonization were aired in Austria and Prussia at the end of the 18th century, the first substantial attempts to carry out such a scheme were initiated by the czarist government in 1807. They were commenced in the governments of Kherson and Yekaterinoslav as part of renewed efforts by the government to colonize the steppe and at the same time to assimilate the Jews, to remove them from the villages and townships of the Ukraine Pale of Settlement, and to make them less “parasitical.” A total of 38 villages, each with 100 to 300 family farms were founded in these areas. Some were given Hebrew names, such as Nahar-Tov and Sedei Menuḥah. According to Russian official data, these 38 villages included almost 7,000 farms with 42,000 inhabitants in 1913. The average area of the holding was 11.8 *desyatines* (about 32 acres).

The Jewish settlements in the Ukraine suffered severely after World War I during the revolution and the civil war, but most were reconstructed with aid from Jewish organizations such as ORT and ICA. In 1924 additional villages, now with Yiddish names such as Blumenfeld and Frayland, were founded, partly by younger members of the old settlements. In 1927 there were 35,000 Jews living in 48 villages in the Ukraine, farming a total of about 250,000 acres.

At first confined to grain production, the colonies in the Ukraine later diversified their output by introducing livestock and fodder, vegetables, and fruits. After the war the production of irrigated crops, notably grapes, was much increased, and co-operative dairies were set up. Loans and instructors supplied by ICA and ORT assisted these developments, which resulted in well established prosperous communities of a pronounced Jewish and rural character. In the late 1920s the Soviet government allocated additional land for Jewish settlements. Around the existing core there developed three administrative districts with a majority of Jewish farmers: Kalinindorf, Nay-Zlatopol, and Stalindorf. The Ukraine thus harbored the largest concentration of Jewish agriculturalists in Europe, who had their own schools, a newspaper (*Der Stalindorfer Emes*), and a Yiddish theater. The new villages, numbering over 50, were based on mechanized cooperative farming, with more livestock and acreage per family than previously. Machinery and instruction were supplied partly by the government and partly by ICA. Two further sections of Jewish settlement developed in the Ukraine in the 1920s, in the vicinity of Odessa and in the district of Pervomaysk. After economic changes villages and agricultural suburbs comprising several thousands of Jewish families grew up in these two districts. The movement of Jews to the soil in the southern Ukraine received a renewed impetus in 1928–30 with the Soviet drive for collectivization.

Belorussia

The czarist regulations of 1835 provided a legal basis for Jewish colonies within the Pale of Settlement. These western Russian provinces, which then included Lithuania and Volhynia, provided many of the settlers of the Ukraine and also saw the growth of a similar Jewish agricultural sector themselves. However the climate and soil in the west were much less favorable. Settlement was more scattered and land tenure less uniform. At the beginning of the 20th century there were 258 Jewish settlements in the western provinces, with almost 6,000 farms and 36,000 inhabitants. These villages each had a maximum of 40 family units, farming an average of 18 acres. On government land a unit might comprise 30 acres, but on land privately leased or purchased they ranged from 5 to 13 acres. This compelled intensification (an average of two cows per unit was high for these regions) and search for supplementary employment. Tillage remained according to local technique on a three-year rotation. Technical and living standards improved from the beginning of the 20th century, due to the aid furnished by ORT and ICA. In these conditions, the settlers in the area who overcame the initial hardships never reached prosperity, but developed a specific Jewish rural way of life in which they took pride.

After the war most of these villages remained in the USSR. All had suffered severely from the years of fighting in World War I and the revolution of 1917. In the early 1920s thousands of Belorussians, including Jews, were driven by hunger to become farmers. The Jews tended to prefer suburban lots, but collectives received higher land quotas. In the collective, it

was also easier to maintain Jewish cohesion and cling to some vestiges of Jewish religious life. Thus, about 40% of the 2,300 families who settled on the land before 1925 were members of collective groups. The movement, encouraged by allocation of public land, continued until 1929. There was then a total of 9,100 Jewish farmer families in Belorussia, with 58,500 members and 170,000 acres. Most of these specialized in dairy farming, preferring fodder crops to grains, and many kept orchards and gardens. The introduction of tractors facilitated the replacement of draft horses by dairy cattle. In the Mogilev and Bobruisk districts the majority of Jewish agriculturalists were individual farmers living on the fringes of the small towns, receiving aid from ORT. Collectives predominated in the Minsk district; they received government assistance and later became kolkhozes. Many of the Jewish kolkhozes eventually merged with non-Jewish ones and lost their Jewish identity (see also *Birobidzhan and *Crimea).

Poland

The dissolution of the state toward the end of the 18th century, combined with efforts to reform Polish society and political life, invested the attempts to turn Jews to agriculture with an importance and attention far beyond their real scope. Even so, there were considerable achievements, for which the initiative came from various sources, including the upper circles of Jewish society, enlightened members of the Polish gentry, and Russian governmental circles. They succeeded in bringing the movement for settling Jews on the land to public attention, and in developing Jewish village life. By the middle of the 19th century there were about 30,000 Jews living from agriculture in the central districts of Poland. Ten Jewish villages were considered models for the surrounding areas.

After World War I, Poland inherited the Lithuanian and Volhynian areas of Belorussia, where there were 1,400 Jewish farms. About half were in the northern section, only one-third of the farms had less than 15 acres each; in the more fertile south the majority were small-scale units. Especially in the early 1920s, additional Jewish families turned to farming in northern Poland, settling in areas adjacent to established units as well as in new locations. The new settlers were all tenants, and in this respect were worse off economically than their forerunners. They concentrated in the small towns and city suburbs rather than in the villages, specializing in truck farming, notably of cucumbers; from the suburbs of Vilna and other cities they marketed hotbed vegetables as far as Warsaw. Near Grodno, Jews specialized in tobacco growing. In the mid-1930s there were close to 2,900 Jewish farm units in 142 locations in northeastern Poland, with approximately 60,000 acres. In Volhynia, 940 units in 20-odd locations farmed an additional 11,000 acres.

In Galicia, entirely different conditions had prevailed under Austrian rule. Here the Jewish agricultural sector comprised three classes: large landlords; tenants and agents; farm hands and smallholders. According to Austrian data of 1902, out of 2,430 large land- and forest-owners, 438 Jews owned

a total of over 750,000 acres. Generally these were absentee owners: merchants, bankers, and industrialists, but some were actively concerned with farm management, and a few made a name for themselves as proficient farmers. Below the two upper classes, a stratum of Jewish subagents and even farm hands had developed. However, the majority of East Galician Jewish agriculturists were village shopkeepers, who also each owned a small plot. On part he grew vegetables and fodder; the rest he let to his non-Jewish neighbor. With the development of rural cooperative stores, however, many such shopkeepers were forced toward the end of the 19th century to turn to these plots as their chief source of livelihood. The agricultural society of Jewish landlords: as well as Baron Hirsch's foundation, supported the movement to agriculture and encouraged marketing and dairy cooperatives. The 1921 census records 48,000 Jewish earners as at least partially subsisting on agriculture.

Developments in the interwar period, particularly after 1929, caused a renewed movement of Galician Jews to agriculture. In 1932 ICA opened a central agency in Lvov, and at the same time grass root initiative culminated in the foundation of YILAG ("Yidische Landvirtschaftlikhe Gezelshaft": Jewish Agricultural Society). The credit facilities, education, and instruction provided by these two organizations encouraged modernization and cooperation. YILAG published the monthly *Der Yidisher Landvirt* from 1933 to 1939. In 1933 there were already eight Jewish farming cooperatives and 12 cooperative dairies in Galicia, with a total membership of 1,400. The dairies processed 4½ million liters of milk annually. Dairy farming was quite profitable in the hill regions, where natural pasture enabled a family to keep up to five milch cows if the problems of marketing could be solved. The cooperatives therefore developed transportation as well as processing facilities, and branched out into retailing. Eventually six shops (four in Lvov alone) for dairy and poultry products under the name "Ḥemah" ("butter" in Hebrew) became very popular with the Jewish urban customer.

After World War II, Jewish survivors of the Holocaust, of whom some had been farmers before the war, settled in villages in the districts formerly in Germany. ORT renewed its activity in Poland and undertook the vocational guidance of the new farmers. Various educational projects were started. However, the whole movement was short-lived, and most participants soon left the soil (and the country).

Romania

The various sections of Romania differ greatly in their geography and history. In Bukovina, Austrian rule created social and political conditions similar to those of Galicia, with an accordingly similar structure of the Jewish agricultural sector. Of the small-scale farmers, who numbered 2,000 families before 1914, many owned their holdings, which averaged five to 25 acres. However, only approximately 500 families survived on the land after World War I, and these were completely impoverished. In the 1930s their reconstruction was

planned and financed by ICA, based on dairy or sugar-beet farming. In Bessarabia, early settlements had been part of the czarist projects, especially from 1850. Additional villages and scattered farms brought the number of Jewish farmers up to perhaps 5,500 families in the late 1920s. Of special interest in this region were the tobacco growers, who worked diminutive plots with effort and skill. Although well known for the high yield of their land and the quality of the leaves they produced, the Jewish tobacco growers could still barely subsist because of high rents and fluctuating prices. Before 1914, over 90% of the tobacco growers in Bessarabia had been Jews; they continued to predominate in the inter-war period. There were also many Jewish winegrowers in Bessarabia working under similar conditions, and with like success. Mixed farming, with much maize, was also represented in the Jewish sector. In the Carpathian Maramures, part of which belonged to Romania and part to Czechoslovakia in the inter-war period, numerous extremely poor Jews, perhaps numbering up to 60,000, gained a subsistence from cattle and sheep, with some supplementary orchards and beehives. Dairies were set up there by ICA in the 1930s.

The process of the return of Jews in Europe to the countryside and villages from the towns is in part due to an intensification of the historical and economic trends which began in the later Middle Ages. However, the driving forces both from within Jewry itself and outside it have been mainly ideological and political.

[Shimshon Tapuach]

IN THE UNITED STATES

As indicated in colonial records, there were individual Jewish landowners and farmers early in the 18th century. The first attempt to establish a Jewish farm community, however, dates back to the 1820s, when Mordecai Manuel *Noah received permission to found his model community of Ararat in the Niagara River region of New York. During the same period, Moses Elias *Levy settled Jews on a Florida tract, and by 1837, 13 families launched the Sholem farm colony in Wawarsing, New York. Within five years the last were forced to disperse, partly because of depressed economic conditions. There were other isolated instances of Jewish farmers, including some in California, throughout the century.

By 1881, however, with the beginning of massive Jewish immigration from Eastern Europe, group settlement received a major impetus. Many of the newcomers were imbued with the agrarian idealism of the *Am Olam, stressing the nobility of farm labor as the most honest of occupations; a few had experience as agriculturalists in Russia. At the same time, the relatively small American Jewish community hoped to develop among the immigrants a healthy yeoman class, away from the cities; it became increasingly sensitive also to anti-immigration sentiment stemming not only from nativist elements, but also from the new urban working class. In a rural setting, philanthropy would combine with self help to absorb the new-

comers. Such settlement efforts were aided by the *Alliance Israélite Universelle, and a number of new American organizations: at first the Hebrew Emigrant Aid Society (1882–83), then the Baron de Hirsch *Fund (1891–) and its subsidiary, the *Jewish Agricultural Society (1900–). A score of colonies were established in areas ranging from the swampy bayous of Louisiana to the dry prairies of Kansas and the Dakotas, as far northwest as Oregon; within a few years all failed for such reasons as poor site selection, floods, droughts, factionalism, insect blight, and always inadequate experience and financing. In the East, however, the settlements ringing *Vineland, N.J. (1882), and the all-Jewish town of Woodbine, N.J. (1891), survived into the 20th century. Their staples were vegetables, especially sweet potatoes and small fruits.

Early in the 20th century, both Vineland and Woodbine unfurled the banner of “Chickenville,” joined later by Jewish farm communities in Toms River and Farmingdale, N.J. Thereby, the poultry industry was able to absorb Jewish immigrants in the 1930s, and beyond World War II, with new centers in the Lakewood, N.J. area, Colchester, Manchester, and Danielson, Conn., and Petaluma, Calif. (north of San Francisco). New York’s Jewish farmers, especially throughout Sullivan and Ulster counties, have been well represented since the turn of the century in the poultry industry, dairying, vegetables, and resort facilities. In Connecticut, Jewish farmers specialized in dairying also, as well as tobacco and potatoes; others pioneered in the famed potato industry of Aroostook County, Maine.

Some notable contributions stand out: in the area of education, the Baron de Hirsch Agricultural School (Woodbine, N.J.) and the National Farm School (Doylestown, P.A.), both pioneering institutions. Also, Jewish farmers founded cooperatives for joint marketing, especially of poultry and eggs, purchase of feed and fertilizer, insurance, and comprehensive community service programs.

At the end of World War II, there were about 20,000 Jewish farm families with perhaps fewer than half that number by the late 1960s, mainly because of trends which led to a decline of American agriculture generally down to only five percent of the total population. Jews continued to be represented in all branches of American agriculture, whether citrus in Florida or vegetables in California’s Imperial Valley, but the number of Jews in agriculture continued to decline in the last third of the 20th century as the overall number of Americans engaged in agriculture dropped further to fewer than 2.5 percent.

[Joseph Brandes]

IN CANADA

Canada’s vast and underpopulated expanses of fertile land were hardly known to the Jews in czarist Russia and other countries who were seeking asylum. Thus, despite Canada’s favorable attitude to immigration, only a small segment of the Jewish emigrants from Europe went to Canada. The first attempt to establish Jewish agricultural settlement in Canada

was made in 1884 (after a two year delay mainly due to the government’s refusal to assign land for the Jews when they first arrived) when a small group tried to farm 560 acres near Moosomin, Saskatchewan. Their experiment ended in failure after five years of struggle. A few years later, the Young Men’s Hebrew Benevolent Society of Montreal approached Baron de Hirsch to assist Jewish immigrants in Canada, as he did the immigrants in the U.S.A., and soon afterward the *Jewish Colonization Association (ICA) established a special Canadian committee for the promotion of agricultural settlement among the Jewish immigrants. With the beginning of large-scale Jewish immigration to Canada in the 1880s some Jews wished to become farmers under the government’s homestead policy. Because of the belief that Jews would not make good farmers the government tended to discourage Jewish group-land settlement. Nevertheless between 1884 and 1910 some 17 Jewish farm settlements were started, mostly in western Canada with the help of the Jewish Colonization Association. Among the best known are Oxbow and Wapella (1888), Hirsch (1892), Lipton (1901), Edinbridge and Sonnenfeld (1906), and Rumsey (1908). Five or six of these settlements lasted for half a century or longer.

By 1920 the population in those settlements reached 3,500, while their annual produce totaled over \$1,000,000. It has been estimated that Jewish farmers in Canada produced enough wheat in the 1930s to feed the entire population of Canada. Some 200,000 acres were allocated for grain and the farmers’ assets were valued at \$7,000,000. The Jewish settlers, new arrivals from Ukraine, Romania, or Lithuania, had almost no training in agriculture, nor any knowledge of the environment, so that their achievement was considerable. Despite the extremely difficult climatic conditions in the prairies, which are covered with snow for eight or nine months of the year, the small and isolated communities maintained strong Jewish cultural activity, often using their last means to bring over itinerant Hebrew teachers for the homesteads. Sometimes a teacher would stay with one family for a whole winter. The younger generation went to study at the colleges of the prairie cities of Winnipeg, Regina, Saskatoon, Edmonton, and Calgary. In time, they became doctors, lawyers, agronomists, and businessmen and settled in town. When the government imposed immigration quotas, the settlements began to suffer manpower shortages and the aging parents, no longer able to carry the burden of isolation, loneliness, and hard work, gradually joined their children in the cities. Some farmsteads fell into decay and were sold; others are still owned by the descendants of the original settlers. Only individual Jewish families have remained on farms, especially those in the proximity of the cities.

IN LATIN AMERICA

Jewish agriculture in Latin America was concentrated in three separate regions during various periods. The first region, the plantation area, was located in the northeast of the continent

and in the Caribbean Islands. From the beginning of the 16th century – only a few years after the discovery of *Brazil – *New Christians were engaged in exploiting the resources of the Brazil tree and exporting its products to Europe. The same group most probably brought the cultivation of sugar from Madeira to Brazil. From that time on, Marranos played a leading role in the development of the sugar cane and sugar refinery industries at Engenhos. In the middle of the 17th century, after the Dutch rule ended and the Portuguese took over, Jews engaged in the cultivation of sugarcane (and possibly other branches of agriculture) in the Caribbean Islands, especially in the areas of the Guiana that remained under Dutch rule. In Surinam, the memory of this period of Jewish agricultural settlement has been preserved in the name of a village, Joden Savanne.

In the wake of mass immigration by Russian Jews toward the end of the 19th century, new and large agricultural settlements were established in the grain and beef areas of southeastern Latin America. The widespread development of agriculture in the Argentinean *pampas* and the large-scale immigration campaign that the government conducted in Europe brought the settlement project of Baron de Hirsch to Argentina. Even though the Hirsch project did not fulfill the expectations of its founder, i.e., to concentrate hundreds of thousands of Jewish settlers in a compact and autonomous area, the total area of the project's agricultural land amounted during its peak period (1925) to 617,468 hectares (1,525,146 acres). The total Jewish agricultural population in the five provinces reached 33,135, of whom 20,382 were farmers and their families and the rest were hired laborers and artisans etc. in 1925 (see *Argentina, Agricultural Settlement).

In 1903 the Jewish Colonization Association (ICA) began to develop additional agricultural settlements in Rio Grande do Sul, southern Brazil. One hundred thousand hectares (247,000 acres) were acquired and two settlements were established that encompassed several agricultural centers. This Brazilian project was never consolidated (see *Brazil, Agricultural Settlement). Attempts at agricultural settlement in Uruguay on government-owned land in 1914 and on private land in 1938–39 were also unsuccessful (see *Uruguay).

The persecution of the Jews in Germany during the 1930s and the limitations imposed upon immigration by the governments of Argentina and Brazil led to additional experiments in Jewish agricultural settlement in other geographical areas, mainly in the Andes. Of all these attempts only one, the settlement of Sosua, which was established with the support of the *American Jewish Joint Distribution Committee in the Dominican Republic, partially succeeded.

AGRIGENTO (Girgenti), town in Sicily. The Jewish community of Agrigento dates to classical antiquity, as attested by a tombstone found there, perhaps of the fifth century. In 598, during the pontificate of *Gregory the Great, a number of Jews were converted to Christianity. The community continued to exist throughout the period of Muslim domination and Girgenti is mentioned in a letter from the Cairo **Genizah* c. 1060. The Jewish community is recorded in 1254 when the revenues from the Jews were taxed in favor of the church. *Faraj da Agrigento was one of the most active translators employed by Charles of Anjou in Naples. In 1397 the Jews of Agrigento had to equip a force of 200 foot soldiers for one of King Martin I of Aragon's military expeditions. In 1426 the citizens of Agrigento petitioned unsuccessfully for royal permission to enforce anti-Jewish measures. In 1476 King John II ordered that the money bequeathed by Solomon Anello to promote Hebrew learning in Agrigento be given instead to Guglielmo Raimondo Moncada (alias Flavius Mithridates), a Sicilian Jewish convert to Christianity. Among the reasons cited was the accusation that Jewish schools in the city taught calumnies against the Christian faith, alluding to the spread of a certain Hebrew book among Sicilian Jews. This book is thought to have been *Toledot Yeshu* ("The Life of Jesus"), a medieval pseudo-history of the life of Jesus. Anello's heirs contested the decision but in the end the school was closed down and the revenues were assigned to Moncada. In 1477 a compromise was reached and the Jews of Agrigento were ordered to provide Moncada a house in Palermo instead of the school building in their city. That same year the heirs of Solomon Anello finally succeeded in repossessing some of the books and estate. At the time of the expulsion of the Jews from territory under Spanish rule in 1492 the municipal treasurer was imprisoned for speculation at Jewish expense.

[Cecil Roth / Nadia Zeldes (2nd ed.)]

AGRIPPA I (10 B.C.E.–44 C.E.), tetrarch of Batanea (the Bashan) and Galilee, 37–41 C.E., and king of Judea, 41–44 C.E.; grandson of *Herod and *Mariamne the Hasmonean, and son of *Aristobulus and *Berenice. Agrippa was educated in Rome with other princes at court, and became friendly with Drusus, son of the emperor Tiberius. After a period of dissipation

he became saddled with debts, and in 23 C.E. had to return home and he stayed on the family estates in Idumea. He was subsequently appointed *agoranomos* ("market overseer") in Tiberias by his brother-in-law, the tetrarch Herod *Antipas. After a quarrel with Antipas, he went to Syria, where he again became involved in debts, and to escape from his creditors went to Rome where he became friendly with Gaius, later the emperor Caligula. While drunk, however, he was caught off guard expressing a wish that Caligula were emperor instead of Tiberius, and was sent to prison for his indiscretion. Caligula on his accession released Agrippa and appointed him to the tetrarchies of *Herod Phillipus and Lysanias consisting of Bashan-Trachonitis, Gaulanitis, Argob, and Abel, with the title of king. In 39 C.E. he was granted the tetrarchy of Herod Antipas, who had been exiled by Caligula, consisting of Galilee, Tiberias, Sepphoris, and Perea. During this period Agrippa used his connections in Rome to intercede with Caligula on behalf of the Jews. They wished Caligula to retract an order to erect his statue in the Temple in Jerusalem. Shortly afterward Caligula was murdered. Agrippa, who was in Rome at the time, was among those who supported the succession of Claudius. He was rewarded in 41 C.E. by the addition of Samaria and Judea to the area under his rule. The event was celebrated with great ceremony, and an official covenant of friendship was concluded between Agrippa and Claudius, the deed of the covenant being placed in the Capitol. With the acquisition of these territories, Agrippa now reigned over the whole area of his grandfather Herod's kingdom and the procuratorship of Judea was temporarily suspended.

There was little to differentiate Agrippa's foreign policy as a client king of Rome from that of other Hellenistic monarchs. Agrippa gave financial help to foreign cities, and built several public buildings, including a theater and amphitheater in Berytus (Beirut). Because of his connections with Rome, Agrippa was regarded as the leading vassal king of the East, and once managed to bring several other kings together in Tiberias. The meeting was broken up by Marsus, the governor of Syria, possibly because he suspected a conspiracy with the king of Parthia.

The three years of Agrippa's reign were a period of relief and benefit for the Jewish people of Judea. The residents of Jerusalem were exempted from the impost on houses. Agrippa also made an attempt to fortify the walls of the city, until prevented by Marsus. He omitted the patronymic "Herod" from coins minted for him and followed a markedly pro-Jewish policy when he was required to arbitrate disputes between Jews

and non-Jews, as in a dispute with the citizens of Dor (Dora). He was also mindful of the welfare of Jews in the Diaspora. His most important achievement was the attainment of an edict of privileges for the Jews of Alexandria from Claudius.

Agrippa made frequent changes in the appointment of the high priest. He was highly sympathetic to the *Pharisees and was careful to observe Jewish precepts. He married his daughters to Jewish notables, and withdrew his consent to the wedding of one daughter to Antiochus, king of Commagene, when the latter refused to be circumcised. His close association with the Pharisees is attested in the statement of Josephus that "his permanent residence was Jerusalem, where he enjoyed living, and he scrupulously observed the ancestral laws." Apparently, it is Agrippa I who is referred to in the Mishnah which points out that when celebrating the festival of the first fruits, "even King Agrippa carried the basket [of fruits] on his shoulder" (Bik. 3:4). He is also apparently mentioned in *Sotah* 7:8 which states that contemporary rabbinical sages accorded him particular regard when he made a special point of standing up to read the Torah, even though it was permissible for a king to do so while seated. When he reached the passage, "one from among thy brethren shalt thou set a king over thee; thou mayest not put a foreigner over thee," his eyes filled with tears, since he was not of pure Jewish descent. The sages, however, called out, "Agrippa, you are our brother! You are our brother!" Agrippa died suddenly when in Caesarea, possibly as a result of poisoning by the Romans who feared his popularity with the population. After his death, Judea reverted to the status of a Roman procuratorship.

[Edna Elazary]

AGRIPPA II (Marcus Julius or Herod Agrippa II; 28–92 C.E.), last king of the Herodian line; son of Agrippa I. Like his father he was educated in Rome and he was there when he learnt of his father's death. The emperor Claudius refused to let him succeed on account of his youth. His uncle, *Herod II of Chalcis, died in the year 48 and Agrippa received this small kingdom two years later. Agrippa's coins indicate that he reckoned his reign from the year 50. During his reign he was accorded the title "king" although at no time was he king of Judea as his father had been. Claudius entrusted to him the supervision of the Temple in Jerusalem and gave him the right to appoint the high priest. In 54 his rule over Chalcis was brought to an end; he was compensated with the tetrarchy of Lysanias which consisted of Bashan-Trachonitis and Gaulanitis and with the administration of the province of Varus. From then on he was one of the most important rulers in the eastern part of the Roman Empire. During Nero's reign his borders were extended once again. In 61 he received parts of Galilee including Tiberias and two towns in Transjordan. The dates of these

events are recorded on the king's coins, which, in his non-Jewish territories, bore his likeness. At the Jewish revolt against Rome in 66, Agrippa was in Alexandria. He hurried back to Jerusalem to try to convince the people of their helplessness against the power of Rome. His mission failed and he supported Rome in the war that ensued. He fought in Vespasian's campaign and was slightly wounded in an engagement near Gamala. In 68, on receiving the news of Nero's death, he set sail with Titus for Rome. On the way they heard of the murder of the new emperor Galba. Titus immediately returned to his father while Agrippa journeyed on to Rome. When Vespasian was proclaimed emperor, he sent word to Agrippa, who left Rome furtively and offered his services to the new emperor. Vespasian granted him new estates which appear to have been in the north. Agrippa's kingdom was populated mostly by non-Jews, but his attitude toward Judaism was different from that of his forefathers. At least while he was in Judea he showed a superficial respect for Jewish religious practices; some scholars even claim that he was the Agrippa whose attachment to Judaism was praised by the rabbis. According to the New Testament he showed an indifferent attitude toward the spread of Christianity (Acts 25–26). His promotion of Hellenistic culture is attested by a number of inscriptions. There were rumors that Agrippa had incestuous relations with his sister *Berenice (cf. Juvenal, *Satires*, 6:156), but this may have been merely Roman gossip based on the fact that Berenice lived for some years in her brother's house.

[Abraham Schalit]

AGRIPPA, CAIUS JULIUS, governor of the Roman province of Asia (late first century C.E.). Agrippa's father, a King Alexander, is possibly the Alexander referred to by Josephus (Ant., 18:139 ff.) as a great-grandson of Herod and Mariamne. This Alexander married Jotape, daughter of Antiochus of Commagene, and was appointed king of Cetic(?) (ἡσιδοός, amended by A. Wilhelm (*Archaeologisch-Epigraphische Mittheilungen...*, 17 (1894), 5) into κητιδοός) in Cilicia by Vespasian. His offspring, apparently including Agrippa, "abandoned from birth the observance of Judaism and adopted the Greek way of life" (Greek inscriptions in the British Museum, 3, sect. 2, 187).

[Isaiah Gafni]

°AGRIPPA, MARCUS VIPSANIUS (63–12 B.C.E.), Roman general and statesman, devoted friend and son-in-law of the emperor Augustus. Agrippa was appointed governor of the eastern provinces, which he ruled (until 21 B.C.E.) from Mytilene, on the island of Lesbos. During his stay there, Agrippa was visited by Herod; this was the beginning of a long friendship between the two men. Agrippa was eventually named heir to Augustus. When Agrippa returned to Asia Minor in 16 B.C.E., Herod invited him to visit his kingdom, and the next year the Roman general was received with great enthusiasm in Jerusalem. In the spring of 14 B.C.E. Herod, who was in command of a fleet, offered assistance to Agrippa in his planned expedition to the Bosphorus. This expedition did not take place, however, and instead the two allies traveled together through a great part of Asia Minor. When, in the course of this journey, the Jews of Ionia complained to Agrippa regarding an attempt by the Greeks to infringe their civic and religious rights, the Roman regent, probably under Herod's influence, upheld them. Their relationship was summed up by Josephus: "He [Herod] stood in Caesar's affection next after Agrippa, and in Agrippa's, next after Caesar." In 13 B.C.E. Herod sent his son Antipater to Rome, entrusting him to Agrippa so that he might gain Caesar's friendship. The following year, however, Agrippa died.

[Isaiah Gafni]

AGRIPPINA, station in the line of beacons kindled during the period of the Second Temple, northward from the Mount of Olives to announce the time for reciting blessings during the *New Moon period: "... from Sarteba to Agrippina and from Agrippina to Hauran..." (RH 2:4). Gropina, the usual reading found in the Mishnah, is a corruption of the name. It is probable that Agrippina was included in the network of fortifications erected by Josephus in 66–67 C.E. Dalman suggested identifying Agrippina with the ruins of Kawkab al-Hawā' (now Kokhav ha-Yarden, the Crusader Belvoir) in the Beth-Shean district, 975 ft. (297 m.) high. Impressive ruins of the Crusader castle of Belvoir, built in the 12th century by the order of Knights Hospitallers and captured by Saladin in 1189, have been restored by the Israel Parks Authority. Stones used for the construction of the fortress were taken from various sources, including dismantled ancient buildings from the Byzantine period. One of these stones probably came from a synagogue and it has a carved depiction of a seven-branched *menorah* between two arches (*aediculae*) and an Aramaic dedicatory inscription.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

AGRON (Agronsky), GERSHON (1894–1959), Israeli journalist and mayor of Jerusalem. Agron was born in Mena, Ukraine, and was brought to the United States as a child. During World War I he served with the *Jewish Legion in Palestine. In 1920–21 he was employed by the Zionist Commission press bureau. From 1921 to 1924 Agron was editor of the Jewish Telegraphic Agency and correspondent for international press agencies, for the London *Times*, and for the *Manchester Guardian*. In 1932 he founded the English-language daily *Palestine Post* (from 1950 *The *Jerusalem Post*), which served to convey Zionist aspirations to the British in Palestine and provided the local population with news from outside Palestine, especially from the Middle East. An emissary for the Zionist Organization on several occasions, Agron was a member of the Jewish Agency delegation to the UN conference at San Francisco in 1945. He was director of the Israel Government Information Services from 1949 to 1951. As mayor of Jerusalem from 1955 to 1959, Agron was instrumental in the expansion and development of the new city. His diaries and letters appear in *Asir ha-Ne'emanut* ("Prisoner of Trustworthiness," 1964), published by S. Shapiro.

[Semah Cecil Hyman]

AGUD(D)AT HA-SOZYALISTIM HA-IVRIM ("Hebrew Socialist Union"), first Jewish socialist workers' organization; founded in London, England, functioning from May to December 1876. Its 38 members were workers, mainly tailors and cabinetmakers, mostly from Russia. The leading founder and secretary of the union was A.S. *Liebermann. His closest associate was V. Smirnov, secretary of the revolutionary Russian periodical *Vpered* ("Forward"). Lazarus Goldenberg was an active member. The minutes book was written in Yiddish, the statutes also in Hebrew. The aim of the Union was to spread socialist ideas among Jewish workers, to organize them to fight "oppressors," and to establish contact with other workers' organizations. The Union's attempts to establish Jewish trade unions failed. Some of its members with cosmopolitan leanings questioned the existence of the Union as a specifically Jewish organization, while others, such as Liebermann and L. Weiner, from the socialist circles of Vilna, believed in the right of Jewish workers to appear as Jews independently. In their opinion, the purpose of the London Union was to encourage similar organizations in all the Diaspora. The Union met with opposition from the leaders of the London Jewish community, and the *Jewish Chronicle* even accused it of mis-

sionary intent. This pressure and internal dissension led to its dissolution. Some of its members later became active in the Jewish workers' movement in England.

[Moshe Mishkinsky]

AGUDAT ISRAEL (Heb. אגודת ישראל; “Union” or “Association” of Israel), world Jewish movement and political party seeking to preserve *Orthodoxy by adherence to **halakhah* as the principle governing Jewish life and society. The ideal on which Jewish life should be modeled, in the view of Agudat Israel, is embodied in the social and religious institutions, the way of life and mores, that obtained in the Diaspora centers in Eastern and Central Europe in the 19th century. Its geographical and linguistic orientation made it automatically a purely Ashkenazi movement. The formation of an organized movement and political party to achieve these aims was itself an innovation. It was deemed necessary to present a viable counterforce to the advances made by assimilation and *Reform trends, and by *Zionism, the *Bund, and autonomism in Jewry. The establishment of a movement was discussed in 1909 by members of the German *neo-Orthodox group, but internal dissension in the Orthodox camp delayed it for three years. The final impetus was given when the tenth Zionist Congress decided to include cultural activities in its program, thereby recognizing a secular Jewish culture coexistent with the religious. Some members of the *Mizrachi party left the Zionist movement and joined the founders of Agudat Israel in an assembly held in May 1912 at Kattowitz in Upper Silesia.

Agudat Israel was constituted of three groups reflecting German neo-Orthodoxy, Hungarian Orthodoxy, and the Orthodox Jewries in Poland and Lithuania. These differed in political and social outlook, and in their opinions on cultural and organizational matters. A major divergence was the attitude to general European culture, society, and mores, which German Orthodoxy accepted. They also disagreed about whether to remain part of the main Jewish communal unit or to form separate Orthodox communities, and whether Jews should adopt the language of the state or adhere to *Yiddish. Their attitude toward Zionism was also a moot point.

Branches of Agudat Israel were established throughout the Ashkenazi world. Later it developed a youth movement (Ze'irei Agudat Israel) and a women's movement (Neshei Agudat Israel) in several countries. In Germany the “Ezra” youth movement was affiliated with it. The labor movement that formed within Agudat Israel separated from the parent body after disagreement on national, social, and religious issues (see *Po'alei Agudat Israel).

Within its ranks, Agudat Israel presented a spectrum of the attitudes which had influenced its creation. Particularly acute was the question of secular education. Some of the initiators of the Kattowitz conference tried to achieve a synthesis by formulating the principle: “The East shall give of its Torah learning to the West, and the West of its culture to the East,” Western culture referring to the Western European, German-style, middle class type. This program was contested sharply by the Eastern European sector of Agudat Israel, who claimed that the only plausible basis for unity was maintenance of the status quo; each group should retain its way of life without change. This solution was contained in 18 clauses presented by Ḥayyim *Soloveichik, rabbi of Brest-Litovsk, as a condition of the participation of Polish and Lithuanian rabbis in the movement.

In regard to Zionism, Agudat Israel was created partly by groups who consistently opposed any attempt to revive Jewish nationhood in Erez Israel through human agency. This they compared with a rebellious attempt by a disbanded regiment to resume its identity and hoist its banner without the express permission of its commander. The secularist elements in the nascent Hebrew culture added to Agudist resentment of Zionism. The **zaddikim* of Eastern Europe (*Ḥasidism) regarded the influence of Zionism on the youth, and its negative revolutionary view of Diaspora existence (see **Galut*), as religiously and socially destructive. Agudat Israel, therefore, maintained an ambivalent attitude toward renewed settlement in Erez Israel, mainly because of its opposition to the Zionist movement. The Agudists resented the cooperation of religious with non-religious Jews within the Zionist movement on the basis of national unity, and unequivocally resisted the creation of a secular Jewish society in the Holy Land. Most Agudists considered that the way of life and culture gradually taking shape in the modern settlements in Erez Israel, and propagated by Zionist educational and cultural activities, were subverting and destroying the only true Jewish way of life, upheld by religious families and communities in the Diaspora. The revival of Hebrew as a secular language seemed a sacrilege. With regard to sponsoring independent settlement in Erez Israel, Agudists were already divided at the Kattowitz conference. Gradually, however, there emerged an opinion which after the *Holocaust apparently became the ideological basis of the organization in Israel. Erez Israel should figure at the center of their program, which should, according to the Agudist leader Isaac *Breuer, aim at “uniting all the people of Israel under the rule of the Torah, in all aspects of political, economic, and spiritual life of the People of Israel in the Land of Israel.”

The constituents of Agudat Israel were united in their aim to reestablish the authority of the prominent rabbis as the supreme institution of Jewry. This was a basic ideal, even if views were divided on the qualifications for leadership. German members considered secular academic qualifications acceptable, while Eastern European members demanded exclu-

sively rabbinical qualifications. However, the agreement on the overall objective, to give expression to rabbinical authority on all matters, was reflected in the structure and central institutions of the new party, providing them with a unique pattern. The Agudat Israel central institutions as eventually established are, in order of formal importance:

(1) The *Mo'ezet Gedolei ha-Torah* ("Council of Torah Sages") in 1964 numbered 15 rabbis, all halakhic authorities, chosen on the basis of preeminence in talmudic learning. There are no defined criteria whereby its members are appointed. The number of members of the council is not predetermined. The council ensures, at least, in theory, that no activity will be undertaken by Agudat Israel without the consent of representatives of halakhic authority. The decisions of the Council of Torah Sages are accepted as legal verdicts, and the details of their consultations are secret. In 1964 the party declared officially: "The absolute obedience to the Council of Torah Sages gave Agudat Israel its specific character; even its opponents cannot avoid seeing that it is the only movement obedient absolutely to a supreme spiritual-Torah authority."

(2) *Kenesiyyah ha-Gedolah* ("Great Assembly"), "the highest (political) authority of the association," is composed of representatives of the local branches of Agudat Israel. Each 200 members may elect a representative to the Great Assembly. The first two Great Assemblies were held in Vienna in 1923 and 1929.

(3) *Central World Council*, or Presidium, is elected by the Great Assembly.

(4) *The World Executive Committee*. Before World War II the strongest numerically and most active politically of the branches of Agudat Israel was in Poland. This was partly because of the support given to the movement by the ḥasidic *zaddikim*, in particular by the dynasty of Gur. Its local political aims and strength were reflected in the Jewish representation in the Polish *Sejm* (parliament) and the Agudist achievements in the elections. In 1919 Agudat Israel presented an independent slate, obtaining 92,293 votes, and returning two deputies to the *Sejm*. In 1922 it joined the "*Minorities bloc" with the Zionists (see *Gruenbaum, Yizḥak), returning six deputies (to the *Sejm*) and two senators. In 1928 it formed jointly with the *Folkspartei* and the merchants' organization the list of the "general Jewish national bloc"; this list, affiliated to the government list, obtained 183,998 votes, but no seat; the sole Agudat Israel deputy was returned from the government list. In 1930, on the same affiliation, it obtained 155,403 votes and one seat; an additional deputy was returned from the government list and one senator. In 1935 one deputy was returned and one appointed by the president of the state; in 1938 two deputies were returned. From 1933 onward some leaders, in particular J. Rosenheim in Germany and Harry Goodman in England, spoke in the name of Agudat Israel on many political issues.

The educational activities of Agudat Israel, conducted in many countries, concerned Orthodox schools and educational institutions. In Eastern Europe and Erez Israel these

were mainly *talmud torah* institutions and yeshivot. Later, it maintained the Bet Ya'akov network of elementary and high schools for girls. From 1953 the Agudat Israel party in Israel supervised schools of the "independent educational network," mainly *talmud torah* schools, which refused to be included in the general educational state network (see *Israel, Education). The educational enterprises of Agudat Israel are supported by the *Keren ha-Torah* ("Torah Fund"), founded by the movement.

After the rise to power of the Nazis in Germany the policy of Agudat Israel to Zionist settlement in Palestine changed fundamentally. The third Great Assembly, held at Marienbad in September 1937, was influenced by the pressure of political events in Palestine and the Diaspora. It discussed anew its attitude toward the eventual creation of a Jewish state and cooperation with the Zionists. Ideologically the strict stand prevailed: "A Jewish State can only be founded on the law of the Torah being recognized according to the Torah. A Jewish State not founded on and governed by Torah principles... cannot possibly call itself a Jewish state." But Agudat Israel took part in the St. James Palace Conference convened by the British government early in 1939. The Agudists coordinated their policies there with those of the Zionist Organization.

The numerical strength of Agudat Israel was seriously impaired by the Holocaust. By the end of World War II the movement in Eastern Europe was all but annihilated. Most of its members were living in Erez Israel, although some eventually immigrated to the United States and Western Europe. At the meeting of the Central World Council at Marienbad in August 1947, three centers for the movement were established: in Jerusalem, New York, and London.

Agudat Israel cooperated with the Zionist Organization in extending help to Diaspora Jewry. In practice it completely identified itself with the Zionist demand for the establishment of a Jewish state. Faithful to its basic principles, Agudat Israel, nevertheless, hesitated to recognize a secular Jewish state. However, on the strength of assurances given in a letter from the *Jewish Agency in June 1947 that the status quo in matters of religion would be observed, Agudat Israel was prepared to join the provisional council of the State of Israel. The fourth Great Assembly, held in Jerusalem in 1954, slightly altered the structure of the leadership, adding a World Executive. The next Great Assembly was also held in Israel in 1964. By that time Israeli representatives predominated in the Agudat Israel central institutions.

Agudat Israel in Erez Israel

In Erez Israel Agudat Israel was founded in 1912, but was inactive in public life until July 1919, when it was refounded in Jerusalem by members of the extreme Orthodox faction who were fanatically opposed to Zionism.

From 1919 until 1935, under the leadership of Moshe *Blau, Agudat Israel was completely identified with the ultra-Orthodox community. The principle guiding its activities was the achievement of complete social and political separa-

tion from the community organized under the auspices of the Zionist Movement. Agudat Israel fought bitterly to avoid being included in the officially recognized framework of the Jewish population of Palestine (**Keneset Yisrael*) and obtained the right for those who so wished to cease to belong to it. They established separate rabbinical institutions, under the leadership of R. Hayyim Yosef *Sonnenfeld, which operated alongside the chief rabbinate headed by R. Abraham Isaac *Kook. Under the leadership of Jacob Israel de Haan (1922–24), Agudat Israel in Palestine attempted to achieve a *modus vivendi* with the Arab nationalists. However, this policy was discontinued after de Haan's assassination by the *Haganah, for subversive activities (1924). The relentless personal attack carried on by Agudat Israel against Rabbi Kook violently antagonized most of the growing *yishuv*. Other Agudist leaders, notably Isaac Breuer and Pinḥas *Kohn, managed through political action with the British authorities and the *League of Nations to prevent the unification of the Jewish community in Palestine within a single organizational framework. They thus obtained official recognition of the separation of the settlers of the “old *yishuv*,” from the *Keneset Yisrael*, or organized Jewish community, and the competence of the *Va'ad Le'ummi (“National Council of the Jews for Palestine”). An attempt made by Agudat Israel to establish an agricultural settlement, Maḥaneh Israel, failed, mainly through lack of funds.

In 1935 the waves of emigration from Poland and Germany brought with them a different type of Agudat Israel member, who wanted to integrate economically and, to a certain extent, even politically into the new *yishuv*. This brought about a fundamental change in the structure, aims, and political activities of Agudat Israel in Palestine. In February 1935 a delegation arrived from the movement's headquarters in Poland, which reorganized the Agudat Israel administration in Palestine and established an agency to deal with matters of immigration and absorption and to negotiate with outside bodies. This agency represented immigrants from Poland and Germany, the members of the Orthodox workers' organization Po'alei Agudat Israel, and members from the old *yishuv*. The latter lost its dominance in the party, and the ultra-Orthodox community separated from Agudat Israel (see **Neturei Karta*). Even before this, however (in the late 1920s), Agudat Israel had begun to cooperate with the official *yishuv* institutions, particularly in the municipalities. This tendency was now increased, mainly among Po'alei Agudat Israel.

The Peel Commission recommendations on the establishment of a Jewish state in part of Palestine (July 1937) caused a heated debate in Agudat Israel in Palestine. In principle, all rejected the idea of a secular Jewish state, but opinions were divided as to whether, in view of the existing plight of European Jewry, the idea should be rejected entirely, or whether, should such a state be established, its inhabitants might not return to the religious fold. Almost all the representatives of the old *yishuv* in Agudat Israel rejected the idea of a Jewish state. The representatives of the immigrants from Germany were divided in their opinions. The immigrants from Poland

and Po'alei Agudat Israel tended to accept the idea of a Jewish State.

From 1940 to 1947 Agudat Israel cooperated with the national Jewish institutions, and also had a special committee to coordinate policies regarding the British authorities. In April 1940, the leader of Agudat Israel in Poland, the ḥasidic rabbi of the Gur dynasty (the “Gerer *Rebbe*”), and his son-in-law, Yizḥak Meir Levin, arrived in Palestine, and a new drive was launched for active participation in the life of the *yishuv*. The influence of the Polish immigrants in Agudat Israel greatly increased.

When Agudat Israel joined those who demanded a Jewish state, it received representation in the Provisional Council of State (*Mo'ezet ha-Medinah*) which signed the Declaration of Independence.

Agudat Israel became a political party when the State of Israel was founded in 1948 and has been represented in all national and municipal bodies. Its leader, Rabbi Y.M. Levin, was minister of social welfare from 1949 to 1952. In all these institutions Agudat Israel fought for the observance of the *halakhah* in public life. Its principal campaigns have been in the field of education and, in 1953, after the educational “trends” were abolished and a unified school system established under the law of compulsory free education, Agudat Israel organized an independent school system of its own. It has also achieved the exemption of “religious” girls and of yeshivah students from military service.

Immigration after the establishment of the State of Israel resulted in increased power for the “Hungarian element” in Agudat Israel, and the “Polish hegemony” was somewhat weakened. About the time of the establishment of the State, friction increased between Agudat Israel and Po'alei Agudat Israel; at the elections to the Second Knesset the two parties submitted separate lists of candidates, and separated com-

Agudat Israel in the Knesset

2 Together with NRP.

3 Together with Degel ha-Torah in Yahadut ha-Torah.

pletely in 1960, when Po'alei Agudat Israel joined the government.

In the elections to the First *Knesset in 1949, Agudat Israel and Po'alei Agudat Israel joined with the *Mizrachi and *Ha-Po'el ha-Mizrachi parties to form a "Religious Front." This front gained third place in the distribution of seats in the Knesset. For subsequent elections, see Table: Agudat Israel.

[Menachem Friedman]

In the United States

The world organization attempted to establish an American branch in 1922 but without success, though it did establish a youth section. Agudat Israel of America was actually founded in 1939. It received considerable impetus from the arrival in the U.S. in 1941 of R. Aaron *Kotler, who was a member of the supreme rabbinical council of the world organization. He enjoyed a preeminent position among Orthodox rabbis and was devoted to the ideal of establishing institutions for exclusively Orthodox interests. Agudat Israel also drew support from the well-organized Adath Jeshurun (Breuer) community of Washington Heights, N.Y., which transplanted the traditions of German "Austritt-Orthodoxie," and from certain ḥasidic rabbis. Agudat Israel of America was active in rescue work among the Jews of Europe during and after World War II. It opposed the participation of other Orthodox bodies in roof organizations which include non-Orthodox elements. It supported federal aid to parochial education. Agudat Israel has divisions for children, girls, and youth, including camps serving thousands of youngsters. It also has a job training program called COPE, a job placement division, and a housing program, is an active lobbyist at all levels of government, and maintains full-time regional offices, including one in Washington. In 1952 it began the publication of a monthly *Dos Yidishe Vort*, and in 1963 of an English monthly, the *Jewish Observer*.

AGUDDAT AḤIM (Heb. אָגוּדַת אַחִים; "The Brotherhood"), assimilationist organization formed in *Galicia in 1880. They were one of two opposite trends of orientation among Jews advocating assimilation in Galicia, then under Austrian administration and torn by national conflicts. One group, represented by the Shomer Israel, established in 1869, favored Jewish adoption of German culture; the members of the Aguddat Aḥim were motivated by feelings of Polish patriotism and de-

sired to assimilate into Polish social and cultural life. In 1880 a group of Jewish intelligentsia and students established Aguddat Aḥim to promote Polish assimilation, and expressed its views in a new Polish-language newspaper, *Ojczyzna* ("Homeland"), edited by Nathan *Loewenstein with Alfred *Nossig among its first contributors. Aguddat Aḥim was active in the political and journalistic spheres and also among the Jewish youth in schools and universities. By 1884, however, the hopes that Jews would be accepted in Polish national life were shaken by an increase in antisemitism among the Poles and reports of pogroms in Warsaw. The counsel of despair now voiced in *Ojczyzna* stated that for Jews the only alternatives were conversion to Christianity or migration to Erez Israel. A number of active members of Aguddat Aḥim abandoned all thoughts of assimilation, rallied to *Zionism, and the organization was dissolved.

AGUILAR, DIEGO D' (Moses Lopez Pereira; c. 1699–1759), Marrano financier. D'Aguilar, born in Portugal, where his father held the tobacco monopoly, went in 1722 via London to Vienna, where he reverted to Judaism. In Austria he reorganized the state tobacco monopoly, which he held from 1723 until 1739 for an annual payment of seven million florins. In 1726 d'Aguilar was made a baron and subsequently privy councillor. He helped to raise large loans for the Imperial treasury – the amount for 1732 was ten million florins – and advanced the empress 300,000 florins for rebuilding Schoenbrunn Castle. D'Aguilar used his influence at court to assist the Jews. In 1742, in conjunction with Issachar Berush *Eskeles, he succeeded in preventing the expulsion of the Jews from *Moravia. He was also at the center of the negotiations to prevent their expulsion from *Prague in 1744. He helped the Mantua community in 1752, organized relief for the Belgrade community after a destructive fire, and collected funds for Erez Israel. He is said to have prevented the expulsion of the Jews from Vienna by contacting the sultan. D'Aguilar founded the "Turkish (i.e., Sephardi) congregations in Vienna and *Timisoara.

When the Spanish government asked for his extradition for trial by the Inquisition as a Judaizer, Aguilar moved in 1757 with his 14 children to London. There he took an active part in the life of the Sephardi community. His eldest son, EPHRAIM LOPEZ PEREIRA (1739–1802), second Baron D'Aguilar, was also active for a time in London Jewish communal life. Later he became notorious as an eccentric and miser, and proprietor of what became known as "Starvation Farm." Another son, JOSEPH (d. 1774), severed his connection with Judaism, entered the army, and was progenitor of an important English military family, including General Sir GEORGE CHARLES (1784–1855), who commanded in the Chinese War (1841–42), and General Sir CHARLES LAWRENCE (1821–1912).

[Meir Lamed]

AGUILAR, EMANUEL ABRAHAM (1824–1904), British pianist and composer. Born in London, he was the brother of the novelist, Grace *Aguilar. Aguilar received his musical education at Frankfurt, and his early compositions were performed there with success. In 1848 he gave a concert with the Gewandhaus Orchestra of Leipzig, and then returned to London, where he devoted himself to teaching. He gave annual piano recitals of classical works, especially those of Beethoven. His own compositions include two operas, three symphonies, three cantatas, chamber and piano music, and a set of preparatory pieces for Bach's "Well Tempered Clavier." Aguilar noted down the melodies of the Amsterdam Sephardi tradition as sung by David Aaron De *Sola, and arranged the harmonizations for De Sola's *Ancient Melodies of the Liturgy of the Spanish and Portuguese Jews* (London, 1857, 1931²).

[Bathja Bayer]

AGUILAR, GRACE (1816–1847), English author of Portuguese Marrano extraction, who wrote a number of novels on Jewish themes and some religious works addressed primarily to Jewish women. Her first book was a volume of poems, *The Magic Wreath*, which she published anonymously when she was only 19. Her truly creative period, however, began in 1842, and in the five years until her death at the age of 31 her literary output was remarkable, particularly because at the same time, although very ill, she was helping her mother run a private school at Hackney (outside London). Most of Grace Aguilar's books were not published until after her death. Her novel *Home Influence* (1847), "a tale for mothers and daughters," and its sequel, *Mother's Recompense* (1851), had considerable success, but it was *The Days of Bruce* (1852), a romance set in 14th-century Scotland, that made her famous. The best known of her Jewish novels was *The Vale of Cedars* (1850), a romantic, highly idealized picture of the Marranos in Spain. Twice translated into German and twice into Hebrew, it long retained popularity. She also wrote stories and sketches based on Jewish life and family traditions. In a more serious vein, she translated from French the apologetic work of the ex-Marrano, *Orobio de Castro, *Israel Defended* (1838). She herself wrote *The Spirit of Judaism: In Defense of Her Faith and Its Professors* (1842), and *The Jewish Faith* (1846). The latter took

the form of letters addressed to a friend wavering in her religious conviction. Her *Women of Israel* (1845) was a series of biographical sketches of biblical characters, intended to arouse the pride of young Jews in their heritage. Grace Aguilar was one of the first English Jews to attempt to write a history of the Jews in England; it appeared in *Chambers' Miscellany* (1847). She died while on a visit to Germany. Her collected works, in eight volumes, appeared in 1861. In recent years there has been a considerable revival of interest in Aguilar, who wrote from the unusual, marginal position of a female Jewish intellectual in Victorian Britain. A collection of her selected writings was published in 2003, edited by Michael Galchinsky.

[Cecil Roth]

AGUILAR, MOSES RAPHAEL D' (d. 1679), Dutch rabbi and scholar. He went to Brazil from Amsterdam in 1641 with other members of his family (including his nephew, the martyr Isaac de *Castro Tartas) and became rabbi-*hazzan*, probably in the Magen Avraham congregation of Mauricia (adjoining Recife). On his return to Amsterdam he opened a private school, and was subsequently (1659) engaged to fill Manasseh ben Israel's place in the Etz Hayyim seminary. He wrote some 20 books, but only two were published in his lifetime – a Hebrew grammar for school use (*Epitome da Grammatica hebrayca*, Leiden, 1660; Amsterdam, 1661²), and *Dinim de Sechitá y Bedicá* (Amsterdam, 1681). His work on the immortality of the soul, *Tratado da Immortalidade da Alma*, was published by M. de Jong (Coimbra, 1935). The auction catalogue of his rich library (Amsterdam, 1680) is one of the earliest known in Jewish bibliography.

AGUILAR DE CAMPÓO, fortress-town in Castile, district of Palencia, northern Spain. The earliest evidence of a Jewish settlement is furnished in the lease of a flour mill in 1187 witnessed by 17 Jews, including two blacksmiths. In the 13th century it was a medium-sized community, with 15 families or about 70 Jews. The farming and other revenues in the districts were in the hands of Don Çağ de la Maleha (*Ibn Zadok) and his associates. The taxes paid by the Jewish community in 1290 amounted to 10,718 maravedis. In 1311 the Infant Pedro confirmed the rights of the convent of Santa Maria to tithes and the dues of porteria paid by the Jews; these were reconfirmed in 1370, although the Jewish community had been

decimated by English soldiery during the civil war in 1367. The community in Aguilar apparently continued to exist until the expulsion of the Jews from Spain in 1492. Over one of the gates of the city, Puerta de Reinosa, there is a long inscription in Judeo-Castilian (i.e., Spanish in Hebrew characters, almost unique among the Spanish Jewish inscriptions) testifying that the tower was constructed by Don Çaq (Isaac) son of Solomon ibn Malak(e) and his wife Bellida in 1380. The inscription is unique from the historical and linguistic points of view. Fourteenth-century documents speak of the location of the Jewish quarter. It seems very likely that the *juderia* was in what is now known as Tobalina Street. A new Jewish quarter was established towards the end of the 15th century.

AGUINIS, MARCOS (1935–), Argentinean writer. Born in Cordoba, Argentina, Aguinis received a Ph.D. in neurosurgery, studied psychoanalysis, and worked as a therapist while devoting himself to literature. Following the democratization process in Argentina (1983), Aguinis became a highly regarded intellectual engaged in public affairs as well as in the local Jewish community. During the first government after the military regime, he was elected undersecretary of culture; two years later he was appointed personal counselor to President Alfonsín, with a rank equivalent to undersecretary of state. For many years Aguinis was also a councilor in the *DAIA.

Aguinis' books deal with Jewish themes: Crypto Jews, the Holocaust, antisemitism, Christianity, and the struggle for democracy and cultural pluralism in Argentina. His most famous historical novel, *La Gesta del Marrano* (1992), deals with Francisco Maldonado de Silva, a Converso physician who lived in Concepción (Chile) and was burned at the stake in Lima in 1639. The book was conceived as a paean on freedom, reaching a broad audience because it dealt with the common fate of Jews, converts, blacks, and indigenous people in the Spanish Catholic Colonial America.

Drawing on historical events of the Nazi era, the novel *La matriz del infierno* (1997) ranges from the rise of National Socialism in Germany to the nationalist and authoritarian political culture of Argentina during the 1930s. It emphasizes the cultural and spiritual contradiction between Nazism and the Jewish outlook as well as the attitude of the Christian Church to the Holocaust. While in his early novel *La Cruz Invertida* (1970) Aguinis contrasted sharply the position of the progressive priests affiliated to the Latin American liberation theology movement and the conservatism of the Church hierarchy, in *La matriz del infierno* almost all the Argentinean priests are silent about Hitler's crimes. This novel contributed to the critical debate among Christians and members of other

creeds on the hypocrisy and contradictory attitude of the ecclesiastic hierarchy.

Aguinis' later novel *Los Iluminados* (2000) deals with globalization and U.S. fundamentalist groups and their connection to international drug trafficking.

Other literary works of Aguinis deal with central contemporary issues in Latin America, such as the problem of violence and Argentine authoritarianism. *La conspiración de los idiotas* (1979) is an incisive criticism of the Argentinean military mind and its obsession with conspiracy theories. Written towards the end of the last military dictatorship, it tells the story of an allegedly subversive colony of handicapped and Downs Syndrome patients, alluding to the paranoid prejudices of the authoritarian figure who believes in imaginary enemies.

Aguinis wrote two courageous letters addressed to an unnamed general in essay form: *Carta esperanzada a un General* (1983) after the Falkland War and *Nueva carta esperanzada a un General* (1996). Both books analyze the circumstances in which Argentineans made their transition to democracy. Among other books that focused on Argentina's plight are *Cantata de los diablos* (1972), *Un país de novela*, *Viaje hacia la mentalidad de los argentinos* (1988), and *Elogio de la culpa* (1993).

Aguinis' fiction and essays attempt to demythologize history and memory; surprisingly his first novel, *Refugiados* (1969), conceived before the Six-Day War, gave early and keen insight into the Israel-Palestine conflict; on the other hand, the characters of his short stories collected in *Operativo Siesta* (1978) and *Importancia por contacto* (1983) move through biblical tales and Jewish history in search of identity.

Aguinis' fiction and essays, based primarily on ideas, address a broad audience by exploring the emotions, sensibilities, and behavior of Jews and non-Jews alike. In many cases, the most compelling characters in his literary oeuvre symbolize the plight of Argentina and of the Jews in its midst.

[Leonardo Senkman (2nd ed.)]

AGUNAH (Heb. עֲגֻנָּה; lit. "tied," cf. Ruth 1:13), married woman who for whatsoever reason is separated from her husband and cannot remarry, either because she cannot obtain a divorce from him (see *Divorce), or because it is unknown whether he is still alive. The term is also applied to a *yevamah* ("a levirate widow"; see *Levirate Marriage), if she cannot obtain *halizah* from the levir or if it is unknown whether he is still alive (Git. 26b, 33a; Yev. 94a; and *Posekim*). The problem of the *agunah* is one of the most complex in halakhic discussions and is treated in great detail in halakhic literature (no less than six volumes of *Ozar ha-Posekim* are devoted to it – see bibliography).

Essence of the Problem

The *halakhah* prescribes that a marriage can only be dissolved by divorce or the death of either spouse. According to Jewish law, divorce is effected not by decree of the court, but by the

parties themselves, i.e., by the husband's delivery of a *get* ("bill of divorce") to his wife (see *Divorce). Hence the absence of the husband or his willful refusal to deliver the *get* precludes any possibility of a divorce. Similarly the mere disappearance of the husband, where there is no proof of his death, is not sufficient for a declaration by the court to the effect that a wife is a widow and her marriage thus dissolved. The husband, on the other hand, is unaffected by *agunut*, i.e., by his wife's refusal to accept the *get* or her disappearance without trace, since in such a case under certain conditions the law affords him the possibility of receiving *hetter nissu'in* ("permission to contract an additional marriage"; see *Bigamy). In most cases of *agunot* the question is whether or not the husband is still alive. Such cases result, for instance, from uncertainty about the husband's fate caused by conditions of war or persecution – particularly in recent times as a result of the Nazi Holocaust, but the problem can also arise, for example, if the husband suffers from chronic mental illness making him legally incapable of giving a *get* or simply if he willfully refuses to do so.

Rabbinical scholars have permitted many relaxations in the general laws of evidence in order to relieve the hardships suffered by the *agunah*. On the other hand great care was always taken to avoid the risk that permission may inadvertently be given for a married woman to contract a second marriage that would be adulterous and result in any children from such a second marriage being *mamzerim* (see *Mamzer). Achieving both these ends, i.e., to enable the *agunah* to remarry while ensuring that an adulterous union does not result, is the object of intensive discussion in the laws of the *agunah*.

Mode of Proof (of the Husband's Death)

It is a basic rule of *halakhah* that facts are to be determined on the testimony of two witnesses (see *Evidence). However, the Mishnah already attributes to R. Gamaliel the Elder the *takkanah* that when a husband is missing because of war, and his fate is unknown, the wife may be permitted to remarry on the testimony of only one witness to his death (Yev. 16:7). Although somewhat later R. Eliezer and R. Joshua disagreed with this ruling, at the time of R. Gamaliel of Jabneh it was again determined (*ibid.*) not only that one witness was sufficient but also that hearsay evidence might be admitted, as well as the evidence of a woman, a slave, a handmaiden, or a relative (which classes were otherwise legally incompetent as witnesses). The legal explanation given for these far-reaching rules is that it is to be presumed that a person will not give false testimony on a matter which is likely to come to light, since the husband, if still alive, will undoubtedly reappear sooner or later (Yev. 93b; Maim., Yad, Gerushin 12:15). Moreover, it may be assumed that the wife herself will endeavor to make sure of her husband's death before remarrying, since she will become prohibited to both men if it later transpires that her first husband is still alive, and her other rights, especially pecuniary ones, will be affected too (v. infra; Yev. 87b; Sh. Ar., EH 17:3, 56). Another reason given is that a relaxation of the law is appropriate in times of danger, the possibility that a woman may remain an

agunah being deemed to be such a time of danger (Yev. 88a, 122a and Rashi *ibid.*; see also **Takkanot*).

An *agunah* may also be permitted to remarry on the strength of her testimony alone as to her husband's death, when she is known to have lived in harmony with her first husband and his absence is not due to war conditions, for the reason, already mentioned, that certainly she has made careful inquiries herself before seeking to contract another marriage (Yev. 93b, 114b–116, and *Posekim*). On the other hand, five categories of women are incompetent to testify as to the husband's death, including his mother and his daughter by another marriage, since it is feared, in view of their customary hatred of the wife, that they are likely to deliver false evidence, so that she should remarry and thus become prohibited to her first husband if it should later transpire that he is still alive (Yev. 117a and *Posekim*).

Similarly, an *agunah* may be relieved of her disability on the unsolicited statement of an apostate Jew (see *Apostasy) or a non-Jew, as to her husband's death; for instance, if during a casual conversation they happened to say, "it is a pity that so and so is dead, he was a fine man," or, "as we were walking together, he suddenly dropped dead," or the like (Yev. 121b–122a; Maim.; *ibid.* 13:11; Sh. Ar., EH 17:14). For the purpose of permitting an *agunah* to remarry it is sufficient if written documents exist that testify to the husband's death (Sh. Ar., EH 17:11). The *halakhah* originally considered documents emanating from non-Jewish authorities as insufficient to permit an *agunah* to remarry (Maim., Yad, Gerushin 13:28; Sh. Ar., EH 17:14), but according to the opinion of most *posekim*, this *halakhah* does not apply to present-day non-Jewish authorities, whose documents, such as death certificates, etc., may be relied on (see, e.g., Ḥatam Sofer, responsa EH 1:43).

Subject-Matter of the Proof

The *halakhah*, while striving to be lenient as possible in the method of proving the husband's death, imposes strict requirements concerning the nature of the evidence with regard to the husband's death, lest a woman still married may thus be permitted to marry another man (Maim. *ibid.* 15; Sh. Ar., EH 17:29). The identity must be established of the person whose death it is sought to determine and there exist most detailed rules in order to establish it with the maximum amount of certainty under the circumstances. Thus evidence as to circumstances from which death would be likely to result in a majority of cases is not considered as sufficient proof of death itself since it may be merely the opinion of the witness that the husband is dead, but not testimony as to the fact of death. Hence, the wife will not be permitted to remarry on the strength of evidence to the effect that her husband was seen to fall into the sea and drown in "water having no end" (i.e., where one can see only the sea but not its surroundings) when his death was not actually seen to have taken place, since he may have been rescued. If, however, the witness testifies that he was later present at the funeral of the husband or some other clear evidence of death, for example, that an identifiable limb was found at

the place of drowning, it is accepted as evidence of death. On the other hand the death of the husband will be accepted as having been sufficiently proved and the *agunah* will be permitted to remarry on the strength thereof if there is evidence that he drowned in water "having an end" (i.e., that one can see its surroundings); and the witness stayed long enough at the scene "for the victim's life to depart," without seeing him rise to the surface (Yev. 120–121; Maim. *ibid.* 15–27; Sh. Ar., EH 17–42, esp. 32).

Agunah in the Case of a Civil Marriage

A deserted wife who, practically speaking, has no prospects of obtaining a *get* from her husband, but was married in a civil ceremony only (see Civil *Marriage), may in certain circumstances be declared by the court to have never entered a marriage and thus be permitted to marry another man without need of a *get* from her first husband. The court will reach this conclusion particularly if the wife is able to prove that her first husband expressly refused to marry her in a religious ceremony, declaring thus by implication that he did not wish to create the status of a marriage according to Jewish law (Resp. *Melammed Leho'il*, EH 20).

Mitzvah to Permit Agunot to Remarry

Finding a way for permitting an *agunah* to remarry is deemed a great *mitzvah* (Responsa Asheri, 51:2). Indeed, an onerous application of the law, without justification, and in cases where there is no suspicion of deception, is regarded not only as a failure to perform a *mitzvah*, but even as a transgression (Responsa Maimonides, ed. Freiman, 159; Sh. Ar., EH 17:21, Isserles). However, in view of the danger of legalizing a possibly adulterous union, it is customary for an *agunah* to be permitted to remarry only after consultation with, and consent having been obtained from, other leading scholars (Sh. Ar. *ibid.* 34; Isserles and other commentators).

Consequences of Remarriage

An *agunah* who remarries, after permission is granted by the court, is generally entitled to the payment of her **ketubbah* (Yev. 116b; 117a; Maim., Yad, Ishut 16:31; Sh. Ar., *ibid.* 43, 44). If an *agunah* remarries after permission has been given, and then her first husband reappears, her legal position is that of an *eshet ish* "a married woman" who has married another man, thus becoming prohibited to both men (see *Adultery). Accordingly, she requires a *get* from both, and any children born to her of her second husband will be *mamzerim* according to biblical law. Any children born to her from a union with her first husband, after he takes her back but prior to her having received a *get* from her second husband, will also be *mamzerim*, but only according to rabbinical law. In such event she is not entitled to her *ketubbah* from either husband (Yev. 87b; Maim., Yad, Gerushin 10:5, 7; Sh. Ar., EH 17:56).

Proposals for Precautions to Avoid a Woman's Becoming an Agunah

In view of the unhappy straits in which an *agunah* is likely to find herself, ways were sought already in early times of taking

precautions against such an eventuality. Thus it was customary for anyone "going to wars of the House of David, to write a bill of divorce for his wife" (Ket. 9b and Rashi and Tos. *ibid.*). This *get* was a conditional one, i.e., becoming effective only should the husband not return from war until a specified date, whereupon the wife would become a divorcee and be entitled to marry another man without having to undergo a levirate marriage or *Halizah* (Sh. Ar., EH 143). In certain countries this practice is adopted even in present times by those going to war, but complications may ensue; since the rules and the consequences of a *get* of this nature are beset with halakhic problems (Sh. Ar., *ibid.*), particularly when the husband is a *kohen*, since his wife will be a divorcee if he fails to return by the specified date, and by law he must not thereafter remarry her (See *Marriages, Prohibited). One of the solutions suggested was for the husband to grant his wife an unconditional divorce, save that each promises to remarry the other upon the husband's return from war. This, however, would not avail a *kohen* for the reasons mentioned. Furthermore, in the event of the wife's refusal to keep her promise upon her husband's return, the question may arise whether on the strength of the *get* she is free to marry another man, because of the reasonable possibility that the husband intended that the *get* be conditional, i.e., to be of effect only in the event of his failure to return from the war (see above). On this question there is a wide difference of opinion on the part of the authorities without any unanimity being reached (see S.J. Zevin, in bibliography). Another solution proposed, has been the stipulation of a condition at the time of the marriage to the effect that in certain circumstances the marriage should be considered retroactively void, for instance if the husband should fail, without his wife's permission, to return to her after a long absence of specified duration and should refuse, despite her demand, to grant her a *get*; or if he should die childless, leaving a brother who refuses to fulfill the obligations of a levir, etc. (see, for instance, *Hatam Sofer*, EH 1:111). This approach also presents formidable halakhic difficulties and was not generally accepted by the majority of the *posekim* (see Freimann, Kahana, and Berkovits, in bibliography). A wife who is on bad terms with her husband and can prove the likelihood of her becoming an *agunah*, may possibly obtain an injunction from the court restraining her husband from traveling abroad without granting her a conditional *get*, as mentioned above.

It was also sought to avoid the disability of an *agunah* by the enactment of a *takkanah* by halakhic scholars to the effect that the *kiddushin* should be deemed annulled retroactively upon the happening or non-fulfillment of certain specified conditions, such as the husband being missing or his willful refusal to grant a *get*. But this *takkanah*, based on the rule that "a man takes a woman under the conditions laid down by the rabbis... and the rabbis may annul his marriage" (Git. 33a), has rarely been employed since the 14th century. In recent times it has been suggested that halakhic scholars should adopt one or other of these procedures in order to solve certain problems

relating to *agunah* (see Freimann, Silberg (in the court decision cited in bibliography), and Elon, in bibliography).

In the State of Israel

The question of permitting an *agunah* to remarry, being a matter of marriage and divorce, falls under the exclusive jurisdiction of the rabbinical courts with regard to Jews who are nationals or residents of the State, in terms of the Rabbinical Courts Jurisdiction (Marriage and Divorce) Law, 5713/1953 (sec. 1), which courts deal with the matter in accordance with the *halakhah*. The provisions of the Declaration of Death Law, 5712/1952 (enacted to meet consequences of the Nazi Holocaust), empowering the Jerusalem District Court under certain conditions to make a declaration as to a person's death, has no bearing on the problem of an *agunah*, since "a declaration of death constituting evidence by virtue of this Law, shall not affect the provisions of law as to the dissolution of marriage" (see *ibid.*, 17).

[Ben-Zion (Benno) Schereschewsky]

A New Approach

Numerous approaches have been suggested in an effort to find a suitable solution to the problem of the *agunah*, based on the enormous range of materials and sources in which even the experienced scholar may find it difficult to orient himself.

Discussion of the issue of *agunot* first appears during the tannaitic period, but has continued until today. This issue is a classic example of how the world of *halakhah* operates: an interplay of innovation and tradition in legal decisions, the existence of truths that in one sense are absolute, and in another sense contingent upon exigencies of time and place, and the fine balance between the law and the judge. Hence, it is highly instructive as an indicator of the way in which social and historical realities integrate in the formulation of *halakhah*, underscoring the reflections, doubts, and debates, the application of far-reaching and far-sighted solutions on the one hand and the search for direction toward such solutions on the other.

According to Jewish law, just as the marital bond is created by the actions of the two individuals involved, so too divorce can only be effected by their complementary and reciprocal actions, namely by the husband giving, and the wife accepting, the *get* (bill of divorce). And just as *kiddushin* is a voluntary act performed by the two spouses, so too the act of divorce (at least since the *herem* issued by Rabbenu Gershom at the end of the tenth century) must be performed voluntarily by both spouses. Thus, according to *halakhah*, a couple is not actually divorced by virtue of the decision of a court that decides on their divorce. When the court (*bet din*), in response to irrevocable discord between the couple, rules that they must divorce, it merely declares that the couple must carry out the act of divorce, by giving and receiving a *get*; the decision of the court itself does not effect the divorce. In other words, the decision is not *constitutive*, as it is in most contemporary legal systems, but rather *declarative*, informing the couple of their obligation to divorce.

This fundamental difference between divorce in Jewish law and in other legal systems has certain advantages. For example, in Jewish law the divorce can be the product of a mutual agreement, with neither of the spouses being required to show any grounds for divorce, as was the case in most legal systems, and as is still the case in some until today. However, this difference also creates difficulties, as when one of the couple is not able, in the sense of legal capacity, or not willing, to take part in the giving and receiving of the *get*: not able – when one of the spouses suffers from a mental illness that renders him legally incompetent, or when the husband is absent (whether voluntarily or not); not willing – when he (or she) is capable of giving or receiving the *get*, yet refuses to do so, whether in order to extort money from the spouse, or to otherwise abuse her or to take revenge upon her. In all these instances it is the wife who is worse off, since she becomes an *agunah* (a chained woman), unable to remarry so long as the death of her husband has not been proven (should he have disappeared), or until he gives her a *get* (where he is alive, but is either mentally incapacitated or has refused to give the *get*). Should she marry or have sexual relations, any children born to her will be *mamzerim* (misbegotten), who are unable to marry other Jews. These severe consequences do not ensue in the case of a husband whose wife is unable or unwilling to accept the *get*, neither in terms of the status of his children (born to him from another woman while he is still married) nor in terms of his potential marriage to another woman. Indeed, permission may be granted for him to remarry, should his wife unlawfully refuse to accept the *get*.

In terms of solutions to the problem of *agunot*, a distinction must be drawn between the various circumstances that can lead to the woman's becoming an *agunah*. The cases in which the husband is missing as a result of war, natural disaster, or other similar circumstances, are usually solved by halakhic authorities and scholars within a reasonable amount of time. Their solutions are based on the principle that "in the case of *agunot* [i.e., in order to prevent a woman from becoming or remaining an *agunah*] the Sages were lenient." In accordance with this principle, for example, the Sages significantly relaxed the level of proof required to ascertain the husband's death. Testimony that would otherwise be unacceptable – whether emanating from a heavenly voice, hearsay, or the like – could be utilized by the court to free a woman from the shackles of being an *agunah*. Relying upon this principle, all the *agunot* from Israel's wars in recent decades were permitted to remarry, as were the wives of the sailors who disappeared when the Israeli submarine *Dakar* sank without a trace in 1967, in accordance with a halakhic decision of late Chief Rabbi Shelomo *Goren. In this latter case, there was almost no evidence available to indicate the fate of the crew; nonetheless, within a very short time none of these women was left an *agunah*.

ISSUES THAT ARE DIFFICULT TO RESOLVE. Difficulties arise in regard to those cases where there is no doubt that the hus-

band is alive, but in which he is incapable or refuses to give the *get*. Cases in which the husband refuses to give the *get*, in order to extort money or take revenge, etc., are both the most difficult and the most numerous. These problems are particularly widespread and serious in countries outside Israel, where there is a legal option for civil marriage and divorce. A civil court may rule that the couple is divorced, but from the halakhic perspective, the woman may not remarry unless her husband gives her a *get*, and husbands often exploit this situation in order to extort money or other concessions from their wives. Again, from the halakhic perspective, there is no parallel limitation on the husband who wishes to remarry. In an attempt to solve this problem, a number of solutions have been proposed. In the United States, for example, proposals were made for the addition of an appropriate clause in the standard *ketubbah* (marriage settlement document), or the introduction of state legislation which prevents the husband from marrying another woman so long as he has not removed any obstacle to the remarriage of his wife, from who he is already civilly divorced.

The principal method proposed by halakhic authorities to relieve the problem of *agunot* was that of *annulment* of the marriage. This approach was first discussed at the time of the *tannaim*, on the basis of the principle that “anyone who betroths [a woman] does so subject to the conditions laid down by the rabbis, and the rabbis have the power to annul the betrothal,” if it “was effected improperly” or “in deviation from the conditions laid down by the rabbis.” This approach was initially widely used, but later its use decreased significantly, particularly as a result of historical changes in Jewish life – the dispersion of Jews throughout the Diaspora and, in certain countries, among various Jewish centers, as well as the ideological and cultural schisms that arose with the onset of the Emancipation.

Before discussing the particulars of this subject, mention should be made of an additional approach, which has not been given sufficient consideration: namely, *kiddushei ta'ut* (“erroneous betrothal”). There is a difference between solving the problem of *agunot* by annulling the marriage – that is, in which the marriage is itself binding, but the *bet din* annuls it and permits the couple to marry – and solving the problem of *agunot* by utilizing the principle of “*kiddushei ta'ut*,” meaning that the marriage itself was never in effect, thereby obviating the need for its annulment. This distinction may be of value in the search for a speedier solution for the distress of contemporary *agunot*. Examples of use of the principle of *kiddushei ta'ut* to permit *agunot* to remarry can be found in the responsa of R. Simḥah of Speyer, one of the outstanding sages of Ashkenazi Jewry at the end of 12th century; of R. Simeon b. Zemah *Duran (Algiers, 14th century); in the reasoning of R. Joseph Dov *Soloveichik, one of the leading scholars of 19th century Lithuanian Jewry; and in the responsa of R. Moses *Feinstein, a leading halakhic authority of our own generation. (For research regarding this approach see Hacohen, *The Tears of the*

Oppressed, in the bibliography. This approach may provide a partial solution to the problem of *agunot*.)

As stated above, the main overall solution to the problem of *agunot*, particularly in view of contemporary needs, is that of annulment of marriage. Of particular importance in this context are the reasons that led to the almost total rejection of this solution; on the basis of a close analysis of these reasons, and in light of the establishment of the State of Israel, it may now be possible to return to this solution.

ANNULMENT OF MARRIAGE – PROBLEMS AND ANALYSIS. From the 12th century we have the report of R. Eliezer b. Nathan of Mainz concerning an incident involving a fraudulent marriage. No explicit enactment regulating the manner of effecting a marriage was applicable to the case and the halakhic authorities disagreed as to whether it was possible to invalidate the marriage (*Rabban*, EH 3, fol. 47b). The authorities of Worms and Speyer sought to annul the marriage of the first husband in reliance on the talmudic statement “that it was effected improperly.” However, this was not the view of the halakhic authorities of Mainz, who argued that since the completion of the Talmud, the post-talmudic authorities do not have a power to annul such a marriage. This was also the view of one of their contemporaries – Rabbenu Tam – who argued that even the *geonim* lacked the authority to annul such marriages (*Sefer ha-Yashar*, R. Tam, Responsa Section, Rosenthal ed., §24).

In the 13th century, Asheri and Rashba made an important distinction in regard to annulment of marriages (*Rosh*, 35:1; 35:2; *Rashba*, 1 §§1026, 1162, 1185). Under this distinction, the post-talmudic halakhic authorities do not have the general power to annul a marriage on the grounds that “it was effected improperly” or that it was entered into “subject to the conditions laid down by the rabbis”; but if an enactment explicitly states that a marriage in violation of its provisions will be annulled, then the marriage is invalid.

If the communities, or each individual community, should wish to erect a legislative safeguard against these unfortunate occurrences, let them all jointly adopt an enactment fully confiscating, whether permanently or for a fixed period, any money given [to effect a marriage] to any woman of their community(ies), unless the woman willingly accepts it with the consent of her father or in the presence of whomever they wish.

Every enactment – whether by a particular community or a group of communities – that expropriates the money given to effect a marriage is thus fully valid; and consequently a marriage that does not fulfill the conditions set forth in the enactment is void.

Rabbenu Jeroham (14th century, France) also held this view:

Every community has the power to adopt an enactment and to agree that any marriage effected in the presence of fewer than ten persons is invalid; and it may also establish other similar conditions that all who marry do so subject to the conditions established by the residents of the community” (*Toledot Adam ve-Ḥavvah*, Sec. *Ḥavvah*, XXII, 4).

In the 14th century, a substantial change occurred in the attitude adopted by the halakhic authorities regarding the actual exercise of legislative power to annul a marriage. We have already noted a certain reluctance on the part of Rashba, who initially ruled that the matter required further consideration but subsequently gave a definitive ruling permitting an enactment for the annulment of marriages. Some time later, even graver doubts were raised by R. *Isaac b. Sheshet Perfet (Ribash), who made his consent to validate such an enactment conditional upon “the approbation of all the halakhic authorities of the region,” as a means of dividing the responsibility for the decision among as many halakhic authorities as possible (*Ribash* §399).

Furthermore, according to Ribash the principle that “all who marry do so subject to the conditions laid down by the rabbis” can be broadened and applied to conditions laid down by the community:

In addition, even if we had to resort to the rationale that “all who marry do so subject to the conditions laid down by the rabbis” to justify every annulment of marriage, we may also state that all who marry do so subject to the conditions laid down by the community in its enactments, given that we have already accepted that all those who marry without any express stipulations as to the terms of marriage do so in accordance with the customs of the town.... Thus, we reach the conclusion that the community may adopt such an enactment, and a marriage that contravenes a communal enactment is invalid, and no divorce is necessary.”

This was Ribash’s rendition of the law in theory. “However, as to its practical application, I tend to view the matter strictly; and I would not rely on my own opinion (i.e., in view of the gravity of the matter) to declare that she needs no divorce to be free [to remarry], unless all the halakhic authorities of the region concurred, so that only a ‘chip of the beam’ should reach me [i.e., that I do not take upon myself the full responsibility, but only part of it].”

Ribash did not yet make an absolute distinction between the theoretical authority to adopt an enactment annulling a marriage, and the practical exercise of that authority. The qualification introduced by Ribash was only that such legislation requires the approval of all the halakhic authorities of the region. However, the position expressed by his younger contemporary, Rashbaz (Simeon b. Zemaḥ Duran), was far more adamant – namely, that an enactment nullifying a marriage should never be applied in practice. His ultimate justification for the strict ruling was “the gravity of sexual matters” (*Tashbez*, 2 §5).

Rashbaz states unequivocally that in terms of the “essence” of the *halakhah*, the existing authority to annul a marriage derives from the principle of *hefker bet din hefker* [the bet din’s authority to expropriate money] and he emphasizes that the authority to annul a marriage rests in every competent court and in every generation. But this is only on a theoretical level. On a practical level a strict approach should be adopted

regarding marriage because of the gravity of improper sexual unions, and hence this authority should not be exercised (see also *Tashbez*, 1, §133).

This same view and rationale are echoed in a responsum by Rashbaz’s grandson, the second Rashbash (R. Simeon b. Solomon *Duran), at the end of the 15th and the beginning of the 16th centuries (*Yakhin u-Bo’az* 2, §20).

During the same period (towards the turn of the 16th century) we also hear of the first detailed explanation for the phenomenon of the growing inclination to abstain from exercising regulative power to annul marriages that are halakhically valid. This trend was explained by R. Moses *Alashkar, who was active at that time in Spain, in Egypt, and later on in the Land of Israel. First, he made it quite clear that the halakhic authorities and the community have the power to adopt an enactment by which a marriage entered into in violation of their regulations is void. However, he further ruled that, as opposed to enactments in other areas of Jewish Law, where there is nothing to prevent each community from fully exercising the legislative authority vested in them, the adoption of far-reaching enactments with regard to the annulment of marriage are not permitted – mainly for reasons of general legal policy – unless the enactments are adopted by all or at least most of the communities in a particular country. Maharam Alashkar pointed out that in this ruling he was following in the footsteps of Ribash, who also required that the enactment be adopted by all of the communities in the region. However, Maharam Alashkar explained this requirement within the particular context of marriage and divorce law (*Maharam Alashkar*, §48).

The fact that an enactment was only adopted by a particular community and not by all the communities – or at least a majority of them – prevented Maharam Alashkar from approving the enactment and declaring it valid. While Jewish Law confers legislative authority to a local community, and even to a tradesmen’s association, it is not proper to “take a lenient approach” to marriages “valid according to the Torah” purely on the basis of one community’s enactment. This is so, because local legislation in matters of marriage and divorce creates a serious danger of degeneracy and of making a mockery of the entire institution of marriage. An enactment of one community clearly does not bind a member of any other community. Consequently, if a member of another community marries a woman in violation of the enactment, the marriage will be valid (since we apply the law of the husband’s community), while if a member of the community that adopted the enactment marries a woman in violation of the enactment, the woman will not be married, and is permitted to marry someone else without a divorce. This kind of situation is intolerable in terms of the integrity and stability of the institutions of marriage and family!

An interesting example of this significant change in the legislative trend regarding enactments dealing with annulment of marriages is the difference between two enactments,

adopted approximately 100 years apart in the very same location – the community of the Castilian exiles in *Fez. The first enactment, adopted in 1494, reads as follows (*Kerem Hemer*, 2, *Takkanah* §1; for the Fez enactments, see *Ha-Mishpat ha-Ivri*, p. 652):

No Jewish man shall betroth any Jewish woman other than in the presence of ten persons among whom there is either a scholar of the community (who receives his wages from the community treasury) or a local judge; the same applies to their entering under the *huppah*. If it is done in any other manner, the marriage is void *ab initio*.

One hundred years later, a new enactment was adopted in Fez, similarly requiring that a betrothal take place in the presence of ten persons. However, this enactment contained a substantial change in the sanction imposed on the violator of the enactment; while he is subject to punishment and fines, the marriage itself is considered valid and is not annulled. Instead, the husband is compelled to give a divorce (*Kerememer*, *Takkanah* §34; the latter enactment was adopted in 1592).

In reality, in the 16th and even in the 17th century enactments were still being adopted in various communities in Italy and elsewhere prohibiting the celebration of marriages in the presence of fewer than ten persons and explicitly stating that a marriage in violation of the enactment is void *ab initio* (see for example the Casalli enactment of 1571; a similar enactment was adopted in Corfu in 1652). However, the overwhelming majority of halakhic authorities refused to endorse the practice of annulment of marriages and it appears that these particular enactments were never actually applied (*Nahalat Ya'akov* §57; the responsum was written in 1615).

It is highly noteworthy that as late as the 18th and 19th centuries, legislation was enacted in the Jewish centers of the Eastern countries, requiring marriages to be celebrated in the presence of ten persons and a rabbi, and providing for annulment as a sanction for violation.

In the middle of the 18th century in Damascus, Syria, an enactment of this kind was adopted by the halakhic authorities together with the communal leaders, led by R. Mordecai Galante. The full text of the *takkanah* was preserved (*Berekh Moshe* by Moses Galante, the son of Mordecai Galante, §33). It states that “in order to remove the stumbling blocks placed by deceivers” they enacted that:

No Jewish man marry any woman, except in the presence of ten Jewish persons, including the rabbi who is the teacher of Torah and who the community recognize as judges ... and two individuals from among the communal leaders and officials are also to be included among these ten persons. This, our enactment and decree, shall be in effect from this day forward until the day of the coming of the Righteous Teacher, the Messiah of the God of Jacob ... and if any man shall intentionally marry in secret in the presence of two witnesses and not in the presence of ten Jewish persons, as mentioned above ... his marriage will have no effect and we annul his marriage by way of absolute expropriation like the court of Ravina and R. Ashi, which had the power to expropriate a person's property.

In the middle of the 19th century this enactment was reaffirmed and fortified by the scholars and leaders of the Damascus community, led by Isaac *Abulafia (in his *Penei Yizhak*, EH, §16; p. 94d).

In our community there is an earlier enactment ... that no man marry in the presence of two witnesses, unless the rabbi or his representative consents and ten persons are present, two of whom must be communal leaders ... and that if any man shall intentionally marry in secret in the presence of two witnesses ... not only shall he be labeled a transgressor, but his marriage is annulled by the rabbis and the money given to effect the *Kiddushin* is completely expropriated under principle of *hefker bet din hefker* like the court of Ravina and R. Ashi, which had the power to expropriate property ... In as much as an incident occurred within the past three years, we have reenacted this legislation and proclaimed it publicly with full force and effect, with all transgressors being made subject to excommunication and ban as is known.

There were disputes among the halakhic authorities regarding the interpretation, validity, and applicability of this enactment (see Freimann, *Seder Kiddushin ve-Nissu'in*, 286 ff.). As a fundamental ruling regarding the manner of establishing the *halakhah* and adopting enactments, it was sharply criticized by R. Shalom Moses Hai Gagin, of Jerusalem:

This is an astounding opinion in which the author states that he saw in the code books that it is permissible to adopt an enactment at variance with the rulings of R. Joseph Caro, even to the point of leniency concerning a prohibition contained in the Torah; to date he has not revealed the identity of this authority to us. This is nothing more than his own view, and his own unsupported opinion. It cannot possibly be contended that the world's great scholars ever gathered together and agreed to rule contrary to R. Joseph Caro, the author of the Shulhan Arukh, even in a single particular (*Yisma' Lev*, EH, §15).

According to R. Gagin, the enactment was only intended to annul a marriage in rare and exceptional cases (e.g., in which there were additional defects, or in special cases in which there was a problem of *iggun*).

In his responsum relating this matter, R. Isaac Abulafia strongly defended his position regarding the power to adopt such an enactment:

What should I say in response to that author who is wise in his own eyes... who compares those who have studied and gained wisdom to ignorant reed cutters? [i.e., who compare people who have studied extensively to ignorant reed cutters; see Sanh. 33a] For the fundamental question, namely, whether a court and a community may enact legislation to annul a marriage that is valid according to the Torah, has been extensively discussed by the *rishonim*, i.e., Ribash and Rashbez, and by other leading authorities, who proved directly on the basis of several talmudic passages that enactments annulling a marriage regarded by the Torah as valid can be adopted on the basis of two sound and fully articulated reasons: (1) that all who marry do so subject to the conditions laid down by the rabbis, and the rabbis annul this marriage; and (2) that pursuant to the principle of *hefker bet din hefker*, the court has sufficient authority to exercise the power of expropriation....

This being so, there is here an *a fortiori* inference: since they have the power to annul a marriage that is completely and clearly valid under the law of the Torah, as stated above, then *a fortiori*, in order to erect a safeguard, they may also adopt an enactment that is contrary to R. Joseph Caro on this particular point, and may instead follow the authorities who disagree with him. If they possess the power to annul and dissolve a marriage that is valid according to the Torah, they must certainly have the authority to adopt an enactment that contravenes the strict view of R. Joseph Caro, for otherwise, what have the halakhic authorities accomplished with their enactment? The matter is simple and clear and beyond all doubt (*Lev Nishbar* §3, 15a).

It should be emphasized that many of the leading halakhic scholars in the Eastern countries shared this view and ruled accordingly, that the halakhic authorities have the power to annul marriages by way of an enactment (in another context, see Elon, “The Uniqueness of Halakhah,” in the bibliography):

The question arose again in its full gravity, during the second half of the 19th century, when it was determined in Algerian law that it was obligatory to conduct a civil marriage ceremony prior to conducting *huppah* and *kiddushin*, and that in the absence of the civil ceremony the couple would not be considered married in accordance with the laws of the State. This change carried tremendous potential for abuse by which the husband could cause his wife to become an *agunah*; for if they had been married under religious law without the marriage having been preceded by a civil ceremony, then he could then legally marry another woman. Alternatively, if the woman who had the status of a married woman, went and married another person, she would thereby blemish the status of her children from the second husband. In order to prevent mishaps of this nature and the like, the Algerian rabbis turned to one of the great halakhic authorities of Turkey, R. Chaim Palagi, from Ismir, who proposed, in view of the increasing numbers of cases in which woman were chained to the marital bond and the attendant danger of *mamzerut*, that they adopt an enactment for the annulment of marriages effected without there having been a prior civil marriage ceremony. Some time later, a similar enactment for the annulment of marriages was adopted in Algeria by R. Elijah Hāzan, and he was supported by the halakhic authorities of Tunis and Constantine and others too. There were other authorities who did not approve of the annulment of marriages, and refused to adopt this kind of enactment in their own locations. Among these was R. David Moeati, one of the Algerian rabbis. The dispute continued between other halakhic authorities as well. R. Hāyim Bleich, an eminent rabbi from Tlemecen, Algeria, wrote a special treatise supporting the idea of annulment of marriages under these circumstances, even after the consummation of marriage (see Freimann, *Seder Kiddushin ve-Nissu'in*, 334–37). It would appear that the majority of the halakhic authorities supported the adoption of this enactment and ruled accordingly, and it served as the basis for annulment of marriages in the Egyptian communities (Freimann, 337–44; see further in Elon, *ibid.*, 34–35, *infra*).

Our discussion shows that in Ashkenazi Jewry, following the period of R. Moses *Isserles, one of the leading halakhic authorities of the 16th century, enactments were no longer made

for the annulment of marriages as a solution for the problem of *agunot*. The position accepted by the Ashkenazi authorities was that they did not have the power to adopt enactments for the annulment of marriages, in view of the considerations dealt with above. Among Oriental Jewry, on the other hand, this practice continued, alongside intensified discussion of the need and the possibility of annulling marriages by appropriate enactments. In a number of locations in the Oriental Diaspora these enactments were actually put into practice, surviving until this very day. The phenomenon has invariably been the subject of incisive and often stormy discussions, and has remained on the public agenda, and some of the halakhic authorities did not recoil from adopting the enactments which in their view were both necessary and appropriate.

THE CENTRALITY OF THE LAND OF ISRAEL AND THE STATE OF ISRAEL – THE KEY TO THE SOLUTION OF THE PROBLEM OF AGUNOT. It would appear that the great historic transformation of the condition of the Jewish people wrought by the restoration of Jewish sovereignty (a transformation unparalleled in its magnitude in the entire course of Jewish history) could and should lead to a change in the trend of refraining from the exercise of halakhic legislative authority. The reasons for this were the fragmentation and dispersal of local communal legislation, and the absence of a central authority for the Jewish people in its entirety. Accordingly, the new reality of ingathering and unification should serve as an impetus for the renewed resumption and exercise of legislative authority and for the emergence of a central authority, which can adopt legislation applicable to the Jewish people in its entirety. The halakhic center in the State of Israel should be the main Jewish center, exercising halakhic hegemony over the entire Jewish dispersion. In that capacity, it is authorized to reassume the authority to adopt enactments which, from the time of their adoption or over time, would become the legacy of the Jewish people wherever it be. The new historical reality ought to give rise to a new halakhic reality, the central innovation of which will lie in the restoration of the “crown” to its ancient glory. This new situation both warrants and demands the renewal of the full scope of creative legislative activity in all branches of Jewish law, including marital law, in order to strive to perfect the world of *halakhah* and the world of the Jewish people. (A proposal in this spirit for a solution of the problem of *agunot* was made by Prof. Abraham Chaim Freimann, *Seder Kiddushin ve-Nissu'in*, 397).

In the State of Israel, as the center of the Jewish world, marriages and divorces of all Jewish men and women are effected, pursuant to the State Law, in accordance with the conditions stipulated by its halakhic authorities and scholars.

Our discussion until now indicates that the dearth of practical application of enactments for *agunot* and for annulments of marriage in the larger portion of Jewish communities in the Jewish dispersion is rooted in the historical phenomenon of the fragmentation into numerous centers and different communities, a phenomenon that gave rise to

a multiplicity of halakhic practices. We find more and more cases in which the enactment was accepted and practiced in one particular center, or even in one particular community. As the fragmentation increased, it increasingly precluded any possibility of annulment of marriages. The situation was one in which there could be two couples, one belonging to a community that had adopted an enactment for the annulment of marriage and the other to a community which had not adopted that enactment. As a result, one could no longer claim that marriage was effected in accordance with the conditions stipulated by the rabbis, because there was no single set of conditions of the rabbis: rather there were two different systems, which alternated from center to center and from community to community. This point was made and reiterated in the responsa of the halakhic authorities just examined.

Needless to say, these enactments ought to be made by the rabbis and scholars of the State of Israel, the center of the Jewish world. However, such enactments need to be adopted in consultation and coordination with Jewish scholars and halakhic authorities from the entire Jewish world. Consequently, anyone who marries would be doing so in accordance with the enactments made by the authorities of the Land of Israel, in the State of Israel. There would thus be one enactment for the entire Jewish people. The factor of centrality thus both accommodates and compels the renewed adoption of an enactment for *agunot* that would unshackle Jewish women both in the State of Israel and in all the centers the world over.

PEACE AS A CONSIDERATION IN JEWISH LAW. In our discussion of an enactment for the annulment of marriages as a solution for the plight of *agunot*, the consideration of *peace* was one of the considerations that periodically arose, either as a compelling reason for finding a solution or as the means for finding such a solution. Indeed, it plays a unique function in the discussions of the halakhic authorities in the context of enactments for *agunot*.

Halakhic authorities derived this principle from the verse in Proverbs 3:17: "Her ways are ways of pleasantness and all her paths are peace." This verse describes the virtues of wisdom, and in the Jewish tradition it serves to extol the Torah and those who study it. It was further established as a general guideline for the manner of interpretation of the rules of Jewish Law in all its various fields, and as the purpose and goal of the entire world of Jewish Law. In the world of the halakhic authorities, "the ways of pleasantness" and the "paths of peace" were integrated into a single principle, each aspect complementing the other, with the emphasis alternately placed on either "pleasantness" or "peace." This integrated principle was the source of a variety of rulings in all areas of *halakhah*, chief among them being family law. (See *Maharsha*, end of Yeb. 122b; Maim., Yad, *Megillah ve-Hannukah* 4:12–14.)

A SIGNIFICANT THOUGH PARTIAL SOLUTION: A MODERN APPLICATION OF RABBENU TAM'S HARḤAKOT. We concluded our above discussion of the subject of *agunot* with the

expectation that the resolution of this difficult and painful problem would be found by resorting to the creative utilization of the tool of annulment of marriage, which would be examined, discussed, and applied from the center of the Jewish people in the Land of Israel in the State of Israel. It is interesting to note that the first steps towards a solution to the problem of *agunot* have already been taken. We refer here to the efficient, variegated, and specific use of a special law, in a manner that induces the husband to immediately comply with the decisions and judgments that obligate him to release his wife from the chains of her *aggimut*.

As we observed, the predominant view in the vast majority of Jewish centers was the proscription of physical coercion as a means of forcing the husband to give his wife a *get*, except for certain exceptional cases: "We should be strict in not using coercion by way of physical coercion, so that the *get* does not become a 'coerced *get*' [one given under physical compulsion, against the husband's will and thus invalid]" (*Rama* Sh. Ar., EH 154.21). On the topic of physical coercion as a means of forcing the husband to give a *get*, see the entry *Divorce and its conclusion: "Enforcement of Divorce in the State of Israel." This strict ruling frequently gave rise to problems of *aggimut* and the halakhic authorities searched for halakhic and social remedies to this serious problem.

The method proposed by Rabbenu Tam (one of the leading 12th century Tosafists) was based on ostracizing the recalcitrant husband who refused to give the *get* to his wife, cutting him off from communal life and severing all contact with him. In other words: "they are not permitted to talk to him, do business with him, host him, feed him, provide him with drink, accompany him and visit him when he is ill ... we will separate from him" (*Sefer ha-Yashar* §24). Physical coercion or other kinds of harm (such as imprisonment, etc.) are forbidden, because in those cases the husband's consent to give a *get* may stem from his inability to withstand the physical pressure and not because he has consented to give a *get*. The social sanctions, by prohibiting any contact with him, are insufficient as a means of forcing him to grant a *get*, for from a physical perspective he is capable of bearing the pressures of denial of contact with him. Accordingly, if he deigns to give his wife the *get*, it may be presumed that he does so willingly.

Notably, resort to this kind of sanction in the judgments of rabbinical courts in the State of Israel has been extremely rare. Two factors may explain this. Firstly, the "fear of instruction" of the halakhic authorities echoes the view of a number of *posekim* who ruled that these sanctions constitute coercion and are therefore only permitted in the rare cases in which coercion is permitted. The second factor is that the sanctions referred to in the aforementioned sources were utilized primarily in order to ostracize and exclude the husband from communal religious life, limiting its effectiveness to those cases in which the husband belonged to that particular community.

Moreover, the economic aspect of abstaining from any financial and commercial dealings with the husband would

be unlikely to be particularly effective in the contemporary reality. It would therefore seem that the idea and the principle of the sanctions, as they should be applied in the current reality, require application and execution by the authorities of the State, exercising its legally conferred power over its entire citizenry.

Sanctions (Exclusionary Measures) in Legislation of the Knesset

This method has in fact been proposed by researchers and various judicial and governmental circles. A halakhic dialogue has begun regarding the possibility of utilizing tools wielded by the State authorities, and whether the use of such tools does not constitute “coercion,” if only because the exclusion from participation in communal life and the possibility of coercion is only permitted in certain exceptional cases, as stated above. The proposals became memorandums, discussions, draft laws, and culminated in the formulation of a list of “exclusionary (shunning) measures” which received expression in the Knesset legislation under the Rabbinical Courts Law (Upholding Divorce Rulings), 5755–1995. Since its adoption a number of amendments have been introduced on an almost annual basis.

Under this law (§1) if a certain period of time has passed since the decision of the Rabbinical Court ruling that the husband must give a *get* to his wife, and the husband has not upheld the judgment:

The Rabbinical Court may, in a restrictive order, impinge on the rights enumerated below, in full or in part, for such period and under such conditions as it may prescribe:

- (1) To leave the country;
- (2) To receive an Israeli passport or *laissez passer* pursuant to the Passports Law, 5712–1952, to hold them or extend their validity, provided that they retain their validity for purposes of returning to Israel;
- (3) To receive, hold or renew a driver’s license;
- (4) To be appointed, elected or to serve in a statutory position or a position in an inspected body within the meaning of the State Comptroller Law 5718–1958 [Consolidated Version];
- (5) To deal in a profession the occupation in which is regulated by Law, or to operate an enterprise which requires a legal license or permit;
- (6) To open, or hold a bank account or to draw checks on a bank account, by determining that he is a restricted customer within the meaning of the Checks Without Cover Law, 5741–1981.

While the historical source of these provisions lies in the “Sanctions (*harḥakot*) of Rabbeinu Tam,” their ramifications extend far further afield. The order issued is a “restrictive order” affecting the possibility of leaving the country, receiving a passport, driver’s license, appointment to official positions, occupation in a profession, opening and maintaining a bank account, and being imprisoned in solitary confinement for a prescribed number of days. Restrictions of this nature may

for the most part be regarded as violations of the basic rights in accordance with the Basic Laws: Human Dignity and Freedom, and Freedom of Occupation (e.g., freedom of movement, freedom of occupation, right to property). At the same time, they are of tremendous importance in the promotion of a solution to the problem of *agunot* in the world of *halakhah* and as part of the world of *halakhah*. The restrictions imposed here by the legislator, whose values are those of a Jewish and democratic state, are a continuation of the exclusionary measures, established in the halakhah of the 12th century, and named after one of its most eminent leaders and authorities, the noted Tosafist, Rabbenu Tam. Mention should be made here of an interesting correspondence relating to the application of this Law, cited in the Report of the State Comptroller, Justice Eliezer Goldberg (Annual Report 54B, 2003, and accounts for fiscal year of 2002, pp. 515–23), under the heading “Rabbinical Courts.” In the response submitted by the director of the Rabbinical Courts to the State Comptroller’s Office, it states that “a *mesurevet get* (wife whose husband has refused to give a *get*) is defined by the Rabbinical Court as a wife whose husband was obligated to give her a *get*, and has still not given it to her after 30 days.” In accordance with this definition, there are only 200 *mesuravot get*. This led to a proposal of the State Comptroller that the Rabbinical Court should initiate the issue of a restrictive order even if the judgment itself did not stipulate that the husband was obligated to give his wife a *get*, but only stipulated that the Rabbinical Court recommends or suggests that the husband give his wife a *get*. This is in accordance with the Law itself which states (section 1 (b)): “For purposes of this section, it is immaterial if the judgment used the wording of coercion, obligation, *mitzvah* (positive precept), suggestion, or any other wording”; and this would result in a decrease in the numbers of *agunot*. The president of the Rabbinical Court replied that “should it be necessary,” the Rabbinical Court would adopt this kind of initiative (*ibid.*, 521–23).

We are once again confronted by the social role filled by the State of Israel, as an esteemed, venerable, and sovereign legislative authority, in both the development of *halakhah* and the resolution of halakhic problems that arise in its framework.

This law contributed significantly to a solution of the *agunot* problem. For further details regarding its provisions, see the entry on Divorce, especially the concluding section, “Enforcement of Divorce in the State of Israel.” Admittedly, the problem remains to be completely and satisfactorily resolved – for the Jews in the State of Israel, and certainly for Jews living in the countries of the Diaspora, to whom the provisions of the law dealing with compliance with judgments do not apply. Nonetheless, the partial promotion of a solution, as embodied in the provisions of the law, is still of great significance in the anchoring of the values of the State of Israel as a Jewish and democratic state, in accordance with the provisions of the purpose section of the Basic Laws.

As stated, the Law of the Knesset is just a beginning, albeit an important one, for the solution of the problem of *agu-*

not. The need exists, and it is incumbent upon us to aspire to a complete resolution of the *agunot* problem. Such a solution exists in the form of annulment of marriages, which could be effected by the adoption of an enactment in the center of the Jewish world in the Land of Israel, with the cooperation and assistance of halakhic authorities from Jewish communities all over the world. To be sure, the halakhic world is divided regarding the issue of the authority of the rabbis to annul marriages in this manner, but this has always been the case. Moreover, this was the situation in the period immediately preceding our period, in a location quite close to ours. I refer here to the dispute between the two great halakhic authorities, R.I. Abulafia and R.C. Ganin, during the 19th century in the Jewish center of Damascus, in Syria, the neighbor of Israel (see *supra*). Accordingly, if there was a dispute regarding the enactment that originated in Damascus in Syria, then an enactment issuing from Jerusalem, in the Land of Israel in the State of Israel, which constitute the center of the Jewish world, should certainly be proposed, accepted, and applied in practice in order to free Jewish women from the chains and suffering of being *agunot*.

In conclusion, it should be noted that the issue of a wife's *agginut* occasionally arises in judicial deliberations, not in relation to the *agginut* per se, but rather in the context of adjudication of other legal matters, such as the amount of damages owing to a widow whose husband died through his employer's negligence, the issue of an extradition order against a husband for a crime committed in another country, and the like. (See Elon, C.A. 110/80 *Gabbai v. Willis*, 36 (1) P.D. 449; C.A. *Aloni v. Minister of Justice*, 41 (2) P.D. 1; H.C. 644/79 *Guttman v. Tel-Aviv Jaffa Regional Rabbinical Court*, 34 (1) P.D. p. 443–50; H.C. 822/88 *Rozensweig v. Attorney General*, 42 (4) P.D. p. 761–59.)

AGURSKY, MIKHAIL (1933–1991), Russian historian and activist. Agursky was born in Moscow, the son of Shmuel Agursky, a noted Soviet party activist and historian of the revolutionary movement who was arrested in 1938 and exiled to Kazakhstan for five years. Mikhail received his Ph.D. in the field of cybernetics in 1969. He took part in the civil rights movements in the U.S.S.R. and in Samizdat (self-publishing), contributing to the anthology *Iz pod glyb* (“From the Underground”). In 1975 he emigrated to Israel and worked at the Hebrew University of Jerusalem. In 1979 he received a doctorate from the University of Paris for his thesis “The National-Bolshevik Ideology,” which was published in Paris in Russian in 1980. He also wrote “The Soviet Golem” (Russ., 1983), *Third Rome: National Bolshevism in the U.S.S.R.* (1987), “Trade Relations between the Soviet Union and the Countries of the Middle East” (Heb., 1990), and with Margaret Shklovski the anthology “Literary Heritage; Gorky and the Jewish Question” (Russ., 1986).

[Shmuel Spector (2nd ed.)]

AGURSKY, SAMUEL (1884–c. 1948), Communist author. Agursky, who was born in Grodno, joined the Bund and fled Russia in 1905 because of his involvement in revolutionary activities. He eventually went to the United States and contributed to the Jewish anarchist press. He returned to Russia in 1917 and helped found the Jewish section of the Communist Party *Yevseksiya. In 1919, when deputizing for S. *Dimanstein, the commissar for Jewish affairs, Agursky issued an order closing the Jewish communal institutions. He wrote on the history of the Jewish labor movement and edited collections of historical and literary works. He disappeared at the time of the 1948 anti-Jewish purges. Agursky's writings include *Der Yidisher Arbeter in der Komunistischer Bavegung, 1917–1925* (“The Jewish Worker in the Communist Movement, 1917–25,” 1926); *Di Yidishe Komisar'yaten un di Yidishe Komu-*

nistische Sektsies, 1918–1921 (“The Jewish Commissariats and the Jewish Communist Sections, 1918–21,” 1928).

[Yehuda Slutsky]

AGUR SON OF JAKEH (Heb. אַגוּר בֶּן־יָקֵה), an otherwise unknown figure mentioned in the enigmatic title to Proverbs 30:1–33. Possibly the title refers only to the first 14 verses since the Septuagint separates these two sections, placing the first between Proverbs 24:22 and 23 and the second following Proverbs 24:33. It was already pointed out by Rabbenu *Tam (Jacob b. Meir) that the *aluqah* (לְעִלְיָקָה); “leech”) in Proverbs 30:15 may refer to a different sage with the name Alukah (in the category of names such as Nahash (“serpent”), Parosh (“flea”), etc.); hence the second section is to be attributed to another sage, Alukah. This assumption is borne out by the marked difference in content between the two sections, the first being in the nature of an ethical admonitory disquisition (in the spirit of Job 42:2), while the second consists mainly of numerical aphorisms. It has been suggested that ha-Massa (הַמַּסָּא) in Proverbs 30:1 should be amended to ha-Massa’i (הַמַּסָּאִי; “the Massaite”), since Proverbs 31:1ff. is attributed to the mother of a king of Massa (cf. Gen. 25:14; 1 Chron. 1:30), one of the *Kenite peoples whose wisdom the Israelites admired.

[Michael V. Fox]

AGUS, IRVING ABRAHAM (1910–1984), U.S. educator and scholar; brother of Jacob *Agus. Agus was born in Swislocz, Poland, and studied at the Hebrew University in Jerusalem (1926–27), and at Dropsie College (1937). He served as educational director in Memphis, Tenn. (1939–45), dean of the Harry Fischel Research School in Talmud (Jerusalem, 1947–49), and principal of the Akiba Academy in Philadelphia (1949–51). From 1951 he was professor of Jewish history at Yeshiva University. Using responsa literature as a primary historical source, Agus wrote extensively on Jewish life in the Middle Ages. Among his works are *Rabbi Meir of Rothenburg* (2 vols., 1947), describing Jewish life in 13th-century Germany, and *Teshuvot Baalei ha-Tosafot*, an edition of previously unpublished responsa by the Tosafists (1954). His later writings concentrated on Jewish communal life in pre-Crusade Europe, showing that the Franco-German Jews, though a small group, were able to preserve talmudic traditions by their great devotion to study and observance of Judaism. In *Urban Civilization in Pre-Crusade Europe* (2 vols., 1965) Agus credits these Ashkenazi Jewish communities, which excelled in commercial ventures, with providing the prototype of town life and organization in Catholic Europe.

[Simcha Berkowitz]

AGUS, JACOB B. (1911–1986), U.S. rabbi and philosopher. Agus (Agushewitz) was born into a distinguished rabbinical family in the *shtetl* of Sislevitch (Swislocz), situated in the Grodno Dubornik region of Poland. After receiving tutoring at home and in the local *heder*, he joined his older brothers as a student at the Mizrachi-linked Takhemoni yeshivah in Bialystok.

In 1925 the Agushewitzes migrated to Palestine. Unfortunately, the economic conditions and the religious life of the *yishuv* were not favorable and in 1927 the Agushewitz family moved again, this time to America, where Jacob’s father, R. Judah Leib, had relocated a year earlier to fill the position of rabbi in an East Side New York synagogue.

The family settled in Boro Park (Brooklyn) and Jacob attended the high school connected with Yeshiva University. After completing high school, he continued both his rabbinical and secular studies at the newly established Yeshiva University. He received his rabbinical ordination (**semikhah*) in 1933. After two further years of intensive rabbinical study, he received the traditional *yoreh yoreh yaddin yaddin semikhah* in 1935.

In 1935 Agus took his first full-time rabbinical position in Norfolk, Virginia. One year later he left Norfolk for Harvard University, where he enrolled in the graduate program in philosophy. At Harvard, his two main teachers were Professor Harry A. Wolfson and Professor Ernest Hocking. Agus’ doctoral dissertation was published in 1940 under the title *Modern Philosophies of Judaism*. It critically examined the thought of the influential German triumvirate of Hermann *Cohen, Franz *Rosenzweig, and Martin *Buber, as well as the work of Mordecai *Kaplan, who in 1934 had published the classic *Judaism as a Civilization*.

While in the Boston area, Agus paid his way by taking on a rabbinical position in Cambridge and he continued his rabbinical learning with R. Joseph *Soloveitchik.

At Harvard, for the first time in his life, Agus encountered serious, even intense, criticism of traditional Judaism. In response, he decided to devote much of his energy for the rest of his life to explicating, disseminating, and defending the ethical and humanistic values embodied in the Jewish tradition, and in particular, how these values were interpreted by its intellectual and philosophical elites.

After receiving his doctorate from Harvard, Agus accepted the post of rabbi at the Agudas Achim Congregation in Chicago. Though the congregation permitted mixed seating, it was still considered an Orthodox synagogue. In this freer midwestern environment, removed from the yeshivah world of his student days, the orthodoxy of Yeshiva University, and the intensity of Jewish Boston, Agus began to have doubts about the intellectual claims and dogmatic premises of Orthodox Judaism. In particular, he began to redefine the meaning of *halakhah* and its relationship to reason and independent ethical norms.

In 1943, disenchanted with his Chicago pulpit, Agus accepted a call to Dayton, Ohio. During this period he also at-

tempted to gather support for an agenda of change and halakhic reform at the Orthodox Rabbinical Council of America (RCA) convention in 1944 and 1945. When this failed he decided to break decisively with the organized Orthodox community and its institutions. He officially broke with the RCA in 1946–47 and joined instead the Conservative movement's Rabbinical Assembly. In this new context he became a powerful presence and an agent of change, serving on the Committee on Jewish Law and Standards for nearly 40 years, until his death.

In 1950, R. Agus accepted the position of rabbi at the newly formed Conservative congregation Beth El in Baltimore. A small congregation of some 50 families when he arrived, it grew over his three decades as its rabbi into a major congregation. During this period Agus also continued his scholarly work. He was a regular contributor to a variety of Jewish periodicals, such as the *Menorah Journal*, *Judaism*, *Midstream*, and *The Reconstructionist*, and he served on several of their editorial boards. He also occasionally published in Hebrew journals. At the same time, he began to teach at Johns Hopkins University in an adjunct capacity, to lecture at B'nai B'rith institutes, and to speak at colleges and seminars around the country. In 1959 he published his well-known study *The Evolution of Jewish Thought*, an outgrowth of his lectures.

Beginning in 1968 Agus, while continuing his rabbinical duties in Baltimore, accepted a joint appointment as professor of rabbinic civilization at the new Reconstructionist Rabbinical College in Philadelphia and at Temple University. In addition, he worked with the American Jewish Committee at both the local and the national level on various communal issues, with the Synagogue Council of America on Jewish-Christian issues, with a host of Jewish communal agencies, and he was active in Jewish-Christian dialogue in the hope of reducing antisemitism and helping to restructure the Christian understanding of Jews and Judaism.

Among Agus' writings are *Modern Philosophies of Judaism* (1941); *Banner of Jerusalem* (1946), a study of the life and thought of R. Abraham Isaac *Kook; *Guideposts in Modern Judaism* (1954); *The Meaning of Jewish History* (2 vols., 1963); *The Vision and the Way* (1966); *Dialogue and Tradition* (1969); and *The Jewish Quest* (1983). Agus also published a volume on Judaism as part of the Catholic Theological Encyclopedia and served as a consultant to Arnold Toynbee on Jewish matters. Some of his letters to Toynbee are printed in Toynbee's "Reconsiderations," the 12th volume of his *Study of History*.

אָהָא (Aḥai; fourth century), Palestinian *amora*. Born in Lydda, Aḥa studied *halakhah* under R. *Yose b. Hanina and *aggadah* under R. *Tanḥum b. Ḥiyya, and transmitted the teachings of most of the contemporary Palestinian authori-

ties. He is extensively quoted in the Jerusalem Talmud, but seldom in the Babylonian. His younger colleagues called him "the Light of Israel" (TJ, Shab. 6:9, 8c). His statement that "the Temple will be rebuilt before the reestablishment of the Davidic dynasty" possibly refers to his hopes for the rebuilding of the Temple by the Emperor *Julian the Apostate. Aḥa declared that "The Divine Presence (*Shekhinah*) never departed from the Western Wall of the Temple." An anti-Christian polemical note can be detected in some of his discourses, of which a typical example is: "'There is one that is alone; there is none other...'" (Eccles. 4:8)... this refers to God, as it is written, 'The Lord is our God, the Lord is One,' 'there is none other' – i.e., He has no partner in His world; nor does He have a son or a brother." After the *Musaf* sermon on the Day of Atonement he would announce that whoever had children should go and give them food and drink (TJ, Yoma 6:4, 43d). He furthermore declared that anyone who inflicted excessive corporal punishment on a pupil should be excommunicated (TJ, MK 3:1, 81d). It is related that on the day of his death stars were visible at noontime (TJ, Av. Zar. 3:1, 42c).

[Mordecai Margaliot]

AHAB (Heb. אָחָב; "paternal uncle"), son of *Omri and king of Israel (1 Kings 16:29–22:40). Ahab reigned over the Israelite kingdom in Samaria for 22 years (c. 874–852 B.C.E.).

Foreign Affairs

Ahab continued his father's policy in the cultivation of peaceful and friendly relations with the kingdom of Judah in the south and with that of Phoenicia in the north. The pact with Judah was sealed with the marriage of *Athaliah, who was either Ahab's sister or his daughter, and *Jehoram son of King Jehoshaphat of Judah (11 Kings 8:18; 11 Chron. 18:1). The alliance between the Israelite kingdom and Tyre was also a continuation of the policy initiated by his father Omri. From the economic viewpoint the two states were complementary. The economy of Tyre and Sidon was based on trade and manufacture, whereas Israel owed her wealth to agricultural produce. Thus, Tyre supplied Israel with the products of her industries and with technical skills, chiefly in the spheres of building and skilled craftsmanship (see *Samaria). In return Israel supplied agricultural products (cf. 1 Kings 5:21–25; 9:10–11; Ezek. 27:17).

The triangular alliance among Judah, Israel, and Tyre had important economic implications, since these three states constituted a geographic unit extending from the Mediterranean in the northwest, to the desert and the Red Sea in the southeast. Tyre marketed her produce on the main trade routes, which passed through Israel and Judah, to the Arabian Peninsula and Egypt. Israel and Judah benefited from the levying of customs tolls on the caravans that made their way from the Arabian Peninsula northward to Philistia and Phoenicia, and vice versa. This alliance did not have the power to alleviate the political and military pressure exerted on Israel by Da-

The Battle of Karkar, 853 B.C.E., to which Ahab contributed 2,000 chariots and 10,000 infantry.

damascus, which had already been her most formidable enemy in the time of *Asa. The threat from Damascus had increased greatly in the period of the house of Omri. *Ben-Hadad, king of Damascus, was neither satisfied with the conquest of areas in north Transjordan nor prepared to make do with the bazaars of the Damascus merchants in Samaria, but aimed at imposing his rule on the whole kingdom, intending to make its king one of the several vassal rulers who owed him fealty (1 Kings 20:1–6).

In the biblical account three wars are mentioned between Ahab and the Arameans, although it is not precisely clear when the first two took place. In the first confrontation (20:1–22), Ben-Hadad succeeded, together with 32 vassal kings, in penetrating into the heart of the Israelite kingdom, and even laid siege to Samaria. It is conceivable that the serious economic plight of the kingdom (17:1–16), which was the result of a period of severe drought and scarcity, facilitated Ben-Hadad's speedy penetration into the very heart of Israelite territory. However, he did not succeed in conquering Samaria. Ben-Hadad's insulting demand from the Israelite king (20:3–6) and his arrogant attitude to the people and their king (20:10) caused the unification of the people under Ahab's rule and a surge of national enthusiasm which was shared by the prophets (20:13–14, 28). The defeat inflicted on Ben-Hadad in this confrontation by Ahab warded off the immediate danger but did not remove the long-term threat to Samaria's security. Thus, one year later (20:22, 26), Ben-Hadad once again prepared his troops for battle, assembling them on this occasion at *Aphek. Ahab's second victory drastically altered the power equilibrium between the two states. Ben-Hadad not only restored the Israelite cities which had previously fallen into his possession but even granted Israelite merchants monopolistic trading rights in Damascus (20:34).

According to the biblical evidence, the third and final war was preceded by a three-year period during which there

was no friction between Aram and Israel (22:1). Certain scholars connect this period of calm in the relations between the two states with what is related in the inscription of Shalmaneser III, king of Assyria, concerning his battle at Karkar in Syria in the sixth year of his reign (853 B.C.E.) against an alliance of 12 kings of Syria and Israel. Hadadezer, king of Aram, Irhuleni, king of Hamath, and Ahab, king of Israel (Akk. *Aḥa-ab-bu māṭ Sir-i-la-a-ia*) stood at the head of the alliance. The greater Assyrian threat forced the states of Syria and Israel to lay aside their internal feuds and unite in a political and military alliance capable of combating the danger of Assyrian aggression. Ahab's status among the allies and his part in the war was prominent. He was given third place in the list of allies, immediately after Hadadezer and Irhuleni, and he himself is said to have provided 2,000 chariots, more than half the total number. In addition, Ahab contributed 10,000 infantry to the battle array. Shalmaneser III claimed that he defeated these allies, but the evidence indicates that if the Assyrian king was not defeated, then, at the very least, the battle ended in a stalemate. With the removal of the Assyrian threat from Israel there was a considerable increase in the internal conflicts among the local powers. The Aramean-Israelite conflict caused the revolt of Mesha, king of Moab (see *Mesha Stele), a vassal who paid an annual tribute to the king of Israel. However, it is not certain whether Mesha had already freed himself of Israelite rule in Ahab's lifetime, or whether he succeeded in doing so only after his death (Mesha Stele, 7–8; 11 Kings 1:1; 3:4–5).

Damascus and Samaria did not reach an agreement concerning the disputed area in north Transjordan. Ahab, with the support of King *Jehoshaphat of Judah, set out for Ramoth-Gilead with the intention of restoring it to Israelite rule. Ahab, for some unknown reason, on this occasion chose to disguise himself as a soldier in the ranks. It is hard to believe that this action was prompted merely by fear, since Ahab's behavior, from the moment he was lethally wounded by an arrow to his death later in the evening of the same day, demonstrated his courage and his hope that the battle would not end in defeat for Israel (1 Kings 22). The description of Ahab's death in battle in 1 Kings 22:34–38 is inconsistent with the notice in v. 40 (*ibid.*) that he "slept with his ancestors," which is otherwise used only of peaceful death, and points to originally separate accounts.

Internal Affairs

Ahab's foreign policy brought about vast changes in the economy of the Israelite kingdom, both in helping to strengthen the administration and in increasing the state's military potential. Ahab completed the building of the city Samaria, including the acropolis and the royal palace within it, and surrounded the city with a strong, high wall. In the same way, Ahab saw to the fortification of additional cities, such as Jericho (1 Kings 16:34). Archaeological evidence shows that other cities, such as Hazor, Shechem, and Megiddo, expanded in the reign of Ahab and their outer, defensive walls were reinforced. It would seem

that the “stables” excavated at Megiddo served Ahab’s chariot troops. In the various regions (“provinces”) he appointed army officers (20:14–15) who were responsible for the security of the province and for the farming of taxes. The widespread fortification of cities, beautiful palaces with ivory ornamentation (22:39), the “Samaritan” pottery, easily distinguishable for its high quality craftsmanship and artistic level, and the imported luxury goods, all indicate a period of economic prosperity. Ahab’s chariots, mentioned in the inscription of Shalmaneser III, and also the stables which were excavated at Megiddo, suggest that the kingdom of Israel benefited not only from the Arabian trade conducted along the main arteries of the trade routes which crossed the territories of Judah and Israel but also from the chariot and horse trading between Egypt and Anatolia (cf. 10:28–29). However, the judgment of the author of the Books of Kings on Ahab is very harsh, because of the affair of *Naboth the Jezreelite (1 Kings 21) and because of the establishment of the cult of the Tyrian Baal in Samaria. Ahab coveted the vineyard of Naboth the Jezreelite and offered to buy it or to exchange it for another (21:1–2), but Naboth was unwilling to give up his family inheritance (cf. Lev. 25:14–28). According to the biblical account Ahab accepted Naboth’s refusal, but his wife *Jezebel arranged to have Naboth accused falsely of insulting God and Naboth was tried and executed and his property was confiscated by the king’s treasury. The Naboth episode was symptomatic of the internal frictions under the rule of the house of Omri. It illustrates the ruthless conduct of the ruling class and the frequently cruel eviction of the small farmer from his land.

The wars with Aram and the years of drought which beset the country obviously caused great hardship to the small farmers, who were reduced to debt and were later compelled to give up their land or even to sell their children into slavery for want of funds to clear their obligations (cf. 11 Kings 4:1). On the other hand, economic prosperity brought great wealth to the nobility and to the rich merchants who engaged in barter with the traders from Tyre. The introduction of a chariot force created a new military aristocracy, structurally opposed to the framework of a patriarchal tribal society. By entrusting authority to the army commanders in the “provinces,” Ahab dealt a hard blow to the clan leaders (“the elders of Israel”). Sooner or later an effective opposition was bound to rise against the ruling class, an opposition which would be composed naturally of all those elements which had suffered from and had been embittered by Ahab’s rule. This opposition movement was championed by the prophets, led by the prophet *Elijah from Gilead.

Just as the deception in the Naboth incident was contrived by Jezebel, who represents the Phoenician element in the house of Omri, so the cult of Baal from Tyre penetrated into Samaria as a result of Jezebel’s efforts to implant Phoenician culture in Israel. From reading the biblical account one has the impression that the worship of Baal and Asherah constituted a grave danger to the Israelite cult (1 Kings 16:31–33). A

sanctuary was built to Baal in the center of Samaria. Some 450 priests of Baal and 400 prophets of Asherah enjoyed royal protection and ate at Jezebel’s table (1 Kings 18:19; 11 Kings 10:21). Mt. Carmel, lying on the border between Israel and Phoenicia, was the site of the impressive altar of Baal, whereas the altar of the Lord was destroyed (1 Kings 18:30). The cult of Baal involved the persecution of the faithful followers of God and his prophets (18:4, 13), among whom was Elijah, who symbolized the uncompromising fighter against tyrannical rule and its crimes on the one hand, and the cult of Baal on the other (18:17–41; 19:10–14; 21:17–24). Ahab himself was not a zealous follower of Baal (his children bore Yahwistic names) and did not deny all the ancient Israelite traditions. On the one hand, he believed in what the Israelite prophets said, consulted with them before military campaigns, and even showed submission and repented after the prophet’s rebuke concerning the murder of Naboth (18:46; 20:13–14, 28; 21:27–29; 22:16–18). But, on the other hand, Ahab granted freedom of action and unlimited authority to Jezebel in all administrative spheres. The biblical historiographer, who culled most of his information concerning Ahab’s reign from the biographical literature on the prophets and the miracles they performed (cf. 11 Kings 8:4), condemned Ahab for not showing any resistance to Jezebel’s incitement (1 Kings 21:25), and because, in his opinion, Ahab bore the responsibility for his wife’s deeds. It also must be observed that then, as now, political opposition may be couched in religious terms, and vice versa.

[Bustanay Oded]

In the *Aggadah*

Ahab was one of the three or four kings who have no portion in the world to come (Sanh. 10:2). Over the gates of Samaria, he placed the inscription, “Ahab denies the God of Israel.” Influenced by Jezebel, he became such an enthusiastic idolater that he left no hilltop in Israel without an idol before which he bowed, and he substituted the names of idols for the Divine Name in the Torah. Nevertheless, Ahab possessed some redeeming features. He was generous in support of scholars and revered the Torah (Sanh. 102b). As a reward for the honor he gave to the Torah, written in the 22 letters of the alphabet, Ahab was permitted to reign for 22 years (*ibid.*). According to R. Levi (TJ Ta’an. 4:2, 68a; Gen. R. 98:8), a genealogical table of Jerusalem mentioned that Ben Kovesin (or Bet Koveshin) was one of the descendants of Ahab. Although it is difficult to determine the trustworthiness of this tradition, it does indicate that the attitude of the rabbis toward Ahab was not completely unfavorable.

Ahab was so wealthy that each of his 70 (or 140) children had both summer and winter palaces (Esth. R. 1:12). He is said to have ruled over the whole world and his dominion extended over 252 (or 232; SER 9) kingdoms (Esth. R. 1:5). His merits might have outweighed his sins, had it not been for the killing of Naboth. On his death, 36,000 mourning warriors marched before his bier (BK 17a).

AḤAB (Heb. אַחָב), son of Kolaiah, a false prophet in Babylon. He was among the persons exiled from Judah to Babylonia by Nebuchadnezzar together with King Joiachin. He and Zedekiah son of Maaseiah purported to be prophets and stirred up unrest among the exiles (Jer. 29:21 ff.). Jeremiah asserts that they were also guilty of adultery, a phenomenon not unknown among fanatics in his (23:14) and other ages. Jeremiah predicted that their death by burning at Nebuchadnezzar's command would become a standard by which people would curse (29:22).

[Harold Louis Ginsberg]

AḤA BAR ḤANINA (c. 300 C.E.), Palestinian teacher. He came from the “south,” i.e., Lydda, and when he moved to Galilee, he took with him much of the halakhic tradition which he had acquired there from R. *Joshua b. Levi (Suk. 54a). In Tiberias he studied under R. Assi from whom he received the tradition of R. Johanan (Sanh. 42a) and also received instruction from Abbahu. The Aḥa mentioned in the Talmud without patronymic is often Aḥa b. Ḥanina. R. Naḥman, one of the great Babylonian teachers, relies on Aḥa b. Ḥanina, and often takes his opinion into account (Er. 64a). Despite his Palestinian origin, his teachings are found mostly in the Babylonian Talmud. Some scholars maintain that he visited Babylonia and studied under R. Huna. An aggadist, he particularly inveighed against slander (Ar. 15b). Aḥa attached great importance to the study of the Torah even under difficult economic circumstances such as he himself experienced (Sot. 49a). He emphasized the importance of congregational prayer and of performing good deeds, especially visiting the sick (Ber. 8a), and he said “he who visits the sick removes one-sixtieth of their suffering” (Ber. 8a; Ned. 39b).

[Zvi Kaplan]

AḤA BAR RAV (end fourth century and beginning fifth century C.E.), Babylonian *amora*. He was a pupil of Ravina I. Many of his opinions were reported by his grandson R. Meshariyya, who belonged to the school of the *savoraim. The quotations in the Talmud reveal the wide gamut of halakhic problems in which Aḥa was interested. He disputed with Ravina with regard to ritual slaughter (Ḥul. 33a), about liability for damages (Sanh. 76b), and concerning the right of a firstborn to a double portion of the inheritance, including loans due to the deceased (BB 124b).

BIBLIOGRAPHY: Hyman, Toledot, s.v.

AḤA BEN JACOB (c. 300 C.E.), Babylonian *amora*. He was a disciple of Huna and older contemporary of Abbaye and Rava. He taught in the city of Paphunia (Epiphania), near Pumbedita (Kid. 35a). Aḥa held discussions with R. *Naḥman, and although the latter was unable to answer his questions (cf. BK 40a), he often cites Naḥman as his authority (BB 52a). He also held discussions with Abbaye and Rava (Hor. 6b; Ḥul. 10b) and took issue with Ḥisda (cf. Beḥaz 33b). His differences of opinion with Rava extended also to the *aggadah* (Shab. 87b). Nevertheless, Rava had great respect for him and praised him as “a great man” (BK 40a). On one occasion Aḥa asserted that “Satan and Peninnah had as their true intent the service of God.” At this point, the talmudic story continues, Satan appeared and in gratitude kissed Aḥa's feet (BB 16a). Several other talmudic stories concerning Aḥa also involve Satan (cf. TJ, Shab. 2:3, 5b; Suk. 38a; Men. 62a). A tendency toward mysticism can be detected in several of his statements (Ḥag. 13a; 13b, etc.).

In addition to his reputation as a scholar he was famous for his piety. Miracles are attributed to him and a story is told of his exorcising a demon (Kid. 29b). Miraculous events are also related regarding his death (BB 14a). His son (Kid. 29b) and grandson (Sot. 49a), both named Jacob, were also scholars.

AḤAD HA-AM (Asher Hirsch Ginsberg; 1856–1927), Hebrew essayist, thinker, and leader of *Ḥibbat Zion movement. Aḥad Ha-Am was born in Skvira, Kiev Province in Russia. He received a traditional Jewish education in the home of his father, a Ḥasid who was a wealthy village merchant. He studied Talmud and medieval philosophy with a private teacher, and was deeply influenced by Maimonides' *Guide to the Perplexed*. He read the literature of the Haskalah, and studied Russian, German, French, English, and Latin – independently. After his marriage in 1873, he continued his studies, particularly philosophy and science, at home. He tried several times to enter a university, but family obligations and his unwillingness to meet certain formal requirements disrupted his academic plans and he remained self-taught. As a result of powerful rationalist tendencies he first gave up Ḥasidism and then abandoned all religious faith.

In 1884 he settled in Odessa, an important center of Hebrew literature and Ḥibbat Zion. He remained there, with brief intervals, until 1907, coming into contact with its foremost authors and communal figures. In Odessa he was drawn into public affairs as a member of the Ḥovevei Zion Committee under Leon *Pinsker's leadership. His first important article, *Lo Zeh ha-Derekh* (1889, *The Wrong Way*, 1962), vigorously criticized the Ḥovevei Zion's policy of immediate settlement in Erez Israel and advocated instead educational work as the groundwork for more dedicated and purposeful settlement. Written under the pseudonym Aḥad Ha-Am (“One of the

People”), the controversial essay made its author famous and unintentionally propelled him into intensive literary activity. His articles, most of which were published in **Ha-Meliz*, all dealt with subjects connected with Judaism, the settlement of Erez Israel, and Ḥibbat Zion. At this time, the secret order of *Benei Moshe, which sought to realize the ideas expressed in his first article, was founded with Aḥad Ha-Am as its spiritual leader. The order existed for eight years, during which his literary activity was directly or indirectly connected with its work (*Nissayon she-Lo Hizli'ah*; “An Unsuccessful Attempt”).

In 1891 Aḥad Ha-Am visited Erez Israel and summed up his impressions in *Emet me-Erez Yisrael* (“Truth from Erez Israel”), a strongly critical survey of the economic, social, and spiritual aspects of the Jewish settlements. In 1893 he paid a second visit, and published similar criticisms. To foster the educational work which he considered a prior condition for settlement, he planned an encyclopedia on Jews and Judaism (*Ozar ha-Yahadut*) which he hoped would encourage Jewish studies and revitalize Jewish thought. Although this effort failed, he acquired great influence as manager of the Aḥi'asaf publishing house and editor of the monthly **Ha-Shilo'ah* – posts which he assumed in 1896. *Ha-Shilo'ah*, the most important organ of Zionism and Hebrew literature in Eastern Europe, served a broad Jewish readership, contributed to the development of modern Hebrew literature, and provided Aḥad Ha-Am with a platform for a series of historic controversies. Immediately after the magazine was founded, a debate broke out between himself and “the young men” (M.J. *Berdycewski, O. *Thon, and M. *Ehrenpreis), who sought to encourage the writing of Hebrew literature in all phases of life, and bring about a transformation of values in Jewish culture. Aḥad Ha-Am, however, feared that writing that was not specifically Jewish was premature and might lead to the severance of Jewish cultural continuity. He instead advocated concentration on Jewish problems and Jewish scholarship (*Li-She'elat ha-Sifrut ha-Ivrit*; “On the Question of Hebrew Literature”).

This controversy – characteristic then of the clashing tendencies in Hebrew literature – was followed by the great debate on the political Zionism of *Herzl and *Nordau, in the wake of the First Zionist Congress at Basel. The realistic and pessimistic Aḥad Ha-Am was wary lest an extensive and premature campaign would end in failure and disappointment. He had no faith in the efficacy of Herzlian diplomacy and was troubled by the estrangement of Herzl and Nordau from Jewish values and culture. He accused them of neglecting cultural work which he regarded as paramount, and through which he hoped to prepare the people for Zionism and protect them against cultural sterility and assimilation (*Ha-Ziyyonut ha-Medit*; “Political Zionism”). In 1900, after visiting Erez Israel again, he took part in the Ḥovevei Zion delegation to Baron Edmond de *Rothschild in Paris. His articles severely criticized the Baron's officials in Palestine, their dictatorial attitude, the ensuing degeneration among the settlers, and the neglect of national values in the education system of the

*Alliance Israélite Universelle (*Battei ha-Sefer be-Yafo* (“The Schools in Jaffa”) and *Ha-Yishuv ve-Epitropsav* (“The Yishuv and its Patrons”). The question of Hebrew national education and assimilation in the West also occupied much of his attention at the time.

In 1903 Aḥad Ha-Am retired from the time-consuming editorship of *Ha-Shilo'ah* and took up a post with the Wisotzky tea firm, intending to devote himself to his neglected literary pursuits. However, he continued his public activities. Following the Kishinev pogroms, he encouraged Jewish self-defense and after the Sixth Zionist Congress, intervened vigorously in the debate on the Uganda Plan, which he regarded as a natural consequence of the detachment of political Zionism from Jewish values. At the conclusion of this debate he devoted himself to writing on subjects not directly connected with current events. He apparently hoped to expound his theories in a comprehensive and systematic form, and wrote a number of essays on these lines (*Moshe, Basar va-Ruah, Shilton ha-Sekhel*; Eng. ed. 1962), but failing health and perhaps inner obstacles prevented him from achieving his aim.

In 1907, after a private visit to Erez Israel, he moved to London where he continued his public activity. He played a role in obtaining the *Balfour Declaration, yet was not overwhelmed by the Zionist movement's enthusiasm following the Declaration. Aḥad Ha-Am perceived its limitations, especially in connection with the Arab question (see, on the Arabs, the Introduction to the 1905 edition of *Al Parashat Derakhim*), and evidently had a better appreciation of its true significance than his colleagues. During this period, his literary work was much diminished.

In 1922 he settled in Erez Israel, where he remained until his death. He completed his four-volume collected essays started in 1895, *Al Parashat Derakhim*, dictated several chapters of memoirs, and edited his letters (6 vols. (1923–25), and in a more comprehensive edition, edited by L. Simon and Y. Pogravinsky (1957–60)).

A self-confessed stranger to literature, Aḥad Ha-Am entered it by chance; in time, however, he developed a carefully chiseled, lucid, and precise style, a desire for consistency, and a profound sense of responsibility. His failure to systemize his teachings in a comprehensive work may have been the result of lack of time, or of his reluctance to undertake a great task. His natural skepticism and his lack of confidence, governed to a considerable extent by the limitations of education and character, also led him to recoil in the face of the audacity of the “young authors” and the daring of political Zionism. His estimation of himself, then, as an occasional writer, was correct. His articles, including even those based on an all-embracing world outlook, are basically the responsible reactions to contemporary problems of a pragmatic thinker, deeply devoted to his aims, but considerably influenced in his arguments by varying conditions and circumstances. This was largely the consequence of the fact that Aḥad Ha-Am owed his ideas to incompatible sources: positivism and idealism, but never succeeded in working out systematically the relation between the

two. Nevertheless, they are historically significant and express the self-questioning of the generation that brought about a momentous change of direction in Jewish history. Aḥad Ha-Am's reservations concerning political Zionism, the immediate settlement of Erez Israel, and the Zionist movement's elation regarding the Balfour Declaration were primarily based upon his misgivings about the tendency to haste which is characteristic of every mass messianic awakening. Aḥad Ha-Am feared that Zionism might have the same end as other such movements in Jewish history that led to despair and disastrous disintegration (*Ha-Bokhim*; "They Who Weep"). He may never have believed wholeheartedly in the reality of the Zionist solution, even on the limited scale of his own definition. He clearly saw the political and economic problems and felt that they could not be overcome.

In his very first article *Lo Zeh ha-Derekh* he ascribed the difficulties of Jewish settlement in Erez Israel to the weakness of the national consciousness among the Jews. A great enterprise demands a readiness on the part of the masses to sacrifice their private advantage for the sake of the community, but as a result of dispersion and the distress of exile, the Jews had not grown accustomed to such altruism. When they came to the homeland, they expected rapid economic success and immediately gave way to despair when this was not forthcoming. Hence, he believed, the pace of settlement should be slowed down, and be preceded by intensive education to prepare the people for self-sacrifice and to strengthen its national consciousness. In other words, the decisive test should be postponed indefinitely, on the implied assumption that the work of preparation for the realization of the aim would in itself constitute a partial solution. It would not, indeed, solve what Aḥad Ha-Am defined as "the question of the Jews," namely, the economic, social, and political problems of the Jewish masses. In any case, he felt that Zionism would not solve these problems. On the other hand, it could solve what he defined as "the question of Judaism"; that is, it could create a new type of Jew, proud of his Jewishness and deeply rooted in it, thus ensuring the continuation of the spiritual creativity of Judaism and the Jews' devotion to their people.

These pragmatic considerations are the starting-point for a first theoretical analysis of the question: What is the nature and the source of the national consciousness? How is it weakened and how can it be strengthened? It is characteristic, again, of Aḥad Ha-Am's pragmatic method that, despite his sensitivity to the weak national consciousness among the Jews, he did not study the cultural and historical bases for such national consciousness, but assumed its existence as a natural fact. When the Jews of Germany, France, and Britain asked "Why do we have to remain Jews?" Aḥad Ha-Am replied that the question was not legitimate. Just as a man does not ask why he has to be a particular individual, so the Jew cannot ask why he must remain a Jew; this is a given fact that cannot be changed by volition. On the assumption that nationality is naturally acquired, he builds a characteristic analogy between the "individual ego" and the "national ego," which

represents the nation's collective identity and embraces all individuals throughout the generations. He did not systematically explain this concept, but his intention is suggested in his distinction between a person's attitude toward his people and toward humanity. The latter is "abstract;" a person rationally understands the unity of all men, recognizes his bonds with them, and his moral duty toward them. But this abstraction is not sufficient to arouse his love for the individual as such. The attitude to the nation is "tangible," that is, emotional. It is not derived from thought, but from a natural, biological impulse. Every individual carries from birth a sense of belonging to the group into which he was born; the family, tribe, or nationality, which is the foundation of his existence (*Ha-Adam ba-Ohel*; "Man in his Tent"). The "national ego" is, therefore, anchored in the "individual ego."

This leads to a second analogy, found in many of Aḥad Ha-Am's essays (*Heshbon ha-Nefesh (Summa Summartum, 1962)*). The individual acts, as Darwin taught, in obedience to the "will to live." This is an elemental impulse that needs no justification; it is a given fact. The nation also acts through its own "will to live." However, this means that each individual aspires to exist with his nation and to maintain its existence; in this sense the "national will to live" is an outcome of the individual will to live." Moreover, under natural conditions the individual regards the survival of the nation as taking precedence over his own survival, because the nation is his biological base and will continue to exist even after the death of the individual. Hence, the individual naturally regards himself as an ephemeral cell in an organism that existed before him and will continue to exist after he is gone. In his desire to survive, he wishes to perpetuate his people, and through the same impulse he will be prepared, in time of need, to sacrifice his personal survival for that of the nation.

Aḥad Ha-Am asked how this natural feeling has been weakened among the Jews. How have they arrived at a situation in which they prefer their personal survival to the survival of their people? And he responded that this is a result of the unnatural conditions of exile. On the one hand, it is apparently caused by social, political, and economic distress, factors not deeply probed by Aḥad Ha-Am, no doubt because he did not regard Zionism as a solution for such problems. On the other hand, he analyzed the spiritual situation of Judaism in modern times, which he presented without enquiry or proof, as an independent cause of the weakening of the Jews' national consciousness. This weakening he ascribed to two causes: first, the paralysis of the spiritual creative powers of traditional Judaism in the Diaspora, which had become enslaved to the written word (*Ha-Torah she-ba-Lev*; "Torah of the Heart") and, second, the tremendous force of Europe's vibrant and creative culture. While the educated young Jew admired and identified with European culture, he despised the heritage of his fathers and could not identify with it. If Jews wished to halt this process, they must revive the creative power of traditional Judaism and combat the Jewish intellectual's self-deprecation in the face of European culture, in or-

der to revive his identification with his pride in his heritage (*Ha-Musar ha-Le'ummi*; "National Morality").

Aḥad Ha-Am did not probe why such an effort should be made. He assumed the existence of the national feeling, if only in a weak and distorted form, both in the souls of the zealots of a petrified tradition and also in those of the assimilationists. In denying this national feeling, or its obligations, he felt that assimilationists denied themselves and were living in "slavery in the midst of freedom," as well as in moral and spiritual distress. Only when they returned to a complete life in the midst of their people would they return to themselves (*Avdut be-Tokh Herut*; "Slavery in Freedom," 1962). But what was it that really bound the Jewish intellectual to his heritage? Aḥad Ha-Am tried to discover this bond in the primary impulse of "the national will to existence." This will not only demands loyalty to the heritage of Judaism but directly molds its specific content. Thus, Aḥad Ha-Am thought he could arouse the devotees of tradition to adapt it to the new conditions, as a duty derived from these values themselves, and persuade those Jews who had assimilationist tendencies to recognize the vital bond between themselves and their people's heritage. In general he argued (as in *Avar ve-Atid*; "Past and Future," 1962) that since the "ego" is a combination of past and future, and the suppression of one of these dimensions suppresses the "ego," therefore every Jew, if he is loyal to himself, must keep faith with the past but adapt its values to the needs of survival in the future. He tried to show in detail (in *Mukdam u-Me'uḥar ba-Ḥayyim*; "Precession and Succession in Life") that even the specific values of the Jewish faith, such as monotheism or the messianic vision, are only functions of the national will to existence, for they can be cherished in an existential attachment to the past and concurrently adapted to the thoughtways of an adherent of modern European culture, in an attempt to perpetuate the national existence.

In this way, Aḥad Ha-Am expressed his ambivalent attitude to tradition, an attitude characteristic of the generation that received a traditional education in childhood but discarded tradition upon reaching maturity. He identified himself with the tradition as an inseparable part of his cultural personality; that is, his memories. But he could no longer define his world outlook and his way of life in its terms. He therefore exchanged the belief that certain values were absolute imperatives for an emotional attachment to such values, and sought in them a reflection of his attitude to them. At the same time, Aḥad Ha-Am did not ignore the difficulties caused by this ambivalence. Asserting that certain values are part of the ancient heritage which maintained the nation in the past, he realized, was insufficient to ensure a positive attitude to them in the present. If we seek to guarantee the nation's survival in the future, we must identify ourselves with the values of its heritage for their own sake. Thus, Aḥad Ha-Am sought those values with which the Jewish intellectual could directly identify himself. While in some essays he based the national bond on the "will to live" of the "national ego" in terms drawn from positivism, in others (such as *Moshe* and *Ha-Musar ha-*

Le'ummi), he based the national bond with Judaism on a specific ideal in terms drawn from idealist philosophy. The ideal of Judaism is the ideal of absolute justice, which is "the quest for truth in action," and which was revealed in prophecy. The inner content of the Jewish faith is pure morality, which Judaism bequeathed to European culture and to which it remained faithful in all its historical metamorphoses.

The contradiction between this concept and the previous one is obvious, and they have only one common denominator, the pragmatic considerations which underlie both. Aḥad Ha-Am's purpose in these essays was not to define the essence of Judaism in general, but to seek those values with which the Jewish intellectual could identify and of which he could be proud. He was therefore able, as it were, to go back on his own statements and in several essays (such as *Al Shetei ha-Se'ipim*; "Two Domains") declare that the essence of Judaism is absolute monotheism, and not undiluted morality. He adopted this attitude during his dispute with Liberal Judaism, which displayed tendencies to assimilation on the assumption of an identity between the ethical ideal of Judaism and that of modern European humanism. To the extent that this identity did not lead to the preservation of the national uniqueness but blurred its identity, he repudiated it and made a new start in his search for the characteristic values of Judaism.

The same degree of ambivalence is revealed in Aḥad Ha-Am's attitude to the *halakhah*. For pragmatic reasons he found it convenient not to deal with this question, but his general statements about the petrified tradition aroused strong reactions even from rabbis who were favorable to *Hibbat Zion*. He therefore had to consider the question of *halakhah* in the hope of maintaining a *modus vivendi* between the religious and secular wings of Judaism (*Divrei Shalom*; "Words of Peace"). This *modus vivendi* was based, of course, on the assumption that both sides were concerned for the continued existence of the Jewish people as a people with a distinct spiritual identity, and regarded the return to Zion as the solution. On this basis the debate on the content of Judaism could be postponed to the distant future. But it was clear that the secular and religious wings had certain expectations of each other. Aḥad Ha-Am's problem was to formulate these expectations without immediately destroying the basis common to both wings. Hence, he rejected Reform by an unqualified acceptance of the Orthodox view, without examining the arguments of the reformers on their merits, arguing that the words of the Torah could not be taken as divine commands and then corrected according to human understanding; the correction undermined the fundamental assumption of religion and thus made itself superfluous. On the other hand, however, Aḥad Ha-Am could not abandon his demand for changes in the *halakhah* in order to adapt it to the way of life of the modern Jew; nor could he conceal the fact that changes in the *halakhah* had indeed taken place in the past. He found the solution in a historical formula: religion is subject not to reform but to development. In other words those who introduce changes in it do not do so deliberately, as reformers. Instead, after their world view has

changed and under the influence of contemporary conditions, they interpret tradition as if they had planned to uphold those things they consider true and obligatory. Aḥad Ha-Am therefore believed that the influence of life in Erez Israel would lead to the development of religion, and there would no longer be any need to directly demand changes in the *halakhah*.

In their new framework Jewish social and cultural life would be enriched and broadened and the very existence of the Jews as members of one nation would not be endangered.

There were several foundations for Aḥad Ha-Am's version of practical Zionism: his distrust of an impetuous and premature attempt to carry out a great enterprise; his disbelief in the reality of the Zionist program as a solution to the Jewish problem; and the aspiration to solve the problem of Judaism by reviving its unfettered spiritual creativity and strengthening the Jews' identification with their reinvigorated heritage (*Dr. Pinsker u-Maḥbarto*; "Pinsker and his Brochure" in: *Federation of American Zionists*, 1911, and *Teḥiyat ha-Ru'ah*; "The Spiritual Revival," 1962). He did not present the vision of the ingathering of the exiles in Erez Israel even as an ultimate long-term goal. Most of the Jewish people would continue to exist in exile, on the assumption that its social and economic situation would ultimately improve and it would achieve equality of civic rights. In any case, the solution to the "question of the Jews" should be sought, in his view, in the lands of the Diaspora. Those who were troubled by "the question of Judaism" would settle in Erez Israel, where they would maintain a Jewish State which would serve as a "spiritual center" for the Diaspora. Its independent society, which would be entirely Jewish, would constitute a focus of emotional identification with Judaism, and the spiritual values that would be created in Erez Israel would nourish all parts of the people and ensure its continued existence and unity. After the Balfour Declaration, Aḥad Ha-Am presented another argument for his limited program; consideration for the national rights of the Palestine Arabs.

Aḥad Ha-Am's works not only influenced his disciples and admirers, but also prompted debates and criticism which fertilized modern Jewish thought to the extent that every stream in Zionism has been influenced by the challenge of his writings. After the establishment of the State of Israel, his doctrines, both political and theoretical, were submitted to renewed criticism, but his essays are still studied and are an influential factor in Jewish thought both in the Diaspora and Israel. One of the most influential authors and thinkers of his generation, his articles and essays constitute one of the major achievements of modern Hebrew literature.

AḤAI (Aḥa; late fifth and early sixth century), Babylonian scholar of the period of transition between the *amoraim* and the *savoraim*, at the time of the final redaction of the Talmud. Since most of his statements aim at resolving problems or clarifying matters in their more or less final form, they are generally prefaced by such distinctive formulae as פריך ("he raised an objection") and פשית ("he explained"). He is mentioned together with other *savoraim* (Ḥul. 59b; Ta'an. 18b). Sages of Erez Israel wrote to their colleagues in Babylonia, "Give heed to the opinion of R. Aḥai, for he enlightens the eyes of the Diaspora" (Ḥul., loc. cit.). *The Epistle of *Sherira Gaon* (ed. Lewin, 38) refers to three *savoraim* named Aḥai or Aḥa: Aḥa of Bei Ḥattim (a place near Nehardea), Aḥai b. Huna who died in 505 C.E., and Aḥa the son of Rabbah b. Abbuha who died on the Day of Atonement in 510 C.E. Aḥai without a cognomen is probably Aḥai b. Huna.

[Alter Hilewitz]

AḤAI BEN JOSIAH (end of second century), Babylonian halakhist at the close of the tannaitic period. His father Josiah was a pupil of R. Ishmael. Aḥai's statements are quoted several times in the halakhic Midrashim of the school of Ishmael, the *Mekhilta* on Exodus and the *Sifre* on Numbers. Toward the end of Judah ha-Nasi's life Aḥai placed the inhabitants of a certain town in Babylonia under the ban because they had desecrated the Sabbath (Kid. 72a). Among Aḥai's adages are "He who gazes at a woman is bound to come to sin, and he who looks even at a woman's heel will have unworthy children" (Ned. 20a); "He who buys grain in the market is like an infant whose mother has died and who is taken from one wet nurse to another, but is never satisfied... But he who eats of his own produce is like an infant raised at his mother's breast" (ARN¹, 31). He applied the verse "Thou shalt not deliver unto his master a bondman" (Deut. 23:16) to a slave who escaped from another land to Erez Israel (Git. 45a). It is assumed that he established the yeshivah in Ḥuzal in Babylonia, known after his death as "the school of Aḥai," which was famous in the early third century and became the nucleus of Rav's yeshivah (TJ, Av. Zar. 4:1, 43d; Ma'as. 4:6, 51c).

[Eliezer Margaliot]

AḤA (Aḥai) OF SHABḤA (680–752), scholar of the Pumbedita yeshivah in the geonic period and author of *She'iltot* ("Questions"). He came from ShabḤa, which is adjacent to Basra. When a vacancy occurred in the geonate of Pumbedita a few years before the death of Aḥa, the exilarch Solomon b. Ḥasdaï appointed Natronai Kahana b. Emunah of Baghdad, a pupil of Aḥa, as *gaon* (748). Incensed at this slight, Aḥa left Babylonia (c. 750) and settled in Palestine. His departure deeply affected his contemporaries and many followed him.

By the next generation a considerable number of Babylonian Jews were settled in Palestine. In many places they even built separate synagogues following the Babylonian ritual. The *She'iltot* (always so called, and not by the more correct name *She'elata*), was the first book written after the close of the Talmud to be attributed to its author. Much of its subject matter is very old, even antedating the final redaction of the Talmud. There are statements in the *She'iltot* that do not appear in the Talmud or which are there in a different version. It also contains "reversed discussions" (i.e., where the statements of the disputants are reversed, contradictory, or different from those in the standard texts). Other portions belong to the period of the *savoraim* and of the first *geonim*. A number of decisions cited by the *geonim* as the tradition of "many generations" or which refer to "earliest authorities" are verbally reproduced in the *She'iltot*. Even the legal terminology is identical with that of the legal decisions of the *savoraim* as transmitted by the *geonim*. Nevertheless, apart from his quotation of the decisions of other authorities, it can be assumed that some of the halakhic decisions are his own.

Both in content and in form, *She'iltot* is unique in Jewish literature. It is unlike midrashic literature since its halakhic elements exceed its aggadic. However, it has some similarity to *Midrash Yelammedenu* in that both deal with *halakhah* derived from Scripture. It is also without parallel in the literature of the Codes, being arranged neither according to subject matter nor according to the sequence of the sections in which the Pentateuch is divided. Aḥa's method is to connect decisions of the Oral Law with the Written Law. The connections are often original and even surprising, though sometimes unconvincing. Often he bases a legal decision not upon its halakhic source in the Torah but on its narrative portion. The laws of theft and robbery, for example, are based on Genesis 6:13: "And the earth is filled of violence because of them." For the laws of the study of the Torah he finds a passage in the section of *Lekh Lekha*. In the section *Va-Yiggash*, which tells of the famine in Egypt, the author launches a remarkable attack on hoarders and profiteers: "And he who acts thus shall obtain no forgiveness." *She'iltot* thus concerns itself not only with the ritual commandments but also with the "duties of the heart," the ethical obligations required of man. Time and again he denounces unethical conduct and praises high moral standards; some of the *she'iltot* are elevating ethical discourses. The book is written in Aramaic; had it been translated into good Hebrew, it would doubtless have enjoyed wide popularity. Various scholars agree that the *She'iltot* consists of sermons delivered during ordinary Sabbaths as well as on the *Shabbta de-Rigla* (the first Sabbath of the academic term, a month before Sukkot) and during the Sabbaths of the **kallah* months. It was almost certainly the custom during the geonic era to give the *she'ilta* form of sermon in the synagogue of the yeshivah. Some assert that both types of lecture (the *metivta* and the *perek*) delivered at the Babylonian academies remained in the archives of the academy and only during the geonic period were they copied and edited. (See **Academies in Babylonia*

and Palestine.) The chapters included in *She'iltot* are those on which discourses were delivered by the *amoraim* before the close of the Talmud and during the early geonic period. According to this opinion the *She'iltot* contain such discourses which were assembled and edited by Aḥa (Mirsky).

Each *she'ilta* is divided into four parts. The first serves as a general introduction to the subject, speaks of the value and significance of the particular commandments, and serves as a preparation for the question that is to be discussed. The second part is always introduced with the words: "but it is necessary that you learn," or in an abridged form: "but it is necessary," followed by the question. Then comes the third part, the homiletical part, which begins: "Praised be the Lord, who has given us the Torah and the commandments through our teacher Moses to instruct the people of Israel," after which the preacher proceeds from subject to subject. The fourth part is introduced by the formula: "With respect to the question I have set before you..." and then answers the question propounded in the second part. Some assume that the lecture was called "*she'ilta*" because its most important part is the question and its solution. However, not all the *she'iltot* have come down in their complete form: in most of them the third part is missing. One *she'ilta* is to be found in the Talmud itself (Shab. 30a) and it appears that this pattern of public sermon is ancient.

Many scholars have dealt with the question of whether Aḥa wrote the book of *She'iltot* while he was still in Babylonia or after his immigration to Palestine. Some are of the opinion that Aḥa began it in Babylonia and completed it in Palestine. There are indications which point to its having been written in both countries. According to Weiss, Graetz, and Poznanski, the *She'iltot* was compiled in Babylonia. L. Ginzberg, basing himself upon linguistic evidence, thought that the book was compiled in Palestine. On the other hand, J.N. Epstein concluded that its language is the Aramaic of the Talmud with the special nuances of the Aramaic of the *geonim*, and that therefore it was probably compiled in Babylonia. One problem still inadequately investigated is the extent to which the *She'iltot* makes use of the Jerusalem Talmud. Some scholars (Ratner and Reifmann) maintain that this is a major source. Poznanski, on the other hand, points to only seven passages definitely taken from the Jerusalem Talmud. Ginzberg and Kaminka refute much of the evidence supporting the view that the *She'iltot* made use of the Jerusalem Talmud.

The *She'iltot* has come down in a fragmentary and defective form. In its extant state it contains 171 *she'iltot*, some repeated twice or even three times, some fragmentary. Tchernowitz has endeavored to explain the unusual repetitions on the assumption that the *She'iltot* was directed against the Karaites who were making considerable progress at that time. Aḥa's sermons deal particularly with those commandments which the Karaites disregarded, particularly those of rabbinic provenance. In various manuscripts, especially in the Cairo *Genizah*, there are *she'iltot* and parts of *she'iltot* not to be found in the extant editions. Excerpts of *she'iltot* are to be found also in the *Halakhot Gedolot* and in several other sources. Some

scholars think that *Halakhot Gedolot* was composed before the *She'iltot*, whereas others maintain the opposite view, holding that *Halakhot Gedolot* drew upon the *She'iltot*. *Halakhot Pesukot* is also considered to be later than the *She'iltot*. It seems probable that after the publication of *She'iltot*, the *geonim* continued to preach *she'iltot* orally and that these formed the basis of the *Halakhot Pesukot* which were later compiled by the disciples of Yehudai Gaon. Special mention should be made of the book *Ve-Hizhir*, apparently written in Palestine in the tenth century, which contains a large number of *she'iltot*. A whole literature of *she'iltot* then grew up which used Aḥa's book as a prototype. The *rishonim* also made great use of the *She'iltot*.

She'iltot was first published in Venice in 1566. Other editions worthy of mention are (1) *She'iltot* with the commentaries *She'ilat Shalom* and *Rishon le-Ziyyon*, by Isaiah Berlin Pick (1786); (2) with the commentary *To'afot Re'em* of Isaac Pardo (1811); (3) with *Ha'amek She'elah* of Naphtali Zevi Judah *Berlin, considered the most complete commentary (1861–67; 2nd edition, with additions and supplements, 1947–52); (4) with the commentary *Rekaḥ Mordekhai* of Eliezer Mordecai Keneg (1940); (5) a new edition with a voluminous introduction, commentary, and *variae lectiones*, published by S.K. Mirsky (*Genesis and Exodus*, in 3 vols., 1959–63). Mirsky mentions 11 manuscripts of *She'iltot* and 4 commentaries which have never been published.

[Simha Assaf / Yehoshua Horowitz]

AHARON, EZRA (1903–1995), composer, 'ud player, and singer. Aharon was born in Baghdad, where he acquired a sound reputation as a versatile musician and a leading virtuoso and composer. The His Master's Voice and Baidaphon companies recorded many of his compositions. He was selected by the Iraqi authorities to head a group of musicians to represent his country at the First International Congress of Arab Music held in Cairo in 1932. The delegation comprised six Jewish instrumentalists plus a vocalist who was a Muslim. The participants in the Congress, including the composers Bartok and Hindemith and the musicologists Robert *Lachmann, Curt *Sachs, and H.G. Farmer, chose Aharon as the best musician present. He came to Palestine in 1934 and settled in Jerusalem, where a year later a group of notables, including Professor David *Yellin, future second president of Israel Izhak *Ben-Zvi, the renowned educator David Avisar, his great supporter Robert Lachmann, and others, established in his honor a special society for the promotion of Israeli Oriental song. When the first radio station was established in Jerusalem in

1936 by the British Mandatory government, he was selected by composer Karl *Salomon to head a special section of Jewish Oriental music. After the establishment of the state, Aharon founded and directed an Oriental ensemble at *Kol Israel*. He composed 270 Hebrew songs including synagogal *piyyutim*, melodies set to poems of famous medieval and contemporary Hebrew poets, such as *Bialik, *Tchernichowsky, *Shimoni, and Sh. *Shalom, as well as about 200 instrumental and vocal Arabic pieces, which represent a landmark in the history of Palestinian and Judeo-Arabic music. In the performance of his Hebrew compositions he appeared together with Western and Oriental musicians; Arabs and Jewish Oriental musicians played and sang his Arabic compositions. Written scores exist for a great portion of his works.

AHARONI, ISRAEL (1882–1946), Erez Israel naturalist and zoologist. Aharoni was born in Vidzy, near Vilna, and studied at the University of Prague. In 1904 he settled in Jerusalem, where he taught French and German in a Sephardi *talmud torah*, and later, Hebrew in the newly founded *Bezalel School of Art. Aharoni's interest in zoology led him to begin a natural history museum and he was among the first settlers in Erez Israel to study the local fauna. His zoological explorations extended over all of Palestine, parts of Syria, and the Arabian Peninsula. In 1924 Aharoni became a staff member of the new Institute of Natural History of Palestine. In the following years he wrote extensively on local birds and made a survey of the mammals of Palestine. Over 30 new species of mammals, birds, and insects were named in his honor. In 1930 he made an expedition to Syria, from which he returned with a pregnant female golden hamster. From the progeny of this single animal a colony was established at the Hebrew University of Jerusalem. The golden hamster proved to be a useful subject for biological and medical research and thousands of hamsters, all offspring of Aharoni's original animal, were provided to laboratories all over the world. Aharoni was custodian of the Zoological Museum and taught at the Hebrew University. He influenced the development of biology in Palestine through his pioneering fieldwork, his university teaching, and his textbook, *Torat ha-Hai* ("Animal Life," 1930).

[Mordecai L. Gabriel]

AHARONI, YOĤANAN (1919–1976), Israeli archaeologist. Aharoni, born in Germany, settled in Palestine in 1933 and was a member of kibbutz Allonim from 1938 to 1947. From 1948 to 1950 he served in the Israeli Army. He was inspector in Galilee for the Department of Antiquities from 1950 to 1955. An archaeological survey conducted by him in Upper Galilee shed new light on the early Israelite settlement during the Early Iron Age. Among his activities during that period were the first explorations in the caves of the Judean Desert, a pre-

liminary archaeological survey of *Masada, and excavations at Kedesh in Galilee and Tel Ḥarashim near Peki'in in Upper Galilee. Aharoni served for four seasons as a staff archaeologist on the *Hazor expedition. He became a research fellow at the Hebrew University and rose to the rank of associate professor (1966). At *Ramat Raḥel he uncovered the remains of an impressive Judean citadel. Aharoni also participated in two seasons of intensive exploration of the caves in the Judean Desert (1960–61). From 1963 to 1967 he conducted five seasons of excavation on the Iron Age fortress at Tel *Arad. Subsequently, Aharoni investigated the small temple at *Lachish for comparisons with that at Arad and found there an older Israelite shrine. In 1968 he became chairman of the department of ancient Near Eastern studies at Tel Aviv University and director of the Institute for Archaeology. In 1969 he commenced the excavation of Tel Be'er Sheva (Tell el-Sabi), the site of the biblical *Beer-Sheba. Besides his numerous articles in the field of historical geography, he wrote *Hitnaḥalut Shivtei Yisrael ba-Galil ha-Elyon* (1967) on the settlement of Israelite tribes in Upper Galilee, and the comprehensive study *Erez Yisrael bi-Tekufat ha-Mikra* (1962; *The Land of the Bible*, 1967). His Hebrew work, *Atlas Karta bi-Tekufat ha-Mikra* (Jerusalem, 1964), was combined with a complementary work by M. Avi-Yonah to form *The Macmillan Bible Atlas* (New York, 1968). Aharoni was joint editor of the *Encyclopaedia Judaica's* department on the historical geography of Erez Israel.

[Anson Rainey]

AḤARONIM (Heb. אַחֲרוֹנִים; lit. “the later” [authorities]), a term used to designate the later rabbinic authorities, in contrast to the **rishonim*, the earlier authorities. Although scholars differ as to the exact chronological dividing line between the two, some antedating it to as early as the period of the *tosafists (12–13th century) and others to the appearance of the *Sha'arei Dura* of Isaac ben Meir *Dueren (beginning of 14th century), the general consensus of opinion is that the period of the *rishonim* ends with the death of Israel *Isserlein (1460) and that of the *aḥaronim* begins with the appearance of the *Shulḥan Arukh of Joseph *Caro with the additions of Moses *Isserles (1525–1572). Caro in his monumental work *Beit Yosef*, of which the Shulḥan Arukh is a codified digest, had taken into consideration the works of all his predecessors, but had tended to ignore the decisions of the Ashkenazi *posekim* of Germany and Poland since the appearance of the *Arba'ah Turim* of *Jacob b. Asher, and this omission was filled by Isserles. It is therefore a fitting point at which to commence the later period.

As a result of the introduction of the method of **pilpul* by R. Jacob *Pollack (d. 1530) and the increasing study of Torah in Poland, the desire to discover new interpretations and to raise problems in the Talmud and resolve them by means of *pilpul* became particularly vigorous in that country, and the second half of the 16th century saw the appearance of some of the greatest *aḥaronim* and commentators of the Talmud and gave a powerful impetus to the study of Torah in Poland.

R. Solomon b. Jehiel *Luria (the Maharshah; 1510–1573) opposed the *Beit Yosef* and the Shulḥan Arukh on the same grounds as Isserles. Relying on the Talmud itself as the only source for halakhic ruling he established in each case the *halakhah* of the Talmud and after comparing the different views of all the *posekim* decided the *halakhah* only as it reflected the statement of the Talmud itself. In his *Yam shel Shelomo*, he took care to determine the correct version of the talmudic text; his *Ḥokhmat Shelomo* comprises annotations on the Talmud, Rashi, and the *tosafot*. To the same era belong R. Abraham b. Moses di *Boton (1545–1588), author of the *Lehem Mishneh*, and R. Bezalel *Ashkenazi (d. 1592), author of the *Shitah Mekubbezet*, covering most tractates of the Talmud and giving the explanations of the *rishonim* to the topics of the Talmud. He also compiled responsa. Others are R. Solomon b. Abraham ha-Kohen (the Maharshakh; d. 1602), one of the greatest rabbis of Turkey and author of four volumes of responsa, to the first of which is appended explanations of and novellae to Maimonides' *Yad*; R. Jacob b. Abraham *Castro (the Maharikas; 1525–1610), author of *Erekh Lehem* on the four parts of the Shulḥan Arukh, regarded as the basis for halakhic decision by the rabbis of Erez Israel and Egypt; and R. Elijah b. *Ḥayyim (Maharanah; 1530–1610), author of *Teshuvot ha-Ranah*.

17th Century

The opposition to the Shulḥan Arukh was continued by R. Mordecai *Jaffe (1530–1612), author of the *Levushim* (issued 1590–1599), which summarizes the *halakhah*, explaining the reasons, sources, and grounds for deciding between the divergent views of different *posekim*, but taking a stand against the prolixity of the *Beit Yosef* on the one hand and the exceptional brevity of the Shulḥan Arukh on the other. He, too, relies in the main upon the views of the Ashkenazi and Polish scholars, and in this respect also opposes Caro's tendency to decide in favor of the view of the Sephardim; R. Joseph b. Moses *Trani (Maharit; 1568–1639), who compiled commentaries to most tractates of the Talmud, to Maimonides' *Yad*, and to the *Turim*; also R. Joshua *Falk b. Alexander ha-Kohen (the Sema; d. 1614), author of the *Derishah u-Perishah* and the *Sefer Me'irat Einayim* (Sema), endeavored to explain the *Tur* and the Shulḥan Arukh at length and to supplement those laws whose sources and reasons are not given in the Shulḥan Arukh, attempting at the same time to compromise between Caro and Isserles. The method of R. Meir b. Gedaliah *Lublin (Maharam of Lublin; 1558–1616) was to penetrate deeply into the meaning of the Talmud and the *tosafot*, the final decision being based on examination of the talmudic sources and the early *posekim*, which caused him to oppose basing halakhic decisions upon the Shulḥan Arukh. His best-known book, *Me'ir Einei Ḥakhamim*, consists of novellae and interpretations of the Talmud. R. Benjamin Aaron *Slonik (d. 1620), a distinguished pupil of Isserles and the colleague of the “Sema,” the “Levush,” and Meir of Lublin, compiled the responsa *Masat Binyamin* (1633) and was regarded in his generation as an

outstanding *posek*. Another contemporary of the Maharam, Samuel Eliezer b. Judah *Edels (the Maharsha; 1555–1631), penetrated deeply into the plain meaning of the Talmud and the *tosafot*. His opposition to the Shulḥan Arukh is not so obvious, since he does not deal with halakhic rulings. Despite this he complains about those “who give halakhic rulings from the Shulḥan Arukh without knowing the reason for each matter.” He compiled *Hiddushei Halakhot* (2 pts.; 1612–1621) and *Hiddushei Aggadot* (2 pts.; 1627–1631). This latter work makes the Maharsha’s commentaries different from most others. Maharsha endeavors to understand the often cryptic *aggadot* through allegorical and symbolic interpretations. The *Shenei Luḥot ha-Berit* of R. Isaiah b. Abraham ha-Levi *Horowitz (the Shelah; 1560–1632) contains laws following the order of the festivals, an enumeration of the 613 commandments (see *Commandments, the 613), and their reasons. *Halakhah* is only a small portion of the *Shenei Luḥot ha-Berit*. This encyclopedic work includes philosophy, Kabbalah, biblical and talmudic interpretations as well as ethics (*musar*) and discussions of talmudic methodology. His son, R. Shabbetai Sheftel (1590–1660), was the author of the *Sefer Vavei ha-Ammudim*, appended to his father’s work. R. Nathan Nata b. Solomon *Spira (1585–1633) published novellae to the *Hilkhot ha-Rif* entitled *Hiddushei Anshei Shem* (1720). R. Meir b. Jacob ha-Kohen *Schiff (Maharam Schiff; 1608–1644) compiled novellae to the whole Talmud and the *Turim*, of which only those to five tractates were published under the title *Hiddushei Halakhot* (1741; 1747). R. Joel b. Samuel *Sirkes (the Baḥ; d. 1640) was aware, as was the Sema, that the *Beit Yosef* could not explain the *Tur* in a sufficiently satisfactory manner because its main purpose was to arrive at halakhic decisions and, in consequence, in his *Bayit Ḥadash* wrote “an extensive commentary on the *Tur* having at the same time the aim of restoring it to its former authority and glory in *halakhah* in order thereby to diminish” the value of the Shulḥan Arukh. One of the greatest scholars of Salonika, a great *posek* and one of the greatest responders, was R. *Ḥayyim Shabbetai (Maharḥash; 1557–1647). R. *Joshua Hoeschel b. Joseph of Cracow (d. 1648) endeavored in his *Meginnei Shelomo* (1715) to defend the views of Rashi against the criticism of the *tosafists*. A colleague of the Baḥ, R. Eliezer b. Samuel Ḥasid Ashkenazi, who was one of the rabbis of the Council of Four Lands, wrote halakhic *pilpulim* into his *Dammesek Eliezer* (1646), which were utilized by Ḥayyim *Benveniste in his *Keneset ha-Gedolah*. R. Yom Tov Lipmann *Heller (1579–1654), author of the *Tosafot Yom Tov*, also opposed the Shulḥan Arukh, his aim being to make the Mishnah the basis for authoritative *halakhah*, taking into consideration the early and later commentators and *posekim*. He compiled an extensive commentary in two parts on the Rosh: (1) *Ma’adanei Melekh* and (2) *Leḥem Ḥamudot*. R. Moses b. Isaac Judah *Lima (d. 1658) made a summary in his commentary *Ḥelkat Meḥokek* on the Shulḥan Arukh, *Even ha-Ezer*, which is based upon a comparison of talmudic sources and the views of the *rishonim* with the Shulḥan Arukh, while emphasizing the method of *pilpul*. There are extant from R. *Joshua Hoeschel b. Jacob, known popularly as the “Rebbi Reb Hoeschel” (d. 1663), halakhic novellae to tractate *Bava Kamma* and novellae on the *Sefer Mitzvot Gadol*. Two commentators on the Shulḥan Arukh, known from their works as the Taz and the Shakh, through whom the Shulḥan Arukh attained its most developed state and widespread acceptance, were active during the period of the *Chmielnicki pogroms of 1648: R. *David b. Samuel ha-Levi (the Taz; 1586–1667) intended through his commentary *Turei Zahav* to restore authoritative decision to its proper place, arriving at the definitive *halakhah* through comparing the different views in order to arrive at a final decision, yet in his eyes the Shulḥan Arukh was the decisive halakhic ruling. In 1978, C. Chavel published a definitive edition of the Taz’s novellae on Rashi’s commentary on the Pentateuch. R. *Shabbetai b. Meir ha-Kohen (Shakh; 1621–1663) in his *Siftei Kohen* explains the Shulḥan Arukh and decides between its author and Isserles, striving at the same time to harmonize their views. In the *Siftei Kohen* on the *Hoshen Mishpat* he summarizes the views of all the *rishonim* and *aḥaronim*, trenchantly criticizing and negating the existing views and laying down new legal principles. R. Menahem Mendel b. Abraham *Krochmal (1600–1661), a disciple of both the Baḥ and the Taz, is the author of the noted responsa *Zemah Zedek* (1675) on the four parts of the Shulḥan Arukh.

In the generation of the Shakh there was in Poland-Lithuania, particularly in Vilna, a concentration of outstanding Torah scholars. R. *Hillel b. Naphtali Zevi (1615–1690) compiled the novellae *Beit Hillel* (1691) on the Shulḥan Arukh, *Yoreh De’ah* and *Even ha-Ezer*. R. Moses b. Naphtali Hirsch *Rivkes of Vilna (second half of the 17th century) compiled the *Be’er ha-Golah* (1662), giving the talmudic sources of the laws of the Shulḥan Arukh, in Maimonides’ *Yad*, and in the works of the *rishonim*. R. *Ephraim b. Jacob ha-Kohen (1616–1678) wrote the well-known responsa *Sha’ar Efrayim*. R. Aaron Samuel b. Israel *Koidonover (Maharshak; 1624–1676) wrote the novellae *Birkat ha-Zevaḥ* (1669). R. *Samuel b. Uri Shraga Phoebus (mid 17th cen.) was the author of the commentary *Beit Shemu’el* (1689) to the *Even ha-Ezer*. R. Ḥayyim b. Israel Benveniste (1603–1673) in his *Keneset ha-Gedolah* gave a digest of the particulars of all new decisions cited in the responsa of outstanding *aḥaronim* from the time of Joseph Caro to his own time. This work, the first after the Shulḥan Arukh to assemble an anthology of responsa, was accepted in Sephardi and Ashkenazi rabbinical circles as an authoritative work that could be relied upon for practical rulings. Of other responsa anthologies mention must be made of the *Panim Ḥadashot* (1651) of Isaac b. Abraham Ḥayyim *Jesurun (d. 1655) and the *Leket ha-Kemaḥ* of R. Moses *Ḥagiz (1672–1751). R. Aaron *Alfandari (1690?–1774) in his *Yad Aharon* supplements the *Keneset ha-Gedolah* from works not in the possession of Benveniste. He also wrote *Mirkevet ha-Mishneh*, novellae to Maimonides’ *Yad*.

The following authoritative commentaries to the *Orah Ḥayyim* should be noted: the *Olat ha-Tamid* (1681) of Samuel b. Joseph of Cracow, and especially the *Magen Abraham* (1692)

of Abraham Abele b. Ḥayyim ha-Levi *Gombiner (1637–1683), who endeavored to arrive at a compromise between Caro's rulings and the amendments of Isserles, and in whose eyes the Shulḥan Arukh was the final authority; Gershon b. Isaac *Ashkenazi (Ulif; d. 1693), compiler of the responsa *Avodat ha-Gershuni* (1699) and *Ḥiddushei ha-Gershuni* (1710), notes and novellae to the Shulḥan Arukh, is known for his strictness in laws of marriage; Jair Ḥayyim Bacharach (1638–1701), whose reputation rests on his responsa *Havvat Ya'ir* (1699) and was opposed to *pilpul*; Aryeh Leib *Gunzberg (1640–1718), author of the responsa *Sha'agat Aryeh*, *Sha'agat Aryeh ha-Ḥadashot*, and novellae to tractates of the Talmud. Among the rabbis of Jerusalem in that generation were: Moses b. Jonathan *Galante (1620–1689), author of *Zevah ha-Shelamim* (1698) and *Korban Ḥagigah* (1709); Moses b. Solomon ibn *Ḥabib (1654–1696), author of novellae to tractates of the Talmud and of *Get Pashut* (1719). *Peri Ḥadash* (1692), a commentary compiled by *Hezekiah b. David Da Silva (1659–1698), added to the Shulḥan Arukh and contains pungent criticism of the *posekim*, including Caro himself. Abraham b. Saul *Broda (1650–1717) wrote novellae on talmudic tractates entitled *Eshel Avraham* and *Toledot Avraham*. Elijah b. Benjamin Wolf *Shapira (1660–1712) was the author of *Eliyahu Rabbah*, novellae on the *Sefer ha-Levush*. Zevi Hirsch b. Jacob *Ashkenazi (Ḥakham Zevi; 1600–1718) published in 1712 his responsa, novellae, and comments. His son, Jacob *Emden (1698–1776), compiled *Mor u-Kezi'ah*, comments and novellae to the *Orah Ḥayyim*. Jacob Emden also wrote an extensive commentary on the prayer book as well as various philosophical works. Samuel b. Joseph Shattin ha-Kohen (Maharshashakh; d. 1719), an outstanding German scholar, published *Kos ha-Yeshu'ot* (1711), novellae to the tractates of the order *Nezikin*. Judah *Rosanes (d. 1727), one of the greatest Turkish scholars, achieved fame with his *Mishneh la-Melekh* (1731), novellae on the *Yad*, and *Al Parashat Derakhim* (1728). Jacob b. Joseph *Reischer (d. 1733) compiled the commentaries *Minḥat Ya'akov*, *Shevut Ya'akov*, and *Hok le-Ya'akov* on the Shulḥan Arukh. Most of the halakhic works, novellae, and responsa of David *Oppenheim (1664–1736), famed for his large library, remain in manuscript. Alexander Sender b. Ephraim Zalman *Schor (d. 1737) was the author of *Simlah Ḥadashah* (1733), rulings in the laws of *sheḥitah* and *terefot* together with a pilpulistic commentary *Tevu'ot Shor* that became an authoritative source on matters pertaining to *sheḥitah*. Elazar Rokeaḥ of Brody (d. 1741) compiled *Arba Turei Even* (1789), novellae to the *Yad* and the *Tur*. A contemporary of the *Peri Ḥadash*, Ḥayyim b. Moses *Attar (1696–1743), author of the *Or ha-Ḥayyim* on the Pentateuch, wrote *Peri To'ar*, a commentary on the *Yoreh De'ah*, in which he defends the *Tur*, *Beit Yosef*, and all *rishonim* from the criticisms of the *Peri Ḥadash*.

18th Century

Among outstanding *aḥaronim* in the 18th century are Meir b. Isaac *Eisenstadt (Maharam Esh; 1670–1744), author of *Panim Me'erot* (3 pts.; 1710–1738); and Isaac Hezekiah b. Samuel

*Lampronti (1679–1756), author of the halakhic encyclopaedia *Paḥad Yiḥyah*. The *Yad Malakhi* (1767) of his contemporary *Malachi b. Jacob ha-Kohen is a methodology of the Talmud and *posekim* in three parts. Jacob Joshua b. Zevi Hirsch *Falk (1680–1756) achieved fame with his extensive talmudic work *Penei Yehoshuah* (4 pts.). Nethanel b. Naphtali Zevi *Weil (1687–1769) was the author of *Korban Netanel* (1755), a commentary of the *Rosh* of Asher b. Jehiel to the orders *Mo'ed* and *Nashim*, and of *Netiv Ḥayyim*, notes to the *Orah Ḥayyim*. Aryeh Loeb b. Saul *Loewenstamm (1690–1755) of Amsterdam republished the responsa of Moses Isserles (1711), adding to it *Kunteres Aḥaron*, parallels from the responsa of the Maharshah. Jonathan *Eybeschuetz (1690–1764) wrote the pilpulistic and acute commentaries *Kereti u-Peleti* (1763) to the *Yoreh De'ah* and *Urim ve-Tummin* (1775) to the *Hoshen Mishpat*. Zedakah b. Saadiah *Ḥozin of Baghdad (1699–1773) published novellae to all four parts of the Shulḥan Arukh. Among the works of Judah b. Isaac *Ayash (1700–1760), an Algerian scholar who settled in Erez Israel during his last years, known also to German and Polish scholars, are *Lehem Yehudah* on Maimonides' *Yad* and the responsa *Beit Yehudah*. Eliezer b. Samuel De *Avila (1714–1761), a great Moroccan scholar, compiled *Magen Gibborim*, novellae to talmudic tractates, and *Milḥemet Mitzvah* (1805) on the sources of *halakhot* in the Talmud and *posekim*.

Exceptional prominence was achieved by Ezekiel b. Judah ha-Levi *Landau (1713–1793), the author of the *Noda bi-Yehudah*, who in his novellae established new halakhic rulings. Solomon b. Moses *Chelm (1717–1781) became known through his *Mirkevet ha-Mishneh* in which he defends Maimonides from the strictures of *Abraham b. David of Posquieres (the Rabad), at the same time explaining the views of Maimonides and the commentators on the *Yad*. David Samuel b. Jacob *Pardo (1718–1790) is known through his *Shoshannim le-David* on the Mishnah and *Hasdei David* on the Tosefta. Meir *Margoliouth's (d. 1790) responsa *Me'ir Netivim* reflect the precarious basis of Jewish life in Poland and Lithuania.

Samuel b. Nathan ha-Levi of Kalin's (1720–1806) *Maḥazit ha-Shekel* (1807) is a commentary on the *Magen Avraham* to the *Orah Ḥayyim* and on the *Shakh* to *Yoreh De'ah Hilkhot Meliḥah*. One of the most prominent personalities among *aḥaronim* in the 18th century is *Elijah b. Solomon Zalman, the Gaon of Vilna (ha-Gera; 1720–1797). In his commentary on the Shulḥan Arukh he stresses the connection between its decisions and the primary sources in the two Talmuds; when explaining the talmudic view the Gaon indicates his sources at the same time as he examines the different versions and determines the talmudic text. Noted for its terse style, the Gaon's commentary on the Shulḥan Arukh reflects his outstanding scholarship and genius. Ḥayyim Joseph David *Azulai (the Ḥida; 1724–1806) wrote halakhic laws and responsa, as well as the *Shem ha-Gedolim*, a comprehensive compilation of Jewish authors and their works up to that time. In 1771, about a century after the publication of the *Shakh* and the *Taz*, Joseph *Teomim (1727–1792) published his commentary *Peri*

Megadim, whose main purpose was to comment on them, adding new laws he had collected and laying down halakhic principles. Another well-known commentary is the *Levushei Serad* to *Oraḥ Ḥayyim* and *Yoreh De'ah* of David Solomon Eibeschutz of Soroki (Safed, 1809). Pinḥas ha-Levi *Horowitz of Frankfurt on Main (1730–1805) became known from his *Sefer Hafla'ah* and *Sefer ha-Makneh*. In his well-known commentary *Keẓot ha-Ḥoshen* on *Ḥoshen ha-Mishpat*, Aryeh Leib b. Joseph ha-Kohen *Heller (1745–1813) used the method of *pilpul*, at the same time stressing the need for rational understanding. Particular note should be taken of *Shneur Zalman of Lyady (1747–1812), the founder of Ḥabad Ḥasidism and author of the *Tanya*, who prepared for his ḥasidic followers a new Shulḥan Arukh which was issued in five parts in 1864. Abraham b. Samuel *Alkalai (1749–1811) wrote *Zekhor le-Avraham* on the *Turim*, which was relied on by halakhic authorities in Erez Israel. Ḥayyim b. Isaac *Volozhiner (1749–1821), the distinguished disciple of the Gaon of Vilna and founder of the Volozhin Yeshivah, continued the latter's method of shunning *pilpul* and stressing the literal and straightforward meaning in *halakhah*. The vast majority of his writings were destroyed by fire at the end of his life, leaving us with only a small number of responsa and his philosophical work, *Nefesh ha-Ḥayyim*. Meshullam *Igra (1752–1802), an outstanding Galician and Hungarian scholar, compiled *Igra Ramah* on the orders of *Mo'ed* and *Nashim*, and responsa. Mordecai b. Abraham *Banet (1753–1829) wrote *Be'ur Mordekhai*, novellae on the *Sefer ha-Mitzvot* of the *Mordekhai*, as well as other novellae. Jacob *Lorbeerbaum of Lissa (1760–1832), in his commentary *Netivot ha-Mishpat* on the *Ḥoshen ha-Mishpat*, summarized the sources of the *halakhah*, while his *Ḥavvat Da'at* to the *Yoreh De'ah* is of decisive importance for halakhic ruling. The following Yemenite rabbis living in the second half of the 18th century should be noted: Yaḥya b. Joseph *Saliḥ, *av bet din* in Sa'na and author of the responsa *Pe'ullat Zaddik* dealing with the practical problem of Yemenite Jews; David b. Shalom *Mizraḥi (1696–1771) and his son Yiḥya (1734–1809) in Sa'na wrote the responsa *Revid ha-Zahav* (1955) on *Oraḥ Ḥayyim* and *Yoreh De'ah* on the customs of Yemenite Jews.

19th Century

Of the most notable 19th century scholars, the following deserve mention: Joshua Heschel b. Isaac *Babad (1754–1838), author of the responsa *Sefer Yehoshua* (1829); Baruch b. Joshua Ezekiel Feiwel *Fraenkel-Teomim (1760–1828), known from his *Barukh Ta'am*; one of the greatest aḥaronim in this period was Akiva b. Moses *Eger (1761–1837), famous for his novellae, his *Gilyon ha-Shas*, and responsa; Moses b. Samuel *Sofer (Ḥatam Sofer; 1762–1839), known by his responsa, novellae on the Talmud, and Pentateuch commentary; Abraham Samuel Benjamin *Sofer, author of *Ketav Sofer*, son of the Ḥatam Sofer, and his son Simḥah Bunem, author of *Shevet Sofer*; *Israel b. Samuel Ashkenazi of Shklov (d. 1839), author of *Pe'at ha-Shulḥan* on laws connected with Erez Israel that were not dealt with by Caro in his Shulḥan Arukh; Ephraim

Zalman *Margoloth (1760–1828), author of *Beit Efrayim* on all four parts of the Shulḥan Arukh, *Sha'arei Teshuvah*, and *Pithei Teshuvah*; Abraham b. Gedaliah *Tiktin (1764–1821), author of *Petaḥ ha-Bayit* on the Talmud and Shulḥan Arukh; Jacob Meshullam *Ornstein (1775–1839), author of *Yeshu'ot Ya'akov*; Israel b. Gedaliah *Lipschutz (1782–1861), famous for his *Tiferet Yisrael* commentary on the Mishnah; Solomon b. Judah Aaron *Kluger (Maharshak; 1783–1869) wrote novellae on the Shulḥan Arukh and compiled works on *halakhah* and *aggadah*; Menahem Mendel Schneersohn of Lubavitch (1789–1866), author of the responsa *Zemaḥ Zedek*; Ḥayyim b. Leibush *Halberstam, the ḥasidic rabbi of Zanz (1793–1876), author of the responsa *Divrei Ḥayyim*, characterized by its blending of scholarship and Ḥasidism; Judah b. Israel *Aszod (1794–1866), outstanding Hungarian rabbi, became widely known through his *She'elot u-Teshuvot Maharia* and *Hiddushei Maharia*; Jacob b. Aaron *Ettlinger (1798–1871), known from responsa *Binyan Ziyon* (1868), his *Arukh la-Ner*, novellae to tractates of the Talmud, and his *Bikkurei Ya'akov*; Isaac Meir Alter of Gur (1799–1866), known for his *Hiddushei ha-Rim* and *She'elot u-Teshuvot ha-Rim*; Samuel b. Joseph *Strashun (1794–1872) wrote *haggahot* (notes) to the Talmud; Joseph *Babad (1800–1875) became famous through his *Minḥat Ḥinnukh* (1869), extensively used especially among yeshivah students, its main aim being not to determine the *halakhah* but to stimulate further study by raising new problems. The *Minḥat Ḥinnukh* is an extensive commentary of the medieval work, *Sefer ha-Ḥinnukh*. Mention must be made of the abridgments of the Shulḥan Arukh by Abraham *Danzig (1748–1820) in his *Ḥayyei Adam* and *Ḥokhmat Adam* and by Solomon *Ganzfried (1804–1886) in his *Kitzur Shulḥan Arukh*; Zevi Hirsch b. Meir *Chajes (1805–1855) wrote the *Darkhei Hora'ah* and *Mevo ha-Talmud* (1845) on talmudic methodology, the responsa *Maharaz* (1849), and notes and novellae on most tractates of the Talmud; Moses b. Joseph *Schick (Maharam Schick; 1807–1879), a Hungarian *posek*, author of about 1,000 responsa; Joseph Saul *Nathanson of Lemberg (1810–1875), the *posek* of his generation, who opposed *pilpul*; David Dov *Meisels (1814–1876), known from his responsa *Ha-Radad* on *Oraḥ Ḥayyim* and *Even ha-Ezer* (1903); Naphtali Zevi Judah *Berlin (the Neẓiv; 1817–1893) of Volozhin, author of *Ha'amek Davar* on the Pentateuch and *Ha'amek She'elah* on the *She'iltot* of R. Aḥai; Moses Joshua Judah Leib *Diskin (Maharil Diskin; 1817–1898), the rabbi of Brest-Litovsk, who served as rabbi of Jerusalem from 1877, compiled *Torat Ohel Moshe* and responsa; Jacob Saul b. Eliezer Jeroham *Elyashar (1817–1906), Sephardi chief rabbi of Erez Israel wrote thousands of responsa in answer to inquiries; Isaac Elhanan b. Israel *Spektor of Kovno (1817–1896), author of the responsa *Be'er Yizḥak*, *Naḥal Yizḥak* on the *Ḥoshen ha-Mishpat*, and the responsa *Ein Yizḥak*; Joseph Baer *Soloveichik of Volozhin (1820–1892) wrote the novellae *Beit ha-Levi* and responsa with the same title; Shalom b. Yaḥya *Ḥabshush (1825–1905), *dayyan* and head of a yeshivah in Sa'na, published novellae and comments on the laws of *sheḥitah* and *terefot*; Isaac Judah b. Ḥayyim Samuel

*Schmelkes (1828–1906) of Lemberg is known for his responsa *Beit Yizḥak* in six volumes; Jehiel Michael *Epstein's (1829–1908) *Arukh ha-Shulḥan* aims at bringing some of the rulings of the Shulḥan Arukh up to date; he also wrote *Arukh ha-Shulḥan le-Atid*; Shalom Mordecai b. Moses *Shvadron (1835–1911), known as Maharsham, whose genius is reflected in the seven volumes of his responsa; Abraham Bornstein of *Sochaczew (1839–1910), author of the responsa *Avnei Nezer* on the Shulḥan Arukh; Isaac Jacob *Reines (1839–1915), who in his *Hotam Tokhnit* and *Urim Gedolim* eschewed *pilpul* and introduced a purely logical approach to *halakhah*. Of noted commentators on the Jerusalem Talmud in the 18th–19th centuries, mention must be made of *Elijah b. Loeb of Fulda (Raf; d. 1725); David b. Naphtali Hirsch *Fraenkel (1707–1762), author of the *Korban ha-Edah*; Moses b. Simeon *Margoliot (1710–1781), author of the commentary *Penei Moshe*; Jacob David b. Ze'ev *Willowski (Ridbaz; 1845–1913), who settled in Safed in his last years and whose commentary on the Jerusalem Talmud and his responsa are regarded as classics.

Among Oriental *aḥaronim* the following are worthy of note: Hayyim *Palache (1788–1869) of Smyrna, author of 26 books, including the responsa *Lev Hayyim* and comments on the Shulḥan Arukh; *Joseph Hayyim b. Elijah Al-Ḥakam (1833–1909) of Baghdad, a great *posek* known from his *Ben Yehoyaddah* and *Ben Ish Ḥai*, which embrace *halakhah*, *aggadah*, and homiletics.

20th Century

Until 1933 the study of Torah was centered in the great and famous yeshivot of Eastern Europe – Poland, Lithuania, Hungary, and Czechoslovakia. During that period centers of Torah also began to be established in the United States. From 1933 on, and following World War II, as a consequence of the liquidation of these centers, the center of spiritual life passed to the United States and Israel, and some scholars immigrated to these new centers during the latter part of their lives: *Meir Simḥah ha-Kohen of Dvinsk (1843–1926), author of the *Or Same'ah* on Maimonides' *Yad* and *Meshekh Ḥokhmah* on the Pentateuch; Zevi Hirsch *Shapira of Munkacz (1850–1913), author of *Darkhei Teshuvah* on the Shulḥan Arukh, and his son Hayyim Eleazar (1872–1937), author of the responsa *Minhat Elazar*; Elijah b. Naphtali Herz *Klatzkin (1852–1932); Hayyim b. Joseph Dov *Soloveichik (Hayyim Brisker; 1853–1918), who wrote novellae on tractates of the Talmud and the *Yad* and devised a new system of talmudic dialectics, and his son Isaac Ze'ev (1886–1960); Joseph *Rozin ("the Rogachover"; 1858–1936), known from his responsa *Zafnat Pa'ne'ah* and commentary on the Pentateuch with the same title; *Israel Meir ha-Kohen (Ḥafez Hayyim; 1853–1933), author of the *Ḥafez Hayyim*, dealing with the laws of slander and gossip, and *Mishnah Berurah* on the first section of the Shulḥan Arukh. The *Mishnah Berurah* rapidly became the most widely accepted work of *halakhah* among Ashkenazi Jewry since the publication of the Shulḥan Arukh. Moses Samuel *Glasner (1856–1924), who compiled *Dor Revi'i* and *Shevivei Esh* on

the Pentateuch; Joseph b. Judah *Engel (1859–1920), whose works on *halakhah*, *aggadah*, and Kabbalah are arranged in an encyclopedic manner, in most cases alphabetically; Judah Leib *Zirelson (1860–1941) of Kishinev, author of the responsa *Azei Levanon*, *Gevul Yehudah*, *Lev Yehudah*; Hayyim Ozer *Grodzinski (1863–1940), author of the responsa *Avi'ezer* (3 pts.); Abraham Isaac ha-Kohen *Kook (1865–1935), author of the novellae and responsa *Mishpat Kohen* and *Iggerot ha-Re'ayah*; the Galician rabbi Menahem Munish b. Joshua Heschel *Babad (1865–1938), author of the responsa *Havazzelet ha-Sharon*; Zalman b. Ben-Zion *Sorotzkin (1881–1966), author of the responsa *Moznayim le-Mishpat* and *Oznayim la-Torah* on the Pentateuch; Ben Zion Meir Ḥai *Ouziel (1880–1953), Sephardi chief rabbi (*rishon le-Zion*) and author of the responsa *Mishpetei Ouziel*, *Sha'arei Ouziel*, *Mikhmannei Ouziel*; Isaac ha-Levi b. Joel *Herzog (1888–1959), Ashkenazi chief rabbi of Israel, wrote *Divrei Yizḥak* (1921), *Torat ha-Ohel* (1948) on Maimonides' *Hilkhot Sanhedrin*, and the responsa *Heikkhal Yizḥak* (1960; 1967) on *Even ha-Ezer*, in which he also discusses problems arising from the Holocaust and the establishment of the State of Israel; Dov Berish b. Jacob *Wiedenfeld (1881–1965) of Trzebinia, Galicia, author of the responsa *Dover Meisharim* (2 pts.; 1958); Moshe Avigdor *Amiel (1883–1946), chief rabbi of Tel Aviv, published *Darkhei Moshe*, *Ha-Middot le-Ḥeker ha-Halakhah*; Menahem Zamba (1883–1943), outstanding Polish talmudist of the last generation whose works reflect a blending of acumen and erudition combined with logic and profundity, was the author of the responsa *Zera Avraham* (1920), *Ozar ha-Sifrei* (1929), *Ozar ha-Sifra* (1960); Jehiel Jacob *Weinberg (1885–1966), author of the responsa *Seridei Esh* (4 vols.; 1961–1969) on practical problems arising in recent generations; Moses Mordecai *Epstein (1866–1934), author of *Levushei Mordekhai*, novellae and expositions on topics in tractates *Zevahim* and *Menaḥot*; Baruch Ber *Leibowitz (1866–1939), author of *Birkat Shemu'el* on tractates of the Talmud; Isser Zalman *Meltzer (1870–1954), author of *Even ha-Ezel* in eight parts; Zevi Pesah *Frank (1873–1960), chief rabbi of Jerusalem, who followed the methods of Isaac Elhanan Spektor and Samuel Salant; Elhanan Bunim *Wasserman (1875–1941), who followed a middle path between *pilpul* and erudition, stressing the decisions of the *rishonim*; Meshullam *Rath (1875–1963), a member of the Israel chief rabbinate council, author of the responsa *Kol Mevasser*; Avraham Yeshayahu *Karelitz (Ḥazon Ish; 1879–1954) published 23 volumes entitled *Ḥazon Ish* (the first in 1911); his novellae and *halakhot* embrace the whole Talmud and all four parts of the Shulḥan Arukh. Karelitz had an enormous impact on the *halakhah* of the latter half of the 20th century, especially in Israel. Reuven *Katz (1880–1963), rabbi of Petaḥ Tikvah, author of the responsa *Degel Re'uvem* and *Duda'ei Re'uvem*; Isser Yehuda *Unterman (1886–1976), who, with the object of consolidating practical *halakhah*, established a methodological theory of talmudic research, wrote *Shevet Yehudah* on halakhic problems; Ovadiah Hadayah (1893–1969) wrote *Yaskil Avdi* in six parts; Moses *Feinstein (d. 1986) of the U.S., author of the responsa

Iggerot Moshe and the accepted *posek* of Orthodox American Jewry during the second half of the 20th century; Isaac *Nissim (d. 1981), chief rabbi of Israel and *rishon le-Zion*, published his responsa in his *Yein ha-Tov*; Eliezer Judah b. Jacob Gedaliah Waldenberg (b. 1917), *dayyan* in Jerusalem, is the author of *Ziz Eli'ezer*; Shlomo Goren (d. 1994), chief rabbi of Israel, published, among others, *Yerushalmi ha-Meforash* (1961), and *Torat ha-Mo'adim* (1964); Ovadiah *Yosef (b. 1920), Sephardi chief rabbi of Israel, is the author of the volumes *Yabbi'a Omer* published in Jerusalem between 1954 and 1969.

The *aḥaronim* laid down many rules for *halakhah*. The fundamental principle is to take care to act in accordance with the decisions of the Shulḥan Arukh. Some have insisted that those giving authoritative rulings from the Shulḥan Arukh must know their sources in the Talmud (Maharsha to Sot. 22a, s.v. *ary*). On the other hand the author of the *Pithei Teshuvah* holds that after the addition of the well-known commentaries such as the *Taz*, *Shakh*, and *Magen Avraham* it is permitted to rule from the Shulḥan Arukh itself (*Yoreh De'ah* 242:8). In the view of many *aḥaronim* the authoritative works are to be regarded as “our teachers” and anyone failing to take them into consideration in deciding the *halakhah* is regarded as guilty of “giving a (different) halakhic decision in the presence of his teacher” (*Peri Megadim*, beginning OH, section 3).

There is a well-known rule that *halakhah* may not be learned from the *aggadah* and the Midrashim (*Tosefot Yom Tov*, Ber. 5:4; *Noda bi-Yhudah*, 2nd ed., *Yoreh De'ah*, no. 161), but one may derive from them a custom being practiced by Jews (*Noda bi-Yhuda*, *ibid.*). On the other hand, several *aḥaronim* hold that where the *aggadot* and Midrashim do not contradict the Talmud but merely add to it they may be relied upon (*Mayim Ḥayyim* of the *Peri Ḥadash*, no. 128; *Shevut Ya'akov*, pt. 2, no. 178).

The novellae of the *aḥaronim* reflect a tendency to *pilpul* and to expand the subjects under discussion with the object of arriving at new halakhic rulings. The conclusions arrived at by outstanding *aḥaronim* are accepted as new halakhic rulings.

The responsa of *aḥaronim* discuss a variety of different problems occasioned by the times. These topics reflect local and temporal conditions: World War I, the condition of Jews in the world after it, World War II, the Holocaust, the establishment of the State of Israel – all these raised problems which are dealt with by the great *aḥaronim* with the object of finding solutions in conformity with the *halakhah*. Indeed, their contribution to our understanding of the Babylonian and Jerusalem Talmuds cannot be underestimated. Throughout the last five centuries the *aḥaronim* advanced our knowledge and comprehension of Jewish law, while constantly and rigorously applying it to everyday life. The decision process in Jewish law in the 21st century is not complete without careful consultation with all previous sources, including those of the *aḥaronim*.

[Yehoshua Horowitz / David Derovan (2nd ed.)]

AHARONOV, YAKIR (1932–), Israeli physicist. Aharonov was born in the Haifa suburb of Kiryat Ḥayyim and received his B.Sc. from the Haifa Technion (1956). While working under Professor Boehm on his doctorate at Bristol University in England in 1959, Aharonov discovered the Aharonov-Boehm Effect, essential to quantum theory and of far-reaching impact on modern physics. After receiving his Ph.D. from Bristol University (1960), he taught at Brandeis University (1960–61) and Yeshiva University (1964–67) in the U.S. From 1973 he held a joint position as professor of theoretical physics at Tel Aviv University and at the University of South Carolina. Aharonov is a fellow of the American Physical Society, a member of the Israel National Academy of Science, and a member of the U.S. National Academy of Sciences. Prizes and awards include the Rothschild Prize in physics (1984), the Elliot Cresson Medal (1991), and the Wolf Prize in physics (1998). In 1989 he was awarded the Israel Prize in physics.

[Fern Lee Seckbach and Ruth Rossing (2nd ed.)]

AHARONOVITCH, YOSEF (1877–1937), writer, editor, and Palestinian labor leader. Aharonovitch, who was born in Kirovka, in the Ukraine, acquired his general education in Odessa. On his way to Erez Israel, he was a Hebrew teacher in Brody, Galicia, where he also established a youth movement, Ḥalutzei Zion. He arrived in Erez Israel in 1906, and worked as a laborer and watchman in the Nes Ziyonah and Reḥovot orange groves. A year later he became editor of *Ha-Po'el ha-Za'ir*, the first journal of the Palestinian labor movement. During World War I Aharonovitch was exiled to Egypt, where he edited the anthology *Ba-Nekhar* (“On Foreign Soil”) in Alexandria in 1918. After the war he returned to his editorial work in Palestine and to public life. Aharonovitch retired from *Ha-Po'el ha-Za'ir* in 1922 to become director of Bank ha-Po'alim (“The Workers’ Bank”) in Tel Aviv. A leader of the Jewish community in Palestine, the Zionist movement, the Ha-Po'el ha-Za'ir Party, and later Mapai, he helped to formulate the ideology and practical character of the Palestinian labor movement through his articles, speeches, and personal example. Aharonovitch believed in adapting to a dynamic new reality without being chained to dogmas and beliefs. He proposed that practical agricultural and industrial work should be carried out by Jews, and that the concerted efforts of pioneers were needed to prepare the ground for mass immigration. He crusaded for integrity in public life and efficiency in the country’s social and economic institutions. His articles appeared in numerous newspapers and journals, including *Ma'barot*, *Davar*, *Moznayim*, *Ha-Olam*, *Ha-Yom*, *Ha-Ḥinnukh*, and *Haaretz*.

His pseudonyms included Temidi, Y.A., and Ben Sarah. In the last two years of his life he was chairman of the Hebrew Writers' Association. Two volumes of his selected articles, *Kitvei Yosef Aharonovitch*, were published in 1941 by his wife, the novelist Devorah *Baron, and Eliezer Shoḥat.

[Israel Cohen]

AHASUERUS (Heb. אַחַשְׁוֵרֶשׁ), king of Persia, who according to the Book of Esther ruled from India to Ethiopia (see Book of *Esther; *Artaxerxes).

In the Aggadah

Ahasuerus generally is portrayed as vacillating, lacking in character, and easily swayed. But the positive aspects of his personality are also emphasized. He is depicted as one of the few kings in history who ruled over the entire earth (Meg. 11a; Targ. Sheni to Esth. 1:2). Before his death Nebuchadnezzar had placed all the treasures of the world he had looted in a ship, and sunk it in the Euphrates to prevent anyone finding them. God, however, had revealed their location to Cyrus when He gave orders that the Temple was to be rebuilt. Ahasuerus' great wealth derived from this treasure. But he neither succeeded in sitting on Solomon's throne nor in erecting a similar one (*Midrash Abba Guryon*). It was through Esther's influence that he appointed *Mordecai as his counselor, for she told Ahasuerus that whereas his predecessors, Nebuchadnezzar and Belshazzar, had consulted prophets, he invariably turned for advice to ordinary mortals. Ahasuerus is said to have desecrated the Temple vessels and priestly robes at the feast he made for all the provinces of his kingdom even though he knew what had happened to Belshazzar for such conduct (Meg. 11b). Other *aggadot* declare that his hatred of Israel exceeded Haman's but he feared he might suffer a fate similar to that of the other enemies of the Jews.

AHASUERUS-XERXES (Heb. אַחַשְׁוֵרֶשׁ; Aram. Papyri שְׁרִשְׁ(א); Dura Synagogue חַשְׁוֵרֶשׁ; Old Persian *Xšayāršā*; Gr. Ξερξης). If one ignores the vowels, the biblical consonantal text is a close approximation of the king's name. The Persian king known to the Greeks as Xerxes I (reigned 486–465 B.C.E.) was the son of *Darius I. As soon as he ascended the throne, Xerxes was confronted by a revolt in Egypt. At the same time, the enemies of Judah apparently tried to incite him against its inhabitants (Ezra 4:6). After reducing Egypt "to a worse state of servitude than it was in under Darius" and crushing another revolt in Babylon, he attempted a more ambitious undertaking, the subjugation of Greece. After the disastrous outcome of this adventure, which took place between the third

and seventh years of his reign, Xerxes settled down to a life of self-indulgence, reflected in the account of Ahasuerus in the *Scroll of Esther, which agrees with the Greek authors in its conception, or even caricature, of life at the Persian court. Ahasuerus is represented in the Book of Daniel as the father of *Darius the Mede (Dan. 9:1) and, in one recension of the Book of Tobit, as allied with Nebuchadnezzar at the capture of Nineveh (Tob. 14:15). Since Nineveh was actually captured (in 612 B.C.E.) by kings Cyaxares of Media and Nabopolassar of Babylon, it is natural to surmise that later generations confused Cyaxares with Ahasuerus-Xerxes just as they confused Nabopolassar with Nebuchadnezzar. The Book of Esther does not mention the death of Xerxes in a bloody court coup.

[Isaiah Gafni / Harold Louis Ginsberg]

AHAVAH RABBAH (Heb. אַהַבָּה רַבָּה; "With great love"); **AHAVAT OLAM** (Heb. אַהַבַת עוֹלָם; "Everlasting love"), two versions of the second of the two benedictions preceding the recitation of the *Shema* in the morning and evening services. In the Talmud there is a difference of opinion as to which is the correct version (Ber. 11b) and a *baraita* is quoted which definitely favors *Ahavah Rabbah*. This controversy continued even into medieval times (see Levin, *Ozar*, vol. 1, p. 29; ET, vol. 4, p. 391). As a compromise decision *Ahavah Rabbah* was adopted for the morning service and the other for the evening (Tos., MG Ber.). The Sephardi and Italian rites, however, only have *Ahavat Olam*. It is not clear whether the difference between the two versions was limited to the opening formula or whether it extended to the content. From the prayer book of *Saadiah Gaon it would appear that the former is the case. In their present form the two prayers have the same basic theme, but they differ considerably in presentation, and *Ahavah Rabbah* is much the longer and the more complex of the two. Both benedictions tell of God's love as the explanation for Israel's receiving the Torah. The prayers introduce the *Shema* which is basically a Torah reading – and promise, in consequence, continual preoccupation with its study and observance. In both, God is besought to continue bestowing His love on His people, but in *Ahavah Rabbah* the idea of the election of Israel is stressed. *Ahavat Olam* ends, "Blessed art Thou, O Lord, Who lovest His people Israel," whereas *Ahavah Rabbah* closes with "Who has chosen His people Israel in love." The Mishnah (Tam. 5:1), as interpreted in the *Gemara* (Ber. 11b–12a), records that *Ahavah Rabbah* was the benediction with which the priestly prayer service in the Temple commenced. According to the *halakhah* (Sh. Ar., OH 47:7) either of the two can serve as a substitute for the **Birkat ha-Torah*, the blessing to be recited before study.

In the Middle Ages various *piyyutim* were composed for insertion into *Ahavah Rabbah* and *Ahavat Olam* on festivals. Those for the latter are still recited in some synagogues. Both

benedictions appear with minor textual variations in the different rites; *Ahavat Olam* much less, however, than *Ahavah Rabbah*. The Reform ritual has retained the traditional text of the former but has abbreviated the latter considerably, omitting the messianic passages. *Ahavat Olam* has been set to music by Mombach and others, and forms part of the repertoire of most synagogue choirs.

[Raphael Posner]

AHAZ (Heb. אָחָז, a diminutive of אֲחִיָּזָה, as shown by the reference to him as *Ya-u-ha-zi* in cuneiform (the inscription of Tiglath-Pileser III), meaning “YHWH holds fast”), king of Judah (743–727 B.C.E.), son of *Jotham and father of *Hezekiah. Ahaz succeeded to the throne at the age of 20 and ruled for 16 years. It seems, however, that he ruled alone for seven years only, sharing the first nine years with his father as regent for his grandfather *Uzziah (785–733 B.C.E.), who was incapacitated by a terrible skin disease. Ahaz apparently refused to join the anti-Assyrian alliance of Aram, northern Israel, the Philistines, and others, no doubt believing Assyrian power to be irresistible. This refusal led to the “Syro-Ephraimite war” of 733, when Israel and Aram invaded Judah (II Kings 15:37; II Chron. 28:5ff.), carried off many captives, and planned to conquer Judah and to set up, under a certain Ben Tabeel, a regime favorable to an anti-Assyrian alliance (for a different motivation, see H.L. Ginsberg in Bibliography). In the course of the war Ahaz lost control over the Negev and the western slopes of the Judean hills to the Philistines (II Chron. 28:18), and of Elath to the Edomites (II Kings 16:6).

Ahaz turned for help to the Assyrian Tiglath-Pileser III whose suzerainty he, or Uzziah, had probably recognized one or more years previously. Tiglath-Pileser thereupon advanced against Aram and Israel. Ahaz went to Damascus to pay homage to the victor; from there he sent instructions to the high priest Uriah to introduce Aramean (Assyrian?) cults into the Temple in Jerusalem and, in particular, to build an altar modeled on an (Assyrian type?) altar he had seen in Damascus. Later, he himself made sacrifices on this altar (II Kings 16:7ff.). Ahaz made other far-reaching changes in the Temple and, besides despoiling the Temple treasury and his own, melted down some of the Temple vessels for his tribute to the Assyrian king. He also installed a sundial in the Temple (II Kings 20:11). Of his ministers, the names of Shebna, the steward (?; Isa. 22:15), and Eshna, “servant of Ahaz,” are known, the latter from a recently discovered seal (see: EM, 1 (1950), 207). More recently, a seal impression reading “belonging to Ahaz (son of) Yehotam, King of Judah” was published.

Ahaz, accused of practicing ancient Canaanite cults, such as the Moloch fire rite, is one of the kings who did evil in the eyes of the Lord (II Kings 16:3–4). According to

II Kings, Ahaz was buried in the royal vault in the City of David, but according to II Chronicles, merely in Jerusalem. In the Talmud (Pes. 56a) his son Hezekiah is commended for giving Ahaz a pauper's funeral as an atonement for Ahaz's sins and in order to disassociate himself from his father's religious policies. Although Ahaz' own record was tarnished, the rabbis credited him with having been the son and father of righteous kings as well as having accepted Uzziah's reproof, which secured him a share in the world to come (Sanh. 104a).

AHAZIAH (Heb. אֲחִיָּזָה, אֲחִיָּזָה; “YHWH holds firm”), the name of two biblical kings.

(1) Son of *Ahab, king of Israel (c. 853–852 B.C.E.). The biblical account of his two-year reign (I Kings 22:52–II Kings 1:18) faults Ahaziah for following his father and mother in sponsoring the cult of the Tyrian Baal, inquiring of Baal-Zebub of Philistine Ekron in addition to his maintenance of the calf-cult initiated by Jeroboam I. The defeat of the army of Israel and the death of Ahab in the war with the Arameans (853 B.C.E.) encouraged *Mesha, king of Moab, to free himself from Israelite suzerainty and to engage in war with Ahaziah. Apparently the Ammonites also gained their freedom at that time (II Chron. 20:1). The traditional alliance between the house of Omri and Judah suffered when *Jehoshaphat, king of Judah, refused partnership in the maritime commercial venture organized at the port of Ezion-Geber which was proposed by the king of Israel (I Kings 22:49–50; see, however, II Chron. 20:35–37). In the second year of his reign Ahaziah was severely injured in a fall from the window of an upper story of his palace and sent to ask for an oracle of Baal-Zebub, god of Ekron. *Elijah reproved him for this act and prophesied that he would die (II Kings 1:2ff.). Given the fantastic elements in the chapter, i.e., repeated fire from heaven called down by the prophet, we might do well to explain the account of Ahaziah's deeds as a theological justification for his brief reign and premature death. Ahaziah left no sons and was succeeded on the throne by his brother Jehoram.

(2) The son of *Jehoram, king of Judah, and *Athaliah, daughter (or sister) of Ahab, king of Israel. Ahaziah ascended the throne at the age of 22 and reigned for one year over Judah (c. 842–841 B.C.E.; II Kings 8:25ff.). His name is misspelled “Johoahaz” in II Chronicles 21:16–17 and “Azariah” in II Chronicles 22:6. He followed his mother Athaliah in all matters relating to the cult. The political alliance with the dynasty of Omri was revived and he and his uncle or cousin King Jehoram of Israel went to war against Hazael, king of Aram (II Kings 8:28–29; II Chron. 22:5–6). Jehoram was wounded in

the battle, and Ahaziah visited him in Jezreel. Because of this kinship and friendship, *Jehu killed him as well as Jehoram (II Kings 9:27–28; II Chron. 22:9).

AḤDUT HA-AVODAH, Zionist Socialist Labor Party in Palestine founded in 1919. First steps toward its formation were taken in 1918 by soldiers of the *Jewish Legion at Tell el Kabir, Egypt, where many Palestinian Jewish workers and members of *Po'alei Zion from America were serving as volunteers in the Jewish battalions of the British Army. The majority of the volunteers belonged to an influential non-party group, led by Berl *Katznelson and Shemuel *Yavneeli, and to Po'alei Zion, led by Izhak *Ben-Zvi and David *Ben-Gurion. There were also a few volunteers who were leading members of the other Labor Party, *Ha-Po'el ha-Za'ir, among them Levi Shkolnik (*Eshkol) and Abraham Haft, although their party objected to participation in the Legion. In February 1919, a conference of Po'alei Zion unanimously called for unity, but a Ha-Po'el ha-Za'ir conference rejected the proposal. Immediately afterward, at Petaḥ Tikvah, a conference of the Agricultural Workers' Union, which included members of both parties, voted 48 to 12 for the establishment of a workers' federation to be responsible for all political, economic, and cultural activities, and for settlement on the land. Most Ha-Po'el ha-Za'ir members did not join, but established separate labor exchanges and a separate agricultural settlement center. A founding conference resulting from the agricultural workers' decision was elected by 1,871 workers, with 47 rural delegates, 15 urban, and 19 representing the legionnaires from abroad. It met shortly afterward and decided to establish the Zionist Socialist Federation of the Workers of Erez Israel, Aḥdut ha-Avodah, as an autonomous body, comprising all workers and members of the professions living solely from their labor without exploiting others. It was to participate in the World Zionist Organization and the Socialist International; to organize the provision of work, cooperative supplies, vocational training, and general education; to protect the workers' dignity and interests; and to enhance the creative capacity of the working class. Aḥdut ha-Avodah aspired, through organized mass immigration, to mold the life of the Jewish people in Erez Israel as a commonwealth of free and equal workers living on its labor, controlling its property, and arranging its distribution of work, its economy, and its culture. Only a minority of Ha-Po'el ha-Za'ir members joined, and, in order to avoid competition in labor matters, both groups agreed to establish the General Federation of Jewish Workers in Erez Israel (*Histadrut), which was founded in December 1920. Aḥdut ha-Avodah became dominant in the Histadrut, of which Ben-Gurion was elected secretary-general. It also became dominant in the Elected Assembly of the *yishuv*, but continued to aim at complete workers' unity. After prolonged negotiations, Aḥdut ha-Avodah and Ha-Po'el

ha-Za'ir merged in 1930 to form Mifleget Po'alei Erez Israel (*Mapai).

[David Ben-Gurion]

A study of Aḥdut ha-Avodah, *Aḥdut ha-Avodah ha-Historit*, by Jonathan Shapiro (1975) traces the consolidation of the party out of various factions and how the veteran leadership from the Second Aliyah period kept the reins of power in their hands. Shapiro attributes the party's organizational strength to its social and ideological roots going back to the Jewish experience in Russia.

BIBLIOGRAPHY: G. Kressel, *Maft'eḥ la-Kunteres, 1919–1945* (1945).

AḤDUT HA-AVODAH, the name of several publications issued by the different labor movements in Erez Israel at various times. (1) The first such periodical was published in 1919, a few months prior to the formation of the Aḥdut ha-Avodah Party, under the editorship of B. *Katznelson. It dealt with the ideology of the new party, labor questions, and contemporary problems of the *yishuv*. (2) After the Aḥdut ha-Avodah Party merged with *Ha-Po'el ha-Za'ir in 1930 to form *Mapai, an anthology was published under the title *Aḥdut ha-Avodah* (2 vols., 1929–32). It contained articles on all aspects of Jewish life in Erez Israel and in the Diaspora – political, economic, and social – by different leaders of the Aḥdut ha-Avodah Party. The editors were B. Katznelson, Shaul *Avigur, and Mordecai Senir. (3) A new social literary monthly, *Aḥdut ha-Avodah*, was established in 1930 and edited by C. *Arlosoroff. It continued until 1932. (4) A number of works, collections of articles, published by Mapai appeared under the same name between 1943 and 1946. (5) When Aḥdut ha-Avodah left Mapai to form a separate party in 1944, it published the weekly *Ha-Tenu'ah le-Aḥdut ha-Avodah* (abbreviated to *Le-Aḥdut ha-Avodah*). It ceased to exist on Jan. 22, 1946, when Aḥdut ha-Avodah merged with *Ha-Shomer ha-Za'ir to form Mifleget ha-Po'alim ha-Me'uḥedet (*Mapam).

[Getzel Kressel]

AḤDUT HA-AVODAH-PO'ALEI ZION (“Unity of Labor-Workers of Zion”), Zionist Socialist Party established in 1946. *Aḥdut ha-Avodah emerged as an independent party in 1944 after a faction in Mapai calling itself *Si'ah Bet* (B Faction) seceded from it because of its objections to the policies of the *Histadrut leadership. In 1946 it united with the left-wing Po'alei Zion, assuming the name Aḥdut ha-Avodah-Po'alei Zion. In 1948 the new party joined with Ha-Shomer ha-Za'ir to form *Mapam and ran within its framework in the elections to the First and Second Knessets. In August 1954, due to ideological differences set against the background of antisemitic “show trials” in Moscow and Prague, it resumed its independence. Aḥdut ha-Avodah-Po'alei Zion ran independently in the elections to the Third, Fourth, and Fifth Knessets, winning ten, seven, and eight seats, respectively. In the elections to the Sixth Knesset it ran on a single list – the Alignment – with *Mapai, and in 1968 it united with Mapai and *Rafi to form the *Israel Labor Party.

The core group of the party membership was made up of members of Ha-Kibbutz ha-Me'uhad (see *Kibbutz), and among its best-known leaders were Yitzhak *Tabenkin, Yigal *Allon, Yisrael *Galili, and Yitzhak *Ben-Aharon. Throughout its independent existence the party was radical in its Zionist and social outlook, advocating a Jewish state with full rights for the Arab minority within what later came to be known as "Greater Israel." It opposed the various partition plans and, during the *War of Independence, demanded that the IDF occupy the whole territory of Eretz Israel within the boundaries of the British Mandate. Both in 1949 and again in 1957, following the *Sinai Campaign, it opposed the withdrawal of the IDF from the Sinai Peninsula, unless the Arab states accepted a peace settlement.

During World War II Aḥdut ha-Avodah–Po'alei Zion favored not only participation of Jewish youth in the British Army, but also the establishment of an underground military force under the sole authority of the *Haganah. Its members played an important role in the foundation and leadership of the *Palmah. It advocated a comprehensive struggle against the British Mandatory regime, the organization of large-scale clandestine immigration, settlement in areas forbidden to Jewish settlement, and, after the war, sabotage operations against British installations in Palestine. However, it objected to acts of personal terror, such as those practiced by the two dissident underground organizations I.Z.L. (*Irgun Zeva'i Le'ummi) and Lehi (*Loḥamei Herut Israel), though it objected to cooperation between the Haganah and the Mandatory police in the apprehension of members of these organizations, advocating instead their detention in Haganah undercover prisons.

The party adopted the philosophy of "scientific socialism," containing distinctly Marxist elements, but advocated "Zionist socialism" unfettered by any international, ideological, or organizational authority. Although sympathetic to the social experiment in the Soviet Union, it rejected the dictatorial regime in that country, and criticized manifestations of violence and persecution in it as well as its policy toward the Jews and Zionism. At the same time it maintained ties with other left-wing socialist movements and groups around the world. Aḥdut ha-Avodah opposed David *Ben-Gurion's policy of rapprochement with West Germany.

From 1959 until 1965 Aḥdut ha-Avodah–Po'alei Zion was a member of governments led by Ben-Gurion and Levi *Eshkol. It was also an active member of the Histadrut leadership, advocating the preservation of the Histadrut's independence, and the maintenance of full ideological and organizational democracy within it. After the establishment of the Labor Party, one of its leaders, Yitzhak Ben-Aharon, served as secretary general of the Histadrut in the years 1969–73. In 1954 it started publishing a Hebrew daily, *Lamerhav*, that survived until 1971, and for a while after 1967 it published a Yiddish weekly, *Folksblat*.

[Susan Hattis Rolef (2nd ed.)]

AHERIM (Heb. אֲחֵרִים; lit. "others"), a pseudonym for sages whose teachings are quoted anonymously in the tannaitic literature. According to the Talmud (Hor. 13b, 14a), *aḥerim* was used as a pseudonym for R. *Meir so that his teachings would not be propounded under his name in the *bet ha-midrash* – this, in punishment for his attempt, together with R. *Nathan, to assail the dignity and authority of the *nasi*, *Simeon b. Gamaliel II, and to remove him from office. The punishment, however, did not remain in force very long, the Talmud continuing that on one occasion Judah ha-Nasi, son of Simeon b. Gamaliel II, was teaching a certain Mishnah to his son Simeon with the words, "*aḥerim* say" whereupon Simeon said to his father, "Who are they whose waters we drink but whose names we do not mention?" at which Judah deferred to his son's opinion and in place of "*aḥerim* say" stated explicitly, "On Rabbi Meir's behalf it is said" (*ibid.*). In point of fact, in the Mishnah, which Judah edited, the expression "*aḥerim* say" does not occur. The tosafists, however, have pointed out the difficulty in the identification of "*aḥerim*" with Meir, for in many passages the words "*aḥerim* say" occur in opposition to Meir's view. One tosafist suggested that only those teachings which Meir received from his teacher, *Elisha b. Avuyah, later called *Aḥer*, were introduced under this pseudonym. The tosafists themselves, however, found this explanation unsatisfactory, and suggested instead that those opinions which he changed after he was punished and referred to as *aḥerim* are cited under this pseudonym, while his earlier views appear under his own name (Tos., Sot. 12a).

[Zvi Kaplan]

AHIJAH (Heb. אֲחִיָּהוּ; "my [or the] brother is יַהְוָה"), son of *Ahitub, priest of the house of Eli (1 Sam. 14:3). Ahijah was apparently the chief priest in Shiloh during the reign of Saul (cf. Jos., Ant., 4:107), although his name does not appear in the list of chief priests in 1 Chronicles 6:50–55 and in Ezra 7:2–5. Several scholars identify Ahijah with *Ahimelech, son of Ahitub, who served as priest of Nob in Saul's days, assuming that the name Ahijah is the short form of Ahimelech or that the element *melekh* ("King") in his name was replaced by the divine name.

When Saul fought against the Philistines at Michmas, Ahijah wore an ephod (1 Sam. 14:3). According to 1 Samuel 14:18, Ahijah served before the Ark of God; however, according to the same chapter, verse 3 (and also according to the LXX; *Baraita di-Melekhet ha-Mishkan*, 6 [and cf. Ish Shalom's ed., p. 44]; Ibn Ezra's commentary to Ex. 28:6 – all referring to 1 Sam. 14:18), "ephod" is to be read (instead of "ark"). Furthermore, only the ephod (and not the ark) is mentioned in the Bible as having been used for consulting the divine will (cf. the consultation by means of the ephod in 1 Sam. 23:9; 30:7). Ahijah may also have been the priest who inquired of God first whether to advance against the Philistines and then, upon failing to obtain a response, provoked God's displeasure (1 Sam. 14:36 ff.).

AHIJAH THE SHILONITE (Heb. אֲחִיָּהּ הַשִּׁלֹּנִי), Israelite prophet during the latter part of Solomon's reign and during the concurrent reigns of *Rehoboam and *Jeroboam. Jeroboam son of Nebat of Zeredah (which, according to the Septuagint, 1 Kings 12:24, was near Shiloh), enjoyed the support of Ahijah, whose main antagonism against Solomon was due to the tolerance shown by the king to foreign cults. At a secret meeting with Jeroboam outside Jerusalem he tore Jeroboam's new garment (or his own – the text is ambiguous) into 12 pieces as a symbol of the 12 tribes and gave him ten. The kingdom of Israel would be divided; only one other tribe (Benjamin), beside Judah, would remain loyal to the House of David (*ibid.* 11:29–39). Not improbably, Ahijah expected Jeroboam to restore the ancient central sanctuary of his native Shiloh. When Jeroboam, instead, set up golden calves in sanctuaries at Beth-El and Dan, the estrangement between him and Ahijah became inevitable. When Jeroboam's son Abijah fell ill, the king who no longer dared to face the old seer, by now almost blind, sent his wife in disguise to inquire about the child's fate. He not only foretold her son's death but predicted a dire end for the House of Jeroboam (*ibid.* 14:1–18).

In 11 Chronicles 9:29 Ahijah, in accordance with the Chronicler's practice, is cited, along with the other two prophets who were active in the reign of Solomon, as an author of the books of Kings' account of Solomon's reign.

In rabbinic tradition, Ahijah was a Levite at Shiloh. He was the sixth of seven men whose lifetimes following one another encompass all time (BB 121b) and is given a life span of more than 500 years. (On this basis Maimonides, in the introduction to his Code, makes him an important link in the early tradition of the Oral Law.) Ahijah was reputed to be a great master of the secret lore (Kabbalah), and ḥasidic legend makes him a teacher of *Israel Ba'al Shem Tov. He is said to have died a martyr's death at the hands of Abijah, son of Rehoboam and king of Judah.

AHIKAM (Heb. אֲחִיקָם; "the divine kinsman has risen [for battle]"), son of *Shaphan and father of *Gedaliah, a high royal official. Ahikam was one of the men sent by King Josiah to the prophetess *Huldah (11 Kings 22:12, 14; 11 Chron. 34:20). Later, during the reign of Jehoiakim, when Jeremiah prophesied the destruction of Jerusalem, Ahikam used his influence to protect Jeremiah from death (Jer. 26:24).

Ahikam was a member of one of the most influential pro-Babylonian families in the last days of the Judean Kingdom. Shaphan, his father, was the scribe of Josiah (11 Kings 22:3 ff. et al.); his brother Elasaḥ was one of the men sent to Babylon by Zedekiah who brought the letter written by Jeremiah to the elders in exile (Jer. 29:1–3); his brother *Jaazaniah is mentioned in Ezekiel 8:11 among the elders of Jerusalem;

and his son Gedaliah was appointed governor of Judah after the destruction of Jerusalem (Jer. 40:5–6). A seal impression published recently appears to bear his name.

AHIKAR, BOOK OF, a folk work, apparently already widespread in Aramaic-speaking lands during the period of Assyrian rule. It was evidently well-known among the Jewish colonists in southern Egypt during the fifth century B.C.E. and at the beginning of the twentieth century the major part of an Aramaic text of the work was discovered among the documents of the Jewish community of *Elephantine. Greek writers were likewise acquainted with its contents. The book has survived in several versions: Syriac, Arabic, Ethiopic, Armenian, Turkish, and Slavonic. These texts bear a fundamental similarity to the ancient Elephantine version. It may be subdivided into two parts: (1) the life of *Ahikar; (2) the sayings uttered for the benefit of Nadan, his adopted son.

Ahikar the Wise, the hero of the work, is mentioned in the apocryphal book of Tobit as one of the exiles of the Ten Tribes. He purportedly attained high rank, being appointed chief cupbearer, keeper of the royal signet, and chief administrator during the reigns of Sennacherib and Esarhaddon. In his later years, realizing that he would leave no offspring, he adopted his sister's son Nadan and groomed him for a high office at court. Ahikar's instructions to Nadan in preparation for this position are couched in the form of epigrams. Ahikar, however, ultimately convinced that his protégé was not equal to the task, disowned him. Nadan thereupon slandered Ahikar before the king. When this accusation was proved false, Nadan was handed over to Ahikar who imprisoned him near the gateway to his home. Thereafter, whenever Ahikar passed by this place, he uttered words of reproof to his former adopted son. These remarks, presented as aphorisms, comprise the last section of the Book of Ahikar. Both the contents and aim of the work indicate its Aramean-Assyrian milieu. In

textual format, it resembles Job, which also contains not only wisdom sayings, but also events associated with the hero of the tale. Also similar to Ahikar is Proverbs 31:1: “The words of King Lemuel”; which, though presently comprising only the apothegmatic section, may well originally have contained biographical data concerning Lemuel. Works along these lines were not unknown among the peoples of antiquity and in Israel too, the Wisdom literature did not fail to take ideas from non-Israelite sources. However, the Book of Ahikar, despite its dissemination and popularity among the Jews, left no imprint upon Hebrew literature. The reason may be that its many pagan features remain unblurred, even in late editions belonging to the Christian era. A profounder cause, however, is the fact that a spirit of total submissiveness to and awe of human rulers pervades the work to such an extent that their edicts and promulgations are regarded as inviolable law. This note of self-negation before a king of flesh and blood, which is of the very essence of the work, was entirely alien to the Jewish spirit.

[Joshua Gutmann]

Ahikar

Although the Book of Ahikar did not exert any direct influence on Jewish literature, Ahikar himself was assimilated in Jewish sources. Chapter 14:10 states that Ahikar raised Nadab (i.e., Nadan) and refers to the slander story described in the Book. According to 1:21–22, Ahikar is Tobias’ cousin, son of Tobit’s brother Anael. Chapter 11:18 raises textual problems, but the reading of the Codex Sinaiticus (Nadab), which makes both Ahikar and Nadab cousins of Tobias, is not impossible. Strictly speaking Nadab would be his second cousin.

The Jews made this hero of the pagan Wisdom tale into a pious Jew of the tribe of Naphtali, an instance of how they adopted and reused international Wisdom traditions. The transformation of Ahikar into an exiled Israelite was accompanied, in Tobit 14:10, by emphasis on the vindication of righteousness in the relationship between Ahikar and Nadab. Ahikar was also mentioned in Hellenistic literature and in a variety of later sources. Ahikar is now known from Babylonian sources as the court sage in the time of King Sennacherib.

AHIMAAZ (Heb. אֲחִימָאז; “the [or my] brother is counselor[?]”), name of three biblical personalities.

(1) Father-in-law of King Saul (1 Sam. 14:50).

(2) Son of the priest *Zadok. When David fled Jerusalem because of the revolt of *Absalom, Ahimaaz, together with Jonathan, the son of David’s other priest Abiathar, remained just outside the city. A messenger of their fathers delivered information about the rebels’ plans to them, which they conveyed to David (11 Sam. 15:27–36; 17:15–22). Later, being a swift runner, he overtook and passed the messenger who was to report

the outcome of the battle with Absalom to David. He thus reported the defeat of the rebels, but left to the messenger the unenviable task of informing the king that Absalom had been killed (*ibid.* 18:19–32).

(3) A son-in-law of Solomon, his prefect over the district of Naphtali (1 Kings 4:15). Some identify him with Ahimaaz the son of Zadok (above). If that conjecture is correct, it is likely that his prefectship was bestowed on him because he was debarred from the priesthood, possibly because of a defect acquired in combat. According to 1 Chronicles 5:34–36, Azariah the great-grandson of Ahimaaz succeeded Zadok as a priest in Solomon’s Temple, but it seems that the verses are corrupt and this Azariah is Ahimaaz’ son. The name Ahimaaz probably also appears on a signet ring discovered at Tell Zakariyeh (ancient Azekah). It has not been satisfactorily explained. The name Maaz occurs in 1 Chronicles 2:27.

AHIMAAZ BEN PALTIEL (b. 1017), chronicler and poet of Capua, south Italy. In 1054 when he removed to Oria, the place of origin of his family, he compiled *Megillat Yuhasin* (“The Scroll of Genealogies”), also known as *Megillat Ahimaaz* (“The Ahimaaz Scroll” or the “Chronicle of Ahimaaz”). It describes in rhymed prose the genealogy of his family from the ninth century to his own time. The Ahimaaz family counted among its members prominent personalities, who had been

leaders of their generations in the different communities of Italy, as well as in North Africa, e.g., Shephatiah, Amittai b. Shephatiah, Paltiel. They actively participated in some of the most important events in these countries. *Megillat Ahima'az* is consequently a significant Jewish historical source covering several periods and countries. Apart from historical data, it includes legends and fantastic tales and, despite some inaccuracies, it is a reliable historical document. The one known manuscript is in the library of Toledo Cathedral, where it was discovered by A. Neubauer in 1895. It has since been edited several times; the edition by B. Klar appeared in 1944 (second edition, M. Spitzer, 1974). Ahimaaz also composed a poem in honor of the *nagid* *Paltiel (included in the Scroll) and a number of *piyyutim*. A photograph of the manuscript was published in 1964 in Jerusalem. In 1965, the text of the manuscript was published with a concordance: *Megillat Ahima'az Me'ubbedet u-Muggeshet ke-Homer le-Millon*, edited by R. Mirkin with the assistance of I. Yeivin and G.B. Tsarfati. There is an English translation by M. Salzman (1924, 1966) and an Italian one by C. Colafemmina (2001).

BIBLIOGRAPHY: B. Klar (ed.), *Megillat Ahima'az* (1944), 139–56, postscript; Klar, in: *Sinai*, 22 (1947/48), 243–8; Kaufmann, *Schriften*, 3 (1915), 1–55 (appeared in *MGWJ*, 40 (1896), 462ff.); Waxman, *Literature*, 1 (1960), 425–7; Roth, *Dark Ages*, 104, 251; Neubauer, *Chronicles*, index. s.v. *Ahima'az*. **ADD. [Jefim (Hayyim) Schirmann]

AHIMAN, SHESHAI, TALMAI, the sons of *Anak, who were said to have inhabited *Hebron when the spies sent by Moses reconnoitered Canaan (Num. 13:22). Their names have not been identified with certainty. Ahiman may be Semitic, while Kempinsky and Hess regard Sheshai and Talmai as Hurrian. The sons of Anak are described as *Nephilim (*ibid.* 13:33), a term probably indicating extraordinary stature and power (cf. Gen. 6:4). In Deuteronomy 2:21 (cf. Deut. 1:28) the Anakim are described as “great, numerous, and tall.” Traditions about an ancient giant race were apparently current in Israel, Amon, and Moab (see *Og, *Rephaim).

According to Joshua 15:13–14, *Caleb attacked Ahiman, Sheshai, and Talmai and dispossessed them (cf. Judg. 1:20). Another passage credits the tribe of Judah with the victory over the three brothers (Judg. 1:10). Finally, according to Joshua 11:21–22, Joshua annihilated the Anakites. The name Ahiman occurs as well in 1 Chronicles 9:17 and in three epigraphs: a jug from *Elephantine, one seal from Megiddo, and another of unknown provenance. Talmai is also the name of a king of Geshur in northern Transjordan who was a contemporary of David.

[Hanna Weiner]

AḤIMEIR, ABBA (pseud. of **Abba Shaul Heisinovitch**; 1898–1962), journalist and writer, Revisionist leader in Palestine. Aḥimeir was born in Dolgi near Bobruisk, Belorussia, studied at the Herzlia High School in Tel Aviv (1912–14) and returned to Russia where he became a member of *Ze'irei Zion. After World War I he studied history at the universities of Liège and Vienna. On his return to Palestine in 1924, he joined *Ha-Po'el ha-Za'ir, but his views gradually underwent a change to extreme opposition to both communism and socialism. In 1928 he joined the *Revisionists and advocated active opposition to the Mandatory government. He was the first to organize illegal public action in Palestine, and as a result was arrested several times from 1930 onward. When Chaim *Arlosoroff was murdered in June 1933, Aḥimeir was accused of plotting the murder, an accusation which he vehemently denied. After spending a year in prison, he was cleared by a court of appeals before defense witnesses had been called. He was nevertheless detained in prison, charged with organizing Berit ha-Biryonim, an underground group formed for the purpose of fighting British policy in Palestine, and sentenced to a further 18 months' imprisonment. Aḥimeir's views contributed to the ideological basis of the *Irgun Zeva'i Le'ummi and *Loḥamei Herut Israel underground movements. He wrote numerous articles, many of them violently polemical. His impressions of prison life appeared as a book, with the punning title *Reportazhah shel Baḥur "Yeshivah"* (“Report by an Inmate,” 1946). His views on the problems of Judaism and Zionism are set down in *Im Keriat ha-Gever* (“When the Cock Crows,” 1958) and *Judaica* (Heb., 1961). After Aḥimeir's death a committee was formed to publish his works under the title *Ketavim Nivḥarim* (“Selected Works”).

AHIMELECH (Heb. אֱחִימֶלֶךְ; “[the divine] brother is king” or “the Melech [deity] is my brother”), name of three biblical figures.

(1) Ahimelech, son of Ahitub, was a member of the priestly family of *Eli, who served in the Temple of *Nob (1 Sam. 21–22). Ahimelech has been identified with *Ahijah, son of Ahitub, who is also mentioned in the time of Saul and who acted as a priest in Saul's war with the Philistines (14:3, 18). Ahimelech probably founded the Temple of Nob after the destruction of *Shiloh by the Philistines in the time of Samuel. He served as the high priest in Nob, and “85 persons that wear linen ephods” were under his charge (22:16–18).

When David escaped from Saul, he first came to Nob where Ahimelech provided him with bread and with the sword of Goliath, which was kept in the Temple (21:1–10, 22:10–15). *Doeg the Edomite informed Saul about it and stated that Ahimelech “inquired of the Lord” for David (22:10), for which Ahimelech (22:15) excused himself by pointing out that it was not the first time, for he had always understood that David was Saul's trusted revenger. Saul, however, put to death Ahimelech and the rest of the priests of Nob. One son of Ahimelech, *Abiathar, escaped and joined David.

(2) Ahimelech, son of Abiathar, was probably the grandson of the former. He is mentioned as a priest, together with Zadok, son of Ahitub, in one of the lists of David's officials (11 Sam. 8:17). In a parallel list he is called Abimelech (1 Chron. 18:16; possibly a scribal error, as testified by some Mss. of the MT, as well as by the Vulg.). In the lists of David's officials in 11 Samuel 20:25, and 1 Chronicles 26:24, as well as in the historical narratives, only Abiathar and Zadok are mentioned as high priests. Therefore, scholars doubted the historicity of Ahimelech and emended the text in 11 Samuel 8:17 to read "Zadok and Abiathar son of Ahimelech son of Ahitub."

(3) Ahimelech the Hittite was one of the men who joined David when David fled from Saul (1 Sam. 26:6). He was probably one of David's warriors, as he is mentioned with *Abishai b. Zeruah. Ahimelech was only one of many foreigners who attached themselves to David, although most of the others joined David after he was made king.

[Yuval Kamrat]

In the *Aggadah*

Ahimelech would not allow David to partake of the sanctified shewbread, until David pleaded that he was in danger of starvation (Men. 95b). The dispute between Ahimelech and Saul (1 Sam. 22:12–19) was based on Ahimelech's action in consulting the Urim and Thummim on David's behalf. Saul maintained that it was a capital offense, since it was a privilege reserved for the king, while Ahimelech maintained that, when affairs of state were involved, the privilege was a universal one, and certainly applied to David, in his position as a general of the army. Abner and Amasa supported Ahimelech's argument, but Doeg did not, and Saul therefore placed upon him the task of killing Ahimelech (Yal. 131).

AHITHOPHEL (Heb. אֲחִיתוֹפֶל) **THE GILONITE** (i.e., of the Judean town of Giloh), adviser of King *David (11 Sam. 15:12; 1 Chron. 27:33–34): "Now, in those days, advice from Ahithophel was like an oracle from God" (11 Sam. 16:23). Ahithophel was the only one of David's inner council who joined *Absalom in his revolt against his father (15:12). His defection was a source of great anxiety to David (15:31), and prompted him to charge *Hushai the Archite with counteracting Ahithophel's counsel (15:34; 16:15ff.). On Ahithophel's advice Absalom took possession of David's concubines, thus demonstrating that the breach between him and his father was final (16:21). Ahithophel further proposed that he himself should pick 12,000 men and pursue David so as to overwhelm him at the nadir of his strength (17:1–3). Hushai, however, persuaded Absalom to muster a vast army before attempting to battle with such formidable adversaries as David and his professional warriors.

Ahithophel, realizing that the respite afforded to David would be fatal to Absalom and his supporters, returned home and committed suicide (17:23).

A juxtaposition of 11 Samuel 11:3 and 23:34 suggests that Bath-Sheba, the wife of Uriah, whom David debauched, was a granddaughter of Ahithophel. This act of David could thus be the motive for Ahithophel's defection (cf. Sanh. 101b).

The meaning of the name is doubtful. It may be a theophoric combination, the *ophel* ("folly") being a pejorative substitute for the name of a Canaanite god (see *Euphemism); but in Deuteronomy 1:1, it is the name of a place (Tophel).

[Jacob Elbaum]

In the *Aggadah*

The rabbis rank Ahithophel and Balaam as the two greatest sages, the former of Israel and the latter of the Gentiles. Both, however, died in dishonor because of their lack of humility and of gratitude to God for the divine gift of wisdom (Num. R. 22:7). Ahithophel's inciting of Absalom to rebel against his father, King David, was in order to gain the throne himself, since he mistakenly regarded prophecies of royal destiny concerning his granddaughter, Bath-Sheba, to apply to himself (Sanh. 101b). The name of "Ahithophel" is interpreted as "brother of prayer" (Heb. *ahī tefillah*), referring to the fact that he composed three new prayers daily (TJ Ber. 4:3, 8a). Socrates was said to have been his disciple (Moses Isserles, *Torat ha-Olah* 1:11, quoting an old source). He was 33 years old when he took his life, and he was one of those who have no share in the world to come (Sanh. 10:2).

BIBLIOGRAPHY: S. Yeivin, *Mehkarim be-Toledot Yisrael ve-Arzo* (1950), 201–2; Noth, *Personennamen*, index; Bright, *Hist*, 188; Ginzberg, *Legends*, 4 (1913), 94–97. **ADD. BIBLIOGRAPHY:** D. Daube, in: *VT*, 48 (1998), 315–25.

AHITUB (Heb. אֲחִיתוֹב, אֲחִיתוֹב; "the [my] (divine) brother is good"), priest, son of Phinehas, the son of *Eli; brother of Ichabod and father of Ahimelech and Ahijah, who lived during Saul's reign (1 Sam. 14:3; 22:9, 11–12, 20). The Bible gives no details about Ahitub, and it is not clear whether he survived the destruction of Shiloh and continued to officiate as priest or died together with his family in the war against the Philistines (cf. Ps. 78:64). Some scholars assume that Ahitub settled in Nob, made it a priestly town, and officiated there over 85 priests (1 Sam. 22:18) until his son *Ahimelech succeeded him. In 11 Samuel 8:17 and 1 Chronicles 18:16 he is named as father of *Zadok, but this may be an attempt to link the priestly Zadokite line with the legitimate Aaronide line of Shiloh (cf. 1 Chron. 5:33–34; 6:37–38). It is doubtful, however, whether the Ahitub mentioned in the line of priests (*ibid.* 5:37–38; 9:11) refers to the same man. In the last cited verse he is called "the ruler [*nagid*] of the House of God."

The name אֲחִתּוֹב is found in an ancient Egyptian inscription (12–18 dynasties); אֲחִתּוֹב and אֲחִתּוֹבִי appear in Akkadian; and אֲחִתּוֹב on an Elephantine ostrakon.

BIBLIOGRAPHY: de Vaux, *Anc Isr*, 127–8, 372–5; Yeivin, in: *Sefer Dinaburg* (1949), 45ff.; EM, 1 (1965), 215–6 (incl. bibl.). **ADD. BIBLIOGRAPHY:** S. Japhet, *1 & 11 Chronicles* (1993), 351–52.

AHITUB BEN ISAAC (late 13th century), rabbi and physician in Palermo. Ahitub's father was a rabbi and physician; his brother David was a physician. He became known while still a young man for his philosophic and scientific learning. When the kabbalist Abraham *Abulafia went to Sicily to win adherents for his teaching, Solomon b. Abraham *Adret of Barcelona communicated with Ahitub in order to enlist his support in his controversy against Abulafia.

Ahitub was the author of *Maḥberet ha-Tene*, a poem resembling the *Maḥberet ha-Tofet ve ha-Eden* of *Immanuel of Rome. In this allegorical work he describes his journey to Paradise where he went to discover the right way of life. There he enjoyed the food of the blessed, and when he returned to earth he brought with him some of the waters of Paradise. These he used to water his garden which then yielded delicious fruits. The first of these he placed in a basket (*tene*), consecrated them to God, and then offered the fruits to anyone who wished to taste them. The number of these fruits was 13, representing the 13 *Articles of Faith. Ahitub's work was incorporated in the *Sefer ha-Tadir* of Moses b. Jekuthiel de Rossi who added a *piyyut* on the articles of faith. This *piyyut* was published twice (A. Freimann, in ZHB, 10 (1906), 172; Hirschfeld, in JQR, 5 (1914/15), 540).

Ahitub also translated Maimonides' *Treatise on Logic* from the Arabic into Hebrew. This translation was still known in the 16th century, and its variant readings were recorded in the margins of some copies of the first edition of another Hebrew translation of the work, this one by Moses ibn *Tibbon. Ahitub's translation was forgotten until a manuscript of it was found and published by Chamizer. An edition of the translation appears in Maimonides' *Treatise on Logic* (ed. by I. Efron (1938), 67–100; cf. Eng. section, 8–9ff.).

[Umberto (Moses David) Cassuto]

AHLAB (Heb. אֲחֻלָּב), Canaanite city allotted to the tribe of Asher, which, however, was unable to conquer it at the beginning of the Israelite settlement (Judg. 1:31). This is apparently the same city of Asher which appears in the form *me-Hevel* (מֵהֶבֶל; “from Hebel”; Josh. 19:29). According to the Septuagint, this form is an error for Meheleb and it is mentioned as Maḥalliba in Sennacherib's account of his campaign in 701 B.C.E. between Zarephath (Zaribtu) and Ushu (mainland Tyre). Ahlab is identified with Khirbet el-Maḥalib, on the Lebanese coast, 3½ mi. (6 km.) north of Tyre and approximately 1 mi. (2 km.) south of the mouth of the Litani River.

[Yohanan Aharoni]

AHL AL-KITĀB (Ar. “The People of the Book”), name of the Jews, Christians, and Sabeans (al Ṣābdʿa) in the Koran (Sura 3:110; 4:152; et al.) because they possess a *kitāb*, i.e., a holy book containing a revelation of God's word. Pre-Islamic Arabic poetry refers to Jewish and Christian Scripture. It especially dwells on the *Zabūr*, a holy book – whose origin is from the word *mizmor* (“psalm”) – which Muhammad knew as given to David (Sura 17:15), i.e., the Book of Psalms. Muhammad frequently mentions the *tawrā* (the Torah, possibly the entire Bible) revealed to the Israelites (e.g., Sura 3:58, 87; 48:29) which contains clear allusions to Muhammad's appearance (Sura 7:156; 33:44; 48:4). He also is acquainted with the *Injil* (Evangelium, the Gospels), a term which covers the entire New Testament. Muhammad emphasizes that the *Injil* confirms the statements of the Torah (Sura 5:50; cf. 48:29; 57:27). He does not specify the holy book of the Sabeans although he mentions them three times in the Koran (Sura 2:59; 5:72; 22:17), along with the Jews and the Christians, and promises them their part in salvation. According to the Arabs, Muhammad meant the Mandeans, a Judeo-Christian sect whose believers lived in Babylonia. In the early period of his mission, Muhammad related positively to the *Ahl al-Kitāb* and their teachings. But his attitude changed as a result of the disappointment in his hope of persuading them to accept his faith. Then Muhammad accused them of intentionally falsifying the Torah or at least distorting its interpretation (Sura 2:70; 3:64, 72, 73; cf. 5:16; 6:91). Despite this, Muhammad determined that the *Ahl al-Kitāb*, as the authors of holy books, deserve special treatment, and because they had agreed to pay the *jizya* (“poll tax”), the command to fight against them was not enforced (Sura 9:29). Since the *Ahl al-Kitāb* fulfilled this condition, they became the *Ahl al-Dhimma* (“protected people”; see *Dhimmi). In a later period this position caused the *Ḥarrān* (“star worshipers”) who called themselves Sabeans and the Persians, who believed in Zoroastrianism and relied on their holy book, to merit inclusion in the term *Ahl al-Kitāb*.

As a result of their belief in the books of divine revelation, the *Ahl al-Kitāb* enjoyed a favored status in Islam. A Muslim is permitted to intermarry with their women and to eat what they have slaughtered. On the other hand, the accusations of Muhammad as to falsifications of Scripture and distorted interpretations caused the creation of an extensive polemical literature and disputations which at times actually poisoned the relations between the adherents of the different religions.

AHLEM, village near Hanover, known for its Jewish horticultural school, the first of its type in Germany. The school was founded in 1893 by the Jewish philanthropist Moritz Alexander Simon and was open to all suitable Jewish applicants, regardless of ideological affiliation. It trained hundreds of Jewish youths as agriculturalists and skilled workers. The three-year curriculum included agricultural subjects, especially horticulture, in addition to general subjects taught in secondary schools. On its foundation boys from the age of 14 were admitted; from 1903 to the 1920s girls over 16 were accepted for vocational training and home economics, and subsequently horticulture. A boarding school and elementary school for children between the ages of eight and 13 were added. In 1933 the number of pupils totaled approximately 50, but increased to 120 between 1936 and 1938. The school was authorized by the Nazis as a center for vocational training for Jewish youth intending to emigrate and was permitted to issue graduation certificates. Between 1933 and 1939 about 300 pupils graduated from Ahlem, and some of them emigrated to Erez Israel. Even before the closure of the school in July 1942, Ahlem was made an assembly point for the deportation of Jews by the Gestapo. Between December 1941 and February 1945, more than 2,400 Jews of the Hanover and Halberstadt region were deported from Ahlem to Riga, Theresienstadt, Warsaw, and Auschwitz. For a short time, the tradition of the *Gartenbauschule* was revived and a kibbutz was established by Holocaust survivors in Ahlem in 1945.

[Mordechai Eliav / Stefan Rohrbacher (2nd ed.)]

°AHLWARDT, HERMANN (1846–1914), German publicist and antisemitic politician. In 1893, when headmaster of a primary school in Berlin, Ahlwardt was dismissed for embezzling money collected from the pupils. He made antisemitism his profession and used it as a political springboard. His first work, *Der Verzweiflungskampf der arischen Voelker mit dem Judentum* (“The Last Stand of the Aryan Peoples against Judaism,” 1890–92), described an alleged Jewish world conspiracy. Its second part, “The Oath of a Jew” (*Der Eid eines Judens*), included slander against G. von *Bleichroeder, a leading Jewish banker. Prosecution followed and Ahlwardt was sentenced to four months’ imprisonment. He was hardly out of prison when he published another defamatory leaflet *Judenflinten* (“Jewish Rifles”), claiming that the guns supplied to the German Army by a Jewish manufacturer were defective. However, Ahlwardt was saved from serving a second sentence by parliamentary immunity, as he had been elected in 1892 to the Reichstag as member for Arnswalde-Friedeberg (Brandenburg) on the platform propounded to the peasants there that their misery was due to “the Jews and the Junkers.” His pamphlets (no less than ten of which appeared in 1892) were assisted by the press and Roman Catholic clergy, with the result that antisemitic rioting, the burning of the synagogue at Neustettin, and the revival of ritual murder accusations en-

sued. To the embarrassment of his own party, the Conservatives, Ahlwardt occupied the time of the Reichstag with his slanderous “revelations” about the Jews. He continued to hold his seat there until the Reichstag was dissolved in 1893 when he was immediately imprisoned for libel. In spite of this and the opposition of the Conservatives he was reelected by the same constituencies and held his seat until 1902. He was sentenced for blackmail in 1909 and died unnoticed.

AHMADNAGAR, capital of the former kingdom of the Nizām Shah dynasty on the west coast of India. Under Burhān Nizām Shah I (1510–53), a Shi’a Muslim, it became a center of Hindu-Muslim culture and learning. Among the scholars attracted to his court and enjoying its atmosphere of complete religious tolerance were some Marranos from Portugal, including Sancho Pirez, who became a favorite of the king and was a friend of Garcia *d’Orta. Garcia refers in his *Colloquia* (no. 26) to “Jews in the territory of Nizamuloco [Nizām Shah].” A Jewish settlement also existed in the port of the kingdom, Chaul (now Revanda).

AḤOT KETANNAH (Heb. אֲחֹת קֵטָנָה; “Little Sister”), name of a hymn for Rosh Ha-Shanah. It was composed by Abraham Ḥazzan Gerondi, a writer of devotional hymns, who flourished about the middle of the 13th century in southern France. The poem consists of eight metrical stanzas of four to five lines, each ending with the refrain *Tikhleh shanah ve-kilelotheha* (“May this year with its curses end”). The last stanza ends *Taḥel shanah u-virekhoteha* (“May the year and its blessings begin”). The acrostic gives the name of the author “Abram Ḥazzan.” The opening words of the hymn are taken from Song of Songs 8:8 “We have a little sister” and refer to the traditional allegorical interpretation of the Song of Songs. The poem evokes Israel’s sufferings in exile and implores God’s mercy “to fortify the song of the daughter and to strengthen her longing to be close to her lover.” At first adopted into the Sephardi ritual, where it is recited before the evening prayer of Rosh Ha-Shanah, the poem was subsequently adopted in the Ashkenazi and Yemenite rites, especially in kabbalistic circles.

[Meir Ydit]

Music

Aḥot Ketannah is sung either by the entire congregation, or by the cantor alone with the congregation joining in the refrain. The melody is uniform throughout the Sephardi Diaspora, with only slight local variations, and may therefore belong to the common pre-expulsion stock. Notated examples may be found in Idelsohn, *Melodien*, 1, no. 93; 2, no. 48 (mus. ex. 1); 3, nos. 43, 46, 175; 4, nos. 185, 186 (mus. ex. 2), 187, 192; 5, no. 159; Levy, *Antologia*, 2, nos. 93–101; F. Consolo, *Sefer Shirei Yis-*

rael (1890), 125; E. Aguilar and D.A. de Sola, *Sephardi Melodies* (1857, 1931), no. 26; O. Camhy, *Liturgie Sepharadie* (1959), nos. 63, 64; Cremieu, J.S. and M., *Chants hébraïques... de l'ancien Comtat Venaissin* (1885), no. 1.

AHRWEILER (Heb. אַרױוילר), small German town near Bonn. There was a considerable Jewish community in Ahrweiler in the 13th century, some of its members owning houses in Cologne. In the 14th century the Jews of Ahrweiler dealt in salt and wine. The community suffered during the *Black Death massacres of 1348. The physician and exegete Baruch b. Samson ("Meister Bendel") lived in Ahrweiler in the 15th century. Among the rabbis of Ahrweiler were Ḥayyim b. Johanan Treves (d. 1598), who also officiated as **Landrabbiner* for the territory of the Electorate of Cologne, and his son-in-law Isaac b. Ḥayyim. A notable family which adopted the name "Ahrweiler" included among its members the Frankfurt *dayyan* Hirz Ahrweiler (d. 1679) and his son Mattathias, rabbi of Heidelberg (d. 1729). The small Ahrweiler community of modern times numbered only 4 Jews in 1808; 28 in 1849; 65 in 1900 (1% of the total population); and 31 in 1933. It maintained a cemetery and synagogue built in 1894. The synagogue was burned and desecrated on **Kristallnacht* (Nov. 9–10, 1938); the last Jews were deported from Ahrweiler in July 1942.

Jahrhundert* (1983); B. Klein, in: F.G. Zehnder (ed.), *Hirt und Herde. Religiosität und Frömmigkeit im Rheinland des 18. Jahrhunderts* (2000), 251–78.

AHWAZ, capital of the Persian province of Khuzistan. Ahwaz was called Be-Ḥozai in the Talmud (Ta'an. 23; Pes. 50; Gitt. 89; Hull. 95). Several *amoraim* originated from the city, including R. Aḥa, R. Hanina, and R. Avram Ḥozā'ah. As a junction between Babylonia and Persia, Ahwaz was an important medieval center for the eastern trade, with a flourishing Jewish population. Two Jews in the service of Caliph al-Muqtadir, Joseph b. Phinehas and Aaron b. Amram, were tax farmers for the province, owning real estate and a bazaar there which yielded a considerable income. They rose to the position of court bankers. The revenue from Ahwaz province is mentioned as security for a large loan they advanced to the government. Ahwaz remained a center of Jewish commercial activities throughout the Middle Ages, as attested by correspondence between Jewish merchants in Ahwaz with associates in *Fez and *Cairo. One of the earliest indications that Jewish merchants in Khuzistan used the Persian language is a Judeo-Persian law report, dated around 1021, found near Ahwaz.

As in *Abadan, Ahwaz became one of the first centers of Zionist activity in Iran beginning with the occupation of the southern region by the British Army (Sept. 1941). During this period there were 300 Jews in Ahwaz, constituting 70 families,

many of them immigrants from Iraq and from other cities like *Isfahan, *Shiraz, *Kashan, Arak, and *Kermanshah. The majority were merchants, mainly in the textile trade. There were five wealthy families in Ahwaz; the rest belonged to the middle class. There were two synagogues, one belonging to Jews of Iraqi origin and the other to Persian-speaking Jews. After 1948, many Jews immigrated to Israel and to *Teheran. The majority of the Jews of Ahwaz left the city after the Islamic Revolution (1979). At the beginning of the 21st century, there were fewer than five families living there.

AI or **HA-AI** (אֵי, אֵי; in the Samaritan version of Gen. 12:15 called Ayna; in Jos., *Ant.* 5:35 – Naian), place in Erez Israel. It is mentioned together with Beth-El as near the site where Abraham pitched his tent (Gen. 12:8; 13:3). In Joshua 7:2, it is located beside Beth-Aven, east of Beth-El. Ai was the second Canaanite city which Joshua attacked (Josh. 7–8). After the first attempt to capture the city had miscarried because of the sin of *Achan, the king of Ai and his army were defeated in an ambush and the city was left in ruins (see also Josh. 12:9). Although the old site of Ai remained abandoned, an Israelite city with a similar name arose nearby. Isaiah mentioned Aiath (אֵיַת – Isa. 10:28) as the first of the cities occupied by the Assyrians in their march on Jerusalem, before Michmas and Geba. In the post-Exilic period, returnees from Ai are mentioned together with people from Beth-El (Ezra 2:28; Neh. 7:32) and Aijah (אֵיַה) appears as a city of Benjamin (Neh. 11:31). Most scholars identify the ancient city with et-Tell near Deir Dibwan, c. 1 mi. (2 km.) southwest of Beth-El. Excavations at the site carried out in 1933–35 by Judith Marquet-Krause were renewed in 1964 by J.A. Callaway. The city was found to have been inhabited in the Early Bronze Age from c. 3000 B.C.E. Several massive stone walls were discovered as well as a sanctuary containing sacrificial objects and a palace with a large hall, the roof of which was supported by wooden pillars on stone bases. The city was destroyed not later than in the 24th century B.C.E. and remained in ruins until the 13th or 12th century B.C.E. when a small short-lived Israelite village was established there. This discovery indicates that in the time of Joshua, the site was a waste (also implied by the name Ai, literally, "ruin"). Scholars explain the discrepancy in various ways. Some consider the narrative of the conquest of Ai contained in the book of Joshua an etiological story that developed in order to explain the ancient ruins of the city and its fortifications. Others assume that the story of Ai was confused with that of nearby Beth-El which evidently was captured during the 13th century. Others dispute the identification without, however, being able to propose another suitable site. Khirbet Ḥaiyan,

c. 1 mi. (2 km.) south of et-Tell, has been suggested as the site of the later city; the only pottery found there, however, dates from the Roman and later periods.

AIBU

(1) Babylonian sage who flourished in the transitional period from the *tannaim* to the *amoraim* (late second – early third century C.E.). The father of *Rav and the brother of Hiyya (Pes. 4a; Sanh. 5a), he studied in Erez Israel, where he frequently visited Eleazar b. Zadok, whose customs and halakhic decisions he quotes (Suk. 44b).

(2) The son of Rav, who told him “I have labored with you in *halakhah*, but without success. Come and I will teach you worldly wisdom” (Pes. 113a).

(3) The grandson of Rav (Suk. 44b), and a frequent visitor to his home.

(4) *Amora* and prominent aggadist (late third – early fourth century C.E.). While he transmitted some halakhic statements in the name of Yannai (Ket. 54b; Kid. 19a; et al.), he was mainly interested in *aggadah*, quoting the aggadic interpretations of *tannaim* and *amoraim* such as R. Meir (Mid. Ps. 101, end), R. Eliezer b. R. Yose ha-Gelili (Tanḥ. B., No’ah, 24, 53), and R. Johanan (Gen. R. 82, 5). His aggadic comments, popular among homilists, were frequently quoted by them, especially by R. Yudan b. Simeon (*ibid.*, 73:3; Mid. Ps. 24:11; et al.), R. Huna, R. Phinehas, and R. Berechiah. One of his aggadic maxims is “No man departs from this world with half his desires realized. If he has a hundred, he wants two hundred, and if he has two hundred, he wants four hundred” (Eccl. R. 1:13).

AICHINGER, ILSE (1921–), Austrian writer and lyricist, and author of radio plays. One of twin daughters born to a Jewish physician and a teacher, Aichinger spent her childhood in Linz and after the early divorce of her parents moved to Vienna. There she and her maternal relatives were confronted with the persecution of the Nazi regime. In her first publication, *Aufruf zum Mißtrauen* (1946), she cautioned against what she perceived to be a new and dangerous self-confidence in Austria after the collapse of Nazi rule. At an early age, she had expressed an interest in studying medicine, but she was unable to do so because of the Nuremberg Laws. At the end of World War II, she was able to pursue her interest in medicine, but dropped out of university in 1948 to complete her first

novel, *Die groessere Hoffnung* (1948). The novel explores the angst and suffering of both the Jews and their pursuers during the Third Reich. The text reflects Aichinger’s commitment to the weak and skepticism about the German language. After 1950, she was employed as a reader at the S. Fischer publishing house. In 1953 she married Guenter Eich, whom she had met at a conference of the “Gruppe 47” where she received an award for her *Spiegelgeschichte*. This is a piece of literary prose that narrates a reversed life with the attempt to unlearn everything including language and thus postulating silence. Aichinger’s collection of narratives *Rede unter dem Galgen* was also published in 1953. In these narratives she examines a range of human emotions, including angst, alienation, paradox, and ambivalence. Aichinger’s lyric and narrative texts increasingly show the reduction of linguistic means focusing on subjectivity, thereby blending reality and dream, inner and outer world. Examples of these themes can be found in *Eliza Eliza* (1965), *Schlechte Woerter* (1976), *Verschenkter Rat* (1978) or *Kleist, Moos, Fasane* (1984). Aichinger also published a number of radio plays, including *Knoepfe* (1953), *Besuch im Pfarrhaus* (1962), *Auckland* (1970), and the radio dialog *Belvedere* (1995). These radio plays illustrate existential borderline experiences between assimilation and resistance. A later publication is *Film und Verhaengnis: Blitzlichter auf ein Leben* (2001), notes on films and photography which turn a spotlight on the cultural life of Vienna between 1921 and 1945.

Aichinger’s awards over the years include the Nelly Sachs-Preis, the Georg Trakl-Preis, the Franz Kafka-Preis, and the Joseph-Breitbach-Preis. She was a member of the Deutsche Akademie fuer Sprache und Dichtung, the Akademie der Kuenste Berlin, and the Bayerische Akademie der Schoenen Kuenste.

[Ann-Kristin Koch (2nd ed.)]

AIJALON (Ayyalon) (Heb. אֵיְיָלוֹן; “place of deer”). (1) City situated in a broad valley (valley of Aijalon) which is one of the approaches to the Judean Hills. Volcanic activity occurring in the area in the latest geological period left some basalt traces and the hot springs found at *Emmaus in ancient times. Potsherds found on a large tell, about 3 mi. (5 km.) north of Babal-Wad, show continuous occupation from the Late Bronze Age onward. The village of Yalu is built on the tell.

The El-Amarna letters indicate that the region was included within the kingdom of Gezer in the 15th and 14th centuries, B.C.E. This kingdom was on hostile terms with Jerusalem, whose ruler Puti-Hepa complained that his caravans were being robbed in the valley of Aijalon (“Yaluna,” EA, 287). In a letter to Amenhotep IV (EA, 273), the queen of the city of Zaphon (?) reports that the Habiru attacked the two sons of Milkilu, king of Gezer, in Ayaluna (Aijalon) and in Šarha

(Zorah). Joshua referred to the valley of Aijalon in connection with his defeat of the Amorites. Joshua asked for a miracle to prevent the sun from setting so that the Israelites could avenge themselves on the Amorites. Joshua said: "Sun, stand thou still upon Gibeon; and thou, Moon, in the valley of Aijalon" (Josh. 10:12). The city is included in the tribal area of Dan (Josh. 19:42) and in the list of levitical cities (Josh. 21:24; 1 Chron. 6:54), but the Danites were unable to subject the Amorites, and later the region came under the influence of the "house of Joseph" (Ephraim; Judg. 1:34–35). The valley became a field of battle between the tribes of Dan, Ephraim, Judah, and Benjamin on the one side and the Amorites and Philistines on the other (1 Chron. 7:21; 8:6). The region was finally conquered by the Israelites under David. Aijalon is included in Solomon's second administrative district under "the son of Deker" (1 Kings 4:9). With the division of the kingdom, the valley remained within the kingdom of Judah, in the territory of Benjamin, and Rehoboam fortified it as part of his defense system of Jerusalem (11 Chron. 11:10). It is mentioned in the list of cities (no. 26) captured by Shishak, king of Egypt, in about 924 B.C.E. and the Philistines also captured it during the reign of Ahaz but held it only briefly (11 Chron. 28:18). There is no reference to Aijalon during the Second Temple period. The valley was located on the route taken by Cestius Gallus, the governor of Syria, in his campaign against Jerusalem in 66 C.E. (Jos., Wars, 2:513–6). In Byzantine times, Aijalon is mentioned as *Ialo*, a name which is preserved in the present-day Arab village of Yalu.

In 637 C.E., Aijalon was the headquarters of the Arab armies which suffered heavily at Emmaus. The region was badly damaged in an 11th-century earthquake. During the Crusades it was once again a battlefield and a fort was built there by the Crusaders (today *Latrun). It was also a scene of fighting during Allenby's campaign in 1917 and in the War of Independence (1948) a prolonged battle was fought in the region over the roads leading to Jerusalem. After the War of Independence, a few Israeli settlements were established in the region. These were considered border settlements, and during the 1950s they were under terrorist attack. In 1967 the whole area was occupied by the Israel Defense Forces, and the Arab inhabitants fled to Ramallah. In 1976 a large park was established on the deserted land of the Arab villages.

(2) Town in the territory of Zebulun where the judge, Elon, was buried (Judg. 12:12). Its location is unknown.

AIKEN, HENRY DAVID (1912–1982), U.S. philosopher. Aiken was born in Portland, Oregon, and taught at the universities of Columbia, Washington, Harvard (1946–65), and Brandeis (1965–80), specializing in ethics, esthetics, and the history of philosophy. He was influenced by the British analytic movement, by the American naturalists – especially Santayana, and by David Hume's moral and political writings,

some of which he edited. Among the works he wrote are *The Age of Ideology* (1957), selections including a commentary on 19th-century thought; *Reason and Conduct* (1962), a collection of essays in moral philosophy; and *Predicament of the University* (1971).

[Richard H. Popkin]

AIKHENVALD YULI ISAYEVICH (1872–1928), Russian literary critic and essayist. An opponent of the dominant school of social criticism, he made his name as a major exponent of the subjective, impressionist approach. His works include *Pushkin* (1908), *Etyudy O zapadnykh pisatelyakh* ("Studies of Western Writers," 1910), *Siluety russkikh pisateley* ("Outlines of Russian Writers," 3 vols. (1906–1910)), and *Spor o Belinskom* ("The Belinski Controversy," 1914), an appraisal of Vissarion Belinski, the first Russian to view literary criticism as a molder of public opinion. In 1922 Aikhenvald and a number of other non-communist intellectuals were expelled from the U.S.S.R. He was killed in a streetcar accident in Berlin.

AIMÉE, ANOUK (Françoise Dreyfus; 1932–), French actress. Starting her film career as a teenager and the daughter of actress Geneviève Sorya, the Paris-born Aimée gained the attention of the French public in 1957 in the film *Les Mauvaises Rencontres*. In Federico Fellini's *La Dolce Vita* (1960), and *8½* (1963), she was cast in roles reflecting modern boredom and world-weariness. She was nominated for an Academy Award as best actress for her part in Lelouch's *A Man and a Woman* (1966). Among her more than 80 films are *Justine* (1969), *The Appointment* (1970), *Salto nel Vuoto* (Cannes Award for Best Actress, 1980), *Un Homme et une Femme: 20 Ans deja* (1986), *Il y a des jours...et des lunes* (1990), and Robert Altman's *Ready to Wear* (1994). She was married to the actor Albert Finney from 1970 to 1978.

[Jonathan Licht]

°AINSWORTH, HENRY (1569–1622), English Bible scholar. Ainsworth was educated at Cambridge and already knew Hebrew when, as an adherent of the Brownist sect (later called Congregationalists), he went into exile in Amsterdam. He served there as a teacher (1596–1610) in the independent English Church, and subsequently as its minister. Through Jewish contacts in Amsterdam he improved his Hebrew knowledge, the considerable extent of which is reflected in his writings. These include *Silk or Wool in the High Priest's Ephod...* (London, 1605); an English version, with annotations, of Psalms (Amsterdam, 1612), which was adopted by the Puritans of New England until they produced their own in 1640; and *Annotations to the Pentateuch*, with Psalms and Song of Songs (1616–27). This work, which includes rabbinic material, was translated into Dutch in 1690 and into German in 1692; Song

of Songs in English meter in 1623. Ainsworth's *Annotations* were used two and a half centuries later by the revisers of the English Bible. He was considered one of the finest English Hebraists of his time.

AISH HATORAH, outreach organization based in Jerusalem, Israel, and housed in a building facing the Western Wall, directly above the plaza. It was founded by American-born rabbi Noah Weinberger in 1974. Weinberger had grown up on Manhattan's Lower East Side, where he was raised in an Orthodox home and was proud of his mother's involvement in the establishment of the Esther Schoenfeld Beth Jacob School for Girls. He saw his mission as fighting assimilation and answering the question, "Why be Jewish?" His strategy involved the use of high technology and powerful and media-savvy business executives and celebrities to help send out his institution's message. It operates 26 full-time branches and offers programs in 80 cities, representing 17 countries on five continents and attended by 100,000 people annually in addition to the 4,500 students who study at Aish Jerusalem every year. Over 175 people have graduated from the rabbinic program and have gone to North America to do outreach work.

Aish Programs

DISCOVERY. A one-day program that explores the rational basis for Jewish belief and practice. More than 100,000 people worldwide have attended the Discovery program. Guest hosts for these seminars have included American entertainers Ed *Asner, Kirk *Douglas, Elliot *Gould, Joel *Grey, and Jason *Alexander. Aish instructors conduct hundreds of related seminars in cities around the world, including Johannesburg, London, Sydney, Melbourne, Santiago, and Jerusalem, as well as in 45 U.S. cities for university campuses, Jewish community centers, and Reform, Conservative, and Orthodox synagogues.

THE EXECUTIVE LEARNING PROGRAM. Successful men and women of all ages participate in individually designed personal study programs in their homes and offices. With limited free time, and often with limited background in Judaism, hundreds of busy executives find a way to fit Torah study into their active lives. Among those who participate are Robert Hormats, vice chairman of Goldman-Sachs International, and Michael Goldstein, CEO of Toys R Us.

THE ISRAEL EXPERIENCE. The 4,500 people participating in Aish Jerusalem programs in Israel attend the Discovery Seminar; the one-month Essentials for men or JEWEL for women; introductory programs; and the Jerusalem Fellowships. The latter was founded in 1985 by senators Daniel Patrick Moynihan and Arlen Specter. The program combines touring Israel, studying Judaism, and meeting Israel's top leadership from across the political spectrum.

EYAHT COLLEGE OF JEWISH STUDIES FOR WOMEN. Rebbetzin Denah Weinberg founded the school in 1990 to empower Jewish women.

THE RUSSIAN PROGRAM. This reaches over 50,000 people in the Former Soviet Union (FSU), plus another 3.5 million viewers through its popular television series. In Moscow, Aish runs the Intellectual Cafe, a bimonthly seminar teaching Talmud to beginners through a logic game. Aish-FSU has four permanent branches, including one accredited college.

In Israel, Aish created a social action organization, AVIV, which provides legal, medical, and social services to aid Russian Jews after they make *aliyah*. Aish has also created a series for Radio Reka, the immigrant radio station that has 200,000 listeners in Israel and one million in Russia.

HIGH TECH AND JERUSALEM FUND MISSIONS TO ISRAEL. The Albert Einstein High Tech Mission brings leaders of hi-tech industry to Israel to meet their peers and explore potential investments, strategic partnerships, and spirituality in the Holy Land. Companies who have participated include the founders, CEOs, or presidents of AOL, Infospace, Ness, National Semiconductor, Computer Associates, IDT, Drugstore.com, ZDNet, StarTek, Net2Phone, The Red Herring, Draper Fisher Jurvetson, Scient, Disney Internet, Akamai, and ATT.com.

THE THEODOR HERZL MISSION. Co-sponsored with the mayor of Jerusalem, it brings world leaders from across the world to Israel for one week. Participants have included Lady Margaret Thatcher, U.S. senators John Kerry, Harry Reid, and Joseph Biden, former House speaker Newt Gingrich, former U.S. Ambassador to the UN Jeanne Kirkpatrick, Congressman Peter Deutsch, Governors Tom Ridge (PA) and Christine Whitman (NJ), philanthropist Carroll Petrie, Elie Wiesel, Alan Dershowitz, Barry Sternlicht, chairman of Starwood Hotels, the world's largest hotel company, Starbuck's Howard Schultz, and Accuweather president Joel Meyer.

THE CAPITAL CAMPAIGN. Aish HaTorah is building a hi-tech Jewish education center incorporating state of the art Internet, video, computer, and satellite hook-ups. The Kirk Douglas Theater, dedicated by the Hollywood legend, will present a film about the Jewish contribution to humanity. Aish also acquired several sites in the Old City, projected for use as classrooms, dormitories, and offices.

AISH.COM. With its 1,000,000 hits a year, the site is user-friendly, hi-speed, and full of information and contact numbers about all of its programs.

[Jeanette Friedman (2nd ed.)]

AI T' IEN (b. c. 1545), Chinese Jew through whom detailed knowledge of Chinese Jewry first reached the Western world at the beginning of the 17th century. Ai T'ien was born in *Kai-feng, Honan province, and obtained his licentiate in Chinese classics as a minor school official (*chü-jên*) in 1573. In 1605 he

went to Peking to seek employment, which led to his eventual appointment at Yangchow. While in Peking, in June 1605, he visited the Italian Jesuit missionary, Matteo Ricci. Ai gave Ricci a detailed account of his own family and the status of the Jewish community in Kaifeng, as well as the relationship of the Jews with the local Muslims and Nestorian Christians. Ricci came to the conclusion that the community in Kaifeng were of Jewish descent and sent this information in a letter dated July 26, 1605, to the general of the Jesuit order in Rome. This was the first report to reach Europe concerning the existence of Jews in China, and a document of primary importance for Chinese Jewish history.

AIX-EN-PROVENCE (Heb. אֵיִזְיִן or אֵיִזְיִן), town in the Bouches-du-Rhône department, southern France. The first reference to the presence of Jews in Aix-en-Provence dates from about 1283. They then owned a synagogue and a cemetery situated at Bourg St.-Saveur, which was under the jurisdiction of the archbishop. In 1299 they contributed to the annual tax paid to the count by the Jews of Provence. The Jewish population in 1341 numbered 1,205 (about 1/11 of the total), occupying 203 houses, mainly on the Rue Verrerie (called Rue de la Juiverie until 1811); not far from there the du Puits-Juif still exists (probably the public well in this street gave rise to the legend that the Jews owned a medicinal spring). A synagogue was situated on the corner of the Rue Vivaut and Rue Verrerie, and another (1354) in the lower town. In 1341 King Robert of Anjou attempted to set up a compulsory Jewish quarter, but notwithstanding repeated injunctions it had evidently failed to materialize by 1403. The community in Aix was administered by at least two syndics. The Jews did not have to pay taxes to the municipality since they contributed to the annual tax paid by the Jews of Provence to the crown. The contributions of Aix Jewry amounted to 16% of the total in 1420, and to over 25% in 1446.

By letters patent of Sept. 25, 1435, Jews were prohibited from practicing brokerage, and were obliged to wear the Jewish *badge. These restrictions followed the anti-Jewish riots, which had taken place in 1430, when nine Jews were killed, many were injured and 74 were forcefully baptized. A general amnesty was subsequently granted to the inhabitants of Aix. The position of the Jews in Aix was ameliorated when, in 1454 King René of Anjou allowed them to employ Christian servants, reduced the size of the badge, and exempted Jews from wearing it while traveling.

When in 1481 Provence passed to France, Louis XI confirmed the privileges formerly enjoyed by the Jews of Aix and Marseilles. Aix Jewry again suffered disaster, however, when on May 10, 1484, they were attacked by bands of marauders from the Dauphiné and Auvergne and the highlands of Provence. The raids were repeated intermittently until 1486. In that year, the Aix municipality asked Charles VIII to expel the

Jews. The general decree of expulsion, issued in 1498, became effective in 1501. The Parliament of Provence reissued the prohibition on Jews settling in Aix in 1760, 1768, and 1787.

In cultural matters, the Aix community took a prominent part in the *Maimonidean controversy that divided Jewish scholars. The Jews of Aix were mentioned by the Provençal poet Isaac b. Abraham ha-Gorni who criticized them for their inhospitable attitude toward strangers.

Shortly after 1789 nine Jewish families from Avignon settled in Aix-en-Provence. The Jewish population numbered 169 in 1809 and 258 in 1872 (out of a total population of 29,000), dwindling to 214 in 1900. In the mid-19th century Aix was the center in which the former traditions of the *Comtat Venaissin communities were most faithfully preserved, largely through the activities of members of the *Milhaud and *Crémieux families. In 1829, the Hebrew book by Moses Crémieux *Ho'il Moshe Be'er* was printed in Aix by François Gigia.

The census conducted by the Vichy government in May 1941 recorded 33 Jewish families living in Aix. When the Germans entered the unoccupied zone in November 1942, 2,000 Jewish refugees from Germany and Eastern Europe were sent to Aix. Most of them were quartered in the nearby camp of Milles. In May 1943, following the roundup of Jews by the Germans in southern France, almost all the Jews in Aix were arrested and interned at *Drancy. They were subsequently deported to Germany and most perished in the Holocaust.

[Bernhard Blumenkranz]

Modern Times

The community practically disappeared during the years immediately following World War II. All the archives of the community disappeared during World War II. As the synagogue that was inaugurated in 1840 was no longer used for worship, it was sold in 1952 and became a Protestant church. The prayer books were distributed among several neighboring communities. The synagogue's centenary could not be celebrated in 1940, but Darius *Milhaud, a native of Aix and great-grandson of the community's president when the synagogue was built, composed a cantata for the occasion, *Crown of Glory*, based on three poems by Ibn *Gabirol and on prayers from the *Comtat Venaissin. The arrival of North African Jews after 1956 created a new community. In 1967 there were about 1,000 Jews living in Aix-en-Provence. As of 1987, the population was said to be 3,000. The rabbi and the rite of the synagogue are North African. The community is administered by a council called the Association Culturelle Israélite, which is affiliated with the Consistoire Centrale de France. An attempt was made to torch the synagogue on the afternoon of Yom Kippur, October 9, 2000.

AIZENBERG, NINA (1902–1974), Russian painter, graphic artist, and stage designer. Aizenberg was born in Moscow. In 1918–24, she studied in Moscow at the High Arts and Technical Workshops (VHUTEMAS). From 1924, she worked as a stage designer for several Moscow theaters. In 1926, Aizenberg became the principal stage-designer for the Blue Robe (*Sinyaa Bluza*), a propaganda-variety theater, where she developed a novel approach to designing sets and costumes. This approach, based on constructivist theater techniques, made possible quick in set and costume changes through the artful use of basic components in various combinations. In 1928–30, Aizenberg was a member of the Association of Decorative Artists, in 1930–32 she joined October group, which united artists working in the constructivist manner and adherents of “industrial art.” In the early 1930s, she was active in the festive design of Moscow’s streets on holidays marking the events of the Revolution. From the mid-1920s through the 1930s, she regularly showed her work at set design and decorative art exhibits in Moscow and Leningrad. In 1938–41, she executed designs for sports parades and rallies. In 1940–50, Aizenberg worked as a set designer for various theaters in Russia and other Soviet republics. She executed a series of landscape paintings in the 1950s. The first and only solo exhibition in her lifetime took place in 1964 in Moscow.

AIZMAN, DAVID YAKOLEVICH (1869–1922), Russian writer. He studied painting in Odessa and Paris, but in his early thirties turned to literature. Aizman wrote a great deal about the Jewish poor, in a style reminiscent of Maxim *Gorki. In such short stories as “Ob odnom zlodeyanii” (“About a Crime,” 1902), “Zemlyaki” (“Fellow-countrymen,” 1903), and “Savan” (“The Shroud,” 1903) as well as in the play *Ternovaya kust* (“The Blackthorn Bush,” 1907), Aizman portrayed revolutionary-minded Jewish intellectuals and their persecution by the Czarist police. His later work bears the imprint of Russian Symbolist prose, e.g., the short story “Utro Anchla” (1906), the novella “Krovavy razliv” (“Bloody Deluge,” 1908), and the fantastic dream “Svetly bog” (“The Radiant God,” 1914). Although he was very popular in his day – an eight-volume edition of his works was published in Russia in 1911–1919 – Aizman’s stories last appeared in the U.S.S.R. in 1926, and by the second half of the century his name was almost totally forgotten.

AKABA, Jordanian port on the northeastern corner of the Gulf of Eilat. Due to freshwater wells in the vicinity, it has

constituted, since antiquity, an oasis in an otherwise hot desert devoid of life. Under Roman rule it was called Aelana, and an army post was stationed there. In the early Arab period, the town had an important Jewish community. In the tenth century, Akaba was a large port, and the Crusaders made it a key position in their outer defense line. In the 12th century, however, the town began to decline and remained little more than a wayfarers’ station on the pilgrims’ road to Mecca. A change came in 1906 when the border between Egypt and the Ottoman Empire was demarked along the Rafah-Taba line (following a British-Ottoman encounter known as the “Akaba Incident”). Once again Akaba became the focus of international interest in World War I when the Hashemite Arab Army under Amir Feisal and T.E. *Lawrence conquered it from the Turks on July 7, 1917. They made it their headquarters from which raids into Transjordan and Syria were organized. Akaba was also the meeting place of Amir Feisal with Chaim *Weizmann in June 1918. Administratively Akaba belonged to the Ottoman province of Hijaz and, after WWI, to the Hashemite Kingdom of Hijaz. When the Saudis ousted the Hashemites in 1925, the British annexed Akaba (and its neighboring district of Maʿān) to the Emirate of Transjordan. Under the Mandate the British built a harbor there, but the place remained of minor importance until the end of Israel’s *War of Independence (1948) when it became Jordan’s only outlet to the sea. In the 1950s, the port was enlarged and the highway to Maʿān and ʿAmmān improved. In 1961 a deep-water port was inaugurated, and installations for the storing and loading of phosphates and for the discharge of oil were built. The port’s annual capacity was increased to 600,000 tons, the number of ships calling rose from 173 in 1954 to 667 in 1966, and the tonnage of goods handled rose from 92,000 to 1,200,000. In 1965 following a Jordanian-Saudi territorial-exchange agreement, Jordan was given a 25-km.-long coastline south of Akaba which contributed to the development of the town and of its harbor. In 1972 an international airport was opened and a railroad later connected Akaba with the north. During the Iran-Iraq War (1980–88) and the Iranian blockade of Iraq’s seaports, Akaba became the main lifeline of the Iraqi economy and war machine and most of the country’s imports and exports went through its harbor (18,000 out of the 30,000 containers passed through Akaba in 1982 originating in or destined for Iraq). During the 1980s the harbor was greatly expanded with Iraqi financial aid, reaching an annual capacity of over six million tons. In 2002 the town numbered 70,000 inhabitants (as opposed to 11,000 in 1967). Its economy was based on port services, foreign and internal tourism, fishing, and some farming. Following the Jordanian-Israeli peace accord of 1994, the Akaba Special Economic Zone (ASEZ) was founded to offer economic incentives and business opportunities to encourage job-creating foreign investments.

AKADEMIE FUER DIE WISSENSCHAFT DES JUDENTUMS, academy founded in Berlin in 1919 for the furtherance of Jewish scholarship and the encouragement of young scholars and the publication of their work. The idea of such an academy had been mooted by Franz *Rosenzweig in his seminal open letter (“Zeit ist’s,” 1917; “It is time” in *On Jewish Learning* (1965)) to his teacher Hermann *Cohen, who took it up enthusiastically. The academy was to be in two parts: an academy in the accepted sense, with members and corresponding members, and a research institute which, by giving grants to younger scholars, would enable them to pursue their work in the various divisions of study, such as Talmud, history, Hebrew literature and language, philosophy, Kabbalah, economics, etc. From the original plan, only the research institute materialized; its first director was E. *Taubler, who was succeeded by Julius *Guttman. The academy made itself responsible for a number of publications, such as the continuation of Theodor and Albeck’s edition of *Genesis Rabbah* (1912–32, repr. 1965), Hermann Cohen’s *Juedische Schriften* (3 vols., 1924) and his philosophical writings (2 vols., 1928), and a bicentenary edition of the works of Moses *Mendelssohn, which was planned for 16 volumes, but only seven appeared (1929–38). The academy’s *Korrespondenzblatt* with annual reports appeared from 1919 to 1930. For some time the academy also shared responsibility for the *Zeitschrift fuer Demographie und Statistik der Juden*. A *Festschrift* was published in 1929 to celebrate its tenth anniversary. Its work came to an end in 1934.

AKAVYA (Yakovovits), AVRAHAM ARYEH LEIB (1882–1964), Polish-born Hebrew and Yiddish writer and editor. After the publication of his first story in David Frischmann’s *Ha-Dor* (1901), Akavya became a steady contributor to the Hebrew press and literary periodicals. He also wrote stories and novels in Yiddish, and translated from Yiddish to Hebrew. Akavya edited several Yiddish weeklies, the Hebrew daily *Ha-Boker* (with D. Frischmann (1909)), the biweekly for youth *Shibbolim*, and (after World War I) *Ha-Zefirah* and *Ha-Yom*. He went to Palestine in 1935 and was an editor of the short *Massadah* encyclopedia and later the chief editor of the *Yizreel* encyclopedia. He devoted many years of research to the Hebrew calendar and published various books on the subject.

[Getzel Kressel]

AKAVYAH BEN MAHALALEL (first century C.E.), member of the Sanhedrin. He engaged in a dispute with *Ḥanina Segan ha-Kohanim and *Dosa b. Harkinas (Neg. 1:4) and the three are mentioned consecutively in *Avot de-Rabbi Nathan* (Version A, 19–21). Akavyah was offered the position of *av bet din* on condition that he renounce four of his decisions in

which he disagreed with the majority but he declined, declaring: “It is better for me to be called a fool all my days than that I should become even for one hour a wicked man in the sight of God; and that men should say, ‘He withdrew his opinions for the sake of getting power’” (Eduy. 5:6). Three of these dissenting opinions appear in the Mishnah (Neg. 5:3; Nid. 2:6; Bek. 3:4). A fourth, concerning the administration of the water of bitterness to a proselyte or emancipated slave suspected of infidelity to her spouse, indirectly resulted in Akavyah’s excommunication. After testimony had been adduced in the name of Shemaiah and Avtalyon, he scornfully remarked, *‘Degma hishkuha*,’ i.e., “they made her drink in simulation only,” or, as explained by others, “men who were like her (i.e., proselytes or descendants of proselytes) made her drink” Eduy., *ibid.*). Although he did not retract his statements before his death, Akavyah admonished his son to accept the opinion of the majority. His son’s entreaty, “Commend me to your colleagues,” elicited the reply: “Your own deeds will bring your commendation or your rejection” (Eduy. 5:7). According to the Mishnah Akavyah died while still under the ban of excommunication, and the *bet din* stoned his coffin (*ibid.*, 6). R. Kahana considered him a “rebellious elder,” but he was not executed because he based his opinions on tradition (Sanh. 88a). Judah b. Ilai (Eduy., *ibid.*) and Judah b. Bathyra (Sif. Num. 105), however, denied that Akavyah was put under a ban. The former declared, “God forbid that (we would think that) Akavyah was excommunicated, for the Temple court was never closed in the face of any man in Israel so great in wisdom and in fear of sin as Akavyah b. Mahalalel.” Akavyah’s maxim, “Reflect upon three things and you will not come within the power of sin: know whence you came, whither you are going, and before whom you are destined to give account” (Avot 3:1; cf. ARN¹, 29), illustrates his own stress on ethical conduct.

[Bialik Myron Lerner]

°AKBAR THE GREAT (Akbar Abū al-Fath Jalāl al-Dīn Muhammad; 1542–1605), Moghul emperor in India. Akbar’s subjects were permitted a remarkable degree of religious tolerance and freedom. The emperor tried to build a bridge of understanding between Hindus and Muslims and to create a new eclectic religion of pure theism (“tauḥīd Ilāhū” or “Dīn Ilāhī”). He collected translations of the holy books of all faiths, and held regular religious disputations in his palace at Fatehpur Sikri, near Agra. The participants also included Jews, probably from Persia, Afghanistan, or Khurasan, as well as Hindus, Jains, Zoroastrians, and Jesuits. The presence of Jews is reliably reported by Moghul court historians, by the Jesuit traveler A. Monserrate, and by the author of the *Dabistan*. A synagogue (*kenisa*) also existed in the Moghul realm according to the English traveler, Sir Thomas Roe (1616). Akbar’s inter-

est in the translation of holy books brought the famous Florentine traveler and scholar Giambattista Vecchietti to Agra. Vecchietti had collected many ancient *Judeo-Persian biblical translations during his journeys in Persia, and while a guest of Akbar, he transliterated the Judeo-Persian manuscript of the Psalms into Persian script.

AKDAMUT MILLIN (Heb. אֲקָדָמוּת מִלִּין; “Introduction”), opening words of an Aramaic poem by R. Meir b. Isaac Nehorai. The poem was recited in the synagogue on Shavuot as an introduction to the Aramaic translation (*targum*) of Exodus 19–20 (the theophany at Mount Sinai). Exodus 19:1 was read aloud in Hebrew, “*Akdamut Millin*” was then read, followed by the next few verses in the Hebrew, and after that the same verses in Aramaic. The remainder of the reading was finished in the same sequence: two to three verses of the Hebrew text followed by the Aramaic translation of the preceding verses. The recitation of “*Akdamut Millin*” now generally precedes the Reading of the Torah, in deference to the objections of later halakhic authorities against interrupting the Reading of the Torah (cf. *Magen David* to Sh. Ar., OH 494), particularly since it is no longer customary to read the Aramaic translation. The poem consists of 90 acrostic lines forming a double alphabet followed by the author’s name. It praises God as creator and lawgiver, expatiates on Israel’s fidelity to God despite all sufferings and temptations, and ends with a description of the apocalyptic events at the end of days and the future glory of Israel. The poem is recited in the Ashkenazi rite only. A similar work by the same author, introducing the reading of the Aramaic version of the Song of Moses (Ex. 15:1–10) on the seventh day of Passover, is found in some medieval manuscripts. “*Akdamut Millin*” has been translated into English in various prayer books, notably by Joseph Marcus (Silverman, *Prayer*, 185–8) and Raphael Loewe (*Service of the Synagogue*, London, 1954, 210). There are also several versions of the “*Akdamut*” in Hebrew (see *Sefer ha-Mo’adim*, 3 (1950), 141–4). A similar poem, “*Yeziv Pitgam*,” is recited on the second day of Shavuot before the reading of the *haftarah*. In East European folk tradition the origin of the poem is connected with the widespread legend that R. Meir b. Isaac saved the Jewish community of Worms by invoking the help of a miraculous emissary of the Ten Lost Tribes from across the *Sambatyon. In many versions of the legend, extant in manuscripts and still alive in oral tradition, the hero is identified with R. *Meir Ba’al ha-Nes, and the “*Akdamut*” *piyyut* celebrates a victory over the Jew-baiters.

[Ernst Daniel Goldschmidt]

Music

The poem has been given two musical settings which have become well-known in Ashkenazi synagogues. One of these can claim great antiquity by its psalmodic style of recitation; the simple but expressive declamation suits the narrative character of the poem. Its identity in the Western and Eastern branches of the Ashkenazi rite, and its use for the **Kiddush* and other prayers, indicates its age. Another melody is found only in the West, and apparently is of a later date, although its motives were already incorporated in cantorial works of 1744 and 1796. Moreover, this second tune serves as a motto theme of the Feast of Weeks and is applied in the **Hallel*, the **Priestly Blessing*, and other prayer texts.

AKEDAH (‘*Aqedah*’; Heb. אֲקֵדָה, lit. “binding (of Isaac)”), the Pentateuchal narrative (Gen. 22:1–19) describing God’s command to *Abraham to offer *Isaac, the son of his old age, as a sacrifice. Obedient to the command, Abraham takes Isaac to the place of sacrifice and binds him (*va-ya’akod*, Gen. 22:9, a word found nowhere else in the Bible in the active, conjugative form) on the altar. The angel of the Lord then bids Abraham to stay his hand and a ram is offered in Isaac’s stead. The *Akedah* became in Jewish thought the supreme example of self-sacrifice in obedience to God’s will and the symbol of Jewish martyrdom throughout the ages.

Critical View

The *Akedah* narrative is generally attributed to source E (which uses ‘*Elohim*’ as the Divine Name) with glosses by the Redactor (R, hence also the use of the Tetragrammaton); or to source J (in which the Divine Name is the Tetragrammaton) which may have made use of E material (Peake’s *Commentary on the Bible* (1962), 193). The original intent of the narrative has been understood by the critics either as an etiological legend explaining why the custom of child sacrifice was modified in a certain sanctuary by the substitution of a ram (Gunkel), or as a protest against human sacrifice (Skinner, *Genesis* (1910), 331–2). The name Moriah (“land of Moriah,” Gen. 22:2) occurs elsewhere (11 Chron. 3:1) as the name of the Temple site; hence the Jewish tradition that the Temple was built on the spot at which the *Akedah* took place. There is no further reference to the *Akedah* in the Bible.

The *Akedah* influenced both Christian and Islamic thought. In early Christian doctrine, the sacrifice of Isaac is used as a type for the sacrifice of Jesus (see Tertullian, *Adversus Marcionem*, 3:18; Clement of Alexandria, *Paedagogica*, 1:5,

1; Schoeps, in: *JBL*, 65 (1946), 385–92). In Islam, the *Akedah* is held up for admiration (Koran 37:97–111), but the more accepted opinion is that it was Ishmael, Abraham's other son and the progenitor of the Arabs, who was bound on the altar and that the whole episode took place before Isaac's birth. The *Akedah* has been a favorite theme in religious art for centuries.

In Jewish Life and Literature

In the early rabbinic period, reference was made to Abraham's sacrifice in prayers of intercession. The Mishnah (Ta'an. 2:4) records that on public fast days the reader recited: "May He that answered Abraham our father on Mount Moriah answer you and hearken to the voice of your crying this day." The Mishnah also states (Ta'an. 2:1) that on fast days, ashes were placed on the Ark and on the heads of the *nasi* and the *av bet din*; a later teacher explained (Ta'an. 16a) that this was a reminder of the "ashes of Isaac." In the *Zikhronot* ("Remembrance") prayers of Rosh Ha-Shanah, there is an appeal to God to remember the *Akedah*: "Remember unto us, O Lord our God, the covenant and the lovingkindness and the oath which Thou swore unto Abraham our father on Mount Moriah: and consider the binding with which Abraham our father bound his son Isaac on the altar, how he suppressed his compassion in order to perform Thy will with a perfect heart. So may Thy compassion overbear Thine anger against us; in Thy great goodness may Thy great wrath turn aside from Thy people, Thy city, and Thine inheritance." One of the explanations given for the sounding of the *shofar* ("ram's horn") on Rosh Ha-Shanah is as a reminder of the ram substituted for Isaac (RH 16a). The story of the *Akedah* is the Pentateuchal reading on the second day of Rosh Ha-Shanah (Meg. 31a). During the Middle Ages, a number of penitential hymns took the *Akedah* for their theme and indeed a whole style of *piyyut* is known by this name. Pious Jews recited the *Akedah* passage daily (Tur., OH. 1) and, following this custom, the passage is printed in many prayer books as part of the early morning service.

In Rabbinic Literature

The *Akedah* was spoken of as the last of the ten trials to which Abraham was subjected (Avot 5:3; Ginzberg, *Legends*, 5 (1925), 218, note 52) and was considered as the prototype of the readiness for martyrdom. "Support me with fires" (homiletical interpretation of Song 2:5) is said to refer to the fire of Abraham and that of Hananiah, Mishael, and Azariah (Dan. 3:12–23; *PsR* 101b); this particular association is probably due to the fact that both cases illustrate not actual martyrdom but the readiness for it. On the other hand, numerous instances of real martyrdom were also compared to the *Akedah*, sometimes to the disadvantage of the latter. Thus in the story of the "Woman and her Seven Sons," every one of whom suffered death by torture rather than bow to the idol, the widow enjoins her sons: "Go and tell Father Abraham: Let not your heart swell with pride! You built one altar, but I have built seven altars and on them have offered up my seven sons. What is more: Yours was a trial; mine was an accomplished fact!" (Yal. Deut. 26). In

the parallel passage in the Babylonian Talmud (Git. 57b), the widow's admonition is softened through the omission of the second half of the first sentence and the last sentence.

In legal literature, the *Akedah* served as a paradigm for the right of a prophet to demand the temporal suspension of a law. Isaac obeyed his father and made ready to become the victim of what would normally have been considered a murder, but Abraham, as an established prophet, could be relied upon that this was really God's will (Sanh. 89b). The opinion is found in the Midrash (Gen. R. 56:8) that Isaac was 37 years old at the time of the *Akedah*. Abraham *Ibn Ezra (commentary on Gen. 22:4) rejects this as contrary to the plain meaning of the narrative in which Isaac is old enough to carry the wood but young enough to be docile. Ibn Ezra (commentary on Gen. 22:19) also quotes an opinion that Abraham actually did kill Isaac (hence there is no reference to Isaac returning home with his father), and he was later resurrected from the dead. Ibn Ezra rejects this as completely contrary to the biblical text. Shalom *Spiegel has demonstrated, however, that such views enjoyed a wide circulation and occasionally found expression in medieval writings, possibly in order to deny that the sacrifice of Isaac was in any way less than that of Jesus; or as a reflection of actual conditions in the Middle Ages when the real martyrdom of Jewish communities demanded a more tragic model than that of a mere intended sacrifice. It was known in those days for parents to kill their children, and then themselves, when threatened by the Crusaders. Geiger (*JZWL*, 10 (1872), 166 ff.) suggests that interpretations of Isaac's sacrifice as a means of atonement for his descendants were influenced by Christian doctrine. In rabbinic literature, tensions can be generally observed between the need to emphasize the significance of the *Akedah* and, at the same time, to preserve the prophetic protest against human sacrifice. Thus, on Jeremiah 19:5 the comment is made: "which I commanded not" – this refers to the sacrifice of the son of Mesha, the king of Moab (11 Kings 3:27); "nor spake it" – this refers to the daughter of Jephthah (Judg. 11:31); "neither came it to my mind" – this refers to the sacrifice of Isaac, the son of Abraham (Ta'an. 4a).

In Religious Thought

A theme of such dramatic power as the *Akedah* has attracted a rich variety of comment. Philo (*De Abrahamo*, 177–99) defends the greatness of Abraham against hostile criticism that would belittle his achievement. These critics point out that many others in the history of mankind have offered themselves and their children for a cause in which they believed – the barbarians, for instance, whose Moloch worship was explicitly forbidden by Moses, and Indian women who gladly practice Suttee. Philo argues, however, that Abraham's sacrifice was unprecedented in that he was not governed by motives of custom, honor, or fear, but solely by the love of God. Philo (*ibid.*, 200–7) also gives an allegorical interpretation of the incident: Isaac means "laughter"; and the devout soul feels a duty to offer up its joy which belongs to God. God, however, in His mercy, refuses to allow the surrender to be complete

and allows the soul to retain its joy. Worship is the most perfect expression of that joy.

Medieval thinkers were disturbed at the idea of God's testing Abraham, as if the purpose of the *Akedah* were to provide God with information He did not previously possess. According to Maimonides (Guide 3:24), the words "God tested Abraham" do not mean that God put him through a test but that He made the example of Abraham serve as a test case of the extreme limits of the love and fear of God. "For now I know that you fear God" (Gen. 22:12) means that God has made known to all men how far man is obliged to go in fearing Him. According to Nahmanides (ed. by C.B. Chavel, 1 (1959), 125–6), the *Akedah* focuses on the problem of reconciling God's foreknowledge with human free will. God knew how Abraham would behave, but from Abraham's point of view, the test was real since he had to be rewarded not only for his potential willingness to obey, but for actually complying. *Sforno's elaboration of this thought (commentary to Gen. 22:1) is that Abraham had to transcend his own love of God by converting it from the potential to the actual, in order to resemble God whose goodness is always actual, the aim of creation being that man imitates his Creator.

The mystics add their own ideas to the *Akedah* theme. In the Zohar (Gen. 119b), the patriarchs on earth represent the various potencies (*sefirot*) in the divine realm: Abraham the Divine Lovingkindness, Isaac the Divine Power, and Jacob the Harmonizing Principle. Abraham is obliged to display severity in being willing to sacrifice his son, contrary to his own special nature as the "pillar of lovingkindness," and thus set in motion the process by which fire is united with water, mercy with judgment, so that the way can be paved for the emergence of complete harmony between the two in Jacob. This mirrors the processes in the divine realm by which God's mercy is united with His judgment so that the world can endure. The Ḥasidim read various subtleties of their own into the ancient story. One version states that Abraham and Isaac knew, in their heart of hearts, that the actual sacrifice would not be demanded but they went through the motions to demonstrate that they would have obeyed had it been God's will (*Elimelech of Lyzhansk, *No'am Elimelech* on Gen. 22:7). The true lover of God carries out even those religious obligations which are personally pleasant to him solely out of the love of God. Abraham obeyed the second command not to kill Isaac solely for this and for no other reason (Levi Isaac b. Meir, *Kedushat Levi* on Gen. 22:6). Another version is that when God wishes to test a man, He must first remove from him the light of full comprehension of the Divine, otherwise the trial will be incomplete. Abraham was ready to obey even in this state of "dryness of soul" (Israel b. Shabbetai of Koziencie, *Avodat Yisrael* on Gen. 22:14). The lesser Divine Name Elohim is, therefore, used at the beginning of the narrative, and not the Tetragrammaton, to denote that the vision in which the command was given was lacking in clarity. Abraham's greatness consisted in his refusal to allow his natural love for his son to permit him to interpret the ambiguous command as

other than a command to sacrifice (Mordecai Joseph b. Jacob Leiner of Izbica, *Mei ha-Shilo'ah* on Gen. 22:7).

To the moralists (*ba'alei ha-musar*) the *Akedah* was a fertile text for the inculcation of religious and ethical values. For Isaiah *Horowitz (*Shenei Luhot ha-Berit, Va-Yera*, end), the *Akedah* teaches that everything must be sacrificed to God, if needs be; how much more, then, must man be willing to give up his lusts for God. Moreover, whenever man has an opportunity of doing good, or refraining from evil, he should reflect that perhaps God is testing him at that moment as He tested Abraham.

The best-known treatment of the *Akedah* theme in general literature is that of Søren Kierkegaard (*Fear and Trembling*). Kierkegaard sees Abraham as the "knight of faith" who differs from the "ethical man"; for the latter the moral law is universal and it has a categorical claim to obedience; the "knight of faith," however, knows also of the higher obligation laid upon him as a free individual in his relationship to his God and this may involve him in a "teleological suspension of the ethical." Abraham is called upon to renounce for God all that he holds precious, including the ethical ideal to which he subscribes and which he has constantly taught. Consequently, Abraham did not know what duty had been imposed on him: to obey God's command or his ethical obligation? According to Kierkegaard, this tension between these two conflicting obligations is what characterized Abraham as a "knight of faith." Kierkegaard was the first thinker to posit the believer's doubts as the characteristic of religious life itself. Kierkegaard's position has been criticized by various Jewish thinkers.

Milton *Steinberg (*Anatomy of Faith* (1960), 147), rejected Kierkegaard's view as "unmitigated sacrilege. Which indeed is the true point of the *Akedah*, missed so perversely by Kierkegaard. While it was a merit in Abraham to be willing to sacrifice his only son to his God, it was God's nature and merit that He would not accept an immoral tribute. And it was His purpose, among other things, to establish that truth." Other thinkers such as J.B. Soloveitchik have found the Kierkegaardian insights fully compatible with Judaism. Ernst Simon (in *Conservative Judaism*, 12 (spring 1958), 15–19) believes that a middle position between the two is possible. Judaism is an ethical religion and would never in fact demand a teleological suspension of the ethical. Abraham is, therefore, ordered to stay his hand. The original command to sacrifice Isaac is a warning against too complete an identification of religion with naturalistic ethics.

Y. *Leibowitz went further than Kierkegaard by suggesting that the believer has the obligation to overcome his ethical duty and unconditionally obey the divine command. Leibowitz thus regarded the *Akedah* as a paradigm of religious life, a position unusual in Jewish thought, which generally maintains that the divine command is not opposed to ethical duty.

Kalonymus Shapira, the rabbi of Piaseczno, maintained that the meaning of the *Akedah* is that the divine command itself determines morality, thus adopting the "divine command morality" prevalent in Christian literature. He wrote:

The nations of the world, even the best of them, think that the truth is a thing in itself, and that God commanded truth because the truth is intrinsically True.... Not so Israel, who say "You God are truth"... and we have no truth beside Him, and all the truth found in the world is there only because God wished it and commanded it... Stealing is forbidden because the God of truth has commanded it... When God ordered Abraham to sacrifice his son Isaac, it was true to sacrifice him and, had God not said later "neither do anything to him" it would have been true to slaughter him. (K. Shapira, *Esh Kodesh*, Jerusalem, 1960, 68)

Shapira's unusual position is an attempt to deal with the problem of theodicy in light of the horrors of the Shoah. His exceptional treatment of the *Akedah* thus demonstrates that Jewish thought generally did not incorporate the theory of "divine command morality." The *Akedah* thus became a basis for justifying sacrifice and devotion, but because of the centrality of morality to Jewish tradition in general, and specifically to halakhah, it was only with Soloveitchik and Leibowitz that the *Akedah* became a paradigm of religious life itself.

[Louis Jacobs / Avi Sagi (2nd ed.)]

In Israeli Culture

The *akedah* myth is used by Israeli society to understand itself. Moshe Shamir, a leading writer from the founders' generation called the *akedah* "the story of our generation" (*Be-Kulmus Mahir* ("Quick Notes"), 1960, p. 332). Changes in the attitudes to this myth point to shifts in the ways Israeli society approaches the meaning of its existence.

Two basic attitudes can be discerned in relation to the *akedah*. Whereas the first views the *akedah* as the deepest symbol of modern Israeli existence, epitomizing the Zionist revolution and the sacrifices it exacted, the second rejects both the myth and its implications.

The *akedah* myth has been sanctified by many Israeli writers. Uri Zevi Greenberg writes: "Let that day come.../ when my father will rise from his grave with the resurrection of the dead/ and God will command him as the people commanded Abraham./ To bind his only son: to be an offering - /... let that day come in my life! I believe it will." (Uri Zevi Greenberg, "Korban Shaharit" ("Morning Offering"), in: *Sulam* 1972 (13), pp. 145-147).

When speaking of the Zionist experience, Abraham Shlonsky writes, "Father/ take off your *tallit* and *tefillin* today/... and take your son on a distant lane/ to mount Moriah" (*Hulin* ("Worldliness"), in: A. Shlonsky, *Ketavim* [Writings], vol. 2, (1954), p. 136). Hayyim Gouri writes of Isaac's descendants being "born with a knife in their hearts." (H. Gouri, "Yerushah" ("Heritage"), in: *Shoshanat Ha-Ruhot* ("Compass-Rose"), 1966). The relationship between Abraham and Isaac is also transformed in modern Hebrew literature. Contrary to the passive figure of the biblical story, the Isaac of Israeli literature is an active hero who initiates the *akedah*. Modern literature also lays greater emphasis than the biblical text on intergenerational cooperation, as if no rift divided the fathers

offering the sacrifice from their sons. Isaac becomes the paradigmatic Zionist pioneer, representing an entire generation: rather than being passive victims, the modern Isaacs assume responsibility for their destiny and sacrifice themselves on the altar of national renaissance.

In the 1967 Six-Day War, when for the first time the generation of founders were too old to fight, and the post-independence generation of their children fought in their place, the *akedah* remained a powerful symbol, at least for some. The post-war collection of interviews, *The Seventh Day: Soldiers Talk About the Six-Day War* (Hebrew: *Siah Lohamim*, 1967; English, 1970) records a father who said: "We do knowingly bring our boys up to volunteer for combat units.... These are moments when a man is given a greater insight into Isaac's sacrifice. Kierkegaard asked what Abraham did that night. What did he think about? ... He had a whole night to think.... It's a question that touches on the very meaning of human existence. The Bible says nothing about it... For us, that night lasted six days" (p. 202).

Conversely, doubts about the *akedah* myth already began to surface soon after independence. In the central work about the War of Independence, by S. Yizhar, we read: "There is no evading the *akedah*... I hate our father Abraham, who binds Isaac. What right does he have over Isaac? Let him bind himself. I hate the God who sent him and closed all paths, leaving only that of the *akedah*. I hate the fact that Isaac serves merely as a test between Abraham and his God... (S. Yizhar, *Yemei Ziklag* ("The Days of Ziklag"), 1958, vol. 2, p. 804).

After the Six-Day War, a gradual change in attitude towards the *akedah* evolved. In 1968, about 10 years after the publication of Yizhar's novel, Habimah Theater staged a play by Yigal Mossinsohn where Shimshon, a blinded officer, thinks of his life in terms of an *akedah* (Yigal Mossinsohn, *Shimshon Katsin be-Zahal, O Requiem le-Erez Pelishtim* ("Samson the IDF officer, or Requiem to the Land of the Philistines)). Mossinsohn states his wish to be released from this "grand" myth. In his view, fathers and sons are jointly responsible for the *akedah*, which must end. In its place, Mossinsohn-Shimshon expects to lead a normal life when "my children... will no longer know war."

In May 1970, Habimah Theater staged a play by Hanoeh Levin. (*Malkat Ha-Ambatyah*) ("Queen of the Bath"), in: H. Levin, *Mah Ikhpat la-Zippor* ("What Does it Matter to the Bird?"), 1987). The play deals with the sons' profound contempt for their parents and, in a passage called "*Akedah*," Abraham and Isaac engage in a rather mundane and sarcastic dialogue, conveying deep disdain for the parents who believe that they, rather than their sons, are the victims of the sacrifice. In the poem "Dear father, when you stand on my grave," which follows the "*Akedah*" dialogue, Levin writes, "And do not say that you've brought a sacrifice,/ because I was the one who brought the sacrifice,/... dear father, when you stand on my grave/ old and weary and very lonesome,/ and when you see how they lay my body to rest - / ask for my forgiveness, father" (p. 92).

The weariness and pain of the *akedah* come to the fore after the Yom Kippur war. Thus, for instance, Menahem Heyd writes: “And there was no ram – / and Isaac in the thicket.// And the angel did not say lay not/ and we – / our son, our only son, Isaac.” (“*Yizhak Halakh le-Har Moriah*” (“Isaac Went to Mount Moriah”), *Yedi'oth Aharonot*, December 28, 1973.) The pain is particularly intense because no ram came to replace Isaac. Many poets report this feeling – the miracle failed.

In Yariv Ben Aharon's roman à clef – *Peleg* (1993) about the sons' generation, the *akedah* becomes the litmus test of the relations between fathers and sons: the fathers will not be satisfied with less than the sons' sacrifice (p. 116). The covenant of secular Zionists with their land forced the actual sacrifice of their children, and the *akedah* no longer symbolized an act of faith but an expression of the deep bond with the land. Ben Aharon blames the parents for the secular distortion of the religious symbol and desires to restore its religious connotations. He thereby seeks to bring about a quasi-religious renaissance, in the tradition of A.D. Gordon, and rejects the prevalent secular overtones of Zionist culture, where the *akedah* served to justify the death of the sons.

Protests against the *akedah* myth gained strength after the Lebanon War. Yehudah Amihai speaks of a plot to sacrifice the sons: “The true hero of the *akedah* was the ram” (Y. Amihai, “*Ha-Gibor ha-Amity shel Ha-Akedah*” (“The True Hero of the Sacrifice”), in: *She'at Hesed* [“The Hour of Grace”] 1983). Replacing the two heroic figures, Abraham and Isaac, with an antihero – the ram – is part of a trend seeking to moderate the dramatic overtones characteristic of Israeli life. The hero is not the one involved in purposeful action, but rather the one confronted with a tragic situation and unable to understand the forces that have led to it.

A poem by Yitzhak Laor offers the most poignant expression of this protest: “To pity the offering?... To trust a father like that? Let him kill him first. Let him slam his father/ his only father Abraham/ in jail in the poorhouse in the cellar of the house just so/ he will not slay./ Remember what your father did to your brother Ishmael (Y. Laor, “*Ha-Metumtam ha-Zeh Yizhak*” (“This Fool, Isaac”), in: *Rak ha-Guf Zokher* (“Only the Body Remembers”; 1985), p. 70).

Yizhar had adopted the *akedah* story but had pointed an accusing finger at the fathers, while Mossinsohn longed for release from its oppressive weight. Laor now blames the sons' compliance, their willingness to die rather than refuse. He rejects the narrative: the sons should have remembered the cruelty of the founding fathers, father Abraham, and their immoral behavior toward Ishmael, the Arabs. This poem exposes a deep breach between fathers and sons, between founders and followers. To a large extent, it also entails a rejection of the entire Zionist ethos.

[Avi Sagi (2nd ed.)]

In the Arts

Among Christian writers and artists the biblical account of Abraham's readiness to sacrifice Isaac was interpreted as a

foretelling of the crucifixion of Jesus. A parallel was drawn between the two stories: Abraham was God the Father sacrificing his “only begotten son”; Isaac himself carrying the wood to the altar was Jesus bearing his cross; while the ram actually sacrificed represented the crucified savior. In Western literature the episode occurs from the Middle Ages onward in various dramatic forms and in different countries. It figures in all the important English miracle play cycles and in an early work of the Eastern Church, the Cretan *Sacrifice of Abraham* (1159), where God's design is revealed, but the ram escapes slaughter. An example of the Italian *sacre rappresentazioni* is Feo Belcari's *Abramo e Isacco* (1449), while there is a more austere treatment in the 16th-century Spanish *Auto del sacrificio de Abraham*. The theme enjoyed special popularity among Protestants. Théodore de Bèze (Beza), the French humanist and reformer who was a close associate of Calvin in Geneva, gave his drama *Abraham sacrificant* (1550) the conventional form of a mystery. It was notable for some revolutionary undertones, however, Abraham appearing as a stern Huguenot, humanized by love for his son. This play was widely translated and often reprinted. In the 17th century, the German dramatist Christian Weise wrote the play *Die Opferung Isaacs* (1680). Among the strict Protestants of the 18th century there were two Swiss German authors who dealt with the episode. Johann Jacob Bodmer wrote *Abraham* (1778), and Johann Kaspar Lavater the religious drama *Abraham und Isaak* (1776). Adele Wiseman's *The Sacrifice* (1956) transposes the story to a modern Canadian setting.

Jewish artists portrayed the *Akedah* in some synagogues of the early centuries of the current era, notably at *Dura-Europos (third century) and *Bet Alfa (sixth century). In both cases the hand of God was depicted as stretching forth to restrain Abraham from sacrificing his son. This is in direct conflict with the biblical text (Gen. 22:11), which states that he was restrained by the voice of an angel. Later Jewish sources are French and German Hebrew Bibles of the late 13th century, the 14th-century Spanish Sarajevo *Haggadah*, and a 15th-century Italian *mahzor*, which contains pictures illustrating the Aramaic *piyyutim* on the Ten Commandments recited on the festival of Shavuot. The illustration of the sacrifice of Isaac accompanies the fifth Commandment, and Isaac's willingness to follow his father is seen as an example of filial piety. There are early Christian representations of the story in the third-century Roman catacomb of Priscilla, in the Vatican grottos, and in glass, ivory, and jewels. Later examples have been found in the cathedrals of Chartres and Verona, and in churches elsewhere. During the early Renaissance, Donatello and Ghiberti produced work on the theme, as did Andrea del Sarto, Sodoma, Titian, Beccafumi, and Cranach later in the 16th century. Caravaggio gave it emotionally realistic treatment, and *Rembrandt depicted the angel's intervention in a painting of 1635 and in an etching in which the angel grips Abraham's arm with one hand and protects Isaac's face with the other. Guardi and Tiepolo treated the subject with the 18th-century lightness.

The melody of the Judeo-German *Akedah* poem, which was used for liturgical, religious, and historical songs in both Hebrew and German, is shown by the indication *be-niggun Akedah* (i.e., to be sung “to the *Akedah* tune”). The melody is first mentioned by Jacob *Moellin (*Sefer Maharil*, 49b). Another similar indication – *be-niggun “Juedischer Stamm”* – refers to the same tune. No notation of this time has been found so far, but A.Z. Idelsohn suggested that it was identical with the liturgical *Akedot* of the old west-Ashkenazi tradition. In European music there are at least 50 works on the sacrifice of Isaac, mostly oratorios. As in literature and art, the *Akedah* is often linked with the Crucifixion, Metastasio has stated this explicitly in the textbook title of his libretto *Isacco, figura del Redentore* (1740). The Viennese court oratorio owes its inception and style to the Emperor Leopold I’s “sepulcro” *Il sacrificio d’Abramo* (1660), which was performed in the court church during Passion Week. Many eminent 18th-century musicians composed settings for Metastasio’s libretto which was originally written for the Viennese court. Popular German oratorios include J.H. Rolle’s *Abraham auf Moria* (1776) and M. Blumner’s *Abraham* (1859–60). In Poland the biblical story inspired an opera by Chopin’s teacher, Ks. J. Elsner (1827), and an oratorio by W. Sowiński (1805–1880). In Abraham *Goldfaden’s Yiddish “biblical operetta” *Akeydas Yitskhok* (1897), the *Akedah* itself figures only near the end of the work. Hugo Adler wrote an *Akedah* (1938), based on the Buber-Rosenzweig German translation of the Bible and on selections from the Midrash and *Akedot piyyutim*, which was modeled on the classical oratorio. Igor Stravinsky’s *Akedat Yizhak* (Abraham and Isaac), a “sacred ballad” for baritone and chamber orchestra set to a Hebrew text, was first performed in Jerusalem in 1964.

AKERLOF, GEORGE A. (1940–), U.S. economist, Nobel Prize laureate. Born in New Haven, Connecticut, where his father was a member of the Yale faculty, Akerlof earned his bachelor’s degree from Yale University in 1962 and his doctorate from the Massachusetts Institute of Technology in 1966. Akerlof’s father, who was born in Sweden, was a chemist; his mother’s family was of German-Jewish descent. His mater-

nal grandfather established the first clinic in cardiology in the United States at Johns Hopkins, though he was later denied tenure there, according to Akerlof, because of his Jewish identity.

After receiving his doctorate, Akerlof joined the Economics Department of the University of California, Berkeley, where he began work on his landmark study “The Market for ‘Lemons,’” for which he would later win the Nobel Prize for economics (in 2001), though it was initially rejected for publication by academic journals. In 1967 and 1968 he was a visiting professor at the Indian Statistical Institute in New Delhi, and then returned to Berkeley. From 1978 to 1980 he was Cassel Professor of Economics with Respect to Money and Banking at the London School of Economics. He subsequently served as Koshland Professor of Economics at Berkeley.

“The Market for ‘Lemons’: Quality Uncertainty and the Market Mechanism” was published in the *Quarterly Journal of Economics* in 1970. In this study of the role of asymmetric information in the market, Akerlof demonstrates how markets malfunction when buyers and sellers operate under different information, as in the example of used cars commonly called “lemons.” The work had applications in other areas, such as health insurance, employment contracts, and financial markets. In *Efficiency Wage Models of the Labor Market* (1986), co-authored with his wife, Janet Yellen, Akerlof and Yellen propose rationales for the efficiency wage hypothesis, in which employers pay more than the market-clearing wage, contradicting neoclassical economic theory. Yellen later served as chair of the U.S. Council of Economic Advisors under President Bill Clinton.

Akerlof served as senior staff economist with the Council of Economic Advisors in 1973 and 1974 and was visiting research economist for the Federal Reserve System Board of Governors from 1977 to 1978. A member of the board of editors of the *Quarterly Journal of Economics* in 1983 and of the *American Economic Review* from 1983 to 1990, he was named a senior fellow of the Brookings Institution in 1994 and served on the board of directors of the National Bureau of Economic Research in 1997. In 2001 Akerlof shared the Nobel Prize for economics with A. Michael Spence and Joseph E. Stiglitz for their contributions to analyses of markets with asymmetric information.

[Dorothy Bauhoff (2nd ed.)]

AKHBAREI/ACCHABARON (Heb. אַחְבָּרַי; modern Akbara), village in Upper Galilee possibly mentioned in the inscriptions relating to the campaigns of Tiglath-pileser III (eighth century B.C.E.) near the line of fortifications erected by Josephus in 66 C.E. (Jos., Wars, 2:573; idem, Life, 37, 188). Eleazar, son of Simeon b. Yoḥai, died there, and when the people of Biri proposed removing his body to Meron, the inhabitants of Akhbarei objected (BM 84b). The *amoraim* Hananiah b. Akbari and Yose b. Avin lived there and Rabbi Yannai established a *bet midrash* with his pupils supporting themselves

from agriculture. According to tradition the burial places of Yannai, Nehorai, and Dostai were pointed out at the site (*Kaf-tor va-Ferah*, 11, 47a). According to one source (Eccles. R. 2:8) pheasants were raised there. A Jewish community still existed in Akhbarei in the 11th century, but in 1522 the Jewish traveler Moses Bassola found its synagogue – referred to in Arabic by the locals as “*el-kenisah*” – in ruins. The remains of the synagogue were identified by Z. Ilan and subsequently partly excavated by E. Damati in 1988. Walls of houses, tombs, cisterns, and oil presses are also known from the site. It is identified with the Arab village of Akbara (now deserted), situated on a high cliff 3 mi. (5 km.) south of Safed, which used to cultivate olives, fruit, and tobacco.

AKHENATON or **AKHENATEN** (**Amenophis IV**; c. 1367–1350 B.C.E. or 1350–1334), Egyptian pharaoh. Son of *Amenophis III and one of the most controversial figures in Egyptian history, Akhenaton has been credited, with justification, as the earliest monotheist in history. When Akhenaton came to the throne, after the wars of the 18th-dynasty kings in Asia had ceased, the most important and most powerful deity in Egypt was Amun-Re, and his was the most powerful priesthood. Second to Amun was the cult of the sun god Re in his various manifestations. Amun-Re had given victory to Egypt's pharaohs. They, in turn, showed their gratitude with wealth and endowments to the Amun-Re priesthood. Fostering the cult of a minor manifestation of the sun god Aton, Akhenaton made a complete break with the Amun cult, eventually going so far as to ban it and persecute its adherents. He abandoned his given name Amenophis, “Amun-is-satisfied,” for Akhenaton, “He-who-is-useful to the sun-disc,” or “Glorified-spirit-of-the-sun-disk.” Although the king's actions had social and economic ramifications, and clearly weakened the Amun-Re priesthood as well as the priesthoods and cults of the other gods, it would be inaccurate to see his religious revolution as a pretext. Akhenaton broke sharply with the past, suppressed the cults of all the ancient gods, and championed a dehistoricized god of light and time. His solar deity was the creator of what would later be called “the universe,” its sustainer and the mirror image of pharaonic monarchy. Akhenaton's iconoclasm extended beyond the elimination of images of deity and ridding the cult of myth. He even had the hieroglyphic script purged of its anthropomorphisms and theriomorphisms (images of gods in animal form) and did away with the world of The Beyond. Akhenaton's iconography reduced the sun to a solar disk, the Aton/Aten. Some scholars point to the fact that only Akhenaton and his wife worshipped the Aton, while the

king himself was worshipped by the people, as proof that that the teachings of the king did not amount to true monotheism. But it might be more productive to compare Akhenaton's role to that of Jesus as the door to the Father in Christianity (Ephesians 3:4) and to a lesser extent, to that of the **Zaddik* as the mediator between God and humanity in Hasidism. As the army sided with the king, Akhenaton's revolution temporarily succeeded. The capital was transferred from Thebes to Akhetaton (modern El-Amarna), Amun-Re was suppressed, and the Aton became the paramount deity of Egypt. After Akhenaton's death, the old religious order triumphed and Atonism was vigorously stamped out.

Akhenaton's capital at Amarna was not only the center of a vigorous naturalistic art that broke with tradition in subject matter, though not in form or canon, but was also the site where the Amarna tablets, some 380 cuneiform texts, mostly letters, representing a portion of the foreign archives of the Egyptian court, were found. When first studied, these texts, the most important contemporary sources for Egypt's foreign policy toward Palestine and Syria, presented a picture of the empire's decline due to Akhenaton's indolence and pacificism. The threat of a Hittite invasion, the raids of *Habiru nomads, and treason on the part of the Egyptian vassals all seemed to be ignored by the Egyptian court. This was not the case, however. Egypt's main interest was to keep the trade routes to Mesopotamia open, and only incidentally to keep the tenuous peace. When Egyptian interests were really threatened, action was taken. There is even evidence in the Amarna Letters that Akhenaton was planning a campaign in Asia at the time of his death (see also *Tell el-Amarna). Forty years later the only mention of him in an Egyptian text is as “that criminal of Akhenaton.”

AKIROV, ALFRED (1941–), Israeli entrepreneur. Akirov built a business empire ranging from real estate and hotels to high-tech, securing his position as one of the country's leading businessmen, known for his determination and sound business instincts. He was born in Iraq in 1941 and immigrated in his childhood to Israel with his parents. He started working in construction in the family business and then struck out on his own. After a couple of business ventures, including participation in the acquisition of the Arkia Airline and a textile company, he set up his own holding company, Elrov, in 1978.

The company, which was listed on the Tel Aviv Stock Exchange in 1983, was active in two core businesses: real estate and technology and communication. Akirov demonstrated

his expertise in the property business by building some of Israel's best-known development projects, including the Europe Building and the Opera Tower in Tel Aviv. The company also built and owns several large shopping malls in Israel's central area.

As the Israeli economy entered its worst economic recession in 2000, Elrov shifted part of its focus to overseas activity and the company acquired commercial centers in Switzerland, England, France, and the United States.

Akirov won fame with the building of the David Citadel, Jerusalem's most luxurious hotel, overlooking the walls of the capital's Old City. Plans to develop a nearby \$150 million project, known as the Mamilla project, which included an upscale residential and business area, ran into difficulties after a long dispute with the municipality of Jerusalem.

Elrov also invested, through its Technorov subsidiary, in some of Israel's most promising high-tech start-ups and venture capital funds. However, the burst of the high-tech bubble in 2000 forced the company to write off much of its investment.

[Dan Gerstenfeld (2nd ed.)]

AKIVA (c. 50–135 C.E.), one of the most outstanding *tannaim*, probably the foremost scholar of his age. A teacher and martyr, he exercised a decisive influence in the development of the *halakhah*. A history of Akiva's scholarly activities – his relations to his teachers, R. Eliezer b. Hyrcanus, R. Joshua b. Hananiah, Rabban Gamaliel II, and to his disciples, R. *Meir, R. *Simeon b. Yoḥai, R. *Yose b. Ḥalafta, R. *Eleazar b. Shamma, and R. *Nehemiah – would be virtually identical to a history of tannaitic literature itself. The content of Akiva's teaching is preserved for us in the many traditions transmitted and interpreted by his students, which make up the vast majority of the material included in the Mishnah, the Tosefta, and the *Midreshei Halakhah*. Later tradition regarded Akiva as “one of the fathers of the world” (TJ, Shek. 3:1, 47b), and credited him with systematizing the *halakhot* and the *aggadot* (TJ, Shek. 5:1, 48c).

In the eyes of later storytellers, the period of the *tannaim* was a heroic age, and even the slightest scrap of information about the least of the *tannaim* can develop in the later *aggadah* into a tale of epic proportions. In the case of truly significant and heroic figures, like R. Akiva, this process of literary expansion and elaboration is inevitable. The resulting legends relating to Akiva's life and death are well known (see bibliography below), and we will summarize a few of them in outline here:

The Bavli tells that in his early years Akiva was not only unlearned, an *am ha-arez*, but also a bitter enemy of scholars: “When I was an *am ha-arez* I said, ‘Had I a scholar in my power, I would maul him like an ass’” (Pes. 49b). Of relatively humble parentage (Ber. 27b), Akiva was employed as a shepherd in his early years by (Bar) Kalba Savu'a, one of the wealthiest men in Jerusalem (Ned. 50a; Ket. 62b). The latter's opposition to his daughter Rachel's marriage to Akiva led him

to cut them both off. Abandoned to extreme poverty, Rachel once even sold her hair for food. Rachel made her marriage to Akiva conditional upon his devoting himself to Torah study. Leaving his wife behind, Akiva was away from home for 12 years (according to *Avot de-Rabbi Nathan* – 13 years). The Talmud relates that when Akiva, accompanied by 12,000 students, returned home after an absence of 12 years he overheard his wife telling a neighbor that she would willingly wait another 12 years if within that time he could increase his learning twofold. Hearing this, he left without revealing himself to her, and returned 12 years later with 24,000 students. Later in his career, Akiva was imprisoned by the Romans for openly teaching the Torah in defiance of their edict (Sanh. 12a). When Pappos b. Judah urged him to desist from studying and teaching in view of the Roman decree making it a capital offense, he answered with the parable of the fox which urged a fish to come up on dry land to escape the fisherman's net. The fish answered “‘If we are afraid in the element in which we live, how much more should we be afraid when we are out of that element. We should then surely die.’ So it is with us with regard to the study of the Torah, which is ‘thy life and the length of thy days’” (Ber. 61b). He was not immediately executed and was reportedly allowed visitors (Pes. 112a; but cf. TJ, Yev. 12:5, 12d). Akiva was subsequently tortured to death by the Romans by having his flesh torn from his body with “iron combs.” He bore his sufferings with fortitude, welcoming his martyrdom as a unique opportunity of fulfilling the precept, “Thou shalt love the Lord thy God with all thy heart and with all thy soul ... even if you must pay for it with your life” (Ber. 61b).

Akiva also played a significant role in narratives which centered on the other great figures of his time. When R. Eliezer b. Hyrcanus was excommunicated, it was Akiva who was chosen to break the news to him (BM 59b). In the controversy between Rabban Gamaliel II and R. Joshua, Akiva attempted to effect a reconciliation between them (Ber. 27b–28c; cf. RH 2:9).

Granting the literary and religious power of these legends, the modern critical reader must approach them with care. Take, for example, the tradition, brought above, which ascribes to Akiva in his early years a bitter hatred and antagonism toward rabbinic scholars. This tradition appears in the Bavli as part of an extended collection of similar traditions (Pes. 49a–b), ascribed to various rabbinic scholars from the Land of Israel in the 2nd and 3rd centuries. S. Wald has shown (Pesaḥim III, 211–239) that this entire talmudic passage is a product of late tendentious revision of earlier sources, reflecting the antagonism between later Babylonian sages and their real or imagined interlocutors – *ame ha-arez* in their terminology. With regard to R. Akiva himself, this source must be viewed as pseudoepigraphic at best, and can neither be ascribed to him in any historical sense, nor can it be reconciled with other traditional accounts of his early life. For example, in the Talmud Yerushalmi (Naz. 7:1, 66a) we hear a very different story: “R. Akiva said: This is how I became a disciple of the sages. Once I was walking by the way and I came

across a dead body [*met mitzvah*]. I carried it for four miles until I came to a cemetery and buried it. When I came to R. Yehoshua and R. Eliezer I told them what I had done. They told me: 'For every step you took, it is as if you spilled blood.' I said: 'If in a case where I intended to do good, I was found guilty, in a case where I did not intend to do good, I most certainly will be found guilty!' From that moment on, I became a disciple of the sages." The fact that Akiva in this story, while still an *am ha-arez*, both sought and expected the approval of the two sages who would in the future be his closest teachers, clearly contradicts the notion that at this stage in his life he both hated and held the sages in contempt.

Admittedly, we have no clear and compelling reason to accept the Yerushalmi's version of events as historically accurate. Nevertheless the very fact that it gives us an alternative version of how Akiva "became a disciple of the sages" raises questions – at the very least – about the historical reliability of the Bavli's story about Kalba Savu'a and his daughter. These traditions have themselves been the subject of intense study, most recently by S. Friedman, who traced the evolution of these stories within the Babylonian rabbinic tradition. Given the number and complexity of the traditions surrounding the figure of R. Akiva, it will in all likelihood be some time before it will be possible to evaluate their relative historical value and the religious, social, and literary tendencies imbedded in them.

Among the early traditions ascribed to Akiva in the Mishnah, we find him affirming the ideas of free will and God's omniscience, "Everything is foreseen, and free will is given" (Avot 3:15). He taught that a sinner achieves atonement by immersion in God's mercy, just as impurity is removed by the immersion in the waters of a *mikveh* (Yoma 8:9). Akiva is reported to have said: "Beloved is a man in that he was created in the image [of God]" (Avot 3:18), and held that "Thou shalt love thy neighbor as thyself" is the most fundamental principle of the Torah (Sifra, Kedoshim, Ch. 4:13). Akiva's insistence that the Song of Songs be regarded as an integral part of the canon – "All the Writings are holy; but the Song of Songs is Holy of Holies" (Yad, 3:5) – may be related to his mystical interests (Lieberman, *Mishnat Shir ha-Shirim*). According to Tosefta *Hagigah* (2:2), Akiva received instruction in the mystical traditions concerning the divine *merkavah* from R. Joshua, who himself received these traditions from R. Johanan b. Zakkai. In addition, R. Akiva is counted as one of the four sages who "entered the *pardes*," and was the only one of the four who "ascended in peace and descended in peace," i.e., participated in this mystical experience and emerged unharmed. As a result of these traditions, R. Akiva became the protagonist of *Heikhalot Zutarti*, one of the earlier works of the *heikhalot* literature, imparting instructions to the initiate concerning the dangers involved in ascending to heaven and concerning the techniques necessary for evading these dangers.

For Akiva's method of midrashic interpretation of scripture, and the school of *Midrash Halakhah* which bears his name, **Midrashei Halkhah*.

AKIVA BAER BEN JOSEPH (Simeon Akiva Baer; 17th century), talmudist and kabbalist. Akiva was among the Jews who were expelled from Vienna in 1670. He thereafter wandered through the whole of Bohemia and parts of Germany, earning his living by teaching Talmud and delivering lectures in the synagogue on the Sabbath. He interrupted his travels when he was elected rabbi of Burgpreppach, in Bavaria. There Akiva wrote a kabbalistic commentary on daily prayers entitled *Avodat ha-Bore* ("The Worship of the Creator," 1688), comprised of five parts, each beginning with one of the letters of his name (A.K.I.B.A.). This work met with success and was published three times. A new commentary for the Sabbath and holidays was added to the third edition. Akiva interrupted his travels a second time to become rabbi of Zeckendorf, near Bamberg. There he met the leader of the community, Seligman Levi Meir, with whom he composed a short encyclopedia to *Midrash Rabbah*, which was published under the title *Pi Shenayim* ("A Double Share," 1702). He remained in Zeckendorf six years. From there Akiva was called to Schnaitach, which at that time had a large Jewish community. There he was imprisoned during a riot. After his release, Akiva became rabbi of Gunzenhausen and, finally, second rabbi of Ansbach. He was the author of two works in Yiddish, which had even a wider circulation than his Hebrew works, namely: *Abbir Ya'akov* ("The Mighty [God] of Jacob," 1700), a collection of legends from the Zohar and from the *Midrash ha-Ne'elam* about the patriarchs, based on the first 47 chapters of Genesis; *Ma'asei Adonai* ("The Deeds of the Lord"), a collection of wondrous stories from the Zohar, from the works of Isaac Luria, and from other kabbalistic books.

AKIVA BEN MENAHEM HA-KOHEN OF OFEN (Buda; second half of 15th century), Hungarian financial expert and scholar in Buda. After Jacob *Mendel, Akiva was the most influential Jew at the court of King Matthias I of Hungary (1458–90). Epitaphs of members of the family (in Prague) refer to him as *nasi* and "head of the entire Diaspora." In 1496 Akiva was still living in Buda. Later forced to leave Hungary

as a result of the slanderous allegations of jealous Hungarian magnates, he settled in Prague where he established a yeshivah. Akiva had 12 sons and 13 daughters, 12 of whom married *kohanim* (priests). When on holidays 25 members of his family pronounced the priestly blessing, they were considered to fulfill an interpretation of Numbers 6:23: “Thus (Heb. *koh* the numerical equivalent of the letters being 25) shall ye bless...”

[Alexander Scheiber]

AKKAD (Heb. אַכַּד), one of the capital cities of *Nimrod in Shinar (Sumer), according to the “table of nations” (Gen. 10:9–10). In the cuneiform sources, Akkad (Sumerian Agade or Aggide) refers to both a city and a country in northern Babylonia which first flourished as the seat of the “(Old) Akkadian” kings in the Sargonic period (c. 3380–3200 B.C.E.). The city’s exact location is still unknown, but it must have been situated on the (ancient) Euphrates, upstream from Nippur and not far from Babylon. According to tradition, it was founded by Sargon, a Semite who began his career at the court of the city of Kish. He assumed a name characteristic of a usurper (Sargon literally: “the king is legitimate”) and the title “king of Kish.” In this he was followed by his sons Rimush and Manishtusu. His grandson Naram-Sin assumed new titles and dignities and seems to have brought the Akkadian Empire to new heights, but in so doing he overreached himself. By the end of his reign, the rapid decline of the empire had begun. Later Sumerian tradition attributed this to Naram-Sin’s sins against the Temple of Enlil at Nippur, but modern scholarship tends to attribute it to the increasing inroads of the barbarian Gutians from the eastern highlands. Under Naram-Sin’s son, Shar-kali-sharri, Akkadian rule was progressively restricted, as the more modest title of “King of Akkad” attests. The decline and fall of the dynasty left a deep impression on the country: Naram-Sin was turned into a stereotype of the unfortunate ruler in later literature, and the “end of Agade” became not only a fixed point for subsequent chronology but also a type-case for omens and prophecies.

While the destruction of the city of Akkad was complete, the name of the country survived into later periods. The geographical expression “[land of] Sumer and [land of] Akkad” came to designate the central axis of Sumero-Akkadian political hegemony; i.e., the areas lying respectively northwest and southeast of Nippur. The kings who held that religious and cultural capital therefore assumed the title “king of Sumer and Akkad.” They tended to replace it, or from Hammurapi on even to supplement it, with the loftier title of “king of the four quarters [of the world]” when to these two central lands they added the rule of the western and eastern lands, Amurru and Elam (see *Sumerians). From Middle Babylonian times

on (1500–1000), the noun Akkad was used in the cuneiform sources as a virtual synonym for Babylonia.

The adjective “Akkadian” was used in various senses by the ancients: originally it designated the Semitic speakers and speech of Mesopotamia as distinguished from the Sumerian, then the older Semitic stratum as distinguished from the more recent Semitic arrivals of *Amorite speech, and finally Babylonian as distinguished from Assyrian. In modern terminology, *Akkadian is used as a collective term for all the East Semitic dialects of Mesopotamia.

Which of these meanings best applies to the “Akkad” of Genesis 10:10 can only be answered in the context of the entire Nimrod pericope (Gen. 10:8–12) and of the identification of Nimrod. Probably the figure of Nimrod combines features pertaining to several heroic kings of the Mesopotamian historic tradition, from Gilgamesh of Uruk to Tukulti-Ninurta I of Assur (see E.A. Speiser). However, the reference to Akkad as one of his first or capital cities points to the Old Akkadian period, and to its two principal monarchs, Sargon and Naram-Sin. Both were central figures of Mesopotamian historiography, and Naram-Sin in particular introduced the title of “mighty [man]” into the Mesopotamian titulary. Genesis 10:8 may reflect this innovation.

[William W. Hallo]

AKKADIAN LANGUAGE. Akkadian is the designation for a group of closely related East Semitic dialects current in Mesopotamia from the early third millennium until the Christian era. Closely connected to it is Eblaite, the language found at Tell Maradikh (ancient Ebla) in northern Syria.

The name is derived from *akkadūm*, the relative adjective of *a.ga.dé* = *Akkad (biblical אַכַּד), the capital of the Sargonic Empire (c. 2400 B.C.E.). It is not known what the speakers of

East Semitic in Mesopotamia called themselves or their speech prior to this period. The available textual evidence does not show any marked dialectal discontinuity between the pre-Sargonic and the Sargonic periods. The earliest textual occurrence is from the first dynasty of Ur (c. 2600 B.C.E.) and the latest from the first century C.E. The dialectal history of Akkadian can be schematically represented as follows:

* Linear development uncertain

The Old Akkadian corpus consists of royal inscriptions, economic documents, letters, and the occasional literary text from the pre-Sargonic, Sargonic, and Ur III periods (to c. 2000 B.C.E.). These texts, in particular the royal inscriptions, are in large measure known from Old Babylonian copies, products of the Nippur scribal school in southern Babylonia. Most of the other original material also comes from this region, but texts have been found further afield: in *Elam, northern Syria, and eastern Anatolia (Asia *Minor). It is not clear whether Old Akkadian is the parent of the later Akkadian dialects. While some obvious phonologic and morphologic isoglosses would seem to indicate that Old Assyrian is the descendant of Old Akkadian, the latter in other, more basic aspects, has much in common with Old Babylonian. However, both Old Assyrian and Old Babylonian may have evolved from other unknown and undocumented dialects. (On this point see M. Hilgert, “New Perspectives in the Study of Third Millennium Akkadian,” *Cuneiform Digital Library Journal*, 4 (2003), 1–14.)

Assyrian

Old Assyrian is mainly known from letters and economic documents excavated in eastern Anatolia, chiefly in the lower city at Kültepe (ancient Kaniš) where an Assyrian mercantile colony (*kārum*) was located at the beginning of the second millennium. The corpus includes a small number of royal inscriptions and about a dozen literary texts, including some incantations; a few of the texts originated in *Assur and other north Mesopotamian sites, such as Nuzi.

The best known Middle Assyrian document is the so-called “Middle Assyrian laws” from Assur, dating from the

middle and second half of the second millennium B.C.E. Economic and legal documents and letters are also attested.

Neo-Assyrian texts consist for the most part of letters and economic documents with a few literary texts. Documents written in this dialect come to an abrupt end with the destruction of Nineveh and other cities in 612 B.C.E. and the complete collapse of the Assyrian Empire shortly thereafter. It should be noted that the Neo-Assyrian royal inscriptions are written in Standard Babylonian, as are the inscriptions of the dynasties ruling southern Babylonia in the first millennium B.C.E. The relative absence of legal material from the private sector seems to be due to an increasing use of Aramaic.

Babylonian

Old Babylonian is richly documented in large numbers of letters, economic records, state and legal documents, including the Code of Hammurapi, royal inscriptions, and a sizable corpus of literary texts consisting of hymns and various types of lyric and epic poetry. Several dialects, some showing substrate influence, can be discerned: a southern and northern dialect in Babylonia, a northeast dialect centered in the *Diyalah region, and provincial dialects such as those from Susa and *Mari. Literary texts are generally written in a poetic register (formally called “dialect”) which exhibits archaic forms and syntax. This poetic dialect, the so-called “hymnic-epic dialect,” could be either a survival of an earlier stage of the language or an older dialect with close affinities to Old Akkadian in a restricted stereotyped use. Post-Old Babylonian Akkadian literature from all centers is usually written in a linguistic register which is an artificial literary offshoot of Old Babylonian, and is influenced by archaic forms current in the older poetic dialect, called Standard Babylonian. Standard Babylonian was cultivated by the scribes for literary purposes from the middle of the second millennium and through the first millennium B.C.E. until Akkadian ceased to be used. Standard Babylonian suppressed literary creativity in local dialects, e.g., Assyrian, but it tends to show a strong influence of the locally spoken tongue.

Middle Babylonian is attested in letters, economic and official documents, and a few literary documents. While the size of the corpus of Middle Babylonian texts found in Mesopotamia proper is moderate, geographically this dialect (and variations of it) is the most widely spread and was used all over western Asia during the second millennium B.C.E. The Akkadian material from the archives of Bogazköy and Ras Shamra (*Ugarit) are written in local forms of Middle Babylonian, as are the letters of El *Amarna found in Egypt, which, however, originated in Anatolia, Syria, Palestine, and Mesopotamia. The wide diffusion of Akkadian during the period was due to its use as a diplomatic language.

Neo-Babylonian is likewise represented mainly by a large corpus of non-literary sources, especially letters and economic documents. The use of the last surviving “living” dialect, Late Babylonian, petered out completely during the Seleucid period. Standard Babylonian continued to be in use in the tem-

ple scriptoria, in the transmission of canonical compositions, and in the compilation of astronomical texts which are the last remnant of the Mesopotamian tradition. The latest datable text so far recognized is an astronomical almanac written in 385 Seleucid era (74/75 C.E.).

Phonology

Akkadian is written with signs which apparently were originally devised for Sumerian. The application of the Sumerian system to Akkadian resulted in a mixed method of writing: on the one hand with logograms and, on the other, with syllables of the type *vC*, *Cv*, or *CvC* (*C* = consonant; *v* = vowel). The phonemic system and structure of Sumerian is radically different from that of Akkadian and the writing system consequently presented inadequacies which were only partially overcome during the long history of writing Akkadian. A phonological interpretation is likewise hindered due to a tendency toward historic writing.

VOWELS. The vocalic phonemes represented are the long and short *a*, *i*, *u*, *e*. *E* does not seem to be original but is derived from *a* or *i*; e.g., *ilqa* > *ilqe* (“he took”), while *i* tends to become *e*, especially in Assyrian, and the etymologically long *ī* became *ē* already in Old Babylonian times. Rare mixed writings, e.g., *ma-ru-iš* (Old Babylonian; “is sick”), have been used in attempts to demonstrate other vowel qualities, in this case the *u-i* sequence being taken as representing *u*. Greek transcriptions from the Seleucid period which reflect the pronunciation of Late Babylonian represent *u* by *o*, e.g., *očov* = *uzun* (“ear of”), and *ū* by *ω*, e.g., *ωωρ* = *nūr* (“light of”). Diphthongs are monophthongized, e.g., *ḫayn-* > *in-* (“eye”), *ḫmawt-* > *mūt* (“death”). (The double dagger, †, indicates the reconstructed form.) Pseudo-diphthongs, such as Old Babylonian *nawrum* (“bright”), probably represent *nawirum*. A basic characteristic of the Assyrian dialects is the vowel harmony operative with short unaccented *a* in an open syllable which assimilates progressively, e.g., *awutum* (nominative singular), *awitim* (genitive singular), *awatam* (accusative singular; “word”); in Babylonian: *awatum*, *awatim*, *awatam*. Vowel length is phonemic, e.g., *šarratum* (“queen”), *šarrātum* (“queens”).

CONSONANTS. The considerable reduction in consonants characteristic of Akkadian (and of later forms of other Semitic languages, such as Hebrew and Aramaic), as compared to the theoretically reconstructed consonant phonemes of Proto-Semitic, or those of other Semitic languages such as Ugaritic or Arabic, is already evident in Old Akkadian. By the time of the earliest written Akkadian, the dentals *ḫ*, *ṭ* and *ḳ* had shifted to *z*, *š*, and *ṣ* respectively, while *ṭ* was on its way to *š* but in Old Akkadian is distinguished graphically from etymological *š* and *ś*.

The laryngeals for the most part merged with *ʾ* or disappeared (Sumerian substrate influence?), compensating with the lengthening of the vowel and apophony, e.g., *ḫba^llum* > *bēlum* (“lord”), although in Assyrian and some Babylonian dialects this process is not complete. In Old Akkadian *ʾ* and

ḫ are at least partially distinct as shown by such writings as *ra-si-im* = *rašim*, later *rēšim* (genitive singular of “head”) and the special use of the sign *É* as in *il-qa-É* = *ḫilqah* (“he took,” cf. Sumerian *É.GAL* > Akkadian *ekallum* > Hebrew *היכל*). The influence of intrusive West Semitic dialects is reflected in doublets, e.g., Old Babylonian *ḫadannum* for *adannum* (“fixed time,” *dn*), Neo-Assyrian *ḫannū* for *annū* (“this,” *hn-*). (On laryngeals see L. Kogan, “*g in Akkadian,” UF, 33 (2001), 263–98.)

Of the various phonological changes affecting consonants as a result of environmental conditioning two should be mentioned. In the nominal patterns *mapras* and *mupras* (except in certain nominal forms, e.g., the participle of the verb of the derived themes; see below) of roots containing a labial phoneme, *m* dissimilates to *n* (Barth’s Law), e.g., *ḫmarkabtum* > *narkabtum* (“chariot”). Likewise, in any given root one of two emphatics dissimilate, viz, *š* > *s* (very rare), *q* > *k*, *ṭ* > *t* – in this order of stability (Geers’ Law), e.g., *ḫšabātum* > *šabātum* (“to seize”), *ḫqašābu* > *kašābu* (“to cut away”).

Initial *w* disappeared already in Old Babylonian, e.g., *warḫu* (Old Babylonian), *arḫu* (post-Old Babylonian; “month”). In Assyrian, *wa-* > (*wu* >) *u*, e.g., *warḫum* > *urḫum*. Babylonian intervocalic *-w-* > *-m-*, e.g., *awilum* > *amilum* (“man”). In Assyrian, *wa-* > *wu* > *u*, e.g., *warhum* > *urhum*. Babylonian *dēq* (“is good”). On the other hand, intervocalic *-m-* in Late Babylonian > *w* or *ʾ*, e.g., *Šamaš* > *ḫŠ(a)w(a)š* (“the sun god” (from Aramaic transcriptions); cf. CAYH for *šamē* (“of heaven”) in Seleucid Greek transcriptions; cf. Hebrew *שׁמַיִם* (< *Simānu*). Survival of the *y* is limited.

Morphology

PRONOUNS. Akkadian shows a rich range of bound and unbound pronominal forms, especially personal pronouns. In the third person, the distinctive element is *š*, where West Semitic, for example, has *h*, e.g., *šu* (“he”), *ši* (“she”). Unbound pronominal forms distinguish three case forms: nominative, genitive/accusative, dative, e.g., *anāku*, *yāti*, *yāši* (“I”), respectively, and in bound forms genitive, dative, and accusative, e.g., *bēlī* (“my lord”), *išpur-šunūšim* (“he sent to them”), *išpur-šunūti* (“he sent them”), respectively where it can be seen that in the plural at least *-š-* is characteristic of the dative and *-t-* of the accusative. The dative pronouns are a strong isogloss between Old Akkadian and Old Babylonian. They are restricted in Old Assyrian where the genitive-accusative forms function as datives; dative forms appear regularly from Middle Assyrian on. There is also a possessive pronominal adjective, e.g., *yāʾum* (“mine”). Of the various *deixis* forms, *annūm* (“this”) and *ullum* (“that”) can be cited, but many dialect words and forms for the near and far *deixis* also occur. In addition, the third person unbound pronoun can be used anaphorically, e.g., *awilum šu* (“that man”). Interrogatives include *mannum* (“who”) and *minum* (“what”), *ayyum* (“which [one]”) and *mā* (“what”) in older dialects. The indefinite pronoun is *mamman* (< *ḫman-man*). A true relative pronoun is found only in Old Akkadian: *šu*, *ši*, *ša*, fem. *šat*, plural *šūt*, *šāt*. Old As-

syrian has some of these forms in personal names but in later dialects they occur residually in stereotyped phrases, mostly literary. The particle *ša* serves as an all-purpose relative, in both nominal and verbal phrases, e.g., *bitum ša rēdim* (“the soldiers house”) and *ša ipušu* (“which he made”). (On this see G. Deutscher, “The Akkadian Relative Clauses in Cross-Linguistic Perspective,” *ZA*, 92 (2002), 86–105.)

NOUNS AND ADJECTIVES. Nouns and adjectives show structural patterning as in other Semitic languages, e.g., *parrāsum* as an “occupational” pattern, e.g., *dayyānum* (“judge”) or *qarrādum* (“warrior”); and *maprasum* indicating instrument or place, e.g., *maškanum* (“depot”; cf. Barth’s Law above).

Formally, there are two genders, masculine (zero marker) and feminine (*at* marker). There are three numbers: singular, plural, and dual. Mimation in the singular of both genders and in the plural feminine, and nunation in the dual are regular until the end of the Old Babylonian and Old Assyrian periods. The singular is triptotically declined forming a nominative, accusative, and genitive in the earlier periods, yielding later to a binary opposition of nominative/accusative and genitive. The plural and dual are diptotic. Traces of a productive dual, nominal, and verbal, are evident in Old Akkadian but by post-Old Akkadian times it has become virtually vestigial, surviving mostly in set words and phrases.

The vocative is expressed by a stressed form with zero ending in the singular, e.g., *eṭel* (< *ṣeṭel*, “O, youth”), *kalab* (< *ṣkalab*, “O, dog”). Plural vocatives seem to coincide with the nominative forms. The morphology of the adjective differs from that of the noun uniquely in that the masculine plural exhibits the morphemes *-ūtu(m)* for the nominative and *-ūti(m)* for the oblique cases, e.g., *šarrū rabūtum* (“the great kings”). The construct case of the noun is a short form with the case markers removed or reduced, e.g., *bēl bitim* (“the householder”), *išū* (“his god”), *mārat awīlim* (“man’s daughter”), *ilū mātim* (“the gods of the land”). The noun or adjective, used as a predicate, can be declined with the bound suffix personal forms, those of the first and second person showing affinity to the personal pronouns, e.g., *šarrāku* (“I am king”), *lū awīlāt* (“be a man!”), while the third person shows gender and plural affixes only, e.g., *libbašu ṭāb* (“he is satisfied”), *Ištar rigmam ṭābat* (“Ištar, sweet of voice”). Feminine nouns are declined in the stative without the feminine marker, e.g., *gašrāte malkāti* (< *malkatum*) *šumūki širū* (“You [Ištar] are powerful, you are a princess, your names are majestic”).

PREPOSITIONS AND CONJUNCTIONS. Prepositions govern the genitive ease of nouns, e.g., *alpam kīma alpim* (“[he will replace] ox for ox”), and most prepositions can also function as conjunctions in which case the verb appears in the subjunctive, e.g., *kīma ērubu* (“when/as soon as he entered”). It should be noted that *ina* (“in”), *ana* (“to”) and *ištu* (“from”) supplanted the common Semitic prepositions *b*, *(?)l*, and *mn* respectively at a preliterary stage of Akkadian.

OTHER PARTICLES. Common negations are *lā* and *ul*, e.g., *lā iddinūšum* (“they did not give him”), *ul aššat* (“she is not a wife”), *lā kittum* (“untruth”). Conjunctions are *u*, “and,” “or,” e.g., *bēl šamē u eṣetim* (“Lord of heaven and earth”), and the enclitic *-ma* used post-verbally as a sentence conjunctive, e.g., *ul itārma... ul uššab* (“he shall not return and take his seat [as judge]”). After nominal or pronominal forms, it forms a stressed predicate (cleft sentence), e.g., *adi māti* (“until when”), *adi matīma* (“until when is it that -?”), *umma Ḥammurapīma* (“thus Hammurapi,” introductory formula in letters), *šūma ilikšu illak* (“it is he who will perform the [feudal] service”).

Umma, with or without the enclitic *-mi*, or in the Assyrian dialects *mā*, introduces direct speech. A strong interrogative tone can be indicated by vowel lengthening, e.g., *ina bitika mannum biri anākū bariākū* (“who in your household goes hungry? Should I go hungry?”). Unreal statements are indicated by the enclitic *-man*. Conditional sentences are introduced by *šumma* (or *šumma-man* for unreal conditions) with the verb in the indicative.

ADVERBIAL CONSTRUCTIONS. In adverbial constructions the accusative is often used, e.g., *imittam* (“to the right”). Among the adverbial formatives are the locative-adverbial in *-um/ū* which with nouns functions sequentially as a case, *libbu/libbum = ina libbim, libbuššu < -umšu* (“in it”), and is used as an adverbial formative, e.g., *balum* (“without”). The locative terminative affixes *-iš* in the meaning “to,” e.g., *ašriš* (“to the place”) and adverbially as in *eliš* (“above,” “upward”).

VERBS. BASIC PATTERNS. All tenses of the verb are prefixed forms: *iprus* (“he cut”) preterite, *iparras* (“he cuts”) present-future with characteristic doubling of the middle root radical, and, unique to Akkadian, *iptaras* (“he has cut / will have cut”) perfect, a syntactically conditioned stressed or consequential form, e.g., *dayyānum dīnam idīn... warkānumma dīnšu itēni* (“the judge passed judgment but afterward changed his verdict”) or as a future perfect, e.g., *inūma issanqānikkum* (“When they will have reached you...”). The imperative can be derived from the preterite base, e.g., *pursus* (< *ṣprus*), imperative singular (cf. below). The precativum is formed by the proclitic particle *lu* + preterite for the third person singular and plural and *i* + preterite for the first person plural, e.g., *lipuš < lu + ipuš* (“let him do”), *lubluṭ < lu + abluṭ* (“may I stay alive”), *inillik* (“let us go”). Contracted forms in Assyrian differ. Other moods include the indicative in main or independent clauses having gender and plural suffixes, the subjunctive in *-u* (Assyrian also in *-ni*, also affixed to non-verbal forms) in subordinated clauses, e.g., *ša ipušu* (“which he did”). In Babylonia affixes of the subjunctive and ventive are mutually exclusive. Unique to Akkadian, and of a different character, is the *ventive*, or *allative*, indicating motion toward the speaker or focus of action, e.g., *illik* (“he came”), *illikam* (“he came here”). The base form participle is patterned *pārisum* (cf. Hebrew *qal* active participle), while other themes (~ Hebrew *binyanim*)

have *mu-* prefix forms. There is no passive participle, but the verbal adjective of each theme is a partial semantic surrogate. The verbal adjective, used in the predicative form, is declined (the stative) with bound suffix pronominal forms, as with the predicative state of nouns (cf. above). In form, then, the stative bears great resemblance to the West Semitic perfect and the old perfective in Egyptian. In meaning the stative generally indicates the resultant state indicated by the action of the verb in its finite forms, e.g., *maška labiš* (“he is/was clothed in a skin”).

Various pronominal morphemes are prefixed to the finite forms of the verb to indicate the person. The plural number is indicated in the second and third person by suffixes. Old Akkadian, Assyrian, and, less commonly, the poetic dialect distinguish the third person feminine singular while in Babylonian the masculine form serves both.

THEMES (~ HEBREW BINYANIM). In common with other Semitic languages, semantic nuances can be given to the verb by a system of themes or forms exhibiting characteristic structures. The basic forms are commonly four in number, though rarer types can also be demonstrated. The basic verb theme is termed *G* (~ Hebrew *qal*) and contains verbs with both stative, e.g., (*w*)*arāqum* (“to be/become pale”) and fientive (transitive) meaning, e.g., *šabātum* (“to seize”). Verbs show various tense vowels between the second and third root radicals in the present-future and preterite: *a – u*, *a – a*, *i – i*, and *u – u*. The characteristic vowel of the perfect is the same as that of the present, thus *iparras* (“he cuts”), *iptaras* (“he has cut”), *iprus* (“he cut”).

The *D* theme (~ Hebrew *pi’el*) is characterized by the doubling of the middle root radical and, in common with the *Š* theme, it employs a different set of pronominal prefixes than *G*, and shows a characteristic *a – i* alternation between the tense vowel of the present and preterite. The perfect here goes with the preterite in the choice of tense vowel, thus *uparras*, *uptarris*, *uparris*. In meaning the *D* can be factitive, especially with stative verbs, e.g., *dummuqum* (“to make good”; *damāqum*, “to be good”); causative, e.g., *lummudu* (“to teach”; *lamādu*, “to learn”); estimative, e.g., *q/gullulu* (“to treat disparagingly”; *qalālu*, “to be/become insufficient”); iterative, e.g., *sullūm* (“to pray”), *qu”um* (“to wait”). The *D* also serves as a denominating theme, e.g., *šullulu* (“to roof over”; *šulūlu*, “roof”) and more rarely indicates plurality of object, or subject.

The *Š* theme (Hebrew *hiph’il*) is so termed after the *-š(a)*-morpheme placed before the first root radical. Thus, *ušapras*, *uštapis*, *ušapis* have the same tense vowel alternation as in *D* and of the nuances conveyed by this theme the main one is causative, e.g., *šūšūm* (“to bring out”; *wašūm*, “to go out”). An internal *Š* indicates entry into a state or condition of some duration, e.g., *šulburum* (“to grow old”), *šumšūm* (“to spend the night”).

In the *N* theme, an *n(a)* morpheme is placed before the first root radical. Like in the *G* theme, various tense vowels are shown, and these can be correlated with those of the *G*.

For *parāsum*, the forms are *ipparras* (< *‡inparras*), *ittapras* (< *‡intapras*), *ipparis* (< *‡inparis*). The *N* theme is commonly a passive to the *G*, e.g., *napšurum* (“to be untied, absolved, explained”). Other nuances are reflexive, e.g., *nalbušum* (“to get dressed”) and related middle meanings, e.g., *naplusum* (“to look [benignly] upon”). Stative verbs take on an ingressive meaning, e.g., *nabšūm* (“to come into being”; *bašūm*, “to be”).

Within each theme occur forms with *-ta* and *tan/tana-* infixes. The *t* forms (*Gt*, *Dt*, *Št*, *Nt*) with the *-ta-* infixes give a reciprocal or separative meaning, e.g., *imtalkū* ([“the judges] consulted together”), *ittalak* (“he went off”). Some *t* forms coincide with perfect forms making the latter difficult to recognize. The *tn* forms (*Gtn*, *Dtn*, *Štn*, *Ntn*) with a *-tan/tana-* infix give a durative or iterative force, e.g., *ittanallak* (“he walks around/back and forth”), *imtanaqutū* (“[the stars] fall down [from heaven]”).

Akkadian lacks a developed series of parallel passive themes. The *G* theme shows no trace of such related forms. Here the *N* theme serves as passive. In the *D* theme, some *t* forms, identical with other *t* forms of the *D* theme, have a passive or middle nuance, e.g., *utellulum* (“to become clean, cleanse oneself”; *elēlum*, “to be clean”; *ullulum*, “to cleanse”), *eleppam uttebbe uša libbiša uhtalliq* (“he subsequently sank the boat and thereby caused the loss of its cargo”) as against *māti... uhtalliq* (“my country has been destroyed”). Likewise, in the *Š* theme, *t* forms can have a passive or middle meaning. Compare *še’am kī maši tuštaddin* (perfect; “how much grain have you brought in?”) and *še’um ša uštaddinu* (“grain which was brought in”). These *t* forms are termed *Šti* in distinction to a rarer non-passive *t* form, *Štz*, which has a unique present, e.g., *lā tuštallapat* (“you are not to touch”).

WEAK VERBS. There are several classes of “weak” verbs. *Primae Aleph* has two groups, those without apophony, e.g., *akālum* (“to eat”), and those with, e.g., *epēšum* (“to do”). The vowel coloring is generally a function of the underlying laryngeal, although some forms show a strong *aleph*. The basic phonological change here is that *v’ > v*; thus, *‡i’puš* preterite (pattern *iprus*) > *ipuš* (“he made”), and similarly throughout the paradigm. *Mediae Aleph* also have “*a*” and “*e*” classes. They further differentiate in a strong *aleph* group, e.g., *iš’al* (“he asked”) and a *ā/ē* group which decline like vocalic roots (see below), but crossovers are not uncommon. *Primae Nun* is characterized by the assimilation of the *N* root element to a following consonant, e.g., *iddin* < *‡indin* (“he gave”). In *Primae Waw* initial or intervocalic *w* goes to *’* or *m* in post-Old Babylonian times, e.g., *walādum* > *alādum* (“to give birth”). In fientive verbs *vw* > *uw* > *ū*, e.g., *‡iwsib* > *uwsib* > *ūšib* (“he sat”). Statives behave like *Primae Yod*, e.g., *iqer* (not *ūqer* < *‡iwqer*; note that the occurrence of the initial or final *y* is very restricted in historic Akkadian and these verbs generally behave like *Primae Aleph* with the apophony of *a > e*). Both fientive and stative verbs have *Primae Yod* type *Š* forms, e.g., *ušēšib* (“he seated” as if < *‡usayšib*), *ušūšib* type forms (< *ušawšib*)

occurring only rarely in poetic dialect (but note Neo-Assyrian *ittušib*, Babylonian *ittaşab* (“he sat”)).

Vocalic roots (“hollow verbs” *Mediae Waw/Yod*) are of the pattern $C\bar{v}C$, where the middle radical has to be considered as a long vowel: \bar{u} , i , \bar{a} , or \bar{e} (secondary). In the *G* present-future and in the present-future and preterite of the *D*, the suffixing of vocalic morphemes induces reduction of the theme vowel – middle root radical and gemination of the third root radical, e.g., *ikān* (“he is upright”), *ikunnū* (“they are upright”). In Assyrian uncontracted forms are usual, thus *ikūan*. The last major division of weak verbs is the *Tertiae Infirmae*. These are final *-u*, e.g., *iḥdu* (“he was happy”); final *-i*, *iqbi* (“he spoke”); final *-a*, *ikla* (“he withheld”); and final *-e*, *išme* (“he heard”). These vowels are *anceps* and are long when followed by bound morphemes, e.g., *iqbi*, but *iqbišum* (“he told him”). Two main groups of quadrilateral verbs occur of the type $C^1 C^2 C^3 C^4$ in the \check{S} and *N* themes, e.g., *nabalkutum* (“to jump over”), *šbalkutum* (“to cause to jump over, overturn”), including a weak class, e.g., *naparkū* (“to be idle, unemployed”). A third type is of the pattern $\check{S} C^1 C^2 C^2$ where C^2 is *l* or *r*, e.g., *šuharrurum* (“to be deathly still”).

It should be noted that the normal position of the Akkadian verb in the sentence is at the end (unlike its nearest Semitic relatives) and this is most likely due to the influence of Sumerian, where the verb is similarly placed.

[Aaron Shaffer]

AKKUM (Heb. עֲבוֹדַת כּוֹכָבִים וּמַזְלוֹת), abbreviation consisting of the initial letters of עֲבוֹדַת כּוֹכָבִים וּמַזְלוֹת (“worship of stars and planets”) or עוֹבְדֵי כּוֹכָבִים וּמַזְלוֹת (“worshippers of stars and planets”). It was originally applied to the Chaldean star worshipers but it was later extended to apply to all idolaters and forms of idolatry. This word is not found at all in the oldest editions of the Mishnah, Talmud, the Yad of Maimonides, or the Shulḥan Arukh. Most editions of these works have a note to the effect that the laws against *Akkum* refer only to ancient idolaters and not to Christians.

AKLAR MORDECAI BEN RAPHAEL (1856–1936), rabbi and author; member of the Persian *anusim* community who

professed Judaism in secret. Aklar, who was born in *Meshed, Persia, was known as a Muslim by the name of “Mulla Murad.” Aklar succeeded his father as the secret rabbi of the *anusim* community in Meshed. He immigrated to Jerusalem in 1927 and there continued to serve as the spiritual leader of the Meshed and Bukharian communities. His Judeo-Persian renderings of liturgical works, translated in Jerusalem, are a major contribution to this literature. They include *Avodat ha-Tamid* (1908), *Olat Shabbat* (1910), *Seliḥot* (1927), *Piyyutim for the Holidays* (1928), and the Passover *Haggadah* (1930). In his Judeo-Persian prayer book he incorporated a Hebrew poem by Solomon b. Mashi’ah, describing the tragic events which led to the forced conversion of the community in Meshed in 1839. His unfinished manuscripts include translations from the writings of Maimonides, and Saadiah Gaon, of the *azharot* of Solomon ibn Gabirol, parts of the Koran, and memoirs.

[Walter Joseph Fischel]

AKNIN, JOSEPH BEN JUDAH BEN JACOB IBN (c. 1150–1220), philosopher and poet. Aknin was born in Barcelona, Spain. Probably as a result of the Almohad persecutions, he, or perhaps his father, moved to North Africa, presumably Fez, Morocco. He remained there until his death, not withstanding his ardent wish to go elsewhere so that he could practice Judaism openly. That he felt guilty about living as a Crypto-Jew is evident from a discussion in which he passed harsh judgment on forced converts. He and Maimonides met each other during the latter’s sojourn in Fez and Aknin wrote a sad couplet on the sage’s departure for Egypt. However, he must not be identified or confused with Joseph b. Judah ibn *Shim’on, a disciple of Maimonides, who eventually was wrongly called “ibn Aknin.” Little else is known of Aknin’s life. He may have been a physician by profession – he certainly was adept in the subject. Nothing is known of his family life or descendants.

Aknin is the author of a number of works:

(1) *Sefer Hukkim u-Mishpatim*, no longer extant, was a book of laws divided into treatises, the first of which dealt with doctrines and beliefs. It may have been modeled on Maimonides’ *Mishneh Torah*, although, unlike this work, it limited itself to laws still practiced by the Jews of the time. He spoke of it as “my major work.”

(2) *Risālat al-ibānah fi uṣūl al-diyānah* (“Clarification of the Fundamentals of Faith”) is also no longer extant. Nevertheless, it is known from a passage cited in another work that this work engaged in a discussion of man’s freedom.

(3) *Ma’amar al ha-Middot ve-ha-Mishkalot* is an anonymous medieval Hebrew translation of an Arabic work by Aknin, entitled *maqāla le-Rabbenu Yehosef ben Aknin Zal fīma’ri fat Kammiyyāb al-maqādir al-madhkūrafi Torah she-bi-khetav ve-Torah she-be’al peh*. The Arabic original is extant in manuscript in the Bodleian Library (Ms. Poc. 186; cf. Steinschneider, *Arab Lit*, 230–1); the Hebrew translation of

the work was published in *Ginzei Nistarot* (ed. by J. Kobak, 3 (1872), 185–200). The introduction states: “It is my purpose to gather all that is scattered in [the] Mishnah and Talmud on coins, weights, measurements, boundaries, and time, and compare it with present-day standards.”

(4) *Mevo ha-Talmud*, written in Hebrew and divided into 12 chapters, concerns “principles which a person must know if he desires to become skilled in talmudic lore.” It was published under the title *Einleitung in den Talmud* with an introduction by H. Graetz in *Festschrift... Zacharias *Frankel* (Breslau, 1871; repr. 1967).

(5) *Ṭibb al-Nufūs al-Salīma wa-Mu‘ālahaj al-Nufūs al-Alīma* (“The Hygiene of Healthy Souls and the Therapy of Ailing Souls”) is an ethical compilation written in Arabic. After a lengthy introductory chapter, in which Aknin offers his views on the composition of the soul and the functions of its three parts, and in which he explains his beliefs regarding the afterlife of both the righteous and the wicked, he turns to an examination of such themes as speech and silence, keeping a secret, filial piety, food and drink, the true goods in life, and so forth. He urges moderation in all areas with a clear suggestion of the futility of material self-indulgence and the gain of spiritual and religious pursuit. Every section opens with a statement of the right course, supported by rabbinic references and followed in many instances by epigrams and sayings culled from classical and Arabic studies. Chapter 26, which deals with “the trials and tribulations which afflict us,” reviews the oppressive laws of Abu Yūsuf Ya‘qūb al-Mansūr, one of the Almohad rulers (cf. Halkin in bibl.). Chapter 27, on “the disciplines of teacher and student,” lists the [necessary qualification of the instructor, the conditions required of a good student, and the curriculum of study. Until the age of 30, the student should be concerned with traditional Jewish lore, which he should master to such a degree that he will be able to hold his ground when apparent difficulties and challenges seem to impugn the validity of tradition. The rest of his life should be devoted to the cultivation of logic, music, mathematics, mechanics, and metaphysics. This chapter was published in its Arabic original and a German translation by M. Guedemann, in his *Das judische Unterrichtsweisen waehrend der spanisch arabischen Periode* (1873, pp. 43–138, and appendix pp. 1–57); and in Hebrew by S. Epstein, in: *Sefer ha-Yovel... N. Sokolow* (1904, pp. 371–88).

(6) *Sefer ha-Musar*, written in Hebrew, is a commentary on the mishnaic tractate *Pirkei Avot*. In it Aknin follows Maimonides’ commentary on this tract, and although he does not follow it slavishly, the latter’s influence is obvious. Interested in psychology and ethics, he dwells particularly on statements that deal with conduct, beliefs, and dispositions. He often develops as part of his exposition lengthy discussions on the constitution of the soul, man’s responsibility for his actions, miracles in a world governed by natural laws, creation, and other metaphysical issues. The work was edited by W. Bacher as *Sefer Musar* (1910).

(7) *Inkishāf al-asrār wa-ṭuhūr al-anwār* (“The Divulgence of Mysteries and the Appearance of Lights”) is a commentary in Arabic on the Song of Songs. The work starts from the premise that it would be preposterous to believe that the wise King Solomon would compose a love story or indulge in erotic banter: the book bears such an external character simply as a pedagogic expedient to attract the young. According to his interpretation, the Song of Songs is a description of the mutual craving of the rational soul and the active intellect and the obstacles in the path of their union. Aknin boasts that no one preceded him in this approach to an interpretation of the Song of Songs. In fact, although Maimonides plainly offered a general explanation of the book along these lines, Aknin was the first to work out the theme in detail in a complete commentary. In his commentary he offers a tripartite explanation of each verse: first, what he calls the exoteric sense, that is, an explanation of the grammatical forms and of the plain meaning, but he avoids the introduction of the erotic aspect; second, what he calls the rabbinic interpretation, an explanation concerned with the fate of Israel, its tragedy, and its hopes (this is the most widely accepted allegorical interpretation, which is drawn from various literary compilations, mainly Midrashim on the Song of Songs); and third, the endowment of each word in the verse under discussion with implications of physiology, psychology, logic, and philosophy, which Aknin consistently opens with the phrase “and according to my conception.” This work was edited and translated into Hebrew by A.S. Halkin as *Hitgallut ha-Sodot ve-Hofa’at ha-Me’erot* (1964).

Aknin is typical of a group of intellectuals in the Jewish community under Islam that was impressed with the learning and doctrines of Greek and Hindu origin cultivated by Muslim intellectuals. However, he saw no conflict between his religious and secular learning. He was certain of the validity of his Jewish beliefs and way of life, and he was convinced that the ultimate goals of his Jewish and secular learning were identical. Aknin did not leave a mark on his peers in his or later generations, and his influence, evidently, was very limited.

[Abraham Solomon Halkin]

AKRA, town in Iraqi Kurdistan, known as Ekron among Jews. There was an ancient Jewish community in Akra. In the 19th century between 300 and 500 Jews seem to have been living there. According to the official census of 1930, about 1,000 persons of a total population of approximately 19,000 were Jews. They spoke Aramaic-Jebelic and were engaged in agriculture, whitewashing, goldsmithery, the perfume trade, and in commerce generally. Many of the orchards of the district belonged to Jews. The community was centered around its synagogue. In 1950 the Jews were attacked by their Kurdish

neighbors and many of them were injured; after this incident they immigrated to Israel.

[Abraham Haim]

AKRISH, ISAAC BEN ABRAHAM (b. 1530), talmudic scholar, traveler, and publisher. Son of a Spanish exile, who went to Salonika after having lived in Naples, Akrish, despite his lameness, traveled extensively throughout his life. His special interest was in manuscripts which he attempted to save from destruction. Arriving in Egypt about 1548, he was engaged by *David b. Solomon ibn Abi Zimra, the head of Egyptian Jewry, to teach his grandchildren. Whatever he earned he spent in purchasing manuscripts, and devoted his time to copying those in Ibn Zimra's library. In 1554, on his way to Candia, his books were confiscated by the Venetian authorities in the wake of the recent edict against the Talmud. Succeeding in rescuing his books, he apparently traveled to Constantinople and then in 1562 back to Egypt. Later he returned to Constantinople where patrons such as Don Joseph *Nasi and Esther *Kiera helped him to engage scribes to copy manuscripts. In 1569 a fire destroyed most of his books. He left Constantinople for Kastoria where he lived for four years in poverty.

Akrish then began publishing books and documents he had collected during his travels. Three such collections, which are of great importance, were published in Constantinople between 1575 and 1578 without title pages or specific titles. The first (republ. as *Kovez Vikkuhim*, 1844) contained *Iggeret Ogeret*, a collection of polemical writings, including Profiat *Duran's famous letter, *Al Tehi ka-Avotekha*, the polemical letter of Shem Tov ibn *Falaquera, and *Kunteres Hibbut ha-Kever* by Akrish himself. The second collection (1607³) contains several important items about the Ten Lost Tribes, the letter of *Hisdai ibn Shaprut to the king of the *Khazars, and *Ma'aseh Beit David bi-Ymei Malkhut Paras*, which is the story of *Bustanai. The Khazar correspondence was published by Akrish to "strengthen the people in order that they should believe firmly that the Jews have a kingdom and dominion."

The third collection of three commentaries on the Song of Songs by *Saadia, Joseph ibn Caspi, and an unknown author, possibly Jacob Provençal, were annotated and corrected by Akrish himself. He also wrote *Heshbon ha-Adam im Kono* (published with *Kunteres Hibbut ha-Kever* in *Sar Shalom* by Shalom b. Shemariah ha-Sephardi, Mantua, 1560?).

AKRON, industrial city in northeast Ohio. Akron is Ohio's fifth largest city, with a population of 217,074 (2000 census). German Jewish merchants settled in Akron prior to the Civil War, but the first congregation, the American Hebrew Association – known today as Temple Israel (Reform) – was founded in 1865. The community grew slowly until it received an influx of settlers from Eastern Europe in the 1880s. Engaging in the clothing business, cigar making, and other small businesses, the Jewish population reached a peak of 7,500 in the 1930s. In 2005, there were approximately 3,500 Jews in Akron and its suburbs with five congregations: Anshe Sfard/Revere Road (Orthodox, founded 1915), Chabad of Akron (Orthodox, 1986), Beth El Congregation (Conservative, 1946), Temple Beth Shalom (Reform, 1977), and Temple Israel (Reform, 1965). The Jewish Community Board of Akron, founded in 1935 as the Federation of Jewish Charities, announced in 2004 that its director would also lead the Jewish Federation of Canton, Ohio, a neighboring city with a Jewish population of approximately 1,200. The Jewish Community Board offers support to the Shaw Jewish Community Center, the Jewish Family Service, the Jerome Lippman Day School, and the *Akron Jewish News*. It also provides funding for campus services to Kent State University, the University of Akron, and Hiram College. Noted Akron residents were Judith A. *Resnik (1949–1986), a NASA astronaut who perished in the explosion of the orbiter *Challenger*, and Jerome Lippman (1913–2005) who invented a heavy-duty waterless hand soap during World War II.

[Jane Avner (2nd ed.)]

AKZIN, BENJAMIN (1904–1985), constitutional lawyer and political scientist. Akzin was born in Riga, Latvia, received doctorates from the universities of Vienna and Paris, lectured in various American universities, and was a Library of Congress expert on matters of law and international relations. He went to Israel in 1949 and joined the faculty of the Hebrew University as professor of constitutional law and political science and served as dean of the law faculty in 1951–54, 1956–58, and 1961–63. Akzin was an early supporter of the Revisionist Party and from 1936–41 was head of the political division of the New Zionist Organization. From 1945 to 1947 he served as political advisor and then as secretary of the Zionist Emergency Committee in the United States. Akzin wrote numerous political and scholarly articles as well as the following books: *Problèmes fondamentaux du droit international publique* (1929); *New States and International Organizations* (1955); *Torat ha-Mishtarim* (1963); *State and Nation* (1964); *Sugyot be-Mishpat u-ve-Medina'ut* (1966). Akzin was founder and first editor of the *Israel Law Review*. He was awarded the Israel Prize in law for 1967.

Akzin served as rector and acting president of the Haifa University from 1969 to 1972. He was elected honorary president of the World Federation of UN Associations, and of the Political Science Association of Israel, and was president of the Council of Friendship Associations between Israel and foreign countries.

In 1975 his *Be-Ayin Bohenet* ("Looking at the Passing Scene") was published.

ALABAMA, state in the southeastern region of the United States. In 2005 its population was estimated at 4,447,100, with a Jewish population of about 9,000. The largest Jewish communities were *Birmingham, with approximately 5,300 Jews; Montgomery, the state capital, with approximately 1,300; and Mobile, with 1,100. There were four Jewish federations in the state, and one periodical, the twice-monthly *Deep South Jewish Voice*.

While Jewish traders are known to have been active in Alabama as early as 1757, and a number of Jews lived in Mobile in the 1760s under British rule, it was not until the 1820s that the first permanent Alabama Jewish community was established in Mobile. Abram (Abraham) Mordecai, a Pennsylvania-born Jew who had settled in central Alabama by 1785 and established the state's first cotton gin near Montgomery, was made a key character in Albert James Pickett's *History of Alabama* (1851), and became a legend in Southern folklore.

The largest antebellum Jewish settlement was in Mobile, where sufficient Jews established themselves to purchase a cemetery in 1841. Previous Jewish graves dating back to 1829 are suitably marked in the oldest, non-sectarian Protestant graveyard in town. Congregation Shaarai Shomayim u-Maskil el Dol was chartered on Jan. 25, 1844. Israel I. Jones (1810–1877), a London Jew who arrived early in the 1830s, was president of the congregation for most of his life; one of his daughters married the well-known New Orleans rabbi, James Koppel Gutheim (1817–1886). An auctioneer and tobacco merchant, Jones was active in politics, served as an alderman, was president of the Mobile Musical Association, and introduced streetcars to Mobile.

A welfare society, the Chevra Mevaker Cholim, was organized in Montgomery on Nov. 17, 1846, by 12 German Jewish immigrants including Emanuel *Lehman, uncle of Herbert H. *Lehman. The society conducted services, purchased a cemetery, and on June 3, 1849, with 30 members transformed itself into Congregation Kahl Montgomery. The mobility of immigrant Jews and the tentativeness of their settlement is indicated by the constitutional provision of Kahl Montgomery that "four members shall be sufficient to continue the Society, but should there be only three members, the Society shall be dissolved." The congregation is now called Temple Beth Or, and its first building, built in 1862 with seed money from Judah Touro, is the oldest synagogue building in the state. It now houses a church.

Other communities were established where trails met

rivers, such as at Claiborne. That community was defunct by the 1870s, after it was bypassed by the railroad.

During the Civil War more than 130 Alabama Jews served in the Confederate Army, and in 1861, when 13 of them enlisted as a group in the Twelfth Alabama Regiment, Mobile Jews held a special service. James K. Gutheim, however, went to Montgomery as an exile rather than take the oath of allegiance to the United States after New Orleans' occupation by federal forces. He served in Montgomery and in nearby towns until the end of the Civil War. Judah P. *Benjamin lived in Montgomery during his tenure as attorney general of the Confederacy, and the last soldier killed in the defense of Mobile was a Jew from South Carolina. The congregations in Mobile and Montgomery, like virtually all of the older Southern congregations, turned to Reform following the Civil War, joined the Union of American Hebrew Congregations after its creation in 1873, and were served by graduates of the Hebrew Union College.

Eastern European immigrants began to arrive in Alabama towns early in the 1870s. They were treated with a combination of philanthropic generosity and social aloofness, which persisted longer in tradition-conscious southern communities than in the northern communities. These immigrants created their own Orthodox congregations in Mobile, Montgomery, and Birmingham, most of which joined the Conservative movement following World War II.

Jewish merchants were found in most Alabama towns of any size, with synagogues springing up in small mining towns like West Blocton and Bessemer, and larger cities like Selma. Immigrants often began selling house to house, saving enough money to buy a cart, then rent a storefront.

The town of Sheffield was founded in 1884 by a land company that included the Moses brothers of Montgomery. Falkville was named for Louis Faulk, who was the first merchant and postmaster, and Saks was established for area tenant farmers by Joseph Saks, founder of a clothing store in Anniston.

Before World War II, many Alabama communities faced shrinking populations, intermarriage on the part of the children and grandchildren of the older settlers, gradual acculturation by the children of the new immigrants, and slow disintegration of traditional Jewish loyalties. But European antisemitism in the 1930s and the sudden influx of Jewish soldiers to many southern towns during World War II, when great camps and air bases were established in the area, brought a return of Jewish consciousness to many disappearing communities. Many northern Jews also came to places like the University of Alabama after finding themselves shut out of northern universities by Jewish quotas. Many Jewish scholars who fled Nazi Germany were similarly shunned by prestigious northern universities and found employment in southern historically black colleges in places like Tuskegee. Scorned in Nazi Germany because they were Jews, they found themselves comparatively well treated in the South because they were white and yet they worked with disadvantaged and persecuted

Jewish communities in Alabama and dates of establishment. Population figures 2001.

black students for whom their race rather than religion was the defining identity. In the post-World War II period, new synagogues were built in the suburbs in Mobile, Montgomery, and elsewhere, and Jewish community life revived with the younger generation of Jews.

In 1943, the Alabama Legislature became the first American governmental body to pass a resolution supporting the establishment of a Jewish state in Palestine.

During the 1950s and 1960s, while there was a significant revival of interest in Judaism, there was also a recurrence of antisemitic attacks on Jews, including the firebombing of Beth Israel in Gadsden and the attempted 1958 bombing of Birmingham's Beth-El. Segregationist politicians called integration a "Communist-Jewish conspiracy," leading many in the Jewish community who were sympathetic to the civil rights movement to work behind the scenes so the movement would not lose legitimacy in the eyes of whites. An overwhelming percentage of northern whites who came to the region to work for civil rights were Jews, causing resentment by southern Jews who were trying to balance a delicate situation and who had to live with any backlash provoked by their northern co-religionists.

Many northern Jews were among the Freedom Riders who were attacked by white supremacists in Anniston and Birmingham, and Rabbi Abraham Joshua Heschel was among the Jewish figures who marched with Dr. Martin Luther King in Montgomery in 1965.

By the 1960s, smaller Jewish communities in the state began to die out as children and grandchildren of the original Jewish immigrants went off to college, became professionals, and chose not to return to their family businesses. Congregations in places like Demopolis and Jasper closed as the Jewish population aged and shrank.

Larger communities, and those connected to university towns, continued to have a stable population. The days of the Jewish country club were gone, but the 1990s saw Mobile's

Conservative Ahavas Chesed move to the suburbs, and a new congregation in Auburn. Almost all of Birmingham's Jewish institutions also expanded greatly or were rebuilt in the 1990s. The state's Gulf Coast is now also seen as a prime destination for retirees who do not want to go to South Florida.

While for many outside the region, the 1960s painted a picture of the South as being a hostile home for Jews, overt antisemitic incidents were rare. The 1990s saw some bruising church-state battles, but in general Jews were respected as "God's chosen people" by the largely evangelical population of the state. In 1995, Governor Fob James paid tribute to Israel in his inauguration, with the singing of "*Hatikvah*" and the blowing of the *shofar* by a Jerusalem rabbi. In 1999, Don Siegelman, a Catholic, was elected governor, making his wife, Lori, the state's first Jewish First Lady. The University of Alabama has a well-endowed and well-respected Judaic Studies program and the University of Alabama Press has an impressive list of Judaic publications, including the first English translation of Franz Rosenzweig's *The Star of Redemption* and Arthur D. Green's *Tormented Master*.

[Bertram Wallace Korn / Lawrence Brook (2nd ed.)]

ALABARCH (Gr. ἀλαβάρχης), title designating office-holders appointed to the fiscal administration in Egypt and other countries in the Roman and Byzantine periods. Since reference is made to the office being held by two wealthy Jewish notables of Alexandria (*Alexander Lysimachus and *Demetrius, the second husband of Princess Mariamne, daughter of Agrippa I, cf. Jos., Ant., 20:147), some historians have identified it as that of the head of the Jewish community (*ethnarch). The title is mentioned, however, in several sources without any Jewish connection.

Many scholars regard this office as identical with the arabarchs (cf. Cicero, *Adversus Atticum* 2:17; Juvenal, *Saturae* 1:130), the letters "i" and "r" (λ, ρ) being interchanged through dissimilation. These arabarchs were Roman officials who were responsible for the collection of imposts from incoming and outgoing vessels from the eastern ("Arabian") bank of the Nile; Wilcken (*Griechische Ostraka*, 1 (1899), 350-1) and Dittenberger quote a document which includes a tariff of the contractors who farmed the harbor dues paid to the arabarchs. Josephus (Apion, 2:64) mentions that the Jews received from Ptolemy (?) the "wardship of the river," and it is therefore possible that Alexander Lysimachus and Demetrius held this office.

According to a less acceptable opinion, the word is a hybrid of the Greek *archō* and the Semitic root 'arab (אָרַב) meaning "to barter" (cf. Ezek. 27:9) and the title therefore designates an official of the mercantile tax administration (V. Burr, *Tiberius Julius Alexander*, Ger., 1955, 16, n.4, 87ff.).

The suggestion of Rostovtzeff that the alabarch was responsible for the collection of specific Jewish taxes is untenable, since such taxes were not imposed until the time of Vespasian (69-70 C.E.) and until then, they paid ordinary taxation to the usual tax collectors.

It seems that the alabarch exercised different functions in different localities and periods and there is no definite information as to their precise functions.

The title does not occur in the Talmud but it has been suggested that the variant reading אפרכוס found in some texts to explain the “*Avrekh*” of Genesis 41:43 (Sifrei Deut. 1:1; Yal-kut Shimoni 1:792) is a corruption of “Abarchus = Alabarchus” (see Mid. Tan. to 1:1).

[Abraham Schalit]

ALAGÓN, town near Saragossa, northeastern Spain. There is evidence that Jews were living in Alagón while the area was still under Muslim rule. Shortly after the reconquest in 1119 Christians began to buy land from the Jewish residents. In her testament of 1208 Queen Sancha of Aragon bequeathed a number of Alagón Jews to the convent of Sigena. The expulsion of six butchers from the town by the community board resulted in a *cause célèbre* in the 1280s. In 1283 the infante Alfonso ordered that a representative gathering for the allocation of the annual tax in the *collecta* of *Saragossa should be held each year in Alagón. Its proximity to Saragossa apparently saved Alagón during the massacres throughout Spain in 1391. A list of accounts from 1403 to 1408 includes the names of Jewish notables, and charitable societies (*cofrías*) as well as *Conversos. The community ceased to exist with the expulsion of Spanish Jewry in 1492.

Ma. Larra, *Documentos para el estudio de la Reconquista del Valle del Ebro* (second series, 1949), index.

ALALAKH (Alalach, Alalah), ancient city situated south of Lake Antiochia, near the bend of the Orontes River in Turkey; now Tell Atshana. The site was excavated by the English archaeologist Sir Leonard Woolley in 1937–39 and in 1946–49. Mesopotamian documents mentioning Alalakh and its kings and archaeological finds have added greatly to the understanding of the history of this city and its importance in the area west of the Euphrates during the first half of the second millennium B.C.E. Alalakh sheds indirect light on the Syro-Palestinian context of biblical *realia*. The most important finds for ancient Near Eastern studies are the 450 clay tablets written in Akkadian. These tablets are from the royal archives of the city and are with minor exceptions from two periods: an early archive from Stratum VII dating from the 18th century B.C.E. and a later archive from Stratum IV from the 15th century. The archives contain a few international treaties and many adminis-

trative, economic, and legal documents. They throw light upon the history of Alalakh, its royal and administrative organization, social strata, mode of life, and ethnic origins, and on the economic activity of its inhabitants during these two periods. Of special importance to scholarship is the possibility of tracing the development of a city-state and of understanding the political, ethnic, economic, and social development of Alalakh from the 18th to the 15th centuries B.C.E. In addition to the documents, a statue of a king inscribed with the history of Idrimi (who ruled in Alalakh approximately at the end of the first half of the second millennium B.C.E.) was found. The inscription consists of a narrative which differs in tone and content from the ordinary run of *res gestae* in the ancient Near East, though it closely resembles biblical narratives. Some of its details are reminiscent of the history of David during his premonarchical period, a fact that indicates the widespread prevalence of certain literary motifs in the biographical style of the books of Samuel. These epigraphic finds are part of the ever-growing corpus of documents from the Fertile Crescent that shed light on linguistic, economic, social, and ethnic conditions in pre-Israelite Palestine and on the ancient Near Eastern origins of Israel's institutions (law, customs, government) and spiritual culture. Thus Alalakh furnishes fresh evidence added to that of *Nuzi and *Ugarit for the right of a father to determine which of his sons should be considered the eldest, disregarding the custom of primogeniture. According to this right, Abraham could prefer Isaac over Ishmael (Gen. 21:10 ff.), and Ephraim could be elected in the place of Manasseh, Joseph's elder son (*ibid.* 48:13 ff.). Jacob's seven additional years of work to earn the right to marry Rachel (*ibid.* 29:18, 27) may also find its parallel in marriage contracts from Alalakh. One of the conditions of such contracts is the option given to a husband to marry a second wife if the first fails to bear children for seven years. In other spheres, mention should be made of the contribution of the international treaties from Alalakh regulating, inter alia, the extradition of escapees from one country to another. This may contribute to the understanding of the extradition of the two servants of *Shimei by Achish, king of Gath (1 Kings 2:39 ff.), suggesting the possibility of a similar treaty between Solomon and Achish (but cf. Deut. 23:16–17). There is also an illustration from another document of the manner in which Jezebel acquired for Ahab the property of Naboth the Jezereelite (1 Kings 21:8 ff.). It is clear from the document in question, that the king had the right to confiscate the property of a rebel or a person guilty of a crime against the king and executed for this reason.

[Michael Avi-Yonah]

ALAMANI, AARON HE-ḤAVER BEN YESHU'AH (commonly known as "Ben Zion" and also "Alluf-Zion"; 12th century), rabbinical judge, physician, and poet. He was born probably in Jerusalem, at the end of the 11th century, and lived for many years in Alexandria, Egypt. When *Judah Halevi went to Alexandria in 1140, he stayed at Alamani's house and became friendly with him. Judah Halevi respected him greatly, composed songs of friendship to him and his children, and continued his relations with the family after leaving Alexandria. Apparently Aaron's name as a poet had been known to Judah Halevi even before he left Spain. More than 30 of his liturgical hymns and poems are now known, all influenced by Hebrew poetry in Spain. It is also possible that certain *piyyu-tim* where only the name Aaron appears were composed by him. His sons, Yeshu'ah and Zadok, were also poets.

[Abraham Meir Habermann]

ALAMI, SOLOMON (c. 1370–1420), Spanish moralist. Alami's family name was apparently Ibn Laḥmish (or Naḥish); possibly he was called Alami because he was blind (the meaning of the word in Arabic). He fled from Spain to Portugal during the persecutions of 1391. There he composed in 1415 his *Iggeret ha-Musar*, also published under the title *Iggeret ha-Tokhaḥah ve-ha-Emunah* ("Epistle of Reproof and Faith"), which has gone through 18 editions (the last ed. by A.M. Habermann, 1946). It is written in rhyming prose and is divided into five sections, corresponding to the five senses. Alami was inspired to write it by the "perplexity which has plagued me these 24 years: Why does God seek to destroy us each generation?" and by his final conviction that "we ourselves have dug the pit into which we have fallen." He criticizes acidly the various classes of Spanish Jewry, exposing the moral shortcomings of the court Jews, tax farmers, philosophers, and rabbis as well as the common people. Alami believed that the upper classes were mainly responsible for the catastrophe that had befallen Spanish Jewry. The court Jews had betrayed the office which they had attained by the will of Providence; "their eyes and their hearts were turned only to selfish gain,

to inherit dwellings that were not theirs in the lands of their enemies... to shift the burden of taxation from themselves to the poor... By their evil ways they became obnoxious to their enemies... and they were driven from the courts of kings and princes... and later not a single Jew remained who had access to the king to seek the good of his people and speak on their behalf." The rabbis "showed favoritism in the law and did not reprimand the people for base conduct." They prided themselves on their empty interpretations and boasted of their secular knowledge. The common people were dishonest in their dealings with the Gentiles: "We dealt with them falsely and dishonestly, and we robbed them through unjust practices, until they despised us and held us to be thieves and liars, fornicators and a gang of traitors, so that every vile and shameful occupation is identified with the Jews." Alami contrasted the lack of decorum in synagogues with the behavior of Christians at prayer. He advocated physical labor, personal cleanliness, and modesty. Concerning forced conversions, he urged the Jews to abandon their homes rather than abjure their faith: "When pagans rise up against you to force you to desert God, to drive you from His inheritance, leave the land of your birth and your father's house for any land you may find where you may observe His law."

ALARIC II (485–507), Visigothic king. Alaric II was a strong and prudent ruler of the Visigoths, who had established themselves in Spain and southern France on the breakdown of the western Roman Empire. The Visigoths had adopted Arian Christianity, a form which their orthodox Roman subjects hated as heretical. Probably because of this the rulers were inclined to favor their Jewish subjects, though the only known details are what can be culled from the Visigothic laws. In 506 Alaric issued a shortened compendium of the Roman *Codex Theodosianus* of the middle of the fifth century, known as the *Breviarium Alariciense*. In this the laws affecting Jews were reduced from over 50 to 10, omitting many which were contradictory. Those forbidding violence against Jews were also omitted, not from anti-Jewish feeling, but as unnecessary. Jews were still basically Roman citizens, but the exceptions to their equality with other citizens remained though no new restrictions were added. The only privilege allowed them was freedom from court action on their holy days. They were excluded from honors, but had to bear all the burdens of public life. They were refused any authority over Christians or the purchase of Christian slaves, and those they inherited they were not allowed to circumcise. They were punished if they molested a Jew who sought baptism, and their clergy enjoyed no immunities.

[James W. Parkes]

ĀL-ASĀṬĪR (Ar. الاساطير), Samaritan work in Aramaic of unknown authorship, date, and provenance ascribed by the Samaritans themselves to Moses. Written in the form of a chronicle, the work is a legendary account of 26 generations from Adam to Moses. The story is focused on the four patriarchs – Adam, Noah, Abraham, and Moses – the “Fundamentals of the World.” The book is divided into 12 chapters. The first ten, from Adam to Israel’s victory over the Midianites, span a period of 2,800 years according to Samaritan chronology. The first half of the 11th chapter contains a description of the borders of the Holy Land that has still not been satisfactorily explained. The last part consists of prophecies about the future of the world until the advent of the *taheb* (“the restorer”; see Religion of *Samaritans). The composition of the book gives the impression that it was written by one hand without interpolations. In some places its genealogical lists and chronological data conflict with those found in the Pentateuch or in other Samaritan chronicles, but these discrepancies may well have been caused by the inaccuracy of copyists. The title of the work, *al-Asāṭīr*, is Arabic and means legends or tales, as in the Koranic expression *asāṭīr al-Awwalīn* (“the Legends of the Ancients”). This fact in itself is not proof of the late origin of the book, as the title may have been a later addition. No express mention of *al-Asāṭīr* is found in the list of source material enumerated by *Abu al-Faḥḥ in the introduction to his *Annal*, but it might be included in the summarizing expression “some histories.” The language of the book, influenced by the Arabic language and Muslim terminology, is difficult to understand. Although the narrative may contain many old midrashic motifs, it could not have been composed before the end of the tenth–the beginning of the 11th century C.E., when Aramaic was still used in the Samaritan community but Arabic had already begun to supersede it. The author seems familiar with the geography of northern Erez Israel and Syria and probably lived in this region, where large Samaritan communities then flourished in Acre, Tyre, and Damascus. Ismā’īl al-Rumayḥī was the first to attribute the composition of *al-Asāṭīr* to Moses in his *Molad Moshe* (beginning of the 16th century). The work is often cited in the Bible commentary of Muslim al-Danāfī (who attributes it once to Adam) and Ibrahim al-Ayya (17th, 18th centuries, respectively). The book is not highly esteemed by the modern Samaritan community. There exist a translation into Arabic and one into Samaritan modern Hebrew (see Language and Literature of *Samaritans) called *Pitron*. M. Gaster edited the book together with the *Pitron*. He translated it into English, and appended a commentary (*The Asatir, The Samaritan Book of the Secrets of Moses*, 1927). An edition with Hebrew translation and commentary was published by Z. Ben-Ḥayyim (*Tarbiz*, 14 (1942/43), 104–25, 174–90; 15 (1943/44) 71–87).

[Ayala Loewenstamm]

ALASHKAR, JOSEPH BEN MOSES (c. 1500), rabbinical author and Hebrew poet. A victim of the expulsion from Spain in 1492, Alashkar settled in Tlemcen (Algeria) where he became the head of a yeshivah. He was a fertile writer, but none of his works was published. They include (1) *Avrekh*, commentaries on Rashi; (2) *Edut bi-Yhosef*, commentary on the laws of ritual slaughter in Maimonides’ *Code*; (3) *Mirkevet ha-Mishneh*, on *Pirkei Avot*; (4) *Refu’at ha-Nefesh*, religious ethics.

In addition, he wrote poems and books in verse form, among them a paraphrase of the tractate *Avot*, verses on the 70 kinds of *terefah*, two poems in honor of his contemporary and fellow countryman, Solomon b. Simeon *Duran, as well as several religious odes and hymns.

ALASHKAR, MOSES BEN ISAAC (1466–1542), talmudist and liturgical poet. Alashkar, who was born in Spain, studied in his youth with R. Samuel Valensi in Zamora. In 1492, when the Jews were expelled from Spain, Alashkar sailed to North Africa. On board he was kept below deck with other Jewish refugees, and nearly drowned when the ship foundered. He wrote a poem, “*Be-Mah Akaddem*,” inspired by this experience. Alashkar settled in Tunisia, but when the Spaniards landed in North Africa in 1510 and part of the Jewish population made prisoner, Alashkar fled. He resettled in Patras, Greece, where he established a yeshivah. Alashkar later immigrated to Egypt, and in 1522 became *dayyan* in Cairo, where he distinguished himself as a talmudist. His halakhic decisions were widely cited; he also corresponded with most of the outstanding rabbis, e.g., Elijah *Capsali, *Levi b. Ḥabib, and Jacob *Berab. Alashkar was involved in halakhic disputes with Samuel b. *Sid and Jacob Berab. In a poem and in a letter to Levi b. Ḥabib, Alashkar complained about the hostility toward him in Cairo. The dissensions eventually led to his departure to Jerusalem, where he died.

Alashkar was well versed in Arabic, and studied the responsa written by earlier scholars, especially Maimonides. He also studied Abraham b. Moses b. Maimon’s *al-Kifāya* and Samuel b. Hophni ha-Kohen Gaon’s *al-Aḥkām*. That Alashkar knew Kabbalah is apparent from his kabbalistic explanations cited by Samuel Uceda in his *Midrash Shemu’el*, and in several of Alashkar’s liturgical poems. Alashkar, however, was opposed to the diffusion of secret lore and mysticism.

Though generally conciliatory and moderate in polemics, occasionally Alashkar severely criticized halakhic statements that seemed untenable to him. Once he even accused his close friend, Levi b. Ḥabib, of making a statement contrary to common sense (Responsa, no. 41). Similarly, he rejected opinions by Joseph *Colon, *Jacob b. Asher, and Joseph *Albo. The editors of Alashkar’s responsa mitigated or deleted several statements directed against Berab. Alashkar’s responsa, 121 in number, were first published in Venice in 1554. Appended to the responsa are five liturgical poems by Alash-

kar, printed also with two others in Y. Zarki's anthology *Yefeh Nof* (Sabionetta, 1575).

ALASHKAR, SOLOMON (16th century), leader (*çelebi*) of Egyptian Jewry, who was also known by his title *mu'allim* ("master"). Alashkar was a wealthy trader and philanthropist who supported scholars and yeshivot in Erez Israel and Egypt. In the 1560s a fierce feud broke out between him and R. Jacob ibn Tibbon, one of the foremost Egyptian rabbis, who insulted Alashkar. Rabbis Joseph *Caro, Moses di *Trani, and Israel de *Curiel, all of Safed, were asked to make peace between them, but failed. Alashkar was one of those who helped to subsidize publication of the *Shulhan Arukh* (Venice, 1565). When his fortunes changed and he was unable to meet his debts to the governor of Egypt, Hussein Pasha, the latter ordered Alashkar's execution (1583?); but he was saved because the governor himself was killed and, according to Joseph *Sambari, Alashkar recovered financially.

[Abraham David]

ALASKA, state of the U.S. located in far northwest North America. Jews first came to Alaska in sizable numbers during the Gold Rush of the late 1890s, when they set up general merchandise stores, law offices and mining operations. After the Gold Rush subsided, some Jews remained in the cities. From the 1940s to the 1970s, most of the Jewish population consisted of military personnel. Due to construction of the Alaskan Pipeline in the mid-1970s and the resultant growth of the oil industry, the population grew. Subsequently, Alaska attracted Jews seeking a quieter lifestyle. From 1970 to 2001, the population increased dramatically, going from 190 to 3,400. Today, over three-quarters of the Jewish population resides in the three largest cities. Anchorage, Fairbanks and Juneau had populations of 1,600, 500 and 300, respectively, in 1994. Smaller communities exist in Sitka, Homer, Ketchikan, Soldotna, Kenai, Haines and Bethel.

The first Jews came to Alaska with the Russian explorer Vitus Bering. In the period of Russian rule, the Jews of Alaska were trappers and traders. In the 1850s and 1860s, San Francisco Jews developed extensive commercial ties with the Russian-American Company in Alaska, and many Jewish fur traders visited regularly. Shortly after the United States purchased Alaska from Russia in 1867, Jewish traders, miners, fur dealers, and merchants arrived from San Francisco to probe the new territory.

Jewish population 2001.

Lewis Gerstle and Louis Sloss, San Francisco merchants, founded the Alaska Commercial Company in 1868. The company developed steamboat transportation and financed some of Alaska's first mining ventures.

As many as 200 Jews lived in the Klondike at the height of the gold rush. Dawson City, in the Yukon Territory, was site of the region's first Jewish services (1898). The small Jewish section of Klondike's cemetery Bet Chaim was established 1902 and later restored in 1998 through the efforts of the Jewish Historical Society of the Yukon. During the Nome gold boom of 1900, a Jewish congregation was initiated when some sixty Jews attended Rosh Ha-Shanah services. In 1901, the congregation established the state's first Jewish organization, the Hebrew Benevolent Society. The isolated community declined after WWI.

Polish immigrant Solomon Ripinsky arrived in 1884. His various occupations echo those of other Jewish pioneers: law clerk, teacher, trading post operator, postmaster, notary, lawyer, elected convention delegate, and U.S. Commissioner. Mt. Ripinsky in Haines is named for him.

The first Jewish settlers of Juneau were Robert Gottstein and his wife (1885). Their son Jacob came to Anchorage at its founding in 1915. He established a trading and warehouse business, the J.B. Gottstein Company, that later combined with Carr's Grocery to form Carr-Gottstein, Inc., at one time the largest private employer in Alaska.

In 1904, a group of fortune hunters and businessmen in Fairbanks organized a congregation and a year later acquired a cemetery that is still the only Jewish burial ground in Alaska. The congregation became Congregation Bikkur Cholim in 1908, holding services at the home of Lithuanian Jew Robert Bloom, a congregation founder who had arrived in the Klondike in 1898 and served as the Yukon's first lay rabbi for nearly half a century. He was chairman of Alaska's Jewish Welfare Board, instrumental in the establishment of an Air Force base in Alaska, a founder of the University of Alaska (1918) and a

charter member of its Board of Regents. Jessie Spiro Bloom established the Fairbanks kindergarten and first Alaskan Girl Scout chapter (1925). The First Jewish Congregation of Fairbanks was established in 1980 at the Army post chapel. Re-named Or HaTzafon (Light of the North), the congregation is affiliated with the Reform movement.

Around Anchorage, Orthodox, Conservative, and Reform Jewish chaplains at Elmendorf Air Force Base rotated tours of duty from the early 1940s to mid 1980s. Reform Congregation Beth Sholom was established in 1958 and its current synagogue built in 1982. From 1984 to 2000, Rabbi Harry L. Rosenfeld was Beth Sholom's rabbi. Alaska's first Chabad Center and only Orthodox congregation, Shomrei Ohr, was established in 1991 by Chabad emissaries Rabbi Yossi and Esty Greenberg.

In Juneau, the Reform Juneau Jewish Community (JJC) operates in public locations and members' homes. In 2004, the congregation purchased a former community center to serve as the home for a future synagogue and Jewish school.

From the time Jews first settled in Alaska, they have been prominent in political life. The first mayor of Anchorage was Leopold David; several years later Zachary Loussac served in the same capacity. In 1958, when Alaska was approved for statehood, Ernest *Gruening, a former territorial governor, was elected as a United States senator. From 1965 to 1997, Jay A. Rabinowitz was a justice on the Alaska Supreme Court, serving four terms as Chief Justice. Avrum M. Gross served as Attorney General from 1974 to 1980. Jews currently make up 5% of the State Legislature and the Anchorage Municipal Assembly.

The television drama "Northern Exposure" (1990–1995) featured a Jewish doctor, Joel Fleischman, among the inhabitants of a fictitious Alaskan town.

[Joy Katzen-Gutherie and Joel Reisman (2nd ed.)]

ALATINO (Alatini), Italian family of physicians and scholars from Spoleto (Umbria). JEHIEL REHABIYAH (VITALE) ALATINO was physician to Pope Julius III (1550–55) and to the cardinal of Urbino. His half-brother, MOSES AMRAM (d. 1605), a celebrated physician, translated into Latin the paraphrase by Themistius of Aristotle's lost work *De Coelo* (Venice, 1574) from a Hebrew manuscript, and Galen's commentary on Hippocrates' *De aere, aquis et locis* from Hebrew into Latin (anonymously, Paris, 1679). When the Jews were expelled from

the minor centers of the papal states in 1569, Moses left Spoleto. He settled in Ferrara, and then in Venice, where he died. Moses' son AZRIEL PETHAHIAH (BONAIUTO), also a physician, assisted his father in his later translation. In 1617 Azriel, who had remained in Ferrara after his father's departure, was compelled to conduct a public disputation there with the Jesuit Alfonso Caracciolo, in the presence of 2,000 persons. He defended the Jewish view concerning the eternity of the Jewish Law, and argued that Jesus did not fulfill the essential prerequisites of the Messiah. Azriel's account of the disputation, *Vikku'ah al Nizhiyyut ha-Torah* ("Debate on the Eternity of the Law"), was first published by Jarè (1875). In 1624 he was a member of a delegation sent to the papal legate in a futile attempt to prevent the establishment of a ghetto at Ferrara. He wrote *Torat ha-Mukzeh* (unpublished). His views were liberal; he supported Leone *Modena's argument permitting Jews to go bareheaded. Recently, it has been suggested by scholars that Angelo Alatini, the author of the pastoral drama *I Trionfi*, published in Venice in 1611, was probably a member of this family, and should not be confused with the almost homonymous Angelo Alatrini, whose Italian verse translation of Hebrew liturgical texts was published in the book *L'Angelica Tromba* (Venice, 1628).

[Cecil Roth]

ALATON, ISHAK (1927–), industrialist. Born in Istanbul, Alaton graduated from Lycée Saint-Michel in 1946. After his military service he worked in Sweden in 1951–53 as an engineering trainee. In 1954 he founded the Alarko Company together with his associate Üzeyir *Garîh. Over a period spanning some 50 years Alarko Holdings has grown into a group of 22 independent companies working in the fields of contracting in Turkey and abroad, building and operating hydroelectric and thermal power plants and airconditioning equipment, as well as operating in the fields of tourism and real estate development. Alaton was honored by the King of Sweden in 1993 with the Nordstjaernan (North Star) first degree. He is the vice chairman of the board of TESEV (Turkish Economic and Social Studies Foundation), a non-government organization, and honorary consul of the Republic of South Africa. His *Görüş ve Öneriler* was published in 2000.

[Rifat Bali (2nd ed.)]

ALATRI, SAMUEL (1805–1889), Italian politician and communal leader. Born in Rome, he joined the council of the Jewish community in 1828 and served on it throughout his life, eventually becoming president. On his many missions abroad he met leading Jews, especially in England and France, who encouraged him to conduct a struggle for the rights of his

fellow Jews in Rome, in which he was to persevere for many decades. He took a keen interest in education, studying foreign institutions and applying the experience he gained for the benefit of Jewish institutions of learning in Rome. Alatri was chosen as spokesman of the annual deputation of the Rome community permitted to wait on Pope Gregory XVI. A gifted orator, he impressed the reactionary pope and gained enough influence with him to effect remedies in individual cases of distress. With the accession of Pius IX, who at first showed liberal tendencies, Alatri also entered general public life and was appointed a director of the papal bank. In 1849, when Rome was declared a republic and was besieged by French troops, Alatri was a member of the city's defense committee. In 1870, when King Victor Emmanuel put an end to the pope's temporal power and a plebiscite was held in Rome which advocated the incorporation of the city into the kingdom of Italy, Alatri was a member of the commission which handed the king the favorable results. The new status of the city also brought about the long-hoped-for change in the situation of the Jews there. Alatri was later elected to parliament and was appointed to regularize the state budget. Many of his speeches appeared in print, among them the outstanding address he delivered to mark the opening of the rabbinical seminary in Rome (1887).

Alatri, *Cenni biografici di Samuele Alatri scritti da suo figlio Marco: l'8 Gennaio 1890* (1929); A. Tagliacozzo, "Samuele Alatri; figura dominante nell'Ebraismo romano del secolo scorso," in: *Rassegna Mensile di Israel* 39 (1973), 278–96.

ALATRINI (or **Alatrino**), Italian family originating in Alatri in central Italy and later dispersed throughout the country. Its members were known from the 14th century as copyists of Hebrew manuscripts, and from the 15th century as authors.

MATTATHIAS BEN ABRAHAM ALATRINI (16th century), of Città di Castello, was author of a commentary (unpublished) on the *Behinat Olam* of *Jedaiah ha-Penini, completed in 1562–63. **ISAAC BEN ABRAHAM** (16th–17th century), grandson of Mattathias, was active in Cingoli and Modena, where in 1621 he was authorized by the duke to teach Hebrew to Christians. He wrote *Kenaf Renanim*, a commentary on the Song of Songs in five parts (unpublished), in which he quotes passages from the *Dialoghi di Amore* of Leone Ebreo (Judah *Abrabanel). There also exists a Hebrew dictionary of philosophical terms with Italian translations, either composed by him or compiled from his works. **JOHANAN JUDAH BEN SALOMON** (fl. 2nd half of 16th century) was an early Jewish author in Italian and a poet in Hebrew. He wrote *L'angelica tromba* (Ferrara, 1589), an Italian version in "terza rima" (the poetic meter of Dante's *Divina Commedia*) of three *seliḥot*, to which he added some "Sonetti spirituali" (spiritual sonnets). The book was translated into Hebrew by Alatrini's grandson Natan Jedidiah of Orvieto, with the title *Barekhi nafshi* (1628).

His Hebrew poems belong to the genre of *tokheḥah* and praise of friends (Abraham Yagel, Barukh ha-Cohen). One *tokheḥah* is translated by the author into Italian. He is perhaps identical with Angelo Alatrini (c. 1534–before 1611), of Città di Castello, early Jewish author in Italian. He wrote *I Trionfi* (Venice, 1611), a pastoral fable, completed in Ferrara in 1575 and seen through the press by Leon *Modena, who added a sonnet in Petrarchian style. *I Trionfi* follows an arcadian model, with moral purposes and characters drawn from Latin mythology; but it also contains sections written in a more popular style, with obscene allusions.

[Cecil Roth / Alessandro Guetta (2nd ed.)

AL-AVANI, ISAAC (early 13th century), poet who lived in Baghdad. The satirist Al-Ḥarizi called Al-Avani a rich man whose poetry was poor, and who paid heavily to be made head of the academy. He wrote that Al-Avani (literally "vessel") had no value: "his song is bare, crude earthenware," and the answer to any inquiry about Al-Avani's poetry should be, "Behold it is hidden among the vessels" (1 Sam. 10:22). Al-Ḥarizi's harsh judgment was unjust. Al-Avani's only extant poem, a *muwashshah* ("girdle poem") on friendship, *Aḥar ha-Zevi Zanu Ra'yonai*, compares favorably with the best of its genre. In view of Al-Ḥarizi's unfair appraisal of Al-Avani's poetry, the statement concerning the purchase of his position must also be questioned.

[Heinrich Haim Brody]

ALAWIDS (Ar. 'Alawiyūn), dynasty of sharifs, i.e., noble descendants of the prophet Muhammad, by his daughter Fāṭima and her husband, Ali ibn Abu Ṭālib, his cousin. It rose to power in *Morocco in the middle of the 17th century and continues to reign there. The dynasty claims to be descended from Hasan, the elder son of Muhammad, and it is therefore called Alawids of the Hasan branch. These sharifs came from Arab countries and settled in the Tāfilālt region, in south-eastern Morocco, as early as the 13th century; thus, they are also called Filālī (or Hilālī). The rise of the Alawids to power in the 17th century was connected with riots and uprisings which broke out in the country at the end of the reign of the

Saydis, about whom much is also related in Jewish chronicles. These chronicles, *Divrei ha-Yamim*, based on the family of Ibn Danān, *Kisse ha-Melakhim* by Raphael Moses Elbaz, and *Yahas Fas* by Abner Zarfaty, devote ample space to the events of the time and to a description of the sharifs. Historians consider al-Rashīd (1660–72) as the true founder of the dynasty; one of the famous Alawids was the sharif Ismail (1672–1727), a controversial figure. Arabic sources view him as the one who established the dynasty, an energetic ruler who succeeded in uniting and consolidating the state and introducing order and security. In contrast, the contemporary European sources emphasize Ismail's cruelty to his subjects and to Christian captives. According to them, no one in the history of the Maghreb spilled innocent blood as he did. Jewish courtiers and officials such as Daniel Toledano, Joseph Maymeran, Moses Abenatar, Abraham b. Quiqui, and others (see *Morocco) surrounded Ismail. European diplomatic reports and contemporary travelogues supply rich material which stresses the great part of these Jews in the relations with European countries. After Ismail's death there were 30 years of riots and uprisings in the country (1727–57) when the sons of Ismail fought each other over the distribution of the inheritance and rule over Meknes, the capital. The entire population suffered and only with the accession of Muhammad ibn 'Abdallah (1757–90) was the country pacified. However, immediately after his death, the reign of terror of his son Yazīd (1790–92) began. The latter vented his anger on Jews and Christians, particularly on Spaniards, and maintained friendly relations only with the British, as his mother (or her mother) was English. Disunity prevailed and his brothers proclaimed themselves kings, one in the southwest, and the other in the southeast. The situation of the Jews during that time is described by S. *Romanelli in *Massa be-Arav*.

In the 19th century a certain relaxation in the relations between the rulers and the population took place, while in contrast, tension mounted with the neighbors across the border, the French ruling in Algeria and the Spaniards who for hundreds of years held a series of cities on the Mediterranean coast of Morocco (Ceuta, Mellila) and hoped to expand their authority in the north. As is usual during times of troubles and wars, the Jews were the major victims, both during the Franco-Moroccan war (1844–45) and the Spanish-Moroccan war (1859–60). Indeed, in 1864 the sharif Moulay Muhammad (1859–73) gave Sir Moses *Montefiore an audience and promised him that his government would be concerned with the civil rights and protection of the Jews. He even issued a royal edict, *Zahīr*, in that spirit whose proclamations and instructions were in effect only on paper. In 1863 the *capitulations treaty was signed between France and Morocco. Belgium, Sardinia, the United States, England, and Sweden were also party to this agreement which influenced the improvement of the situation of the Jews in Morocco who had succeeded in various ways to be included in its framework. The Madrid Convention in 1880 expanded the application of the

capitulations to additional countries and decided on lengthy and comprehensive commentaries to its items (chapters). This clearly contained the reduction of Moroccan independence and sovereignty.

From 1873 to 1912 the Alawid sharifs made desperate attempts to preserve the integrity of their kingdom and protect it from imperialist aspirations of the European countries, particularly France who sought to annex Morocco to its overseas empire after it had extended its protection over Tunisia in 1881. The reign of Hasan (1873–94) and 'Abd al-'Azīz constituted an unceasing decline of sharif rule. The sharif 'Abd al-Ḥāfiẓ (1909–13) was compelled to sign a treaty with France on March 30, 1912, according to which France received most of Morocco as its protectorate. A similar treaty was signed at the end of the same year with Spain, whose share of the loot included the northern region of Morocco extending along the Mediterranean coast. 'Abd al-Ḥāfiẓ relinquished the throne and his brother Moulay Yusuf (1913–26), who was prepared to cooperate with the authorities of the protectorate powers, ruled in his stead. His son Muhammad v (1926–61) became king at the age of 18. He possessed a great deal of diplomatic talent and helped France during the difficult period of World War II. In addition, he opposed the racist policy of the Vichy government and announced his personal protection of the Jews in his country. He was removed in 1953, apparently by political opponents in his country who enthroned one of his relatives, Sidi Muhammad ibn 'Arafa. Muhammad spent two years in exile and was returned to his country with great honor in 1955 and continued to rule. After his death his son Hasan (1961–1999) became king.

King Hasan's regime was characterized by the tightening of internal control and a military buildup. He oppressed his political opponents and tried to unify the country. He also fought against the Polisario resistance in southern Morocco. King Hasan's attitude toward Moroccan Jews was favorable. Under his regime most Jews left the country during the "Yachin Operation" (1961–64). Jews who remained in Morocco lived safely and could practice their religion and continue their economic activity. The Israeli secret services helped King Hasan to build his own secret services. In addition, Hasan headed the Jerusalem committee of the Arab League. His contribution to the peace process in the Middle East was of great importance. Moroccan Jews in Israel, France, and Morocco also helped Israeli leaders make contact with the palace.

King Mohamed v I, Hasan's son, took over at a very young age. He quickly began to introduce some reforms with regard to democratic processes and women's rights. Thus, he released political prisoners and authorized expatriates, such as Abraham Zarfaty, a Moroccan Jewish communist and syndicalist, to return to Morocco. The country was open to Israeli tourists but diplomatic relations were broken off because of the Intifada. Mohamed v I found in Morocco a small Jewish community of not over 7,000 people, most of them in Casablanca and enjoying Jewish communal life.

ALBA, JACOB DI (late 16th–early 17th century), preacher and rabbi in Florence. *Toledot Yaakov* (Venice, 1609) is a collection of his sermons. In the introduction, he gives details of his life, mentioning that he had traveled for many years and lived for a long time in Constantinople, before being appointed preacher of the Jewish community of Florence. The structural basis of his homilies is to begin with a biblical verse, then to quote a passage from the Talmud or the Midrash which often is only slightly connected to the verse, the exordium to the body of the homily in which he raises a number of rhetorical questions regarding the talmudic passage, and the main part of the sermon in which the questions are answered. His method is in the tradition of R. Moses *Alshekh, the famous preacher of Safed. The book is arranged according to the weekly pentateuchal readings and includes references to the various festivals in relation to the nearest Sabbath; there are no special sermons for the holy days. Some of the readings are discussed in two different sermons. Though Jacob availed himself of certain philosophical terms in his sermons, he was not oriented toward philosophical preaching; nor was he influenced by the Kabbalah. His sermons usually are in the regular rabbinic tradition.

ALBA DE TORMES, city in the province of Salamanca, Spain. A charter, granted by Alfonso VII of Castile in 1140, takes into detailed consideration the relation of Jews to Christians. Both population groups were made equal in civil juridical matters; litigation between Christians and Jews was to take place in the synagogue; less indemnity was to be paid for the murder of a Jew, while a Jewish murderer of a Christian was to be put to death and his goods confiscated. The charter of Alba is one of the oldest Spanish *fueros* to fix the rate of interest on Jewish loans. A Hebrew chronicle records persecutions in the kingdom of Leon in 1230 in which Alba Jewry also suffered. The testament of Don Judah, a wealthy Jew of Alba (1410), indicates the existence of local usages governing the

laws of inheritance, in addition to the Jewish laws. A satirical play in verse was written in the 15th century by the *bachilmer* Juan de Trasmiera about the members of the Jewish community in Alba, who brought a suit against a dog which bit them. It mentions the names of various Jews and their occupations, as well as of Conversos who were called as witnesses to the dog's attacks, and employs vivacious expressions which were in current use. The dog was sentenced to be hanged, but freed itself from the gallows and bit the onlookers, while the Jews stayed away from Alba until the dog had died. The satire reflects the popular prejudices of the period. The community existed until 1492.

ALBAHARI, DAVID (1948–), Yugoslav author and translator. Born in Pec, Albahari graduated from Teachers College in Belgrade and settled in Zemun as a freelance writer of short stories and novels. His prose interweaves abstraction and reality, the lyric and the fantastic. He has edited literary magazines and translated literature from English, and is a member of the PEN club, the writers' union of Serbia, and the president of the Federation of Jewish Communities of Yugoslavia. His books include the collected short stories *Family Time* (1973), *Ordinary Tales* (1978), *Description of Death* (1982), and *Simplicity* (1988); the novels *The Judge Dimitrievich* (1982), *Shock in the Shed* (1984), and *Zinc*; and the anthology *Contemporary World Short Stories* (1982), in two volumes. Some of his stories and novels have been translated into Hebrew, English, Hungarian, and other languages. In 1993 he was elected president of the Federation of Jewish Communities in Belgrade, but in 1994 he resigned and immigrated to Canada. He settled in Calgary, continuing to produce new books in the Serbo-Croat language, among them *Enticement* (1996), *The Snowman* (1997), and *Goetz and Meyer* (1999).

[Eugen Werber / Zvi Loker (2nd ed.)]

ALBA IULIA (in the Roman period **Apulum**; Hung. **Gyulafehérvár**; medieval Latin **Alba Carolina**; Ger. **Karlsburg**, also **Weysenburg**; referred to in Yiddish and Hebrew sources by the German name **Karlsburg**; in Ladino sources **Carlosburg**), city in Transylvania. Alba Iulia was the seat of residence of the princes of Transylvania in the 16th and 17th centuries; for several centuries it was administered by Hungary but was incorporated into Romania after World War I. The Jews there, originally Sephardim, benefited from the patronage of the princes of Transylvania. A Hebrew document of 1591 mentions a *bet din* there. In 1623 Prince Bethlen Gábor granted the Jews of Alba Iulia a liberal charter of residential and commercial privileges, framed at the insistence of Abraham Szasza, a Jewish

physician from Constantinople, who had been invited to settle there. The privileges were endorsed by the National Assembly in 1627. However in the code *Approbatæ Constitutiones* passed by the National Assembly in 1653, Jewish residence in Transylvania remained restricted to Alba Iulia. Prince Apaffi Mihály I reaffirmed Jewish privileges in 1673 after anti-Jewish outbreaks had occurred. The charter was renewed a number of times. The Christian Hebraist, János Apáczai Csere (1625–1659), was active in Alba Iulia and recommended the inclusion of Hebrew in the senior school curriculum. Data in a census of 1735 show that the Jews then living in Alba Iulia originated from Poland, Turkey, Moldavia, Wallachia, Hungary, Moravia, and Belgrade. But during the 18th century the number of Jews living there decreased very sharply as a result of Rakoczi's rebellion; only after the return of the region to peaceful conditions did the number of Jews begin to increase again. From that period the Ashkenazi element became increasingly predominant. Alba Iulia was regarded as the Jewish "capital" of Transylvania. The *shofet* (judge) of the community was styled the "head of the Jewish people of the region." Between 1754 and 1868 the rabbi of the congregation held the title "rabbi of Karlsburg and chief rabbi of the state." The first known chief rabbi was the Sephardi *hakham* Abraham Isaac Russo (d. 1738). Best known was Ezekiel *Panet, who officiated in Alba Iulia between 1823 and 1845. The last chief rabbi to officiate was Abraham Friedman (1879). Until the emancipation of the Jews in Austria-Hungary in 1867 their entire religious life developed under the strict control and censorship of the Roman-Catholic bishop of the region. After the religious schism in Hungarian Jewry in 1867 the Alba Iulia congregation remained within the *status quo ante faction. An Orthodox congregation was formed in 1908, and in 1932 it was joined by the original congregation of Alba Iulia, which had until then adhered to its status quo position. The *pinkas* (minute book) of the community for the period 1736–1835, written in a mixture of Hebrew, Yiddish, Judeo-Spanish, German, Hungarian, and Romanian, has been preserved. The *Neolog rite of the Hungarian Jews was almost entirely absent in this city. A Jewish newspaper, the *Siebenbuërger Israelit*, was published in 1883 for a short time. In the 17th century there were about 100 Jews living in Alba Iulia; in 1754, 54 taxpayers; in 1891, 1,357 persons; in 1910, 1,586 (out of a total population of 11,616); in 1920, 1,770 (out of 9,645); and in 1930, 1,558 (out of 12,282). As the area became a hotbed of the antisemitic *Iron Guard, conditions for Jews became difficult. In 1938 a bomb exploded in one of the synagogues. All the property of the community was confiscated in 1941, and the men were seized for forced labor. The Jewish population of Alba Iulia increased during World War II, however, as Jews were sent there from the surrounding areas by the authorities. Heavy fighting in 1944 caused an additional influx. The maximum figure was 2,070 in 1947. This was considerably diminished by emigration in the 1960s. At the outset of the 21st century the number of Jews living in Alba Iulia was very small, as it was in all of Transylvania and Romania.

ALBALA, DAVID (1886–1942), Jewish and Zionist leader in Serbia and Yugoslavia. Albala was born in Belgrade, studied medicine at the University of Vienna, and practiced in Belgrade. In 1903 he founded Gideon, the first Zionist youth association in Belgrade. In 1917 he served on the Serbian delegation to the U.S. that attempted to gain support for the country, which had been conquered by the armies of the Austro-Hungarian Empire. While in the U.S. he advocated enlistment of Jews into the *Jewish Legion, and obtained an official letter of sympathy and support for the political aims of Zionism from the Serbian foreign minister in the U.S. (Dec. 27, 1917). After World War I he was a leading figure of Yugoslav Jewry and its Zionist movement. In 1935 he visited Palestine and established a forest in memory of King Alexander of Yugoslavia. At the outbreak of World War II he was sent to Washington on behalf of the Yugoslav government.

ALBALAG, ISAAC (13th century), translator and philosopher. Albalag probably lived in Catalonia. In 1292, Albalag composed the only work of his which has come down, a Hebrew version of al-*Ghazālī's *Magāsīdal-Falāsīfa* (Hebrew, *Kavvanot* or *De'ot ha-Filosofim*), with a prologue and 75 more or less elaborate notes to which he gave the special title *Tikkun ha-De'ot*. In this independent addition to his translation, Albalag sought not so much to elucidate the basic text as to subject it to a critical evaluation, for the real purpose of his annotated translation was to determine the respective roles of revelation and philosophy in the speculations of the intellectual Jew.

According to Albalag, philosophy is identical with Aristotle's teachings as interpreted by *Averroes. This affirmation necessarily placed him in direct opposition to *Avicenna and to *Maimonides, an opposition to which he often gives expression. Yet, although he is closely dependent upon Averroes, he does not follow him blindly, or in all matters. According to Albalag, four fundamental beliefs are common to revelation (Torah) and to philosophy: the existence of God, reward and punishment, the soul's survival of physical death, and Providence. (It should be noted that rejection of the eternity of the universe is not listed among these beliefs.) Revelation addresses itself to the mass of believers in terms which are within

their power of comprehension. An appropriate allegorical exegesis can always extract philosophical truths from the Torah; thus, Albalag interprets the first two chapters of Genesis (*Ma'aseh Bereshit*) in the sense of eternal *creation, though he does say that such exegesis does not yield absolute certitude. Albalag does not deny that the Torah, which is above all a "political" book, a guide for life designed to ensure good order in human society, contains truths inaccessible to human reason. However, those truths, described as "prophetic," are of as little interest to the common man, whose welfare is assured by obedience to the letter of the Law, as to the intellectual who is capable of attaining through philosophy the truths necessary for the beatitude of his immortal soul. Albalag seems to acknowledge some sort of individual immortality (see Immortality of *Soul); at any rate, he does not follow Averroes in the latter's radical doctrine of the total fusion of the disembodied rational souls with the Active *Intellect. As for the vaunted "tradition" of the esoterics, it has, according to Albalag, no serious claims to authenticity. Even though he speaks in respectful terms of three contemporary kabbalists (*Isaac b. Jacob ha-Kohen, Todros b. Joseph *Abulafia, and *Moses b. Solomon b. Simeon of Burgos), it is precisely the demonology which was so dear to them that he discards. In those cases where allegorical exegesis fails to resolve the contradiction between the indisputable facts of scriptural faith and the results of philosophic speculation, there is no alternative but to acknowledge each in its own sphere, namely, the truth laid down by the revealed text and the contrary truth irrefutably established by rational demonstration. Albalag's line of thought and his vocabulary (truth imposed by way of nature, truth believed by way of miracle) indicate with great plausibility the influence of contemporary Latin Averroists who were accused of professing the theory of the "double truth." In the final analysis it is, however, doubtful whether Albalag would have granted full validity to a truth which was not exclusively rational, at least in the case of any man who was not a prophet. One of Albalag's notes on the part of al-Ghazālī *Magāsīd* devoted to logic, which is in some of the manuscripts, was borrowed from a certain Abner, who could only have been *Abner of Burgos.

Although later Jewish philosophers and theologians made frequent use of Albalag's translation of al-Ghazālī, *Tikkun ha-De'ot* brought him, except for the praises of his younger contemporary Isaac b. Joseph ibn Pollegar, nothing but censure and abuse on the part of the kabbalists, such as Shem Tov *Ibn Shem Tov, and the fideist opponents of Aristotelian philosophy in the 15th century, such as Abraham *Shalom and Isaac *Abrabanel. Nevertheless, his work was eagerly copied and undoubtedly read with interest in the Jewish intellectual circles of southern Italy and Greece during the same century. Beginning with the 16th century, however, his name and work were almost forgotten. They owe their emergence in the history of Jewish thought to the researches of J.H. *Schorr who published extracts of the *Tikkun ha-De'ot*.

Schorr, in: *He-Ḥalutz*, 4 (1859), 83 ff.; 6 (1861), 85 ff.; 7 (1865), 157 ff.; Steinschneider, *Uebersetzungen*, 299–306; Guttman, *Philosophies*, 200–3, 205, 245, 259; Touati, in: *REJ*, 2 (1962), 35–47.

[Georges Vajda]

ALBALIA, BARUCH BEN ISAAC (1077–1126), Spanish judge and head of a yeshivah in Córdoba; son of Isaac *Albalia. Born in Seville, he went to Lucena after his father's death (when he was 17 years old) in fulfillment of his father's express wish, in order to get R. Isaac *Alfasi to drop the hostility he had long harbored toward his father, and to be accepted as a student in Alfasi's academy. He studied there nine years, together with Joseph *Ibn Migash. After the death of Alfasi, Albalia became judge and head of the yeshivah in Córdoba. Among his many disciples was his nephew Abraham *Ibn Daud. Albalia was well versed in Greco-Arabic philosophy. Among his friends, he counted *Judah Halevi, and Moses Ibn Ezra. There is a play on words in one of Halevi's poems (*Divan*, ed. by H. Brody, 1 (1935), 120): "His name is 'Baruch' [blessed], and he, like his name, is blessed, and all who bless themselves with his name, are, in turn, blessed," apparently alluding to Albalia and testifying to his influence on Spanish Jewish intellectuals. On his death Moses Ibn Ezra eulogized him in a poem beginning with the verse: "*Einot Tehom Hemmah ve-lo-Einayim*" (*Shirei ha-Hol.*, ed. by H. Brody (1935), 92) and Judah Halevi did the same in a poem beginning "*Mar la-Am Yikre'u Aẓarah*" (*Selected Poems*, ed. Brody (1946), with English translation, 82).

[Zvi Avneri]

ALBALIA, ISAAC BEN BARUCH (1035–1094), Spanish astronomer and talmudist. Isaac was born in Córdoba. According to *Ibn Daud, in his youth he had a great Jewish scholar, R. Perigors from France, as a teacher. He was also close to R. Samuel ben Joseph ha-Nagid, and later to the latter's son *Jehoseph ben Samuel ha-Nagid, to whom in 1065 he dedicated his calendrical work *Maḥberet Sod ha-Ibbur* ("The Secret of Intercalation"). After the disastrous death of Jehoseph ha-Nagid (1066), R. Isaac spent great sums of money in reassembling the family library which had been scattered. In 1069 al-Mu'tamid, king of Seville, appointed him to his retinue as court astrologer, and also as rabbi and *nasi over the Jews in his realm. R. Isaac used his influence at court to improve the status of the Jews of the kingdom. Isaac was renowned for his great erudition, both in general and in Jewish studies. At the age of 30, he began to write his *Kuppat ha-Rokhelim* ("Spice-Peddlers' Basket"), a commentary on difficult passages in the Talmud, but did not complete it. R. Moses *Ibn Ezra refers to him as a "poet and grand stylist" (*Shirat Yis-*

rael, ed. by B.Z. Halper (1924), 72). Two of Albalia's responsa have been preserved: one on the laws of *zizit* in *Abraham b. David of Posquière's *Temim De'im*, no. 224, and one in Arabic in *Toratam shel Rishonim* (ed. by Ch. M. Horowitz, 2 (1881), 36–38). He died in Granada.

[Zvi Avneri]

ALBANIA, Balkan state (bordering Serbia and Montenegro (formerly Republic of Yugoslavia), Macedonia, and Greece) on the eastern shores of the Adriatic Sea; from 1478 to 1913 under the sovereignty of Turkey.

*Benjamin of Tudela heard of people living in the region, evidently Wallachians, toward the end of the 12th century: "They are not strong in the faith of the Nazarenes and call each other by Jewish names, and some say that they are Jews." Jewish settlements were founded at the beginning of the 16th century in the Albanian seaports by exiles from Spain, who were joined by refugees from other areas. There were sizeable trading communities at Berat, Durazzo, Elbassan, and Valona: here there were Castilian, Catalanian, Sicilian, Portuguese, and Apulian synagogues.

In 1673 Shabbetai Zevi was exiled by the sultan to Albania, dying in Dulcigno. In 1685, during the Turkish-Venetian War, members of the Valona community fled to Berat. Those who remained were taken prisoner, including Nehemiah *Hayon. Between 1788 and 1822 Jews suffered from the extortions of Ali Pasha. The Jewish minorities were accused of collaborating to suppress the rebels during the Albanian revolt in 1911.

After World War I only a small number of Jews were living in Albania, in Koritsa (1927). According to a 1930 census, there were 204 Jewish inhabitants in Albania. The Albanian community was granted official recognition on April 2, 1937. In 1939, some families from Austria and Germany took refuge in Tirana and Durazzo.

[Simon Marcus]

The Holocaust Period

In July 1940 all Jews were ordered to transfer to Berat, Lushnje, and Fier. Nine months later, during the battle between Greece and Italy in April 1941, when part of Yugoslavia was annexed to Albania, an additional 120 Jewish refugees from Serbia, Croatia, and Macedonia arrived there. In addition, 350 Jewish prisoners of war were brought in from Montenegro. Jewish refugees were well treated by the native population. The local community in Kavaje assisted 200 Jewish refugees. In 1942 refugees from Pristina were transferred to Berat and protected there.

In September 1943 after the change in the Italian government and the German domination of Italy, Albania came under German control and the situation of the Jews deteriorated dramatically. Some Jews fled to the partisans. Others obtained false papers. Albanian bureaucrats gave identity papers to

Cities in Albania known to have had Jewish inhabitants.

many Jews of Kavaje so they could go to Tirana and hide there and in 1944 the governors of Albania refused to cooperate in submitting a list to the Germans of all the Jews.

In all, 600 Jews were saved from the Holocaust. Only six Jews from Shkoder were arrested and sent to a camp in Pristina. No Jews were turned over to the Germans.

Modern Period

After World War II until the collapse of Communism in 1990, the community, numbering 200–300, was completely cut off from the Jewish world. All religion was strictly outlawed and there was no communal life, no rabbi, and no Jewish educational facilities. In 1991 almost the entire community was airlifted to Israel. Relations between Albania and Israel were subsequently normalized, with an agricultural cooperation agreement signed in 1999 and Israeli aid accepted for the Kosovar refugees there. Efforts were made by the Joint to revive community life among the few dozen remaining Jews, nearly all in the capital, Tirana. A synagogue still existed in Valona (Vlore) but was no longer in use.

ALBANY, capital of the state of New York, 150 miles north of New York City; population, 95,000 (2004); estimated Jew-

ish population, 12,000–13,000 with half living in suburbs but members of Albany congregations. Public records indicate the presence of Jews as early as 1658. Asser Levy owned property, obtained burgher's rights, and lived in Albany in the 1650s. Other early Jewish merchants and traders who resided in Albany included Jacob Lucena, Hayman Levy, Jonas Phillips, Asher Levy, Levi Solomons and Levi Solomons (11). The second Solomons, who lived with his family in Albany in the early 19th century, started a chocolate and snuff business and belonged to New York's Shearith Israel.

A Jewish community emerged in the 1830s as immigrants from Bavaria and Posen arrived in Albany. German-speaking Jews organized Congregation Beth El in 1838. By 1841, the congregation had bought a burial ground and purchased its first synagogue building. Divisions over language and ritual led to the founding of Beth El Jacob in 1841 by Jews of Polish origin. After acquiring property for a synagogue and separate burial grounds, the congregation built a new synagogue in 1847. Prominent Gentiles including Mayor William Parmalee attended the dedication of Beth El Jacob on April 28, 1848. Isaac Mayer *Wise arrived in the United States from Bohemia and became Albany's first rabbi when he took over leadership of Beth El in 1846. He was the teacher at the congregation's Hebrew school, then one of only four in the United States. Wise's advocacy of changes in ritual split the congregation with the famous confrontation at the Rosh Ha-Shanah service on September 7, 1850. Synagogue officers prevented him from taking out the Torah scrolls, a fight ensued, and Wise and members of the congregation were arrested. By October 11, 1850, Wise and 77 supporters had organized Anshe Emeth, the fourth Reform congregation in the United States. Members of all three congregations were poor and worked as peddlers, tinsmiths, tailors, or middlemen. About 800 Jews lived in Albany in 1860.

By the 1880s, the arrival of Jews from the Russian Empire expanded the Jewish population to 3,000. Further immigration of Russian- and Polish-speaking Jews increased the community to 4,000 in 1900 and 10,000 in the 1920s. Assimilation and Americanization led to the merger of Beth El and Anshe Emeth in 1885 to form Beth Emeth, the only Reform congregation in Albany. Rabbi Wise returned to Albany in 1889 to dedicate the synagogue for the combined congregation. Recent immigrants, while Orthodox, did not feel comfortable in Beth El Jacob and formed a separate congregation, Sons of Abraham, in 1882. In 1902 another group of Russian Jews split off and established the United Brethren Society, as a separate congregation that followed a ḥasidic prayer book, and the congregation incorporated in 1905.

From the 1830s to about 1950, the South End, especially the area around South Pearl Street, remained a Jewish neighborhood with kosher meat markets, restaurants, Jewish-owned businesses, synagogues, and communal institutions. As Albany expanded in the early 1900s Jewish residents moved "up the hill" and started new congregations in the Pine Hills and Delaware neighborhoods. Ohav Shalom, the first Conserva-

tive congregation, began in 1911, and purchased property for a synagogue in 1922. Another group of Jews in Pine Hills began to meet at Schwartz's Mansion and became Tifereth Israel in 1936. Sons of Israel, a third Conservative congregation, began in the 1930s, and constructed a synagogue in 1935.

The passing of the immigrant generation, Americanization, and suburbanization led to a relocation and reorganization of the synagogues. The Orthodox synagogues merged with the United Brethren Society, joining Beth El Jacob in 1959, and Beth El Jacob merged with Sons of Abraham in 1974 to form Beth Abraham-Jacob. The combined congregation dedicated a new synagogue in 1991. A small group of Orthodox Jews sought to create an informal religious community, and established a *shtibl*, a small house of prayer, Shomray Torah, in 1965. Reform Congregation Beth Emeth built a new synagogue in 1957. A split within the congregation created a new Reform congregation, Bnai Shalom, in 1971, and the new congregation dedicated its own synagogue in 1979. Two Conservative congregations merged in 1949 as Tifereth Israel, and Sons of Israel joined to build a new synagogue, dedicated as Temple Israel in 1956, which was led for a generation by Rabbi Herman Kieval and produced rabbis and scholars. A Hebrew-speaking day camp, Camp Givah, was perhaps the only one in the United States at the time. Ohav Shalom remained separate and dedicated a new building in 1964. Starting in November 1991 Jews seeking an informal and egalitarian community created the Havurah Minyan of the Capital District, following Conservative ritual. In 1995, Ohav Shalom voted to become equalitarian in worship and ritual life. While the Jewish community increasingly resides in the suburbs, synagogues and the Albany Jewish Community Center remain in the city. This led ḥasidic Jews to establish Chabad houses in Albany, Delmar, Guilderland, and, in December 2004, in Colonie.

Jewish residents organized social, fraternal, mutual aid, and self-defense institutions. In 1843 the Society for Brotherly Love became the first mutual aid and burial society. Congregations started burial societies and in 1855 merged their mutual aid groups into the Hebrew Benevolent Society. Merger with the Jewish Home Society led to the Albany Jewish Social Service in 1931, now Jewish Family Services. It aided Jewish refugees in the 1930s, Holocaust survivors in the 1940s and 1950s, and from 1988 it resettled 1,300 Soviet Jews, the latest Jewish immigrants to the Albany area. State government workers and scholars working at the local universities including State University of New York at Albany are a distinct component of the current Jewish community.

B'nai B'rith opened a German-speaking chapter in 1853, but an English-language chapter, the Gideon Lodge, began in 1870 and replaced the German language branch by 1910. A women's organization, United Order of True Sisters, started a chapter in 1857, and is still active. Concern for the elderly poor led to the Jewish Home Society in 1875, which merged with Daughters of Sarah in 1941, and in the 1970s they built a new facility in Albany. Gideon Lodge joined with the Albany

Jewish Community Council to build senior citizen housing, Bnai Brith Parkview Apartments, which opened in 1973, and Congregation Ohav Shalom built senior citizen housing next to their synagogue in 1974.

In the early 2000s Jewish educational institutions included the Orthodox Maimonides Hebrew Day School. Combining Jewish and secular education is Bet Shraga Hebrew Academy, which is named after a Jewish educator and not a prominent donor – the brilliant and dynamic Jewish educator Philip “Shraga” Arian, who served as the educational director at Temple Israel, opened in 1963. Responding to the anti-semitism of the 1930s and activities of the German-American Bund, local veterans formed the Jewish War Veterans in 1935, and it remains a local veterans organization concerned with patriotism, education, and antisemitism. Starting in 1938 local Jewish groups created the Albany Jewish Community Council, now the Jewish Federation of Northeastern New York, to combat antisemitism, coordinate among Jewish organizations, and represent the community. The Holocaust Survivors and Friends Education Center raises public awareness of the Holocaust, especially in public schools. Starting out in the Hebrew Institute in 1915, the YMHA and YWHA merged into the Jewish Community Center in 1925. Formally incorporated in 1926, the JCC gradually replaced the Hebrew Institute as a meeting place for Jewish groups and as a center for recreational activities. The JCC built its current headquarters and recreational center in 1960. The variety of Jewish institutions peaked in about 1915, when there were anarchist, socialist, Zionist, and Yiddish-language benevolent societies in Albany. Today’s synagogues and organizations reflect the ongoing tensions between assimilation and retention of Jewish identity and religious practice. While probably half of Albany’s Jewish community actually resides in suburbs, synagogues have not followed the pattern in other Jewish communities and relocated to the suburbs. All the congregations have relocated but remain within the city of Albany. Finally, the resettlement of 1,300 Soviet Jews in the Capital District since 1988 represents the most significant Jewish immigration into the Albany area since the early 1920s.

[Harvey Strum (2nd ed.)]

ALBARADANI, JOSEPH (tenth century), liturgical poet and chief *hazzan* in the Great Synagogue of Baghdad. The surname is derived from a suburb of Baghdad called Baradan. The fact that his liturgical poems were composed to correspond with the annual Torah reading cycle (and not with the

triennial one current at the time in Erez Israel) supports the view that he was of Babylonian origin. Many of Joseph’s poems are preserved in all the large *genizah* collections but only a few specimens have appeared in print. Beside the *kerovot* for the Torah readings, Joseph composed several short *masdar* poems (introductions, at a later period called *reshuyyot*). Strangely enough, some of these were included in the Sicilian liturgical collection, *Hizzunim*. He was succeeded as *hazzan* by his son Nahum ha-*Hazzan*, who was a friend of the *geonim* *Sherira, *Hai b. Sherira, and *Samuel b. Hophni. In 999 he went on an official mission to Kairouan from where he was to continue on his way to Spain. However, Hai Gaon ordered him back in 1006 in order to take over the post of his late father. He, too, was the author of liturgical poems. Nahum was in turn succeeded by his son Solomon al-Baradani as *hazzan* and *paytan*.

[Jefim (Hayyim) Schirmann]

AL-BARGELONI (i.e. “of Barcelona”), **ISAAC BEN REUBEN** (b. 1043), Spanish talmudist and liturgical poet. In a *genizah* fragment Al-Bargeloni is described as a pupil of **Hanokh* b. Moses and must, therefore, have studied for some time in Córdoba. His permanent residence was the coastal city of Denia, where he was presumably active as a *dayyan* until his death. **Naḥmanides* was one of his descendants. Abraham **Ibn Daud* extols his learning, including him among the four distinguished contemporaries of Isaac Alfasi, also called Isaac. Moses **Ibn Ezra* and **Al-Ḥarizi* praise his poetical talent, especially his ingenuity in interpolating biblical verses into his poems. This skill is particularly manifest in Isaac’s *azharot*, in which all 145 strophes end with a biblical quotation. The *azharot* have been included in most North African rites published since 1655 and have been frequently published, both alone and together with those of Solomon ibn **Gabirol*. Of Isaac’s other poems there are extant two introductions to the *azharot*, two *tokheḥot* (one unpublished), two *mi-khamokha*, and an *ahavah*. His halakhic works consist of commentaries to single tractates of the Talmud (not preserved), and a translation from Arabic to Hebrew of **Hai Gaon’s Sefer ha-Mikkaḥ ve-ha-Mimkar* made in 1078. According to Simeon b. *Zemah* **Duran* (*Responsa* 1:15), **Judah* b. Barzillai al-Bargeloni was Isaac’s pupil.

ALBARRACÍN, Spanish city near Teruel in Aragon. Jews were living there in the 12th century. The *fuero* (charter), granted to Albarracín by the local overlord about 1220, includes regulations governing the legal status and economic activities of the Jews. In 1391 the municipal council attempted to compel the Jews to submit to its legislation, but the king opposed this move. The Jews of Albarracín suffered in the anti-Jewish riots in *Spain that year; in 1392 the gate of the Jewish quarter was broken down and several of the inhabitants were massacred. There is evidence that the Jews in Albarracín maintained their communal organization, social identity, and economic activities until the expulsion. Albarracín was among the communities which requested of Juan II in 1458 to ratify new communal regulations. The community was permitted to levy a *cisa* tax on foodstuffs and was released from a series of other taxes; the procedure regarding oaths was changed. Between 1484 and 1486 an Inquisitional tribunal operated in Albarracín, but for the most part the trials of the local Conversos took place in Teruel. The expulsion of the Jews from Albarracín, among other communities, was ordered in May 1486. The Jews were granted three months in which to comply; in July the king advised *Torquemada to grant them an additional six months. At the time of the general expulsion from Spain in 1492, however, some Jews were still apparently living in Albarracín and the aged rabbi Solomon urged his congregation to accept exile rather than conversion to Christianity.

[Haim Beinart]

ALBAZ, MOSES BEN MAIMON (16th century), Moroccan kabbalist. Albaz, who lived in Tarrodant, was the author of *Heikhal Kodesh*, which he began writing in 1575. It is an interpretation of the prayers in the kabbalistic idiom, based mainly on the Zohar and Menahem *Recanati's works. The manuscript was owned by R. Jacob *Sasportas, who published it with the annotations of R. Aaron ha-Sab'uni of Salé (1653). His work *Sod Kaf-Bet Otiyyot* is preserved in the copy by R. Joseph b. Solomon ibn Mussa (London, Jews' College, Montefiore Ms. 335).

BIBLIOGRAPHY: Azulai, 2 (1852), no. 55, s.v. *Heikhal Kodesh*; G. Scholem, in: ks, 6 (1929/30), 276, 457; J. Ben-Naim, *Malkhei Rabbanan* (1931), 95b.

AL-BAZAK, MAZLI'AH BEN ELIJAH IBN (11th century), *dayyan* in Sicily. Mazli'ah was a pupil of *Hai Gaon in Pumbedita and later he apparently migrated to Sicily where he was appointed *dayyan*. *Nathan b. Jehiel, author of the *Arukh*, was his pupil and it is quite likely that the explanations of Arabic and Persian terms appearing in Nathan's work were derived from his teacher. Mazli'ah wrote a letter in Arabic to Samuel ha-Nagid, concerning Hai Gaon, of which fragments only are extant. One fragment has a commentary by Hai Gaon to

Psalms 103:5, and in another it is stated that Hai Gaon, with a view to seeking a correct interpretation of Psalms 141:5, sent Mazli'ah to the Nestorian patriarch, who showed him the Syriac version. On a journey to Europe – or on some other occasion – Mazli'ah stopped over in Erez Israel, when he acted as a judge in a civil dispute in Ramleh.

[Umberto (Moses David) Cassuto]

ALBECK, family of talmudic scholars.

SHALOM (1858–1920), talmudic and rabbinic scholar, born and educated in Warsaw. Though he earned his living in business, Albeck gained distinction as an astute scholar. His *Mishpehot Soferim* (pt. 1, 1903), a biographical encyclopedia of the *tannaim* and *amoraim*, only covered a small part of the letter *alef*. Albeck also began to publish the *Even ha-Ezer* of *Eliezer b. Nathan, together with an introduction and commentary (pt. 1, 1904); and the *Sefer ha-Eshkol* of *Abraham b. Isaac of Narbonne, with an introduction and notes (pt. 1, 1910), completed by his son Ḥanokh (1935–8). Albeck's questioning of the authenticity of the earlier edition of this work by Z.B. *Auerbach gave rise to a keen literary polemic. Albeck also planned to publish the Babylonian Talmud with variant readings on the basis of manuscripts and with a modern commentary, but only a specimen was published, *Moda'ah Talmud Bavli* (1913). A critical study of the writings of *Judah b. Barzilai al-Bargeloni appeared in *Festschrift... Israel Lewy* (1911).

His son ḤANOKH (Chanokh; 1890–1972), talmudic scholar, studied at the Theological Seminary and the University of Vienna, became research scholar at the *Akademie fuer die Wissenschaft des Judentums in Berlin (1920) and lecturer in Talmud at the *Hochschule fuer die Wissenschaft des Judentums (1926). In 1936 he immigrated to Erez Israel and was professor of Talmud at the Hebrew University, until 1956. Albeck's work covers almost all areas of talmudic research. In his studies on tannaitic literature, he came to the conclusion that the editors (not only of tannaitic literature, but also of the Talmud) compiled their materials without adapting, abridging, or reworking them, as their only objective was to collect scattered materials. This first attempt to offer a comprehensive solution to the various problems arising out of the study of talmudic literature provoked a keen controversy, not yet settled. In Albeck's opinion, as opposed to that of David *Hoffmann, the principal differences between the two types of halakhic Midrashim stem from divergent redactions. Albeck even set out to prove that both the *Tosefta and the halakhic Midrashim, as they are known, were unknown to the two Talmuds. In his work on the *halakhah* in the Book of Jubilees Albeck argued that it does not stem from any of the three known sects (Pharisees, Sadducees, or Essenes), but that it originated in the circles of another sect, the "Circle of

*Enoch,” and shows affinity to the *halakhah* of the *Damas-cus Covenant. These conclusions have assumed special importance since the discovery of the *Dead Sea Scrolls. After the death of J. *Theodor, Albeck completed the publication of the latter’s monumental critical edition of *Genesis Rabbah* and he wrote the comprehensive introduction as well. This work is a striking example of an extremely accurate critical edition. Albeck also edited the Hebrew translation of Zunz’s *Gottesdienstliche Vortraege*, adding a great amount of new material. His major works are an edition of *Meiri’s *Beit ha-Behirah* on *Yevamot* (1922); *Untersuchungen ueber die Redak-tion der Mischna* (1923); *Genesis Rabbah* (1926–36); *Untersu-chungen ueber die halakischen Midrashim* (1927); *Das Buch der Jubilaen und die Halacha* (1930); *Ha-Eshkol* by Abraham b. Isaac, 1-2 (1935–38); *Bereshit Rabbati* (1940); *Mehkarim bi-Veraita ve-Tosefta* (1944); *Ha-Derashot be-Yisrael*, Zunz’s work (1947); *The Mishnah* (with introductions, commentary, and notes; 1952–59); *Mavo la-Mishnah* (1959); *Mavo la-Talmudim*, 1 (1969). Beside his major works, he also wrote many scholarly essays in Hebrew and German.

[Moshe David Herr]

ALBELDA, MOSES BEN JACOB (1500–before 1583), rabbi and philosopher. It is likely that Moses Albelda was born in Spain, and that he was the grandson of a Moses Albelda who settled in Salonika. He lived a life of hardship and wander-ing. He states that he acted as both *daiyyan* and *rosh yeshivah*. He was rabbi of Arta (Greece) in 1534, and later of Valona (Albania). His sons, Judah and Abraham, went to consider-able trouble to publish their father’s works. These are charac-terized by a distinctive style and are eminently readable. His commentary and biblical expositions are mainly philosophi-cal. His sermonic works are *Reshit Da’at* (Venice, 1583), dis-courses on philosophical themes and rabbinical dicta; *Sha’arei Dimah* (*ibid.*, 1586), on such varied themes as Providence, the vicissitudes of the times, the death of the righteous, and the destruction of the Temple. His biblical works are in two parts, the first, *Olat Tamid* (*ibid.*, 1601), exegetical, and the second, *Darash Moshe* (*ibid.*, 1603) homiletical. These works mention a number of others that he wrote, including commentaries on Joshua, Esther, and Samuel, and on Maimonides’ *Guide* and *Sefer ha-Mitzvot*.

BIBLIOGRAPHY: Steinschneider, *Cat Bod*, 1768, no. 6427; JE, 1 (1901), 332.

ALBERSTEIN, HAVA (1946–), Israeli singer and composer. Born in Stettin (Poland), Alberstein came to Israel with her parents in 1951. She started singing and accompanying her-self on the guitar while still at school. During her military service she performed as soloist in army bases throughout

the country. Upon completion of her military service she be-gan performing in concerts and for several years played the guitar while singing, but in 1971 she started appearing with a small ensemble and without her guitar, thus demonstrating her dramatic ability on stage. She then began writing her own lyrics. The songs in her 1986 album *The Immigrants* incorpo-rated autobiographic elements and a measure of criticism of Israeli society. She expressed her political views in such songs as “The Magician,” “Had Gadya,” and others. In “Had Gadya” she changed the words of the traditional song to liken Israeli soldiers to devouring animals during the Intifada, which led to a storm of protest and a radio ban on the song. In 1988 she began composing her own music as well and produced the album *The Need for a Word, the Need for Silence*. In 1992 she recorded her first album in English, *The Man I Love*, follow-ing it by a number of others, notably one with the Klezmatics Band in 1998. With over 50 albums to her credit, Alberstein frequently performed abroad and is considered a major Israeli singer. She is notable in the field of children’s songs and is con-sidered one of the greatest singers of Yiddish songs, with some ten albums. She received the Kinnor David Prize several times as well as the Manger Prize.

[Nathan Shahar (2nd ed.)]

ALBERT, MARV (Marv Philip Aufrichtig; 1941–), U.S. tele-vision and radio sportscaster, member of the Basketball Hall of Fame. Albert was born in Manhattan Beach, Brooklyn, New York, the son of a grocer, and grew up there with his brothers, Al and Steve, both of whom also became professional broad-casters. The three brothers started practicing in their youth, staging a “contest” between the two family hamsters and do-ing the play-by-play of the Hamster Olympics. Albert worked on Howard *Cosell’s national radio show as a teenager and then with Marty *Glickman at WCBS Radio when he was in college. Albert attended Syracuse University from 1960 to 1962 and graduated from New York University in 1965. Glick-man gave Albert his start in broadcasting, allowing him to broadcast his first New York Knicks basketball game on ra-dio on January 27, 1963, at age 22. He broadcast the Knicks full time on radio from the 1967–68 season through the 1985–86 season. He also broadcast the Knicks on television, but was dismissed after he criticized the team’s poor play on-air in 2004.

Albert was the radio voice of the New York Rangers hockey team, beginning with his first game on March 13, 1963, and full time from 1965–66 to 1996–97. He later broadcast NBA basketball, NFL football, college basketball, boxing, NHL all-star games, and baseball studio and pre-game shows for the NBC network from 1979 to 1998. He also broadcast basket-ball for the TNT network and was the voice of Monday Night Football on Westwood One Radio/CBS Radio Sports. Prior to joining NBC, Albert was the radio voice of the New York Gi-ants football team from 1973 to 1976, and for 13 years was the sports anchor for Ch. 4/WNBC-TV.

Albert became the focus of a media frenzy in 1997 when he pleaded guilty to a misdemeanor assault charge amid embarrassing allegations about his sex life. As a consequence he was forced to leave broadcasting, but was rehired by the MSG and Turner networks in 1998 and NBC in 1999. He was hired in 2005 to handle play-by-play duties for the New Jersey Nets beginning in the 2005–6 season. Albert, whose iconic catchphrase is an emphatic “Yes!” punctuating a jump shot in basketball, has won six Cable Ace Awards for Outstanding Play-By-Play Announcer, three New York Emmy awards as Outstanding On-Camera Personality, and was named New York State Sportscaster of the Year an unprecedented 20 times. In 1997 he was awarded the Curt Gowdy Media Award by the Naismith Memorial Basketball Hall of Fame.

Albert played himself in a number of films and is the author of *Krazy about the Knicks* (1971), *Ranger Fever* (1973), *Marv Albert's Sports Quiz Book* (1976), *Yesss!: Marv Albert On Sportscasting* (1979), and *I'd Love To But I Have a Game* (1993).

[Elli Wohlgelernter (2nd ed.)]

ALBERT, MILDRED ELIZABETH LEVINE (1905–1991), international fashion consultant, educator, lecturer, columnist, and radio and television personality. Albert was the youngest of four children of Thomas Levine and Elizabeth Sugarman. Born in Russia, she emigrated with her family, who settled in Roxbury, Massachusetts. While a student at the Sargent School of Physical Education (now part of Boston University), Mildred Levine met her future husband, James Albert. The couple married in 1928 and had three children. A teacher of art, dance, and literature at Florence Street Settlement House in the South End of Boston, Albert also taught posture at Massachusetts General Hospital and was sought out to give private lessons in good posture and proper etiquette to daughters of prominent Boston families. In the 1930s she established the *Academie Moderne*, a finishing school for young women that combined lessons on poise, grace, and good speaking skills with exposure to museums and cultural events. In 1944, Albert co-founded the Hart Model Agency and Promotions, Inc. with Muriel Williams Hart and her husband, Francis Hart; during those years she began covering major designer fashion shows as Boston's “First Lady of Fashion.” Albert sold the school and the agency in 1981, but remained dean emeritus to the school and consultant to the agency. From the 1930s through the 1970s, Albert hosted weekly radio programs on fashion and beauty. She continued fashion show coverage on the CBS *Good Day Show* into the 1980s, and late in life as a reporter for the *Tab* newspapers. Although not religiously observant, Albert identified strongly with Jewish history and culture. She shared her name and money as a generous philanthropist, co-coordinating fashion shows for various charities; she served on the board of the Hebrew Teachers College in Boston in the 1920s and 1930s. Albert was the recipient of numerous awards, including the State of Israel Bonds 35th

Anniversary Award in 1983; in 1990 Boston's Mayor Flynn declared “Mildred Albert Day” to honor the city's “official Grande Dame.” Albert's papers are located at the Schlesinger Library of Radcliffe College.

BIBLIOGRAPHY: S. Alpern, “Mildred (Levine) Albert,” in: *Jewish Women in America* (P.E. Hyman and D.D. Moore, eds.), vol. 1 (1997), 32–33.

[Sara Alpern (2nd ed.)]

ALBERTA, province in Western Canada. Alberta boasts Canada's fourth largest provincial population, with over 3.2 million people (July 2004). Its two major cities are Edmonton, the provincial capital, with approximately 5,500 Jews, and Calgary, home of the Canadian oil industry, with 8,200 Jews.

Although the province's nearly 15,400 Jews live primarily in the main cities of Edmonton and Calgary, the Jewish presence in Alberta was not always so overwhelmingly urban. Prior to the creation of Alberta in 1905, Jews were found in villages, towns, and on farms around the region. The earliest record of a Jew in Alberta was that of a gold prospector in Fort Edmund. The Hudson Bay factor's journal reads: “September 15, 1869 – Mr. Silverman (a Jew) and a party of four Americans and a Negro started for Fort Benton today.” Other Jewish traders and merchants also visited the region from Montana Territory.

Permanent settlement in the region did not take place until the 1880s when two significant historical developments coincided: the extension of the Canadian Pacific Railway into Western Canada (it reached Calgary in 1883) and the terrible pogroms against East European Jews following Alexander III's ascension to the throne in 1881. In 1882, around 150 Russian Jews worked on the CPR's railway gang, laying 100 miles of track to Medicine Hat. It was reported that they kept the Sabbath, ate kosher food, had a Torah scroll for services, and were directed by a Yiddish-speaking foreman.

The first permanent Jewish residents, in what became Alberta, were brothers, Jacob Lyon Diamond and William Diamond. In 1888, Jacob Diamond moved to Calgary and worked as a pawnbroker and traded liquor and hides. Although historical sources differ slightly over the timetable of William's arrival in Calgary and Edmonton, it seems that he opened a tailor shop in Calgary in 1892. The brothers initiated the first formal Jewish service for the High Holidays in 1894 and founded many of the Calgary community's institutions, such as its cemetery in 1904. Jacob Diamond established Calgary's first synagogue, Beth Jacob, in 1911. In Edmonton, Abe Cristall opened a liquor store soon after his arrival to the city in 1893. William Diamond was instrumental in establishing the first Jewish religious council in Alberta in 1906, a year after his move to Edmonton. Hyman Goldstick, the province's first full-time Jewish religious leader, moved to Edmonton from Toronto in 1906 and served Calgary, Edmonton, and smaller surrounding Jewish communities.

Recognizing the need to populate the West, Canada's high commissioner in London, Sir Alexander Galt, convinced the prime minister, Sir John A. Macdonald, that the Russian Jewish refugees could serve a useful purpose, colonizing the West as farmers. Alberta's first Jewish farming settlements developed in 1893 at Pine Lake and near Fort Macleod. The Jewish community at Pine Lake, numbering 70, was the largest in the region at the time. By 1895, the difficult conditions, inexperience, and lack of Jewish communal institutions contributed to the decline of this settlement and a smaller settlement near Fort Macleod. In 1901, there were 242 Jews in the region.

A decade passed before there was another serious attempt made at Jewish agricultural settlement. Settlements were established at Trochu, Rumsey, and Sibbald in 1905, 1906, and 1911, respectively. Living conditions improved after the arrival of the Canadian Northern Railway in 1910 and families joined the male settlers and opened businesses in the railway villages. In Rumsey, Jews occupied important positions within the wider community as justices of the peace and school trustees. The *Jewish Colonization Association, an international organization supported by Jewish philanthropists like Moses *Montefiore, provided settlers with loans for reuniting farm families and financial support for communal essentials like kosher food, religious services, and education. The Canadian government provided little, if any, support to the Jewish settlers. During the heyday of Jewish farming in Alberta, up to 70 Jewish families were operating farms around Rumsey and Sibbald. In 1914, the 100-person Jewish community of the Montefiore colony near Sibbald built a synagogue and hired a rabbi. As was the case everywhere, the Depression in the 1930s had a devastating effect on the Jewish colonists and by World War II few Jewish farmers remained at Rumsey or Sibbald. By the war's end, the Jewish presence in rural Alberta was virtually non-existent.

But for all the efforts at agricultural settlement, Jews tended to concentrate in urban areas where there were economic opportunities as merchants, traders, and peddlers. By 1911, there were 1,207 Jews in the province, with more than half of them in the two major cities (604 in Calgary and 171 in Edmonton). Aside from Edmonton and Calgary, larger Jewish communities were also established in Lethbridge (home to the third largest Jewish community in Alberta) and Medicine Hat. As it took many years for these communities to acquire a synagogue building, services were conducted for years in people's homes. In the small town of Vegreville, Jews lived harmoniously with the town's Ukrainian and French Canadian residents and were active in municipal life. The Jewish presence in small towns and cities in Alberta, however, gradually disappeared due to the richer Jewish communal life and better economic opportunities available in Edmonton and Calgary.

After World War I, Canada briefly opened its doors to immigration. In 1921, the Canadian census found 3,186 Jews in Alberta. By 1930, however, the number of Jews admitted to the country was in decline as a result of growing immigration restriction. Nevertheless, the number of Jews in the province

grew by almost 15 percent between 1921 and 1931, largely due to migration of Jews from Manitoba and Saskatchewan. In 1931, 92 percent of Alberta's 3,700 Jews lived in urban settings.

Alberta's Jewish population grew slowly through the war years and into the postwar era but prosperity in the 1970s led to a significant increase in the number of Jews in the province, primarily in Edmonton and Calgary. With that growth came the development of large Jewish community centers and Reform temples in both cities. Serving Calgary and Edmonton, the *Jewish Star* was published between 1980 and 1990. Since then, the *Jewish Free Press* serves the Calgary Jewish community and *Edmonton Jewish Life* and *Edmonton Jewish News* serve Edmonton. Jews in both cities also established community day schools.

Although the early Jewish community in Alberta faced antisemitism, and antisemitism was a fact of life in the Canadian government's immigration policy until after World War II, it has not been very pronounced in the major cities of Alberta. Jews in Alberta did not face enrollment quotas in professional schools as did Jews in Manitoba, Ontario, and Quebec. Discrimination was not blatant and organized in Alberta but existed at an informal level, for instance with social clubs. There was the exception of the Social Credit Party which took power in 1935. The victory gave antisemitic politicians a platform from which to spout their views and appeal to their largely rural support base. Major Douglas, the party's founder, blamed the Jews for Alberta's hard times during the 1930s and while Premier William Aberhardt publicly spoke against antisemitism, his personal writings and social circle, including Henry Ford, belied an ambivalent, if not, negative attitude.

A case that received wide attention was that of James Keegstra, a high school teacher in the town of Eckville, Alberta. In 1984, Keegstra was charged with unlawfully promoting hatred against an identifiable group, in violation of the Canadian Criminal Code, through his anti-Jewish statements, e.g., calling Jews "barbaric," "manipulative," and "sadistic," and claiming that Jews "created the Holocaust to gain sympathy." His defense lawyer, known for defending neo-Nazis and Holocaust deniers like Ernst Zundel, argued that the Criminal Code violated Keegstra's Charter right to freedom of expression. The case went all the way to the Supreme Court, which in a 4-3 decision ruled against Keegstra and maintained that Criminal Code Section 319(2) constituted a reasonable limit on freedom of expression, noting "there is obviously a rational connection between restricting hate propaganda and fostering harmonious social relations between Canadians."

Despite the infamy of the Keegstra case in Alberta, Alberta's Jewish population has found the province to be a secure and prosperous home. Jews in Alberta have risen to prominence in important and prestigious leadership roles in the larger community. Sheldon Chumir, a well-known Calgary lawyer, Rhodes scholar, and Liberal politician, was twice elected to the Alberta Legislature. Calgary was also home to Canada's first female chief of police, Christine Sil-

verberg. In September 2001 a Jew was appointed president and vice chancellor of the University of Calgary, and, in October 2004 Edmonton elected a Jewish mayor, Stephen Mandel. The Edmonton Symphony was founded by Abe Fratkan and the Canadian Football League's Edmonton Eskimos was also founded by Jews. Jews have played a vital role in the arts in Alberta – Shoctor founding the Citadel Theatre in Edmonton and contributing significantly to Calgary's Centre for the Performing Arts.

As with many other North American communities, in the final decades of the 20th century, two newer Jewish groups have joined the primarily Ashkenazi established Jewish community in Alberta, Israelis and Russians. Reform, Conservative, Orthodox, and Ḥabad denominations of Judaism all have a presence in Alberta, although the majority of Alberta's Jews are non-Orthodox.

ALBERTI-IRSA (also known as **Albertirsa**), twin cities in the Monor district of Pest-Pilis-Solt Kiskun county, Hungary. Jews first settled there in 1746. In 1770 there were 13 Jewish residents in Alberti and 95 in Irsa, mainly occupied as merchants, tailors, tavern owners, distillers, and bookbinders. The communal regulations (*takkanot*) date from 1772. The *chevra kadisha* was organized by Rabbi Abraham Pressburger in 1784. A synagogue was built in 1809, and a *talmud torah* in 1804; a Jewish elementary school was opened in 1851. The participation of the community in the Hungarian struggle for independence in 1848–49 cost it an indemnity of 1,200 gulden, levied by the Austrian authorities. Many of the Jewish residents left Alberti-Irsa after 1850, when Hungarian Jews were permitted freedom of movement. The community constituted itself as a Status Quo community in February 1881, although a number of Jews organized themselves as an Orthodox congregation. The two were consolidated in 1889 by Rabbi Zsigmond Büchler. In 1929 the congregation had 250 members, including those of the other communities in the district. The rabbis of Alberti-Irsa include Abraham Pressburger, author of *Even ha-Ot* (Prague, 1793); Amram Rosenbaum (1814–26); Hayyim Kittsee (1829–40), head of a large yeshivah and author of the responsa, *Ozar Hayyim* (1913); Jónás Bernfeld (1853–72); and Zsigmond Büchler (1886–1941).

According to the census of 1941, Irsa had a Jewish population of 124 (1.7% of the total), and Alberti of 21 (0.5%). In addition the twin towns had one and six converts, respectively, who were identified as Jews under the racial laws. The status quo congregation of the twin cities, led by Rabbi Imre Blau, had 92 members in 1941. After Blau was drafted into a forced labor service company in 1942, the community came under the leadership of Rabbi István Székely. After the German occupation of Hungary on March 19, 1944, Rabbi Székely was

appointed head of the local Jewish Council. The 149 Jews of the twin cities were first concentrated in a local ghetto that was established in the so-called Fodor lumber yard and in the "Singer building." They were later transferred to the ghetto of Monor from where they were deported to Auschwitz in early July 1944. The community numbered 14 in 1968, but ceased to exist a few years later.

°ALBERTUS MAGNUS (about 1200–1280), German scholastic philosopher and theologian. He was a key figure at the rising University of Paris and in the schools of the Dominican Order, especially in Cologne. Among his students was Thomas *Aquinas. Although he belonged to the group of scholars that witnessed the condemnation of the Talmud in 1248, he was interested in Jewish literature and never attempted to hide his reliance on *Maimonides as a mediator between philosophy and Bible. Occasionally, he referred to Maimonides and Isaac *Israeli, the compiler of neo-Platonic doctrines, as men who frivolously adapted philosophy to Jewish law. However, "Rabbi Moyses" ("Maimonides") discussions on the limits within which peripatetic cosmology may be accepted by a believer in divine creation as described in Genesis had a very positive meaning for a Dominican who was introducing the whole of Aristotle's system into the orbit of ecclesiastical learning. For his own attempt at synthesis Albertus was inclined to combine Aristotelianism with neo-Platonic ideas; therefore Avencebrol's (Ibn *Gabirol's) *Fons vitae* was an important text for him. He did not know, however, that this author was a Jew of great renown.

During the latter half of the 13th century friars began using information from Maimonides' *Dux neutrorum* (*Guide of the Perplexed*) for their exegetical work. Albertus shared this trend, following Maimonides in his interpretation of the Book of Job as a philosophical treatise on the relation of divine providence and human suffering. Parts of Albertus' works were known to late medieval Jewish philosophers through Hebrew translations.

ALBI, town in France. The church council held at Albi in 1254 issued a number of canons (63–70) embodying anti-Jewish restrictive measures. One or two Jewish families resided in Albi toward the end of the 13th century. A few settled there after 1315 without authorization from the local authorities. In 1320 several were massacred by the *Pastoureaux. Subsequently Jews were only permitted to enter Albi in transit on payment of a

toll of 12 deniers. In 1967 there were approximately 70 Jews in Albi, mainly of North African origin.

[Bernhard Blumenkranz]

ALBIGENSES, generic name, deriving from the city of Albi, loosely applied to a number of Christian heretical sects which developed in Provence and south France in the 12th century, the term being used especially in connection with Cathari. Knowledge of their precise doctrines is vague, being derived mainly from the vilifications of their Roman Catholic opponents, now partly reinforced by the information embodied in Inquisitional trials. The Roman Catholic Church suspected that some of these heresies were deliberately stimulated by the Jews. This is out of the question, especially as in most cases the sectarian doctrines embodied dualistic elements which were even further removed from Judaism than those of normative Christianity. On the other hand, some of the allied bodies, such as the "Passagi" and "Circumcisi," had an Old Testament basis and can be characterized as Judaizing sects (see *Judaizers). Some of the other sectaries also apparently studied Hebrew in order to have a better understanding of the Old Testament, and personal relations between Albigenses and Jews seem to have been relatively cordial, this fact itself adding to the suspicions and animosities of the church. The Cathari accused the Roman Catholic Church of corruption, ritualistic pomp, and superficiality. Seeing them as a challenge to its power, the Church in return condemned them as Manicheans and Church Judaizers. However, though the Cathari rejected image worship, maintained certain prohibitions on the consumption of meat, and denied that Jesus was God, their theology and ritual contained a variety of contradictory elements. In fact, their attitude toward Judaism and the Old Testament was clearly hostile, as is borne out by the records of the Inquisition and the contemporary chronicles which cannot be suspected of a Catharistic bias. Jewish law was rejected by the Cathari as evil, because the "devil in the shape of a calf" (*diabolus in forma vituli*) had given it to them. Judaism as a whole was held to be an emanation of the material, visible, and consequently evil God.

Catharist hostility toward Judaism on the theological level, however, was not reflected on the social and cultural plane. Jews were held in high esteem in the French Midi, where their status was probably the best in Europe. Cities like Albi, Béziers, Carcassonne, Toulouse, Lunel, Montpellier, Marseilles, Beaucaire, and Nîmes, which were most affected by the heresy, also had large Jewish populations. Concomitantly, rulers of the Midi openly favored both Albigenses and Jews, whom they appointed to important functions in the fiscal administration. Roger II, of Béziers, probably a Cathar himself, intermittently appointed Jews to the office of bailiff (*bailli*), a tradition apparently carried on by his son Raymond-Roger. Count Raymond VI of Toulouse, patron of Provençal poetry

and tolerant of Catharism, generally favored Jews and employed Abba Mari b. Isaac of St. Gilles as one of his officials. In granting privileges to the Jews, the princes were motivated by reasons more powerful than mere sympathy. Owing to their commercial activity Jews often were a considerable source of revenue and some princes were in debt to them. More generally, the degree of independence of thought in Provence and the good will displayed to one another by Christians and Jews are probably explained by the fact that the whole region was then exposed to a wide range of outside influences which made it an island of civilization and tolerance, far removed from medieval obscurantism.

The situation which thus obtained in Provence Jewish prosperity expanding in the midst of heresy was doubly intolerable to the established church. In 1195, at the Council of Montpellier it was decreed that anyone who allowed Jews (or Muslims) to exercise public office would be excommunicated. In 1209, Pope *Innocent III (1198–1216) ordered the Cistercians to preach a crusade against the Albigenses (January 1209). An army of monks, fanatics, and nobles marched into southern France. It was headed by Arnold of Cîteaux, Cardinal Bertrand, and the rapacious Simon de Montfort, King Philip II of France having refused to lead the enterprise. The first stage of the operation ended with the capitulation of Raymond VI of Toulouse. In June 1209, at Montélimar, he and his nobles pledged themselves by oath "to forever removing the Jews from all administration and office, not ever to restore them, nor to accept other Jews for any office... nor use their council against Christians, nor... to permit them to employ Christians, men or women, in their homes as servants." Next the Crusaders took Béziers and Carcassonne (July/August 1209), defended by young Raymond-Roger. Twenty thousand Christians and 200 Jews were massacred at Béziers. Many others were carried away as captives. In September 1209 the Council of Avignon decreed that "the Jews should be restrained from the exaction of usury by excommunicating those Christians who enter into commercial relations with them... and that the Jews be compelled to remit what they had gained through usury. We also prohibit them... to presume to work in public on the Sundays or festivals. Nor shall they eat meat on days of abstinence." Seven years later the wife of Simon de Montfort emulated her consort by having all the Jews of Toulouse arrested. Children under age were promptly baptized, but the adults resisted conversion and were eventually set free.

The Albigensian Crusade came to an end in 1229 with the Treaty of Paris, which destroyed the power of the princes in the south. The remaining adherents of Catharism were left to the care of the Inquisition, which dealt them a final blow by setting up a collective stake at Montségur (1245).

°ALBINUS, LUCCEIUS, Roman procurator of Judea, 62–64 C.E. During the brief interval between the death of his predecessor Festus and his arrival, the high priest *Anan son of Anan summoned the Sanhedrin and sentenced James, the brother of Jesus, to death. Thereupon delegations were sent to Agrippa II and even to Albinus, then on his way from Alexandria, to protest against Anan's illegal act, since he had no authority to convene the Sanhedrin without the procurator's consent (Jos., Ant., 20:197–203). Josephus depicts Albinus as unusually rapacious. He increased the burden of taxes and released prisoners only on payment of a ransom (Jos., Wars, 2:272–3). Under Albinus the *Sicarii intensified their activities and when they were unable to ransom their followers they would seize some of the leading citizens and make their release dependent upon that of their members held prisoner by Albinus. Thus Ananias, the high priest, was constrained to persuade Albinus to release ten Sicarii in exchange for his son, Eleazar's secretary, kidnapped by them (Jos., Ant., 20:208–9). Josephus relates that several years before the destruction of the Second Temple, portents foretold its approaching doom. Among them was a farmer, Jesus, the son of Ananias, who day and night proclaimed the coming destruction by crying out: "A voice from the east, a voice from the west, a voice from the four winds, a voice against Jerusalem and the sanctuary, a voice against the bridegroom and the bride, a voice against all the people." Brought before Albinus, Jesus unceasingly repeated his dirge, even under torture. Albinus concluded that he was mad and sent him away (Jos., Wars, 6:300–5). Signs of the imminent outbreak of hostilities were probably evident in the days of Albinus, who, in 64 C.E., was succeeded by Florus, the last procurator of Judea.

[Lea Roth]

ALBO, JOSEPH (15th century), Jewish philosopher in Christian Spain. Albo participated in the famous Jewish-Christian disputation at *Tortosa and San-Mateo (1413–14) as a representative of the Jewish community of Daroca and wrote a theological-philosophical treatise by the name of *Book of Principles* (Heb. *Sefer ha-Ikkarim*). Albo's *Ikkarim* has become one of the most famous compositions of medieval Jewish thought and was translated into Latin, English, German, Russian, and Italian (part A only).

Little is known about Albo's life. The general opinion regarding the dates of his birth and death (1380–1444) is based on assumptions rather than on historical documents or facts. Albo was born, presumably, in the Crown of Aragon, where

he studied with Ḥasday *Crescas of Saragossa, to whom he refers in his book as his teacher (*Ikkarim*, 1, 26; 3, 16; cf. *Book of Principles*, 1, ed. Husik, Philadelphia, 1929, vol. 1, p. 200, 1, 18; vol. 3, p. 148, 1, 9). According to Albo's own words, he moved to Soria in the Crown of Castile, very possibly following the destruction of his community at Daroca (1415), and there he completed his major treatise (*Ikkarim*, intro.; cf. *Principles*, vol. 1, p. 37, 2, 1–2). Historical documents indicate that Albo was a social as well as a religious leader in both Daroca and Soria. His judgment was requested, for instance, in matters of family quarrels as well as in halakhic questions. It also seems that he was a physician and that he understood, apart from the Hebrew language in which he wrote his philosophical treatise, both Spanish and Latin. Whether or not he could read Arabic is an unresolved question.

A survey of Albo's written work shows, quite interestingly, that the *Ikkarim* was not his sole publication. Several researchers claim that Albo also wrote a polemical treatise in Spanish by the name of *The One* (Heb. *Ha-Eḥad*). Others attribute to Albo a composition called *One Hundred Pages* (Heb. *Me'ah Dapim*) that deals with the dogmas of faith. Finally, two other short compositions attributed to Albo are still available only in manuscripts: (a) Commentary to Maimonides' *Treatise on Logic*; (b) notes on Maimonides' Thirteen Principles.

Sefer ha-Ikkarim

CHRONOLOGICAL AND HISTORICAL BACKGROUND. Nevertheless, Albo's major contribution to the history of Jewish philosophy lies in his *Sefer ha-Ikkarim*. Another aspect of the uncertainty surrounding Albo's biography is the difference of opinions regarding the exact year in which he completed the writing of this book (e. g. 1424, 1425, 1428, and a more cautious opinion stating only that it could not have been before 1415). The prevailing opinion among scholars seems to be, however, that it was completed by the year 1425.

Important chronological information concerning the composition process of the *Ikkarim* can be drawn from Albo's retrospective comment at the end of part A of his book. Albo notes that his initial intention was to discuss exclusively the doctrine of religious dogmas, an aim that was fulfilled in the course of part A alone. However, later on, at the request of a group of people who presumably had read his original work, he decided to expand his discussion of these matters and, consequently, to add three more parts to the first (*Ikkarim*, 1, 26; cf. *Principles*, vol. 1, p. 203, 2, 1–9). In light of this remark several scholars have concluded that part A of the *Ikkarim* was, and henceforth should be treated as, a work Albo had written independently of the final version of the whole book. The question as to the year in which part A of the *Ikkarim* was actually written in its first version remains open. Scholars addressing this issue are mainly divided with regard to the question of whether it was written before Albo's immigration from Aragon to Castile and before the Tortosa disputation, namely, many years before the completion of the entire composition,

or not, namely, a relatively short period of time before the book's completion. Differences between part A and parts B–D of the book with regard to both style and content can be considered to favor the former point of view.

After considering the narrow chronological aspect of the composition stages of the *Ikkarim*, the broader historical one should also be taken into account. Two historical-cultural circumstances can be pointed to as sources of influence on Albo's theoretical activity: (1) Massive, rapidly growing, and multi-dimensional pressure exerted by the Christian church upon the Jews in northern Spain to encourage them to convert to Christianity. (2) Internal dissension within the Jewish theological camp between rationalistic thinkers on the one hand and conservative and kabbalistic thinkers on the other hand. It should be noted that these motifs have been highlighted in the research that has been conducted on Jewish thought in 15th-century Spain in general.

CONTENTS AND CHARACTERISTICS. As indicated above, the *Ikkarim* is divided into four parts. Part A presents Albo's dogmatic system, namely the system of the main beliefs in what he calls "Divine Law." That system is divided into three hierarchic categories: (a) fundamental principles (Heb. *Ikkarim*), (b) derivative principles (Heb. *Shorashim*), and (c) obligatory dogmas (Heb. *Anafim*). Denying one of the fundamental or the derivative principles, Albo claims, is equivalent to heresy, but not the denial of one of the obligatory dogmas, which is considered by him merely a religious sin.

According to Albo there are three fundamental principles of "Divine Law": (1) the existence of God, (2) divine revelation, and (3) reward and punishment. The remaining three parts of the *Ikkarim* (parts B–D) address these principles, respectively.

Part B discusses the first fundamental principle in Albo's list, namely the existence of God, and its four derivative principles which are God's unity, incorporeality, independence of time, and absence of defects. The main theme of part B is the doctrine of the divine attributes, yet attention should also be drawn to Albo's interesting critical discussion of Maimonides' philosophical proofs for the existence of God (*Ikkarim*, 2, 4–5; cf. *Principles*, vol. 2, pp. 26–35).

Part C discusses the second fundamental principle, namely divine revelation, and its two derivative principles, which are prophecy and the authenticity of the messenger of "Divine Law." Other important issues discussed in the framework of part C are the question of ultimate human felicity, the Law of Moses and its commandments, and finally the religious duties of fear and love of God.

Part D discusses the third fundamental principle, namely reward and punishment, and its two derivative principles, which are God's knowledge and providence. In the course of this part Albo addresses the problem of evil and offers interesting analyses of two major religious phenomena, prayer and repentance. In the sequel Albo discusses extensively the

doctrines of reward and punishment in the hereafter, resurrection of the dead, and the messiah.

Thus, the *Ikkarim* offers a systematic, detailed, and broad examination of the cornerstones of religious philosophy in general, and of Jewish thought in particular. To be precise, this book offers a summation of medieval Jewish thought as it appears from the abundance and divergence of its philosophical and theological sources. The Jewish thinkers who seem to have had the greatest influence on Albo's thought are *Maimonides, *Naḥmanides, *Nissim of Gerona, Ḥasdai Crescas, and Simeon ben Zemah *Duran. Albo was also familiar with kabbalistic sources and views on the one hand and with works of non-Jewish philosophers, such as *Aristotle, *Avicenna, *Averroës, and Thomas *Aquinas, on the other.

These qualities of the *Ikkarim*, in addition to its plain language, have contributed to its popularity within divergent Jewish and non-Jewish circles. The *Ikkarim* was one of the first philosophical treatises to be printed (1485), and in the following two centuries it was twice commented on, first by Jacob Koppelman (*Ohel Ya'akov*, 1584), then by Gedaliah Lipschuetz (*Ez Shatul*, 1618). Moreover, Albo's name is mentioned in the works of later Jewish philosophers, medieval as well as modern, and references to his book can be found in their writings. Such thinkers are, for example, Isaac *Arama, Isaac *Abrabanel, *Spinoza, and Moses *Mendelssohn. Lastly, Christian theologians in the 16th and 17th centuries used the *Ikkarim* in order to promote their polemical purposes.

A last remark should be made in regard to the research conducted on Albo's thought during the last 150 years. This research has taken three main courses: (1) an exposure of the philosophical sources of the *Ikkarim*, (2) a discussion of the historical circumstances in which Albo's theoretical activity took place, and (3) an examination of Albo's theological opinions.

Until recently researchers shared the general agreement that Albo was not an original thinker, but rather an eclectic one. Correspondingly, the *Ikkarim* was mainly considered a popular homiletic and encyclopedic treatise that lacked originality and philosophic profundity. This approach to Albo's work emphasized especially his polemical and apologetic interests in the light of the massive Christian spiritual as well as physical attacks on the Jews of his time and place.

An alternative approach to Albo's work wishes to supplement the analysis of his philosophy as such with an analysis of his philosophical "art of writing." In other words, it views the *Ikkarim* as not merely a compendium of views randomly put together but as a composition that was written purposefully and meticulously as an esoteric work, very much like Maimonides' in his *Guide for the Perplexed*. Albo intentionally expresses certain points of view on the exoteric, outer level, of the book and conceals other, opposing ones on its esoteric, inner level. It should be mentioned that this approach to Albo's thought is primarily supported by his opening remarks in part B of the *Ikkarim*, where he indicated that the book contains de-

liberate contradictions and therefore should be carefully read (*Ikkarim*, 2, opening; cf. *Principles*, vol. 2, pp. 1–4).

Albo's treatise indeed hardly displays any significant theoretical novelty. However, researchers of both camps point to one discussion that reflects some originality, that is, the discussion of the different kinds of "Law," namely "Divine," "Human," and "Natural" (*Ikkarim*, 1, 5–8; cf. *Principles*, vol. 1, pp. 70–92). They assert that Albo was probably the first Jewish thinker to use the political concept of "Natural Law" in his book, possibly under the influence of Thomas Aquinas. Another discussion that points to an original approach to a familiar subject is the one regarding the meaning of human love of God (*Ikkarim*, 3, 35–37; cf. *Principles*, vol. 3, pp. 316–51). This discussion has influenced several later Jewish thinkers who addressed the issue.

[Dror Ehrlich (2nd ed.)]

ALBORAYCOS. One of the insulting names applied to converted Jews in Spain in the 15th century. An anti- Converso work, the *Libro del Alborayque*, apparently from the north of Spain (c. 1488), derives the term from the name of the marvelous mount of Muhammad, al-Burāq. Just as the steed was neither horse nor mule, male nor female, so the insincere converts were not Jews, Muslims, or Christians. The work specifies 20 characteristics of al-Burāq and applies each of them to the Conversos.

[Kenneth R. Scholberg]

ALBOTINI (Albutaini), JUDAH BEN MOSES (d. 1519), kabbalist and commentator on *Maimonides' writings. His father was a scholar in Lisbon. Albotini was one of the "Members of the Yeshivah of Jerusalem" and, in 1509, signed with them an ordinance to exempt scholars from taxes. He succeeded Jacob of Triel as head of the Jerusalem yeshivah, and as such was also head of the Jerusalem rabbis. Albotini was the author of several halakhic and kabbalistic books, all of which have remained in manuscript. His main work is the *Yesod Mishneh Torah* on Maimonides. The book includes the notation and explanation of the sources which preceded Maimonides. It discusses the foundation of every *halakhah* and the manner in which it was substantiated by Maimonides. Albotini held that the critics of Maimonides made strange and superfluous suppositions because Maimonides' sources were not accessible to them. He, however, had several sources and manuscripts which were not available to them. Of special interest in his work are the introductions (*derushim*) which encompass subjects treated by Maimonides. He discusses these extensively in the place where they are first mentioned, analyzes the problems, explains the practical issues, and sums up the subject matter. In addition to the manuscripts of homiletical commentaries on *halakhah* and *aggadah* and the ancient authors, he also possessed the correct manuscripts of the *Mishneh Torah* and chose, according to them, the correct version. In 1518–19, he completed his commentary on Maimonides' *Sefer ha-Madda*, *Sefer Ahavah*, and *Sefer Zemanim* (British Museum, Ms. Add. 19.783). However, from *Sefer Nashim*, Albotini explained only the laws of marriage and a number of chapters from the laws of divorce (Ms. Deinard 398, J.T.S., Schechter collection, New York). Three additional books on Maimonides, now lost, are (1) *Moreh ha-Mishnah*, which proposed to explain the veracity of his commentary on the *Mishnah*; (2) *Sefer Yeshu'ot*, on *Seder Nezikin*; Albotini intended to include rulings on money matters by R. Isaac *Alfasi, Maimonides, *Sefer Mitzvot Gadol*, and *Tur Hoshen Mishpat*; (3) a commentary on Maimonides' commentary on the *Mishnah*, or more precisely, on the division of the *Tumot* (uncleanesses) in the introduction to *Seder Tohorot* (order of cleannesses). Albotini wrote this book in Jerusalem in 1501. *Sullam ha-Aliyyah* ("The Ladder of Ascent"), a manual for contemplative mystics, is his only known kabbalistic work. Albotini was attracted by Abraham *Abulafia's prophetic kabbalism and by his doctrine of combinations (*zeruf*).

Another work called *Mar'ot Elohim* ("Visions of God"), which probably dealt with *Ma'aseh Bereshit* (esoteric doctrine of the creation) and with *Ma'aseh Merkavah* (mystic

speculations on the celestial chariot) is mentioned in *Yesod Mishneh Torah*. At the beginning of the latter there are also some chapters dealing with kabbalistic subjects: *Derush ha-Havayah*, *Derush Hishtalshelut ha-Nimza'im*, and *Derush ha-Nefesh*, which constitute an introduction to *Hilkhot Yesodei ha-Torah*.

Albotini's book reflects the cumulative impact of the various layers of ecstatic Kabbalah: Abulafia's *Or ha-Sekhel*, R. Nathan ben Saadiah's *Sha'arei Zedek*, and R. Isaac of Acre. *Sullam ha-Aliyyah* was printed by E.Y. Porush in Jerusalem, 1989.

BIBLIOGRAPHY: G. Scholem, in: *KS*, 2 (1925/26), 107, 138–41; idem, *Kitvei Yad be-Kabbalah* (1930), no. 6, 32, 225–30; M. Benayahu, in: *Sinai*, 36 (1955), 240–74.

ALBRIGHT, WILLIAM FOXWELL (1891–1971), U.S. biblical archaeologist and Semitics scholar. The son of Methodist missionaries, Albright studied at Johns Hopkins University, earning his doctorate under Paul Haupt. In 1929, he became professor of Semitic languages at Hopkins. He directed the American School of Oriental Research in Jerusalem, 1920–29 and 1933–36. Albright's excavations in Erez Israel include Gibeath-Shaul (Tell al-Fül), 1922–23, 1933; Adar and Bāb al-Dhrā' in Moab in 1924 and 1933; *Beth-El in 1927 and 1934; and Petra in 1935. His main achievement in field work was the excavation of Tell Beit Mirsim (the biblical Debir?), which he directed in 1926, 1928, 1930, and 1932. He also participated in the University of California expedition to Sinai (1947–48) and was chief archaeologist of expeditions of the American Foundation for the Study of Man at Wadi Bayḥān (Beiḥan), Hajar Bin Humayd, and Timna' in Arabia (1950–51). His main publications (apart from over 1,500 articles) are *From the Stone Age to Christianity* (1940; 1946²); *Archaeology and the Religion of Israel* (1942); *The Archaeology of Palestine* (1949); and *The Excavation of Tell Beit Mirsim* (1932–43). In this last work, Albright laid the foundations for the scientific ceramic chronology of the Canaanite and Israelite periods in Erez Israel: his philological and topographical studies solved some of the most difficult problems in Egyptian and Semitic philology and in the identification of places. In his approach to biblical history (*The Biblical Period from Abram to Ezra* (1949), *New Horizons in Biblical Research* (1966), and *Archaeology, Historical Analogy, and Early Biblical Tradition* (1966)), Albright was a theologically conservative scholar, dating the Patriarchs to the first half of the second millennium on the basis of his intensive study of the Near Eastern background of the period; similarly he assigned the composition of the historical books of the Bible known as the "Former Prophets" to the 13th–10th centuries B.C.E. and most of the Psalms to the pre-Exilic period. Albright was one of the first scholars to authenticate the *Dead Sea Scrolls. His students include most of the prominent archaeologists of the later 20th and early 21st century in the United States and Israel, among them G.E. Wright, N. Glueck, and B. Maisler (Mazar). He also trained such eminent biblicalists and Semiticists as J. Bright, F.M. Cross, D.N. Freedman, and W. Moran. Albright was the foremost bibli-

cal archaeologist of modern times, combining a devotion to evangelical Christianity with a scientific approach to the problems of archaeology and the Bible. While many of his broad syntheses of the Bible with archaeology came under criticism beginning in the 1970s, Albright must be credited for providing the very framework within which such criticism could occur. Likewise, his work on many aspects of Semitic philology remains invaluable.

[Michael Avi-Yonah]

ALBU, SIR GEORGE (1857–1935), South African mining magnate and financier. Born in Berlin, Albu in 1876 joined his brother Leopold as a diamond broker in South Africa and became prominent in Kimberley and later on in the Johannesburg goldfields. He opposed Kruger's restrictive policies but denounced the Jameson Raid of 1895, aimed at the overthrow of the administration. In 1887 he formed the company of G. and L. Albu which, reorganized as the General Mining and Finance Corporation in 1895, controlled some of the largest gold-producing properties on the Rand. Albu introduced innovations in goldmining techniques. He supported Jewish institutions, including the Johannesburg Hebrew High School. In 1912 he was made a baronet. His daughter, Margaret, married Bishop Wilfrid Parker of Pretoria in 1933.

BIBLIOGRAPHY: W. Macdonald, *The Romance of the Golden Rand* (1933). **ADD. BIBLIOGRAPHY:** G. Wheatcroft, *The Randlords* (1985), index.

ALBU, ISIDOR (1837–1903), German physician and public health specialist. Albu was born in Berlin and graduated from Berlin University in 1864. His work was devoted primarily to problems of social hygiene, medical statistics, and epidemiology, and his writings included *Mortality in Berlin*, *Studies on Cholera, Typhoid and Smallpox in Berlin*, and *Typhus und Grundwassergang in Berlin* (1877). His major work was the authorized summary of the rules laid down by Riant in *Leçons d'Hygiène* (1874). This work became a widely used handbook of general, personal, and public hygiene. Albu was responsible for the establishment of eye clinics in Berlin and other cities of Germany. In 1882 he went to Iran where he became professor of medicine at the University of Teheran and personal physician to the shah, Nāṣir al-Din.

[Nathan Koren]

ALBUM, SIMON HIRSCH (1849–1921), U.S. rabbi. Album was born in Tazitz, Lithuania, and studied at the Volozhin yeshivah where he received his ordination. After spending

much of his early career working as a rabbi in Russia, Album immigrated to America in 1891. He settled in Chicago and assumed the pulpit of the new Mishna Ugemoro Synagogue, which served the substantial immigrant community. He held this pulpit until his death, overseeing the growth of the congregation and the opening of a second satellite synagogue. Despite his successes as a scholar, communal leader, and congregational rabbi, Album's tenure was not entirely untroubled. His involvement in a number of intra-communal squabbles suggests a difficult personality and penchant for feuding. The most serious of these confrontations occurred in 1903 after Jacob David *Willowski was invited to Chicago to serve as the chief rabbi of a collection of allied synagogues. Willowski quickly set out to establish oversight and control of the *kashrut* supervision of Chicago's vast abattoirs. This move angered Album, who shortly before had secured an arrangement to act as the sole supervisor for the *shohatim* working at the major packing plants that supplied much of America's centrally slaughtered meat. Bridling at this perceived affront, and probably resentful of his rival's status, Album published a polemic that vilified Willowsky. The ugly public dispute that followed created friction and divisions within the immigrant community, eventually degenerating into a violent confrontation in a synagogue between supporters of the two men. The bickering subsided when Jacob Willowski resigned his post and left Chicago for Palestine. Among Album's writings are *Divrei Emet* (1904–12), *Meḥa'ah Geluyah* (1910), and *Teshuvah al Ḥanutat ha-Metim* (1916).

[Adam Mendelsohn (2nd ed.)]

ALBUQUERQUE, city in New Mexico. Available documentation dates a village of Alburquerque (the first “r” was later dropped) from 1706. The comparatively lush land adjacent to the Rio Grande River to the west of the Sandia Mountains in central New Mexico and 60 miles south of Santa Fe proved to be an attractive point for settlement for Spanish newcomers from Mexico. A number of Indian pueblos already existed there. American military occupation after 1846 and the territorial status accorded New Mexico in the United States allowed Americans to join the existing Hispanic and Indian population.

Jews were among the early American traders to the area. As early as 1852 Simon Rosenstein was operating a store on the plaza – now called Old Town – and possessed real estate in 1850. He married a Hispanic woman and may have been the first Jew divorced in New Mexico in 1866.

In 1880 the Atcheson, Topeka and Santa Fe railroad created a railroad depot and yards over a mile from the old plaza, which became a focal point for New Albuquerque and New Mexico. By 1883, some 25 Jewish males formed the first Jew-

ish organization in Albuquerque and New Mexico, a chapter of B'nai B'rith. They were young, mostly single, and all were merchants or clerks. By 1896 their number had nearly tripled; and the group, although still young, showed maturation through marriage and the creation of families. As a result, Albuquerque's Jews created a congregation in 1897, the second in the Territory after Congregation Montefiore in Las Vegas. It was named Congregation Albert, the name acquired through auction to the highest bidder by Alfred Grunsfeld in honor of his father. It adhered to Reform practice. This Congregation is now the oldest in the state. In 1921 a more traditional Conservative congregation formed under the name B'nai Israel.

Although Albuquerque was the largest city in the state before World War II, the Cold War provided great impetus to its further growth. As a result of the whole area's isolation and open spaces Albuquerque became a center for atomic research and attendant industries and the site for numerous military bases. With a population of 35,000 in 1940 the city grew to 200,000 by 1960. By 2000 it had 448,000.

The increase of Jewish population in Albuquerque outmatched the city's general growth. In 1940 the estimate of Jewish numbers was 450 – over one-third of the state's total Jewish persons. In 2000 the estimate was 7,500, perhaps 70 percent of the state's Jews.

The social character of the Jewish population changed dramatically after World War II. Scientists, doctors, attorneys, and faculty became quite common, gradually matching shopkeepers. A survey carried out in 1977 counted more than 100 Jewish faculty members at the University of New Mexico in the city. In the last decades of the 20th century Jewish women joined the ranks of professions in rapidly increasing numbers. However, Jewish-owned businesses – new and old – continued to exist and prosper.

Jewish residents have long participated in the political life of the community. The first mayor of an incorporated Albuquerque in 1885 was Henry N. Jaffa. Mike Mandell followed him in 1890. Jews continued to serve on various local commissions after World War II. In the late 1980s, Steve Schiff, a former district attorney and a Republican, was elected to the United States House of Representatives and served until his death in 1998.

Their increasingly varied social character gave witness to Jews assuming an ever-broadening range of important roles. Home builder Sam Hoffman constructed large housing developments in the early postwar era until his death in 1959. Architect Max Flatow, who arrived in 1947, contributed some of the city's tallest modern structures and the College of Education complex at the University of New Mexico. From 1985 to 1992 Neil Stulberg conducted the New Mexico Symphony Orchestra in the city.

In the latter decades of the 20th century all dimensions of activity broadened. In religious organization Chavurat Hamidbar was formed in 1973 and Nahalat Shalom (Renewal Independent) came into existence under Rabbi Lynn Gottlieb in 1983. In the early 1990s Chabad made its presence known.

In addition, secular organizations grew up after World War II with an eye to aiding Jewish refugees and supporting Israel as well as seeking to aid a growing number of elderly and to educate Jewish children. By the end of the century a well-developed Jewish Community Council and a splendid campus placed Albuquerque in the category of middle-sized Jewish communities in the United States.

[Henry J. Tobias (2nd ed.)]

ALCALÁ DE HENARES (Heb. אַלְקָלַעַא), city in Castile, central Spain. Under Muslim rule Jews lived in Alcalá. After Alcalá was captured from the Moors in 1118, the Jews were granted equal municipal rights with Christians regarding residence, evidence, and criminal compensation. At the end of the 13th century the community was rather small. It grew immensely, as the Jews' taxes indicate. The annual tax paid by the Jews of Alcalá to the Crown, amounting to 8,000 *maravedis*, was granted by Henry II in 1366 to the archbishop. It seems that during the 1391 massacres the Jews there did not suffer persecution. In 1395, 19 Jews protested in the synagogue against the nomination of the archbishop's physician Maestre Pedro, a convert from Judaism, as judge of appeals for the Jews of the archdiocese. The Jews of Alcalá were derided in a late 14th-century satire by the *Converso Pedro Ferrús, entitled *Cancionero de Baena*, depicting a wanderer who entered the synagogue seeking lodging for the night and was scared out of his wits by the inhospitable congregation. The community dwindled after the wave of massacres which swept Spain in 1391, but was later renewed. In the course of the 15th century the community grew constantly to become one of the largest in central Castile. In the 1474 distribution of taxes Alcalá was the third highest paying community in the district of Toledo. There were about 200 Jewish families then. For a short while, Isaac Abravanel lived there. Conversos continued to visit the city's synagogues, as suggested by the Marrano poet Pedro Ferrús; many were tried by the *Inquisition. Hebrew studies at the University of Alcalá were encouraged by Cardinal Francisco *Ximenes de Cisneros in the early 16th century, and the "Complutensian Polyglot" edition of the Bible was compiled under his patronage. Some important Hebraists, such as the Converso Alfonso de Zamora, worked there.

The location of the Jewish quarter of Alcalá de Henares is well known. It was within the area defined by the streets Mayor, Santiago, Imagen, and Cervantes. In Mayor Street it extended in both directions. We know also about two synagogues in Alcalá: the Mayor was at the back of No 10 in Carmen Calzado Street. The other synagogue was in Santiago Street.

ALCALAY (Alkalaj), ISAAC (1882–1978), rabbi. Born in Sofia, he studied at the Vienna Rabbinical Seminary and in 1909 was appointed chief rabbi of Serbia. While occupying this post he served as emissary of the Serbian government (1915–18), visiting the U.S. in 1918 on a mission on behalf of Serbian Jewry (which he described in the *American Jewish Year Book*, vol. 20, pp. 75–87; later published separately). In 1923 he founded the Rabbinical Federation of Yugoslavia and became its first president, helping to edit its annual *Jevrejski Almanah* (cf. volumes for 1920–30). In 1923 he was elected chief rabbi of Yugoslavia by King Alexander, a position of political importance at the time (see *Yugoslavia). He continued his activities abroad, attending the first Sephardi Congress (held at Vienna in 1925), where he was elected vice president of the World Sephardi Federation. When King Alexander made him a senator, Alcalay was the only Jew to sit in the Yugoslavian Upper House (1930–38). Until the Holocaust, Chief Rabbi Alcalay was a central figure and a unifying force for Yugoslav Jewry. He fled the country when the Germans occupied Yugoslavia in 1941 and, after a short stay in Palestine, settled in the U.S. in 1942, where he served as rabbi of the Sephardi community of New York. He later unified and organized the Sephardi communities there and became the chief rabbi of the Central Sephardic Jewish Community of America in 1943. He published a study on travels of Jews through the Balkans at the end of the 18th and beginning of the 19th centuries (1928). In 1970, Alcalay was awarded a medal by Yeshiva University of New York. In 1971, on the occasion of his 90th birthday, the Association of Yugoslav Jews in the U.S. issued a souvenir journal in his honor.

ALCALAY, REUVEN (1907–1976), Hebrew lexicographer and translator. Alcalay was born in Jerusalem and graduated from the Hebrew Teachers' College there. He entered government service during the Mandatory period and was translator-in-chief and superintendent of the Government Press Office from 1920 to 1948. On the establishment of the State, he served as deputy-director of the Government Information Office and from 1948 to 1951 was editor of the *Israel Government Year Book*. Alcalay translated many books from English into Hebrew, but his major achievement was in the field of lexicography, where his publications include the *Complete Hebrew–English Dictionary*, 4 vols. (1958); the *Complete English–Hebrew Dictionary*, 4 vols. (1963); the *Complete Hebrew Dictionary*, 3 vols. (1968–71), which contains hundreds of words coined by him for modern concepts; and *Words of the Wise* (1968), an anthology of Hebrew (and Yiddish) proverbs.

ALCAN, ALKAN, name of several French families, possibly deriving from Elkanah:

Alphonse *Alkan (1809–1889), Parisian printer, bibliographer, and author of works on printing and illustration.

MICHEL ALCAN (1811–1877), politician, engineer, and author of works on textile technology. He was born in Donnelly and afterward lived in Paris. He took an active part in the 1830 and 1848 revolutions in France, and was elected to the National Assembly, where he sided with the left wing (the Mountain).

MOÏSE ALCAN (1817–1869), publisher and poet. He lived in Metz, where he was a member of the Jewish consistory. FÉLIX (1841–1925), Moïse's son, was a publisher and scholar. He lectured on mathematics before entering the publishing business of his father in Metz. He later founded his own firm in Paris, which from 1880 specialized in producing textbooks, mainly on philosophy.

ALCAÑIZ, city in Aragon, Spain, subject to the Order of *Calatrava. The jurisdiction of the order also extended to the 30 Jewish families living in Alcañiz. Several families, formerly scattered in the surrounding villages, joined the community in 1380. In 1383 Pedro IV exempted the Jews of Alcañiz from having to attend missionary disputations with apostates. During the massacres of 1391, the infant Martín ordered that the Jews in Alcañiz should be protected. At the beginning of the 15th century the Jews of Alcañiz achieved some prosperity and a certain level of Jewish leaning. *Astruc ha-Levi of Alcañiz was a protagonist in the disputation of *Tortosa, 1413–14. Alcañiz was also the home of Joshua Halorki, a learned Jew who became Jerónimo de Santa Fe and the instigator of the disputation of Tortosa, which proved disastrous to the Jewish community. Most of its members converted to Christianity. After this only 15 families in Alcañiz and its environs adhered to Judaism, and probably fewer at the time of the expulsion of 1492. In the 15th century the Jewish quarter was enclosed and its gates locked at night.

ALCASTIEL, JOSEPH, Spanish kabbalist, who lived in Játiva, Aragon, at the time of the expulsion of the Jews in 1492. While there is no evidence that Alcastiel was among the exiles he is indeed mentioned by R. Isaac ha-Kohen of Játiva, an expellee from Valencia. A recently published treatise contains Alcastiel's responsa to 18 questions purportedly asked by Judah *Ḥayyat, although it is not known that Alcastiel ever lived in Italy or knew Ḥayyat: Ḥayyat does not mention him in his writings nor do his writings show the influence of Alcastiel's

work. On the other hand, Alcastiel's ideas, distinguished by their originality and insight, influenced other important kabbalists in the generation after the expulsion from Spain, such as Meir ibn *Gabbai, Solomon ha-Levi *Alkabez, Moses *Cordero, and, almost certainly, Isaac *Luria. According to one account, these responsa were written at Játiva in 1482. The treatise entitled *Ma'amar Mufla al ha-Tanninim* ("Wondrous Treatise on the Sea Monsters"; Ambrosian Library, Milan, Ms. 62/12) is ascribed to *Ha-Ḥakham ha-Elohi Alcastilo* ("the divine scholar Alcastilo"). Judging by its content and style, the author of this was Joseph Alcastiel and not Joseph b. Samuel of Catalonia as suggested in the catalog.

[Efraim Gottlieb]

ALCEH, MATILDE (1923–1967), Turkish poet. Born in Istanbul, she contributed poems to various periodicals, including the daily *Cumhuriyet*, and also published some translations. The collection *Mart* ("The Gull," 1953) contained some of her characteristic lyrical verse. The only Turkish woman poet of Jewish birth, she married a Muslim and died in a car accident in Yugoslavia.

[Shmuel Moreh]

ALCHEMY, ancient art that was the origin of chemistry. The Jewish association with alchemy dates from ancient times. Zosimos, a fifth-century Greek historian, states that the Jews acquired the secrets of the "sacred craft" of the Egyptians and the knowledge of the "power of gold" which derives from it by dishonest means, and they imparted the knowledge of alchemy to the rest of the world. In ancient Greek manuscripts, which contain lists of writings on alchemy, a number of alchemic and magic writings are attributed to Moses; one work is ascribed to *Hoshea, king of Israel. *Bezalel was also considered a proficient alchemist on the basis of Exodus 31:1–5. The author of the above-mentioned writings was, most probably, Moses of Alexandria, a famous alchemist, which would explain why they were later ascribed to Moses the Lawgiver; in any case it seems certain that the author was a Jew since his writings show traces of Jewish monotheism and other Jewish beliefs.

Toward the end of the Middle Ages, and later, the connection between alchemy and the Bible and Prophets was strengthened in the view of Christian alchemists who despaired of finding the philosopher's stone by natural means and sought to attain it by the grace of God who reveals His secret only to His faithful. The alchemists believed, therefore, that the patriarchs, the prophets, and the kings of Israel possessed the secret of the "stone." Gerhard Dorn (end of 16th century) contended that the whole art of alchemy was contained in the verse, "God made the firmament" (Gen. 1:7). Michael

Maier, the physician of Rudolf II, and chief exponent of the Rosicrucian order in Germany in the 17th century, found its basis in the verse, “the spirit of God hovered over the face of the waters” (Gen. 1:2), “the waters” being mercury. Aegidius Guthmann of Augsburg wrote a lengthy “alchemical” interpretation of the first verses of Genesis. Tubal-Cain, who lived before the Flood, was considered the father of alchemy since it was said of him that he was “the forger of every cutting instrument of brass and iron” (Gen. 4:22). These alchemists particularly singled out the name Mehetabel, the daughter of Matred, the daughter of Me-Zahab (Gen. 36:39). The name Me-Zahab (“waters of gold”) was interpreted to mean that he knew how to produce drinkable gold (*aurum potabile*); and Mehetabel possibly reminded them of the Greek *metabole* (μεταβολή), “transmutation.” Abraham *Ibn Ezra heard this interpretation of Me-Zahab and remarked in his commentary: “Others say it refers to those said to make gold out of brass, but this is nonsense.”

The first men mentioned in Genesis would not have, according to the alchemists, reached such old age, had they not made use of the *elixir vitae*. They also contended that “Abram was very rich in cattle, in silver, and in gold” (Gen. 13:2) because he learned the secret of alchemy from Hermes in Egypt. All the patriarchs, as well as Judah, wore the philosopher’s stone on their bodies. Moses was, however, according to them, the first and foremost among the biblical experts. As late as the 18th century, an alchemist wrote a book: *Urim und Tumim von Moses, Handleitung vom grossen Propheten und Feldherrn zum Weisenstein* (“Oracles of Moses, a Guide to the Philosopher’s Stone by the Great Prophet and General,” Nuremberg, 1737). King David was considered an expert alchemist, since he could only have raised “a hundred thousand talents of gold, and a thousand talents of silver” for the building of the “house of the Lord” (1 Chron. 22:14) by alchemical means. Further support for this assumption was adduced from the fact that David bequeathed to his son, Solomon, *millu’im avnei-pukh* (“stones to be set, glistening stones,” *ibid.* 29:2) which are the philosopher’s stones. Solomon learned the secret from his father, and was, therefore, able to provide “silver and gold to be in Jerusalem as stones” (11 Chron. 1:15). According to the story quoted by Johanan Alemanno (in his *Sefer ha-Likkutim* (“Collectanea”; from the Arab alchemist Abu Aflah of Syracuse)), supposedly originally found in the esoteric *Sefer ha-Mazpuz*, ascribed to King Solomon, the “precious stone” with which the Queen of Sheba presented Solomon (1 Kings 10:2) was none other than the philosopher’s stone which she had inherited from her first husband, Sman (who was a great Nabatean sage). The Queen of Sheba’s aim was to test King Solomon’s wisdom, but he already knew the secret and recognized the stone immediately (cf. I.S. *Reggio, in *Kerem Hemed*, 2 (1836), 48–50).

The prophet Elijah, also considered a great expert in alchemy, is frequently mentioned by the Christian alchemists, and some of their writings bear his name. Jewish influence is evident from the fact that they too contend that Elijah would,

on his return to earth, provide the answer to all the unsolved problems. The prophet Isaiah was also considered to have been an expert, on the basis of the verses: “I will set thy stones in fair colors [*pukh*] and lay thy foundations with sapphires” (Isa. 54:11) and “For brass I will bring gold, and for iron I will bring silver” (Isa. 60:17). The adepts also include the prophets Elisha, Ezekiel, Zechariah, Malachi (the first verses in chapter three of the book of Malachi were interpreted in an alchemic and Christological manner), Daniel, and Ezra. The names of Job’s three daughters, Jemimah, Keziah, and Keren-Happuch were also interpreted in a religious and alchemic spirit.

Alchemy and Kabbalah

Alchemy and the *Kabbalah were closely linked in the Middle Ages. A kabbalistic outline is found in the early alchemist manuscript of Saint Mark (11th century) called *Solomon’s Labyrinth*. The wandering German alchemist, Salomon Trismosin, boasted that he drew his knowledge from kabbalistic writings which had been translated into Arabic. His great disciple, Paracelsus, maintained that expert knowledge of Kabbalah was an essential prerequisite for studying alchemy. However, neither he nor his master had more than a superficial knowledge of the Kabbalah, if any at all, although both talked about it a great deal. Paracelsus even based his strange theories on it, i.e., that of the creation of a *golem, a homunculus, through alchemy. The lesser Christian alchemists, especially the religious ones, following his example, also tended to make use of the Kabbalah for their purposes, though most had no knowledge of it. When, at the beginning of the 17th century, alchemy took a religious, mystical turn (in particular with the rise of the Rosicrucians), the prestige and influence of the Kabbalah became even more widespread; alchemy and Kabbalah became synonymous among Christians. This identification was generally speaking groundless. While many kabbalists undoubtedly accepted alchemy as a fact, the interests and symbol systems of Kabbalah and alchemy respectively were utterly different. Nevertheless occasional – albeit relatively insignificant – mutual influences are evident, and traces of alchemical lore are to be found in the *Zohar. The saying “through the gaze of the sun and its power, dust evolves and grows gold” (Zohar, 1:249–50) agrees with Artephius’ theory that the metals grow like plants, but whereas the plants are composed of water and dust, the metals are composed of sulphur and mercury; the heat of the sun’s rays penetrates the earth and combines with these elements to form gold, the metal of the sun. Simeon *Labi, the commentator on the Zohar, interprets this saying in his *Ketem Paz* in a definitely alchemical manner and states that the kabbalists call gold, “sun,” and silver, “moon.” The following saying (Zohar, 2:148a), bears an even stronger alchemical influence: “The heavenly gold is bright and shines in the eyes ... and whoever clings to it when it descends into the lower world, conceals it within himself and for this reason it is also closed gold (*zahav sagur*), for it is not seen by the eye which does not possess it; but the gold of the earth is ‘lower gold’ and is easier to discover.” The alchemical theory

is even clearer in the passage following the one just quoted: "... when silver thus reaches its fulfillment it becomes gold; we find, then, that silver transforms itself into gold and when this happens, it attains the stage of perfection." Hence, it is clear that the author of the Zohar not only believed in the transmutation of metals, but that he also adopted the alchemical theory of perfect and imperfect metals, as well as the belief that when silver is transformed into gold it reaches a higher grade of perfection.

*Moses b. Shem Tov de Leon, in his *Shekel ha-Kodesh* (London (1911), 118–22), also uses the language of the alchemists: "Copper is red and this generates the nature [teva, or zeva, "color"] of both, for those who know the craft [melakhah] make out of it the nature [color] of gold and silver." According to the alchemical teachings, copper too has the faculty of direct transformation into gold (without having to go through the intermediary stage of silver). It is true that the Zohar does not include mercury in the list of metals for the *Merkabah (*merkavah*; "divine chariot"; Zohar, 2:423–4), which has the greatest importance in alchemy, but this is possibly because, in common with Jābir (eighth century alchemist and physician), the Zohar did not consider mercury to be a metal at all but a spirit (*pneuma*). Ḥayyim *Vital, who at an earlier stage in his career took a lively interest in alchemy, lists mercury among the seven metals. Abraham b. Mordecai *Azulai (1570–1643) quotes Vital in the last part of *Ḥesed le-Avraham* (1863) that the seven metals correspond to the seven *Sefirot* ("degrees of divine emanation"), from *Ḥesed to Malkhut*, "hence, mercury corresponds to the seventh planet *kokhav* ['Mercury']... and it is already known to you that *Yesod* [one of the *Sefirot*] is also called *El Ḥai* ['the Living God'] and it corresponds to *Kesef Ḥai* ['Quick-Silver']." Mercury is allocated to *Sefirah Yesod*, because it is the basic element in all metals and in its ideal form is the basic element in the philosopher's stone, just as *El Ḥai* is the foundation of the universe. Ḥayyim Vital studied alchemy. This is shown in the following passage in *Shivḥei Rabbi Ḥayyim Vital* (1826): "He [Isaac *Luria] also told me that he saw inscribed on my forehead the verse: 'And to devise skillful works, to work in gold and in silver and in brass' [Ex. 35:32], an allusion to the two-and-a-half years during which I forsook the study of the Torah and pursued alchemy." Ḥ.J.D. *Azulai speaks of the philosopher's stone in his *Midbar Kedemot* (Lemberg, 1869, fol. 19), and calls it *esev* ("weed") as it was also called by the alchemists (and as it is called in other kabbalistic writings as well as in Hebrew manuscripts dealing with alchemy). Numerous prescriptions for the making of gold are found in books of practical Kabbalah (*Nifla'im Ma'asekha*, Leghorn (1881), s.v. *zahav*); these were probably taken from the writings of Jewish as well as gentile alchemists.

The influence of the Kabbalah on alchemy was greater than that of alchemy on Kabbalah, especially after the latter was diffused in Christian circles by *Pico della Mirandola, *Reuchlin, *Galatinus, and others. Some of the Christian alchemists adopted the theory of the ten *Sefirot* as well as the

doctrine of the secrets of letters obtained by *zerufim* ("combinations") and *gematriot* and made them a basis for the Work of Holiness. Some used to inscribe on the melting-pot Hebrew and Syriac words copied from kabbalistic writings or words obtained by the above-mentioned methods. (The combination of letters was supposed to bring about the combination of metals.) The use of kabbalistic methods is also found in the book *Ars Magna*, attributed to Raymond Lull. Christian *Knorr von Rosenroth was one of the alchemists who had a real knowledge of Kabbalah. His *Cabbala denudata* (1677) contains translations of passages from the Zohar as well as lengthy quotations from *Esh Mezaref*, a book on alchemy written in a kabbalistic spirit, which is probably a translation of a Hebrew manuscript. The author of *Esh Mezaref* explains the relation of the metals to the *Sefirot* and quotes extensively from the Zohar; he too relates mercury to the *Sefirah Yesod*. He also quotes from another Jewish alchemist, Mordecai, who found a way to produce artificial silver by means of a four-month-long process. It is probable that this alchemist was Mordecai the son of Leone *Modena who transformed lead into silver and died as a result of his experiments (*Ḥayyei Yehudah* (Kiev, 1912), 33). Under the influence of Knorr von Rosenroth's work, a whole literature of kabbalistic alchemy was created. The book *Or Nogah* is particularly noteworthy. It was written in Hebrew and German and printed in Vienna, 1747. Its author, Aloisius Wiener, a nobleman of the Sonnenfels family, was a baptized Jew and an expert in Kabbalah, called "Lipmann Berlin" before his conversion.

The number of Jews who practiced the art of alchemy was apparently relatively small; however, the state of knowledge on this point is incomplete. It seems that the Jews of Egypt, particularly Alexandria, many of whom were gold- and silversmiths, during the Greek and Roman periods, were devotees of alchemy, magic, and *demonology (Suk. 51b). Zosimos testified that the "true teachings about the Great Art" were to be found only in "the writings and books of the Jews." However, the conclusion at which De Pauw arrived 150 years ago, namely that the Jews were the creators of alchemy, is incorrect. Alchemy is neither a Jewish science nor a Jewish art. The Jews were engaged in it in the same measure as they were engaged in other secular trades and fields of knowledge. However, the fact that in 1545 Martin *Luther warned Archduke Joachim II of Brandenburg against alchemy with which the Jews dealt indicates that he shared the general belief concerning the close connection between alchemy and Judaism.

In some alchemic writings the philosopher's stone is symbolized as a circle enclosing a hexagonal star ("the star of David"): the circle alludes to the kabbalistic **Ein-Sof* ("Infinite"); the triangle which points upward represents the element fire; and the one which points downward the element water. Fire and water together constitute heaven (*shamayim* = *esh* + *mayim*). From the 17th century, this was used by alchemists to symbolize the primeval matter out of which the main element of the philosopher's stone, philosophic mercury, the "quintessence," is extracted.

Jewish Personalities in Alchemy

In the Egyptian-Greek period one of the greatest alchemists was a woman known as “Mary the Jewess” (Maria Hebraea). According to Lippmann, she lived in the first century C.E. Her name and works are often mentioned in alchemic literature. According to Zosimos she was greatly skilled in alchemy and invented numerous ovens and boiling and distilling devices out of metal, clay, and glass. She even taught how to plaster them with the “philosopher’s clay.” The most important among her ovens, the *kerotakis* (also called “Mary’s oven”), served to liquefy solids and to separate, through sublimation, the evaporable parts from the non-evaporable ones. Its main use, however, was for the preparation of the so-called “divine water” (a combination of sulfuric acid used to “bleach” metals). Mary also discovered the water, sand, and oil baths, vessels which even today are indispensable in any chemical laboratory. Mary is also the first to mention hydrochloric acid and one may therefore assume that she discovered it. The following esoteric saying, paralleled in kabbalistic writings, is ascribed to her: “Two are one, three and four are one, one will become two, two will become three.” Another strange saying which excludes non-Jews from dealing with alchemy is also attributed to her: “Do not touch [the philosopher’s stone with your hands]; you are not of our stock, you are not of Abraham’s bosom.” There is no doubt that she really existed and was famous in her time. Zosimos identified her with Miriam the prophetess, the sister of Moses; the Christian alchemists, who were eager to add the luster of biblical sanctity to their art, called her by this very name: “Maria Prophetissa, Moysis Soror.”

Khalid b. Jasikhi (Calid Hebraeus) was an Arabian Jew and writer. He was revered by the Arab alchemists, who considered him to be the first alchemist of the Arabic period. Steinschneider, however, believes that he was an Arab. Artepheus, the great alchemist of the 12th century, “before whom there lived no other expert equal to him” was a baptized Jew according to the author of *Keren ha-Pukh*. Artepheus is said to have brought the creation of the philosopher’s stone to perfection. He wrote three books on alchemy “whose importance is invaluable.” In one of them, he relates that he wrote his work at the age of 1,025 years (thus supporting the belief that the philosopher’s stone brings long life). Some scholars believe that Artepheus was an Arab. However, the fact that he did not write anything in Arabic (all his works are written in Latin), seems to belie this contention.

At the beginning of the Christian period in alchemy (13th century), Jacobus Aranicus, a Jewish alchemist living in France, taught alchemy to the Christian scholar Vincent de Beauvais. Later (in the 15th century; according to Lippmann, the 17th century), two Dutch Jews became famed as alchemists: Isaac and his son John Isaac, both called “Hollandus,” since their family name was unknown. The father was a diamond cutter and his son a physician. They led solitary lives and became famous only posthumously, through the works which they left behind; some authors consider them equal to Basilius Valentinus. They knew how to prepare “royal wa-

ter” out of nitrate and sea-salt, as well as the “spirit of urine” (ammonia), and produced artificial gems. In the first quarter of the 18th century, a strange Jewish adept named Benjamin Jesse lived in Hamburg. His name became known only after his death, when a complete laboratory was discovered in a locked room of his house.

It is most probable that there were other Jewish alchemists in the Middle Ages as well as in the later period, particularly among the physicians and naturalists of the Spanish and Renaissance periods. It is certain that more books on alchemy have been written than have survived, partly because they were lost and partly because their authors hid behind the names of famous predecessors. It seems that among kabbalists, too, there were quite a number of alchemists, beside those already mentioned. The Jews of Morocco were particularly assiduous in their study and practice of alchemy, even into recent times. According to G. Scholem’s testimony, a Jewish kabbalist from Morocco who was also an alchemist still lived in Jerusalem early in the 20th century. Baruch *Spinoza, though not a practitioner of alchemy, was nevertheless keenly interested in it.

While alchemic literature runs into thousands of volumes, there is no original work in this field in Hebrew literature. It seems, therefore, that Jewish adepts did not write their works in Hebrew. However, information on alchemy is scattered in the Hebrew works of several medieval and later authors. Hebrew authors referred to alchemy (*alkimiyyah*) as *melakhah* (“craft”), or *hokhmat ha-zerifah* (“the art of refining”). Among the Jewish scholars who in one way or another had some relation to alchemy, one should add the following: *Bahya b. Joseph ibn Paquda, who in his *Hovot ha-Levavot* (beginning of chapter *Bittahon*) describes the ways of life and work of the alchemists, and apparently had no doubt about the truth of alchemy. Abraham Ibn Ezra also believed in alchemy as may be inferred from his commentary on the burning of the golden calf (Ex. 32:20): “for there is a thing which, when thrown into the fire together with the gold, it burns and becomes black and it will never become gold again; and this has been tried and it is true.” *Maimonides knew some of the writings of Hermes (*Guide of the Perplexed*, ed. by S. Pines (1963), 521) but considered them to be nonsense. He does not even mention alchemy. Nevertheless, *Iggeret ha-Sodot* was later attributed to him; in this he allegedly explains to his disciple Joseph ibn *Aknin the secrets of alchemy in *Sha’ar ha-Shamayim* (Venice, 1547, section 2). Johanan Alemanno, who introduced Pico della Mirandola (who was interested in alchemy) to the Kabbalah, believed in alchemy, and mentioned it in *Sefer ha-Likkutim* and in *Heshkek Shelomo* (Leghorn, 1790). Abraham b. David Portaleone wrote a book in which alchemy is discussed, called *De aurodialogi tres* (Venice, 1584). Judah Loew b. Bezalel of Prague, a devotee of alchemy, was summoned to the alchemist King Rudolf II. According to the stories which circulated, they discussed the mysteries of alchemy.

Leone Modena recounts in his book *Hayyei Yehudah* that he and his son Mordecai dealt in alchemy for a profit. According to Modena, they began to do so on the advice of the physi-

cian, Abraham di Cammeo, who was rabbi in Rome, and himself an alchemist. Shemaiah, the uncle of Modena, was killed as a result of his alchemic activities. Modena's disciple, Joseph Solomon *Delmedigo, considered alchemy a very superior art (*Mazref la-Hokhmah* (Warsaw, 1890), 49; see below). In 1640 Benjamin Mussafia, the author of *Musaf he-Arukh* and physician at the Danish court, published a Latin letter on alchemy, entitled *Mei Zahav*, in which he brings examples from the Talmud and Midrash (Yoma 44b; Ex. R. 35; and Song R. 3, etc.) to prove both the truth of alchemy, and the fact that the sages of the Talmud and Midrash practiced this craft. The majority of his quotations do not really prove anything. However, the saying by the disciples of Judah on "refined gold" (*zahav mezukkak*) that "it is buried for seven years in dung and it comes out refined" (Song R. 3:17) reminds one of the methods employed by the alchemists; similarly, the expression "gold that bears fruit" (*zahav she-oseh perot, ibid.*) most likely is derived from alchemy.

Among the great scholars of modern times, Jonathan *Eybeschuetz believed in alchemy (*Ya'arot Devash*, 1 (1779), passim); his opponent, Jacob *Emden, doubted it. "I wish to know whether that science [i.e., alchemy] is still thriving and whether those things have been proved beyond doubt" (*She'ilat Ya'vez* (Altona, 1739), 1, note 41).

Among the Jewish scholars who deny the truth of alchemy, one should cite *Judah Halevi who mentions alchemy disparagingly in *Kuzari*. Judah b. Solomon ha-Kohen ibn Matka, in his encyclopedia, *Midrash Hokhmah*, says that alchemy is "empty talk" and refers to alchemists by quoting the verse: "he that keepeth company with harlots wasteth his substance" (Prov. 29:3). Simeon b. Zemaḥ *Duran states in *Magen Avot* (pt. 2 (Leghorn, 1785), 10, 71) that "the craft of alchemy" is an error; "many got involved in it and wasted their lives but none ever succeeded in it." An important Hebrew manuscript on alchemy is preserved in the Berlin Staatsbibliothek; judging by its contents it cannot be earlier than the 17th century and its author is possibly Joseph Solomon Delmedigo. A second important Hebrew manuscript on alchemy, which includes a catalogue of alchemic literature, is found in the Gaster Library, now in the British Museum; it probably dates from the second half of the 15th century.

ALCIMUS (Hellenized form of the Hebrew name **Jakim** or **Eliakim**), high priest 162–160 (or 159) B.C.E. Alcimus was a member of a high-priestly family and was the nephew of *Yose b. Joezer of Zeredah. When Demetrius I Soter ascended the Seleucid throne, Alcimus came to him to complain of the persecution of the Hellenists by Judah Maccabee and his followers, and he suggested that the king appoint him high priest,

promising to be faithful to the Seleucids and to oppose Judah and his faction. Demetrius appointed him and sent him back to Judea, accompanied by Syrian troops under the command of Bacchides. At first, the *Hassideans supported him because he was of high-priestly stock, while Judah's faction opposed him because he had arrived with foreign troops. Alcimus had barely secured his position in Judea, when he arrested 60 Hassideans and put them to death. This act aroused popular indignation, and when Bacchides and his soldiers left Judea, Alcimus was driven from Jerusalem by Judah and his supporters. He returned to Demetrius, and once more asked for military support. The king sent a new army against Judah Maccabee, this time under the command of *Nicanor. Judah defeated Nicanor in battle twice, Nicanor being killed in the second battle. Demetrius again sent Bacchides against Judah, and this time the Jewish leader was defeated and killed. Alcimus returned to Judea and ruled with Syrian help. He broke into the *soreg* (one of the approaches to the Temple) in order to remove the wall which non-Jews were forbidden to pass. The *soreg* was breached in 13 places, and the Hassideans were infuriated. Alcimus' sudden death was interpreted by the people as an act of divine retribution.

ALCOLEA (Heb. אֶלְקוּלִיָּא *De Cinca*, town in Aragon. In 1320 the infante Alfonso gave special privileges to Jews settling there. They were exempt from taxation other than a substantial house tax. Problems regarding the communal taxes are discussed (c. 1380) in the responsa of R. *Isaac b. Sheshet. Isaac, son of R. Vidal de Tolosa, who lived in Alcolea, disputed the assessment and was denounced to the countess. The community broke up in 1414 in the aftermath of the disputation of *Tortosa.

ALCONIÈRE, THEODORE (Herman Cohn; 1797–1865), Hungarian painter. Alconière received his training in Vienna and then spent some years in Rome, where he acquired his dramatic romantic style. While in Italy he was appointed court portraitist to the duke of Parma. In 1848 he moved to Hungary, where he painted many equestrian portraits of the nobility and scenes from everyday life. After 1850 he lived mainly in Vienna. Impoverished, he began supporting himself by the production of humorous lithographs and even took to counterfeiting banknotes. However, his conscience troubled him and instead of circulating the money, he handed himself over to the police. He died two years later in a Vienna hospital. Alconière was the most distinguished Jewish painter among the first generation of Hungarian nationalists.

ALCONSTANTINI, family of Jewish courtiers in 13th-century Aragon probably originating from Constantine, North Africa. Nahmanides refers to them disapprovingly as “the Ishmaelites of the court.” Many members of the family were hated by the ordinary Jews for their arrogance and lack of sensitivity to the social problems of their community. The first members to attain importance were the brothers BAḤYA (Baḥi'el, Bafi'el) and SOLOMON of Saragossa. By 1229 the two brothers were already in receipt of crown grants from James I of Aragon – the revenues from the local dyeing vats and two pounds of mutton daily from the Jewish slaughterhouse. In the same year Bahya, who was Arabic interpreter to the court, was sent to Majorca with the count of Roussillon to conduct negotiations for the surrender of the Muslims. Bahya also took part in Jewish communal affairs and in 1232 signed the counterban against the group who had banned the study of *Maimonides. The overweening ambitions of the two brothers to attain the position of supreme judicial authority (*dayyan*) in Aragonese Jewry were frustrated by Judah de la Cavallería, the royal *baile*. *Nahmanides also opposed the claims of the family to have one of its members appointed as rabbi and judge of Aragonese Jewry. However, Bahya continued his diplomatic activities. During the distribution of the lands of the conquered territories in the 1260s he received grants of large estates. In 1240 Solomon held a village and fortress near Tarragona and the revenues from some Catalan knights.

Of Bahya's two sons, MOSES and SOLOMON, the former was by far the more active and important. The two brothers appear in the sources from 1264. Moses was appointed *baile* of Saragossa from 1276 until the end of 1278; he succeeded the late Judah de la Cavallería, of a family that was Alconstantini's staunchest opponent. As *baile* of Saragossa he was much involved in the collection of the salt tax in Aragon. In the years 1280–81 Moses was the *baile* of the city of Valencia. Even before his campaign for the conquest of Sicily had begun, Pedro III gave in to the growing anti-Jewish pressure of the clergy and the nobility. Moses was the last Jew in the royal service to be dismissed from office. He was thrown into prison and brought to trial, in which he almost lost his life. The trial was the result of unpaid debts which he incurred during his work for the king. He was greatly disliked by Jews and Christians for his unscrupulous conduct.

Moses was also deeply involved in the affairs of the Jewish community. Members of the Alconstantini family were at constant odds with the community and its leading members, first and foremost Judah de la Cavallería. Solomon Alconstantini was appointed one of the three magistrates (*berurim*) of the Saragossa community in 1271. Moses was implicated, with Meir b. Eleazar, in beating up R. *Yom Tov Ishbili for having delivered a legal opinion to the royal clerk on the feuds of the local great families.

The Alconstantini family was still aspiring to the office of chief justice and “crown rabbi” of the kingdom in 1294, and the queen of Castile applied to James II of Aragon with the request that Solomon Alconstantini be confirmed in this of-

fice. James, however, refused, on the ground that the privileges granted to the family had lapsed during the reigns of his predecessors: “for great damage and destruction has been suffered by all the Jews in our kingdom, and it would be unreasonable that for the sake of one Jew we should thereby lose all the others.”

In the 14th century the Alconstantini family declined from its former eminence. Some physicians of this name are mentioned as living in Aragon. SOLOMON (early 14th century), probably a descendant of the family, was the author of *Megalleh Amukot*. Enoch B. Solomon *Al-Constantini was the author of philosophical works. An Alconstantini represented the *Huesca community in the disputation of *Tortosa (1413–14). After the expulsion from Spain, members of the Alconstantini family are found in Turkey. Later, they moved to Ancona, where the name assumed the Italian form, Constantini. Some of them were rabbis and community leaders in Ancona during the 17th and 18th centuries. When the French conquered Ancona (1797) SANSONE was one of the three Jews elected to the city council.

[Haim Beinart / Yom Tov Assis (2nd ed.)]

AL-CONSTANTINI, ENOCH BEN SOLOMON (c. 1370), physician and philosopher. His work *Mar'ot Elohim* (“Divine Visions”) is extant in almost 30 manuscripts (described in the edition by C. Sirat in *Eshel Be'er-Sheva* (1976), 120–99).

The book is divided into three chapters, preceded by an introduction. The first chapter interprets Isaiah 1:1–6; the second Ezekiel 1:1–20; the third, Zechariah 10. The exegesis is entirely philosophical and deals with the separate intelligences, the spheres, and the human intellect. Al-Constantini was influenced by Maimonides, Al-Fārābī, Avicenna, Averroes, Samuel ibn Tibbon, Moses of Narbonne, Levi b. Abraham, and Solomon ibn Gabirol (in the abridged version of Gabirol's *Mekor Hayyim*, the *Likkutim* by Shem Tov ibn Falquera). A Bodleian manuscript (Opp. 585) of Al-Constantini's work contains glosses by Menahem Kara.

[Colette Sirat (2nd ed.)]

ALCORSONO (אלכורסאני, כרסאנו, כראסאנו), **JUDAH BEN JOSEPH** (14th century), Moroccan theological scholar. For unknown reasons he was put in prison where he wrote *Aron ha-Edut* (“Ark of Testimony”) on such subjects as *Ma'aseh Bereshit* and *Ma'aseh Merkavah*, the story of the Garden of Eden, providence, prophecy, and Satan's dispute with God (Job, chs. 1 and 2). The work is divided into 22 chapters corresponding to the number of letters in the Hebrew alphabet.

Manuscripts of the work are preserved in several libraries; one has been annotated by Moses *Ḥagiz. In Saadiyah b. Maimun *Ibn Danan's *Ma'amar al Seder ha-Dorot*, Alcorsono is mentioned as an astrologer (Z.H. Edelman (ed.), *Hemdah Genuzah*, (1855), 30).

ALCOTT, AMY (1956–), professional golfer, member of the LPGA and World Golf Hall of Fame. Born in Kansas City, Missouri, Alcott grew up in Los Angeles, where she began playing golf as an eight year old putting toward sprinkler heads. She won the United States Golf Association juniors championship in 1973, two years before joining the Ladies Professional Golf Association (LPGA) shortly after her 19th birthday. Alcott proceeded to win the third professional tournament she entered, the 1975 Orange Blossom Classic, which set a record for the fastest career win, and was subsequently named the tour's rookie of the year. She went on to win 29 professional tournaments, including five majors: the Peter Jackson Classic in 1979, the U.S. Women's Open in 1980, and the Nabisco Dinah Shore in 1983, 1988, and 1991. Alcott set a one-round tournament record of 65 when she won the 1984 Lady Keystone Open and tied the tour record of winning at least one tournament in 12 straight years. She shot her fifth career hole-in-one in 2001. Alcott was named Golf Magazine's Player of the Year in 1980 and was awarded the LPGA's Founders Cup in 1986, designed to recognize altruistic contributions to the betterment of society by a member. She wrote *Guide to Women's Golf* (1991) and produced the instruction video *Winning at Golf with Amy Alcott* (1991).

[Elli Wohlgelernter (2nd ed.)]

°**ALCUIN (Albinus Flaccus; c. 735–804)**, educator and tutor of Charlemagne from 781. Born in York, he was educated in a school where one of his teachers had been a student of Bede. Author of several books and educational manuals, Alcuin's exegetical works make frequent reference to commentaries on scripture by Jewish scholars; his knowledge of them derives from the works of *Jerome. He was present at a religious disputation between a Christian scholar and a Jew in Pavia, Italy, held between 750 and 760.

ALDABI, MEIR BEN ISAAC (c. 1310–c. 1360), religious philosopher, with strong leanings toward the Kabbalah. Aldabi was a grandson of *Asher b. Jehiel. As a young man he received a comprehensive education in biblical and rabbinic literature, and afterward he turned to philosophical and scientific studies. In 1348 he apparently left his native Toledo and settled in Jerusalem, where, in 1360, he finished his long contemplated

work, *Shevilei Emunah* ("Paths of Faith"). It was first published in Riva di Trento, 1518.

Aldabi was moved to write his book by the belief, prevalent in the Middle Ages, that the Greek philosophers (especially Plato and Aristotle) derived the essentials of their knowledge from Jewish sources. He determined to assemble the fragments of ancient Jewish wisdom scattered throughout the various works of the philosophers and natural scientists and to trace them back to their original sources. Actually, as stated in the introduction, the book is merely a compilation of subjects and theories, some of them translated by him from foreign languages, and culled from different works. The various subjects are not arranged systematically but are presented in random sequence. He borrowed mainly from Hebrew literature and to some extent, particularly in the fields of medicine and astronomy, from Arabic literature. His philosophy is based largely on that of *Maimonides, his ethics on that of *Bahya b. Joseph ibn Paquda, and his theology on that of *Naḥmanides and his circle. The influence of the last is particularly evident in Aldabi's predilection for Kabbalah which he ties in with his rationalist philosophy. He relies on the encyclopedic *Sha'ar ha-Shamayim* of his predecessor Gershon b. Solomon of Arles, and for his psychological theories he uses the views of Joseph ibn *Zaddik and *Hillel b. Samuel of Verona. Aldabi's book is divided into ten "paths" (*netivot*) in which he treats (1) the existence and unity of God, His names, and divine attributes both from a philosophic and a kabbalistic point of view; (2) the creation of the world, geography and astronomy, and the elements; (3) the creation of man and family life (part of this section is taken, without acknowledgment, from the *Iggeret ha-Kodesh* of Naḥmanides); (4) embryology, anatomy, and human physiology (a digest of the accepted theories on anatomy and physiology in medieval medicine, presented on the basis of the comparison between the microcosm and macrocosm); (5) rules for physical and "spiritual" hygiene (on the nature of anger, joy, and the like); (6) the nature and the faculties of the soul; (7) religious observances as defined by the Torah and rabbinic tradition; (8) the uninterrupted chain of the Oral Law from Moses to the Talmud; (9) reward and punishment and metempsychosis; and finally (10) the redemption of Israel, resurrection, and the world to come.

The last two chapters are based largely on the opinions of Naḥmanides and Solomon b. Abraham *Adret.

[Meir Hillel Ben-Shammai]

ALDANOV, MARK (pseudonym of **Mark Aleksandrovich Landau**; 1889–1957), Russian novelist. Aldanov was born in Kiev and trained as a chemist and lawyer. He left Russia in 1919 and settled in France. During World War II he lived in

the United States, but eventually returned to Europe and died in Nice. A writer of exceptional erudition and sophistication, Aldanov excelled in the historical novel – a genre in which he had few peers in Russian literature. He also wrote other prose works including several treatises on the philosophy of history. He is best remembered for his tetralogy *Myslitel* (“The Thinker”), a work set in Russia and Western Europe during the Napoleonic era. Aldanov’s novel *Desyataya simfoniya* (1931; *The Tenth Symphony*, 1948) is based on the life of Beethoven; and *Nachalo kontsa* (1936–42; *The Fifth Seal*, 1943) depicts Europe on the eve of World War II. Aldanov was singularly successful in blending historical and fictitious characters and events, but unlike so many other Russian novelists – especially Tolstoy in *War and Peace* – he erected his historical scaffolding merely as a support for the fictional structure. This did not, however, discourage his tendency to devote more time to historical research than to pruning his own work. Aldanov also differed from Tolstoy in believing that the fate of men and nations was shaped not by laws but by historical accident. His writing shows a partiality for paradox and a fondness for a pose of ironic detachment. His novels were translated into many languages but, unlike those of some of his émigré colleagues, were unobtainable in the U.S.S.R. A staunch anti-Communist, Aldanov remained a liberal Russian intellectual, retaining only tenuous links with his Jewish heritage.

ALDEMA, GIL (1928–), Israeli musician and composer. Aldema’s father, Abraham Eisenstein (Aldema), was active in the early Israeli satirical theater. Gil Aldema studied piano and violin. Among his teachers were Menashe Rabina and Paul *Ben-Haim. During his army service he was wounded. Later he studied at the Jerusalem Music Academy and directed folk singing activities. In 1952 he became a music teacher and composed his early songs. In 1957 he went to the U.S. to study music and worked as a music arranger for the Carmon Dance Company. From the 1960s to the 1980s he worked at Kol Israel (Israel Broadcasting Authority) as a musical director of light music. Aldema is known for his work and arrangements for choirs such as Rinat, Cameran, and others. He composed many songs, such as “*Ana Halakh Dodekh*,” “*Ashirah li-Yedidat*,” “*Zemer Ikkarim*,” “*Maḥol Dayyagim*,” and more, which were published in *Ziyyunei ha-Derekh* (1979), *Maḥberet Mezameret* (1981), *Shir le-Elef Arisot* (1983), and *Menifah Kolit* (2000). Among his awards are the AKUM Prize for his contribution to Israeli folk music (1984) and the Israel Prize for Israeli folk songs (2004).

[Gila Flam (2nd ed.)]

ALDERMAN, GEOFFREY (1944–), British historian. An Oxford graduate, Geoffrey Alderman was professor of politics and contemporary history at Middlesex University in London and later vice president of American Intercontinental Univer-

sity in London. One of the best-known historians of the Jewish community in Britain, Alderman is the author of *Modern British Jewry* (1992), a sophisticated and deeply researched history of the Anglo-Jewish community since 1858; *The Jewish Community in British Politics* (1983); *London Jewry and London Politics, 1889–1986* (1989); a history of the right-wing Orthodox, *Federation of Synagogues, 1887–1987* (1987); and other works. In recent years he has written an often controversial weekly column in the *Jewish Chronicle* newspaper, which generally reflects his Orthodox Zionist viewpoint.

[William D. Rubinstein (2nd ed.)]

°**ALDO MANUZIO** (1449–1515). Italian humanist, Hebraist, and printer. In 1494 he set up a printing press in Venice which soon became famous. Printing Greek and Latin grammatical works, he appended to several of them the first printed Hebrew grammar for Christian students (*Introductio perbrevis in linguam hebraicam*, date of foreword 1501). This was reprinted separately eight times by Aldo himself under a slightly different title (a facsimile reprint was published in 1927). Aldo also printed Leone Ebreo’s (Judah *Abrabanel) *Dialoghi di Amore* (1544, 1545) calling him a convert to Christianity. The type is very similar to that used by Gershom *Soncino. This led to a rather acrimonious competition between the two great printers.

ALDRICH, ROBERT (1918–1983), U.S. director, producer. Born in Cranston, Rhode Island, to a prominent East Coast family, Aldrich departed from family tradition to become one of Hollywood’s most provocative filmmakers. After attending the University of Virginia, where he played football and studied economics, Aldrich began his film career as a production clerk for RKO at the onset of WWII. Aldrich quickly became an assistant director and spent the rest of the decade learning from esteemed directors such as Lewis Milestone, Joseph Losey, Abraham Polonsky, and Charlie Chaplin. Aldrich made his directorial feature film debut in 1953 with *The Big Leaguer*. The following year, he made his directorial breakthrough with the western *Apache* featuring Burt Lancaster as a pacifist Native American warrior in a film that presaged Aldrich’s career-long exploration of violence and morality. Aldrich solidified his reputation as a director with *Vera Cruz* (1954), another western starring Lancaster, this time opposite Gary Cooper, as the two men vied for gold in Mexico. Aldrich’s distinctive style continued to crystallize in two provocative film-noir features, *Kiss Me Deadly* (1955) and *The Big Knife* (1955), both of which earned him critical acclaim in Europe. After a series of disappointing films in the late 1950s, Aldrich rejuvenated his career with *What Ever Happened to Baby Jane?* (1962), for which Bette Davis won the Academy Award for Best Actress. Aldrich’s turbulent career was marked by two more high-

lights, *The Dirty Dozen*, the highest grossing film of 1967, and the popular prison film *The Longest Yard* (1974), starring Burt Reynolds. Aldrich served as president of the Director's Guild of America from 1975 to 1979, during which he successfully lobbied for increased creative authority for directors.

ALDROPHE, ALFRED-PHILIBERT (1834–1895), French architect. Born in Paris, Aldrophe designed the French buildings at the international exhibitions (1855, 1867). He designed the synagogues in the Rue de la Victoire and at Versailles. He also built private homes in Paris including that of Baron Gustave de *Rothschild. He erected several important monuments in the Père-Lachaise cemetery.

ALDUBI, ABRAHAM BEN MOSES BEN ISMAIL (14th century), Spanish talmudist. Aldubi studied under Solomon b. Abraham *Adret and was the teacher of *Jeroham b. Meshullam. The whole of his *Seder Avodah bi-Kezarah*, dealing with the Day of Atonement service in the Temple, was incorporated by Jeroham in his *Toledot Adam ve-Havvah*. Aldubi's book *Hiddushim ve-Shitah to Bava Batra* is mentioned in the responsa of Moses b. Isaac Alashkar (1554), and one of his responsa is printed in the *Zikhron Yehudah* (1846) of Judah the son of *Asher b. Jehiel.

[Zvi Avneri]

ALECHINSKY, PIERRE (1927–), Belgian painter. Alechinsky was leader of the CoBrA group of artists, formed in Brussels, which fostered a spontaneous approach to painting and opposed social realism on the one hand and a calculated abstraction on the other. Alechinsky's works have been described as "explosive." They are characterized by a sense of perpetual movement and flux in which incomplete forms appear and dissolve. Alechinsky studied at the Ecole Nationale d'Architecture et des Arts Décoratifs in Brussels. In 1951 he moved to Paris, joining other members of the CoBrA group. Later he visited Japan, where he made a film on Japanese calligraphy. Alechinsky exhibited at the Venice and São Paulo Biennales.

ʾALEF (Heb. אָלֶף; אַ), first letter of the Hebrew alphabet; its numerical value is 1. It is a plosive laryngal consonant, pronounced according to the vowel it carries. The earliest clear representation of the ʾalef is to be found in the Proto-Sinaitic inscriptions of c. 1500 B.C.E. This acrophonic pictograph of an ox-head (*alp*) א develops through the Proto-Arabic א and South Arabic א into the Ethiopic א on the one hand, and through the Proto-Canaanite א and א into the tenth–ninth

centuries B.C.E. classical Phoenician ʾalef א on the other hand. The Ugaritic consonantal cuneiform script of the 14th century B.C.E. has three ʾalef signs: א (ʾa), א (ʾi), and א (ʾu). About 800 B.C.E. the Greeks borrowed the Phoenician ʾalef and used it as a vowel (*alpha*). They altered its stance and turned it into Α, a shape which was adopted by Latin, among other scripts. While the Phoenician ʾalef underwent its own evolution (א – fifth century B.C.E., א – Punic, א – Neo-Punic), the Hebrew and the Aramaic scripts, which derived from Phoenician, developed it as follows: in seventh century B.C.E. Hebrew, along with the cursive forms א and א there existed a formal one: א. The latter survived in the Paleo-Hebrew Dead Sea Scrolls and its variations occur on Jewish coins as א, א and in late Samaritan as א. The development of the Aramaic cursive ʾalef in the seventh and sixth centuries B.C.E. was א → א → א → א; and in the fifth century B.C.E., it reached its classical form א. The latter is the ancestor of the first letters of many alphabets which developed from the third century B.C.E. onward. They include: Nabatean: א → א → א → א → א. The last form, which occurs in the first century C.E. documents found near the Dead Sea, indicates the date when the Arabic ʾalif was fixed. The Palmyrene א turned into the Syriac א (Estrangela), but in other Syriac systems it is a vertical stroke resembling the Arabic. The Jewish (square Hebrew) ʾalef preserved the shape of its Aramaic ancestor. Although there is a tendency to curve the left leg – as in Nabatean and Palmyrene, e.g., the Nash Papyrus – the straight-legged ʾalef א prevails. The Jewish cursive forms of the time of the Herodian dynasty א, א disappeared apparently after the period of Bar Kokhba. The Jewish formal ʾalef did not change its basic shape during the following period. In the cursive styles of the various Jewish local systems the left leg became the main stroke – א; so it is in the Ashkenazic cursive from which stems the modern cursive ʾalef א, א. See *Alphabet, Hebrew.

[Joseph Naveh]

Alef in Aggadah and Folklore

The *alef* is more personified than any of the other Hebrew letters. Praised is its humility, which is reflected in the fact that it did not ask God to be the means of creation nor that the Bible be started with it (the Bible begins with the second letter of the alphabet *bet*). The *alef* was rewarded by starting the Decalogue (אָנֹכִי, *Anokhi*; "I") and by denoting the highest number, אָלֶף (alef, "thousand"). The three letters (א, ל, נ) which constitute the *alef* have been interpreted according to different homiletic means such as the **notarikon* אָפֶתַח לְשׁוֹן פֶּה (*eftah leshon peh*; "I shall open the tongue (and) mouth") which is the opening phrase of God's proclamation: "I shall open the tongue (and) mouth of all people to praise Me, or to study, and teach" (*Midrash Alfa Beta de-Rabbi Akiva* in A. Jellinek, *Beit ha-Midrash*, 3 (1938²), 12–14; cf. the use of the root אָלֶף in Job 33:33). Since *alef* is the initial letter of God's name at the time of Creation (אֱלֹהִים, *Elohim* in Gen. 1:1) and of the three words alluding to His Ineffable Name (אֶשֶׁר אֵשֶׁר אֵשֶׁר in Ex. 3:14), it is fundamental in Hebrew inscriptions in *amulets and letter

magic. Similarly, the letter “א” is to be found at the end of the European magic-formulistic inscriptions belonging to the “abracadabra” type. The expression “from *alef* to *tav*” (Shab. 55a and Av. Zar 4a) corresponding to that of “Alpha and Omega” (Rev. 1:8 and 22:13) denotes complete integration.

ALEGRE, ABRAHAM BEN SOLOMON (1560–1652), rabbi and scholar of Constantinople. Ḥayyim *Alfandari in his *Maggid me-Reshit* records Alegre’s controversy on a halakhic issue (responsa 4, 5). His own responsa were published together with those of Jacob Shalem Ashkenazi (Sephardi emissary of Jerusalem), in Salonika in 1793. Alegre is more widely known by the title of his extensive commentary on Maimonides’ *Sefer ha-Mitzvot, Lev Same’ah*, (Constantinople, 1652), printed in the Israeli edition of the *Mishneh Torah* (vol. 1, 1962). In this work, which took 40 years to complete, Alegre analyzes the 14 principles defined by Maimonides in the introduction to his *Sefer ha-Mitzvot* and those on which he based the enumeration and classification of the *mitzvot*. He particularly justifies Maimonides against the strictures of Naḥmanides on the *Sefer ha-Mitzvot*. His son-in-law, Levi Teglio, in a foreword to the *Lev Same’ah*, states that Alegre wrote a homiletical work and a book of responsa.

[Abraham Hirsch Rabinowitz]

ALEINU LE-SHABBE’AH (Heb. עֲלֵינוּ לְשַׁבְּחָה; “It is our duty to praise [the Lord of all things]”), prayer now recited at the conclusion of the statutory services. Originally it introduced the **Malkhuyot* section of the Rosh Ha-Shanah additional service in which the kingship of God is proclaimed and where it is recited with great solemnity. Its theological importance secured for it, from the 12th century at least, a special place in the daily order of service (*Maḥzor Vitry*, p. 75); first at the conclusion of the morning service and later at the end of the other two daily services as well (*Kol Bo*, no. 16). As with some other prayers, it was taken over from the New Year liturgy into the additional service of the Day of Atonement.

The style of *Aleinu* is that of the early *piyyut*, composed of short lines, each comprising about four words, with a marked rhythm and parallelism. It is one of the most sublime of Jewish prayers, written in exalted language.

It is referred to as *Teki’ata de-Vei Rav* (“The *Shofar* Service of *Rav”) and it has therefore been ascribed to this third-century Babylonian teacher (TJ RH 1:3, 57a; cf. Av. Zar. 1:2, 39c). But the *Aleinu* may be considerably older. According to one popular tradition, it was composed by Joshua (*Arugat ha-Bosem*, ed. by E.E. Urbach, 3 (1962), 468–71); according

‘ALEINU
Ex. 1 Three “Realizations” of the 19th Century.

The musical score for 'ALEINU' is presented in three systems, each corresponding to a different realization. Each system consists of three staves labeled A, B, and C.
 - **System 1:** Realization A (West Ashken. Abraham Baer) starts with a treble clef and a common time signature. It features a melodic line with a '1a' marking and a 'b 3' marking. Realization B (East Ashken. H. Weintraub) follows a similar pattern. Realization C ('Acculturated' L. Lewandowski) is in a different style, marked with 'C' and 'L. Lewandowski'.
 - **System 2:** Realization A includes a '3' marking and a 'II' section with an 'ossia' marking. Realization B and C continue the melodic development.
 - **System 3:** Realization A includes a '5' marking and a 'III' section. Realization B and C continue.
 - **System 4:** Realization A includes a '3' marking and a 'IV' section. Realization B and C continue.
 - **System 5:** Realization A includes a '3' marking and a 'V' section. Realization B and C continue.
 - **System 6:** Realization A includes a '3' marking and a 'VI' section. Realization B and C continue.

to another, it was written by the Men of the Great Assembly during the period of the Second Temple (Manasseh Ben Israel, *Vindiciae*, vol. 4, p. 2). There are good reasons for placing it within that period, because there is no mention of the Temple restoration in the prayer while there is reference in it to the Temple practice of prostration. Prostration during *Aleinu* is still customary in the Ashkenazi rite in most communities on Rosh Ha-Shanah and on the Day of Atonement, while in the other services the congregants bow when reciting the words “we bend the knee...” The description of God as the “King of the kings of kings” may be due to Persian influence, since the Persians described their king as “the king of kings” (cf. Dan. 2:37). It has been suggested that the prayer has its origin in early *Merkabah mysticism; a version of *Aleinu* was recently found among hymns used by the early mystics (see bibliography).

Contents

The main theme of the prayer is the kingdom of God. In the first part, God is praised for having singled out the people of Israel from other nations, for Israel worships the One God while others worship idols. The second paragraph expresses the fervent hope for the coming of the kingdom of God, and the universal ideal of a united mankind which will recognize the only true God, and of “a world perfected under the kingship of the Almighty.” The juxtaposition of the two paragraphs provides a coherent theology connecting the idea of a chosen people (Israel) with the challenge that such distinctiveness has for its purpose, religious union and the perfection of mankind under the kingdom of God.

Censorship

In the Middle Ages the prayer was censored by Christians as containing an implied insult to Christianity. They claimed that the verse “for they prostrate themselves before vanity and emptiness and pray to a God that saveth not” was a reference to Jesus. Pesah̄ Peter, a 14th-century Bohemian apostate, spitefully alleged a connection between the numerical value of the Hebrew word וְרִיק (va-rik; “and emptiness”) and ישו (Yeshu; the name of Christ). The elder *Buxtorf (16th century) and *Eisenmenger (17th century) and others repeated the charge; and Jewish apologists from Lippmann Muelhausen (15th century) to Manasseh Ben Israel and Moses Mendelssohn were at pains to refute it. However, the 13th-century *Aruḡat ha-Bosem* by Abraham b. Azriel does mention a tradition that the numerical value of לְהֵבֵל וְרִיק (la-hevel va-rik; “vanity and emptiness”) equals ישו וְיִחְמַד (Yeshu u-Muḥammad; Jesus and Muhammad). Some ecclesiastical censors also deleted the previous passage: “Who did not make our portion like theirs, nor our lot like that of all their multitude.” Eisenmenger refers to the custom of spitting at the offending word which he interprets as an additional insult to Christianity. This was, no doubt, a popular gesture suggested by the double meaning of rik (“emptiness” and “spittle”). In view of this accusation, rabbis such as Isaiah Horowitz discouraged the indecorous prac-

tice. (The popular Yiddish phrase, *er kummt tsum oysshpayen* (“he comes at the spitting”) came, therefore, to describe someone who arrived at a service as late as the concluding *Aleinu*.) The censors remained adamant even when it was pointed out that the offending phrase is found in Isaiah (30:7; 45:20), that the *Aleinu* prayer is probably pre-Christian, and that if Rav was the author, it was composed in a non-Christian country. The line had to be removed from Ashkenazi prayer books. In 1703 its recital was prohibited in Prussia. The edict, which provided for police enforcement, was renewed in 1716 and 1750. Even earlier, some communities omitted or changed the offending lines as an act of self-censorship (e.g., by replacing *she-hem*, “for they [prostrate themselves before vanity],” with *she-hayu*, “for they used to...”). The Sephardim – especially in Oriental countries – retained the full text and it has now been restored to some prayer books of the Ashkenazi rite as well.

The Blois Tragedy

*Ephraim of Bonn tells how the Jews of *Blois, martyred in 1171, went to their death chanting *Aleinu* to a soul-stirring melody which “at the outset... was subdued, but at the close was mighty.” The messianic theme of the second paragraph would have made it especially significant for the Jew in the tragic moments of his history, and it takes its place with the *Shema* as a declaration of faith. Its introduction into the daily service may have been an act of defiance when Christian pressure was on the increase.

Reform Usage

In the Reform liturgy the prayer, with some modifications, has retained its importance and is called the “Adoration.” The Ark is opened and the congregation bows as the words “we bow and prostrate ourselves” are recited.

Music

The *Aleinu* of the *Musaf prayer of the Penitential Feasts is notable, in Ashkenazi tradition, for its music; the Sephardi and eastern communities sing it to one of their regular prayer modes. A musical peculiarity was claimed for the Ashkenazi tune as early as 1171, when it was sung by the martyrs of Blois (Neubauer-Stern, p. 68, 202). Its written tradition, however, dates from the 18th and 19th centuries. The Ashkenazi *Aleinu* belongs to the class of unchangeable *Mi-Sinai tunes. Thus, it cannot be traced back to a definite archetype, but only to a basic concept or musical idea which is executed differently in every performance.

The *Aleinu* tune consists of seven melodic sentences or “themes” (see Music Example), always produced in the same order. Four of them, nos. I, IV, V, and VI, are virtually invariable in outline; the others, especially the final themes III and VII, are frequently changed. The *Aleinu* has several themes in common with other *Mi-Sinai* tunes: IV, V, VI, and VII³ recur, in the same order, in the *Avot* Benediction; II, V, and VII² are known from the **Kol Nidrei*. Apart from mere ornamental elaboration and minor variants, three main patterns of melodic realization can be distinguished: (1) the predomi-

nant version (Examples 1A and 1B), known to both western and eastern Ashkenazi communities. This is well on the way to major tonality which gradually replaces the original mode (featuring a diminished seventh). Cantors from Russia often omitted some of the themes, except 1 and 5, replacing them by repetitions. This points to a western-Ashkenazi origin for the tune. (2) "Acculturated" versions (such as Example 1C) came into being in the mid-19th century. They feature drastic reduction of coloraturas and decided major tonality. (3) A presently obsolete, expanded version was current in the 18th and early 19th century. It is excessively ornate, and may be regarded as a cantorial development of or a "fantasia" on the traditional tune. Many of its extended vocalizations and trumpet flourishes represent a musical illustration of certain mystical intentions (*kavvanot*) connected with the prayer. An old theory proposes a relationship between the tune of *Aleinu* and the Sanctus of the Roman Mass IX. Since the latter, however, is not dated earlier than the 14th century, no conclusions can be drawn from the slight similarity between the two tunes.

°ALEKSANDER JAGIELLONCZYK (1461–1506), grand duke of Lithuania 1492–1501, king of Poland 1501–06. In 1495 Aleksander expelled the Jews from Lithuania. The young prince may also have been indoctrinated by his rabidly anti-Jewish mentor Jan *Dlugosz. Aleksander would also have found it convenient to confiscate the property of the exiles to finance his wars against Russia. When elected king of Poland, however, Aleksander's attitude toward the Jews was more tolerant. In 1503 he allowed the exiled Lithuanian Jews to return. The Polish code, compiled by his chancellor Jan Laski (1506), includes the former grants of privileges accorded to Polish Jewry, but with the preamble that their incorporation is "to protect the citizenry from the Jews."

ALEKSANDRIYA, small town in Rovno district, Volhynia, Ukraine. The Jews settled there before the *Chmielnicki upris-

ing (1648–50) and suffered at the hands of the Cossacks. Few Jews lived there until 1700, when they were obliged to pay a 350-zloty head tax. The community grew rapidly in the 19th century. In 1847 it numbered 728 and in 1897, 2,154 (out of a total population of 3,189). Jews built a sugar refinery, textile factories, and a sawmill, and rented flour mills from Count Lubomirski. The community maintained a school, a club, and a Hebrew library. The Zionist movement was very popular there. The Hebrew Tarbut school founded in 1917 served as a model for most of the towns of Volhynia. The Jewish population numbered 1,700 in 1939. During Soviet rule in 1939–41 all Jewish political parties, organizations, and cultural institutions were closed and the economy was nationalized. The Germans occupied Aleksandriya on June 29, 1941, and in the following days pillaged Jewish property and burned down the synagogues with the help of local peasants. On July 31, 85 Jews were executed. On September 22, 1942 about 1,000 Jews, including women, children, and the aged, were taken to the forest at Swiaty and murdered. Fifty Jews returned to the town after the war but soon left for Palestine.

ALEKSANDRIYA (originally **Becha**), town in Kirovograd district, Ukraine. The first Jews settled in Aleksandriya at the end of the 18th century. In 1864 they numbered 2,474, and in 1897, 3,735 (26% of the total population). In 1910 the community had five synagogues, a *talmud torah* and a communal school, and 11 *hadarim* with 230 pupils. The main occupation of the Jews in Aleksandriya was garment manufacturing. In a pogrom on April 23, 1882, Jewish shops and homes were pillaged. On the Day of Atonement of 1904 (September 6), three Jews were killed and several injured in a pogrom. During the civil war of 1919–20, the Jews in Aleksandriya endured great suffering, Aleksandriya being the headquarters of Ataman Grigoryev, leader of the Ukrainian pogrom bands. They were also attacked by Denikin's "White" army. In 1926 the Jewish population in Aleksandriya numbered 4,595 (23% of the total). During the Soviet period most of the Jews worked as artisans in cooperatives. The central Chabad synagogue was still operating in the early 1930s. The Jewish population declined to 1,420 persons in 1939 (total population 19,755). Aleksandriya was occupied by the Germans on August 6, 1941. They murdered 463 males on September 19, and over 300 on August 29. In all, 2,572 were murdered, including Jews from the surrounding area.

ALEKSANDROW (Danziger), influential dynasty of ḥasidic rabbis in Poland active from the second half of the 19th cen-

tury (see *Hasidism). Their “court” was at *Aleksandrow Lodzki (Yid. Alexander), a small town near Lodz. In contrast to the Hasidim of Góra-Kalwaria (Yid. Ger), the Aleksandrow Hasidim generally did not take part in Jewish party politics in Poland.

The founder of the dynasty, SHRAGA FEIVEL DANZIGER (d. 1849) of Grójec (Yid. Gryce), was rabbi in the small towns of Sierpc, Gąbin, and Maków; Shraga succeeded his *rebbe*, R. Isaac of Warka. His son, JEHIEL, the disciple of Isaac of Warka, settled in Aleksandrow and made it the seat of the “court.” Jehiel’s son, JERAHMEEL ISRAEL ISAAC (1853–1910), was the outstanding member of the dynasty. He was learned in a wide variety of subjects and had a keen intellect, and was beloved by the Hasidim. A natural leader, Jerahmeel would question his followers about their circumstances and advise them accordingly, consoling, encouraging, and reproving. He had a small circle of learned disciples, but also provided moral guidance to all his followers. He wrote *Yismah Yisrael* (1911). Jerahmeel’s brother and his successor was SAMUEL ZEVI (d. 1925). The last rabbi of the line, ISAAC MENAHEM (1880–1943), established a network of Aleksandrow yeshivot in various places. He perished in the concentration camp at *Treblinka. He wrote *Akedat Yizhak* (1953). After the war, JUDAH MOSES TIEHBERG, Jehiel’s grandson, head of a yeshiva in Bene-Berak, was declared “Aleksandrow Rabbi.” He wrote *Kedushat Yizhak* (1952) on the Aleksandrow dynasty.

ALEKSANDROW LODZKI, town in central Poland, founded in 1818. The first Jewish residents were under the jurisdiction of the Lutomiersk *kahal*, but an independent community was established in 1830 by Jews who came from Lutomiersk. In 1826 the governor of the Polish Congress Kingdom granted the community a privilege permitting them to reside and acquire property in specified areas of the town. The Jewish population of Aleksandrow Lodzki numbered around 1,000 in the 1850s; 1,673 (27.9% of the total population) in 1879; 3,061 (24.1%) in 1909; and 2,635 (31.9%) in 1921.

Holocaust Period

In 1939 there were 3,500 Jews in Aleksandrow, comprising one-third of the total population. The German army occupied the town on Sept. 7, 1939, and on the following day set the main synagogue afire and forced the Jews to burn the Torah scrolls which were found in private homes. There were several cases of *kiddush ha-Shem* when Jews sacrificed their lives while trying to save the sacred books. Kidnapping of Jews in the streets, open robbery, and the imposition of ever higher ransoms continued until the end of 1939. In this period the famous “court” of the Aleksandrow zaddik (Danziger) was liquidated. All Jews of Aleksandrow were expelled to Glowno (in the Generalgouvernement) on Dec. 27, 1939. Some of them remained there

and the others were deported to other towns of the Generalgouvernement. The Jewish cemetery of Aleksandrow was plowed up and turned into a park.

ALEMÁN, MATEO (1547–c. 1615), Spanish novelist of “New Christian” descent. He studied medicine at Salamanca and Alcalá. Always poverty-stricken, he was several times imprisoned for debt. *Conversos were forbidden to leave Spain, but Alemán secured permission by means of a bribe and arrived in the New World in 1608. Alemán’s fame rests on one great work, the *Guzman de Alfarache*, the first part of which was published in 1599, the second in 1604. This is a picaresque novel marked by a skillful fusion of narrative and didactic elements. The picaresque genre was introduced in 1554 with an anonymous work called *La vida de Lazarus de Tormes ...*. The bitterness expressed in the novel has been ascribed to its author’s position as a Converso, one of whose ancestors was burned in an auto-da-fé, while some have suggested that it may merely reflect Alemán’s personal disillusionment. In the novel Alemán contrasts the nobility that has possessions and power with the “ignobility” that lacks lineage and respectability. He died in Mexico.

[Kenneth R. Scholberg / Yom Tov Assis (2nd ed.)]

ALEMANNO, JOHANAN BEN ISAAC (1435/8–after 1504), philosopher, kabbalist and biblical exegete. A descendant of an Ashkenazi family expelled from France, his father married an Aragonese Jewess, and the family came to Italy because of his grandfather’s (Elijah) mission to the Pope.

Alemanno himself was born in Mantua and was reared in Florence in the house of Jehiel of *Pisa, where he acquired a thorough education in several disciplines, especially philosophy. Later he taught in various cities in Italy. At the age of 35 he settled in Mantua where he was among the guests of Luigi III Gonzaga, and studied with R. Yehudah Messer Leon. In 1488 he returned to Florence, where he again stayed with the family of Jehiel of Pisa until they left Florence in 1497. In the house of this patron Alemanno spent some quiet years and was able to complete the works he had begun and to embark on new ones. The most important of these works are the following:

(1) *Heshek Shelomo*, a philosophical commentary on the Song of Songs, which Alemanno began at the age of 30. In 1488 he read portions of his manuscript to Giovanni *Pico della Mirandola who urged him to complete it. The work, thus far never printed in its entirety, is extant in manuscripts (Bodle-

ian, 1535, British Museum 227, Ms. Moscow-Guensburg). A substantial part of Alemanno's introduction to it was published by Jacob Baruch under the title *Sha'ar ha-Heshek* (Leghorn, 1790) in a very imperfect edition, which was reprinted in Halberstadt (c. 1862) without change. In addition, some fragments of the work were published in various places. The introduction constitutes almost half of the book, and opens with a lengthy section, *Shir ha-Ma'ilot li-Shelomo*, glorifying King Solomon, as a philosopher, Kabbalist and magician. Alemanno goes on to discuss the content, character, form, and significance of the Song of Songs. In his opinion, the book in its simple sense treats of earthly love, although allegorically Solomon sought to depict divine love.

(2) *Einei ha-Edah* an unfinished philosophic-kabbalistic commentary on the Pentateuch still in manuscripts. The general line of thought resembles that of the *Heshek Shelomo*.

(3) *Hei ha-Olamim* is Alemanno's chief work, on which he labored from 1470 until 1503. One manuscript is found in the library of the Jewish community of Mantua, and another in the Jewish Theological Seminary (Rab. 1586). The work deals with the problem of how man may attain eternal life and rise to communion with God. The introduction prescribes a two-fold method of instruction to be followed by every teacher: for the masses, a simple method readily understandable to all; and for the learned and informed, a logical one calculated to remove doubt. In this work Alemanno makes use of both methods. He introduces two characters, the *Meliz Yosher al-Leshono* ("the felicitous interpreter") who presents each subject in succinct and simple words; and the *Dover Emet bi-Levavo* ("one who speaks the truth in his heart") who engages in elaborate proofs. The author charts the career of the ideal man; he describes man's physical life from conception to maturity and indicates the preparations one should undertake at every stage of his life to attain perfection. Then he discusses man's spiritual development through the perfection of his moral and intellectual capacities. The final goal is the attainment of the perfect love of God and union with Him. The work constitutes an encyclopedia of the knowledge of Alemanno's time.

(4) *Likkutim* are various notes and reflections, among them, those of the years 1478 and 1504, which Alemanno had intended to later incorporate into his other work. It is extant in manuscript (Bodleian 2234). The material preserved in this compilation reflects the wide scope of his reading and his acquaintance with philosophical, Kabbalistic, magical and astrological traditions of Spanish extraction, and they serve as the main source of inspiration for his later works.

Alemanno often mentions a work of his entitled *Ha-Me'assef*; perhaps the reference is to the *Likkutim*. (The name *Likkutim* was originally used by Abraham Joseph Solomon Graziano in the 17th century.) Alemanno presumably wrote annotations to the *Hai ben Yoktan* by Abu Bakr ibn Tufayl found in manuscript (Munich 59). Another work by Alemanno, *Zeh Kol ha-Adam*, is also occasionally mentioned; it is probably identical with *Hai ha-Olamim*. In addition, he probably wrote *Pekah Ko'ah*, which has been lost. The works *Melekheth*

Muskelet – a book of magic translated from Greek into Latin and extant only in some Hebrew fragments from the circle of Alemanno – and *Peri Megadim* have been erroneously ascribed to him. Alemanno was well-versed in Greek and Arabic-Jewish philosophy and familiar with the Latin literature of antiquity and the Middle Ages. His erudition and writings were held in such high regard in his day that a scholar such as Pico della Mirandola wished to become his student in Hebrew literature. The hypothesis that Alemanno was the same person as Dattilo or Mithridates, both of whom moved in the circle of Pico della Mirandola, is unfounded. Alemanno's son Isaac was the teacher of Giovanni Francesco, the nephew of Pico della Mirandola. Alemanno influenced a series of Jewish Italian thinkers, more notably R. Isaac de Lattes and R. Abraham Yagel.

Alemanno was well-acquainted with Italian Jewish Kabbalah: mostly Abraham Abulafia's prophetic Kabbalah, and Menahem Recanati's writings, and he was part of a revival of interest in this lore evident among Jews and Christian in the Florentine Renaissance. He conceived magic as a high form of activity, even higher than Kabbalah, and described it as *Hokhmah ruhanit*, "the spiritual lore". He studied a number of Jewish and other type of magical books, like *Sefer ha-Levanah* and a *Sefer Raziel* translated from Latin, and resorted to astro-magic views, under the impact of the tradition of Abraham ibn Ezra and his many commentators in 14th–early 15th century Spain, whose writings he often quotes. This synthesis between Kabbalah and magic is evident also in Pico della Mirandola's thought. The affinities between Alemanno's thought and that of his Florentine Christian contemporaries still waits for detailed investigations. It is possible that Alemanno arrived in Jerusalem in 1522.

[Umberto (Moses David) Cassuto / Moshe Idel (2nd ed.)]

ALEPPO (Ar. **Ḥalab**; called by the Jews **Aram-Zoba** (**Aram Zova**)), second-largest city in Syria and the center of northern Syria. The Hebrew form of Aleppo (**Ḥaleb**) is, according to a legend quoted by the 12th-century traveler, *Pethahiah of Regensburg, derived from the tradition that Abraham pastured his sheep on the mountain of Aleppo and distributed their milk (*ḥalav*) to the poor on its slopes. According to Jewish tradition, mentioned by Rabbi Abraham Dayyan, the beginning of the community was in the era of Joab ben Zeruiah, the conqueror of the city in the time of King David, who also built the great synagogue. There are also other non-Jewish traditions which confirm the existence of the community in the Greek period. It would seem that the establishment of the Jewish community was in this period. Jewish settlement there has continued uninterrupted since Roman times. The ancient section of the great synagogue was built in the form of a basilica with three stoa during the Byzantine period; an inscription on it dates from 834. The Jews lived in a separate quarter before the Muslim conquest in 636. They lived separately during the Muslim period in the northeastern area of the city. The most ancient synagogue, named Kanisat Mutakal, was built in the fourth century and was located in the Parafara quarter in the northeastern region of the city. It is the oldest Jewish building in the city. During the Muslim period the Jewish quarter was named Mahal al-Yahud. In the Seljuk period the Jewish quarter was spread over a large area of the walled city. On the south it bordered on the market street, on the west the castle, on the east the Dār Al-Bbatih food merchandise area, and on the north the wall and the Jewish gate (Bab al-Yahud). This latter gate was named from the end of the 12th century Bab al-Naṣr (Victory Gate). In the anarchic period (1023–79) it seems that there were also Jews who lived outside the Jewish quarter. A document from the 12th century deals with a Jewish building in the market street. There was also a synagogue located in a new suburb outside the walls.

*Saadiyah Gaon was in Aleppo in 921 and it is said that he found Jewish scholars there. In the 11th century learned rabbis led a well-ordered community. R. Baruch b. Isaac was its leader at the end of the 11th century: fragments of his commentary on the *Gemara* as well as responsa have been found in the *genizah*. Apparently the *rosh kehillot* ("head of communities"), i.e., a leader common to the various communities of Jews (such as Babylonians, Palestinians, etc.), represented all Jews

before the Muslim authorities. The leader of the community of Aleppo during the years 1015–29 was Jacob ben Joseph, who came to Aleppo from Fustat and served there as *dayyan*. He was also the *dayyan* responsible for the other communities in the region and received the title *rosh kala* from the Babylonian academy. He also had in Aleppo a *bet midrash* and had students from various countries. His successor in the 1030s was Jacob ben Isaac, who served as the *dayyan* of the Aleppo community. He died c. 1036. His successor as *dayyan* was Tamim ben Toviah. His grandson Tamim ben Toviah is known from another document dated 1189. A famous rabbi of the community, Barukh ben Isaac, served as *dayyan* in Aleppo from the 1180s. In the 1190s he headed a *bet midrash* and students gathered there around his son Joseph. Rabbi Barukh gave the proselyte Obadiah, who came to his *bet midrash*, a recommendation to the Jewish communities. Rabbi Barukh was known also as a significant halakhic *posek*, and as a Talmud *parshan*, too, and his commentaries were cited by scholars from Aleppo. He was busy also in public affairs.

The community seems to have had close contacts with Palestine, and heads of Palestinian yeshivot visited Aleppo. In the second half of the 12th century the great yeshivah of Baghdad was in contact with Aleppo. R. Zechariah b. Barachel, a disciple of the *gaon* *Samuel b. Ali of Baghdad, was appointed to head Aleppo's *bet din*. The scholars of Aleppo also exchanged letters with *Maimonides; R. *Joseph b. Aknin, Maimonides' disciple, lived in Aleppo at that time. We identify this scholar with the leader of the community in the 12th century, Joseph b. Judah Ibn Simeon. This scholar was a merchant who traveled to India and other lands and later returned to Aleppo, bought a big estate outside the city, and founded on it a *bet midrash*. He was also the court physician of Al-Malik Al-Tahir. Maimonides wrote that the Jews of Aleppo were very sociable, sat in taverns, and listened to music. In the castle of the city, ancient Jewish tombstones from the years 1148 and 1217–31 survived. With the inclusion of the town in Nūr al-Dīn's (Noureddin) kingdom in 1146, security improved. *Benjamin of Tudela estimated in 1173 the number of Jews in Aleppo as 5,000 (according to the best-preserved manuscript versions, but according to another manuscript the number was only 1,500). Community leaders such as R. Moses Alcostandini, R. Israel, and R. Shet appear in the letters of the Gaon *Samuel ben Ali. After *Saladin's death, Aleppo became the capital of an independent kingdom and until the middle of the 13th century the city enjoyed security and prosperity which the Jews shared. In 1217, Judah *Al-Ḥarizi visited Aleppo and reported that there were several Jewish scholars, physicians, and government officials active there at the time. He noted the names of R. Samuel, who was a scribe in the court, and the physician Eleazar. Among other persons cited by him were R. Azaryahu, a descendant of the exilarch; R. Samuel b. Nissim (*ḥakham* Nasnot), who was the head of the local academy; R. Yeshuah; R. Yachun; Shemarya and his sons Muvkhar and Obadiah; R. Joseph, the son of Ḥisdai; R. Samuel, who was the king's scribe; and the physician Hananiah b. Bezalel. Al-

Ḥarizi died in Aleppo in December 1225. A famous scholar who lived in Aleppo during the 13th or 14th century was R. Judah *Al-Madari, who wrote commentaries on the *Gemara*. In 1014 Muslims plundered and destroyed Jewish and Christian houses. The great synagogue was under the authority of the Ereẓ Israel *gaon*, and the small synagogue was under the authority of Babylonian *geonim*. In the *Seljuk period only two synagogues survived in the city. In the *Ayyubid period the Muslim authorities converted synagogues into mosques. In the days of al-Malik al-Tahir the Jewish cemetery and the Jewish gate were destroyed. Muslims used Jewish tombstones to reconstruct the castle. Throughout the Muslim period the Jewish community in Aleppo had considerable autonomy and organized institutions.

The Mongol conquest (1260) led to the slaughter of Jews, but the central synagogue, untouched by the invaders, offered asylum to many. The same year, the Mamluks defeated the Mongols and ruled over Syria until the beginning of the 16th century. Aleppo, their stronghold in northern Syria, contained a large garrison which brought further prosperity to the community. There were several wealthy merchants, officials, craftsmen, and outstanding scholars among the Aleppo Jews. The rich community maintained educational institutions and scholars. The growth of Muslim intolerance under rulers from Cairo and Damascus and the periodical publication of discriminatory laws against non-Muslims had their effect on the life of the community. In 1327, the synagogue was turned into a mosque with the approval of the sultan of Cairo and its name became the Al-Hayyat (“Snake”) mosque. In the 13th century a group of *Karaites lived in Aleppo, but they disappeared in the following centuries. The end of the 14th century saw a power struggle between opposing factions of the leaders of the Mamluks and heavy taxes were imposed on the civilian population. In 1400, Tamerlane captured Aleppo with much bloodshed and destruction. Many Jews were killed and enslaved. The community gradually overcame this disaster and in the second half of the 15th century Aleppo Jews again traded with India and scholars resumed their learned activities. In the Mamluk period (1260–1517) the Jews lived in the old quarter and were active as merchants. Between 1375 and 1399 R. David, the son of Joshua, the *nagid* of Egypt, settled in Aleppo. The *nasi* of the community c. 1471 was Joseph b. Zadka b. Yishai b. Yoshiyahu. R. Obadiah of *Bertinoro pointed out in 1488 that the Jews of Aleppo had a good income. According to a census, 233 Jewish families lived there during 1570–90, but the real number was probably higher.

At the beginning of the 16th century exiles from Spain started to arrive in Aleppo, among them outstanding rabbis. They established a separate community although sharing the general institutions with the *musta'arabim* (Orientals). The Jewish population increased markedly; the great synagogue (called, “the Yellow”) could no longer accommodate all the congregation and in the second half of the 15th century an additional (eastern) wing was added where the Sephardim prayed. The leaders of the *Musta'arab* congregation were

members of the Dayyan family until the 19th century – in the 16th century: Moses and Saadiah Dayyan; in the 17th: Mordecai, Nathan, and Joseph Dayyan; in the 18th: Nathan, Mordecai (d. 1733), Samuel (d. 1722), Joseph, and Mordecai (d. 1774) Dayyan. The communal leader of the *Musta'arab* congregation during the 16th century was the *sheikh al-yahud*. The spiritual and intellectual leadership of the community gradually passed to the Sephardim, and important rabbis include R. Solomon Atartoros in the middle of the 16th century and after him R. Abraham b. Asher of Safed, R. Moses Chalaz, R. Eliezer b. Yoḥai, and R. Moses Halevi Ibn Alkabaz, R. Samuel b. Abraham *Laniado, his son, R. Abraham (who officiated until 1623), and his grandson, R. Solomon. In the 16th century disputes broke out between the *Musta'arab* and the Sephardi congregations, but later the relations between them improved and they lived peacefully. The leader of the community in the beginning of the 18th century was Samuel Rigwan. Other famous rabbis in the 18th century were Joseph Abadi, Samuel Deweik Hacoheh (d. 1732), Samuel Pinto (d. 1714), Mordecai Asban, Judah Kazin, Zadka Hutzin, Gabriel Hacoheh, Yeshayah Dabah, Michael Harari, David Laniado, Ḥayyim Ataya, Elijah Laniado, Isaac Antibi, Yeshayah Ataya, Ezrā Zaig, and Isaac Beracha. Famous scholars in the city in the same time period were the brothers Joseph (d. 1736) and Yom Tov Safsaya. From the end of the 17th century an academy (*yeshivah*) operated in Aleppo. In 1730 R. Eliya Silvera founded a Midrash Silvera and the first head of this institution was R. Yeshayah Dabah (d. 1772). R. Samuel Pinto was head of a *bet midrash* in the first half of the 18th century. Many of the above scholars wrote books on rabbinic subjects, most of them printed in Italy. In the 17th century significant Jewish manuscripts from Aleppo were bought in France and Britain. After the Ottoman conquest in 1517, constant contacts were established with the great communities in Constantinople and the other towns in Turkey, as were trade links with them and with Persia and India. Contacts with the Jews of Palestine were also close, and the influence of the Safed kabbalists was marked. Shabbateanism found many adherents in Aleppo, especially R. Solomon Laniado and R. Nathan Dayyan, R. Moses Galante and Daniel Pinto, and after *Shabbetai's apostasy, *Nathan of Gaza went to Aleppo and continued his activities there. In 1684 R. Solomon Laniado wrote a letter as the rabbi of the two congregations.

The traveler Texeira estimated c. 1600 the Jewish population of the city at about 1,000 families, many of them wealthy. According to the census of 1672 there lived in the city 380 Jews who paid the *jizya*, most of them *musta'arabs* and 73 of Spanish origin. In 1695 there were 875 Jewish families. The Jews numbered about 5% of the city's population in the Ottoman period. In 1803 the traveler Taylor estimated that there were only 3,000 Jews in the city.

In 1700, R. Moses b. Raphael Harari of Salonika was rabbi of Aleppo. He died in 1729. At that time, European Jews from France and Italy also settled in Aleppo; they participated in the extensive trade between Persia and southern Europe in which Aleppo served as an important station. These mer-

chants, called *Francos, enjoyed the protection of the consuls of the European powers and this created antagonism in the community. The Francos liberally supported communal institutions, but refused to pay the regular taxes and did not recognize the authority of the community. R. Samuel Laniado II, rabbi of Aleppo in the first half of the 18th century, strongly demanded that the Francos have the same obligations as all other Jews in Aleppo and that all the rules should bind them. In the second half of the 18th century the dispute flared up again when the chief rabbi, Raphael Solomon (b. Samuel) Laniado, tried to compel the Francos to accept the rules of the community and was opposed by R. Judah Kazin, who defended the Francos; the latter, in protest, ceased to take part in public prayers. The dispute had a social background, since the Francos were wealthy and learned and were attached to the ideas and customs they brought from Europe. At the end of the 18th century, with the decline of trade between Aleppo and Persia, the number of Francos dwindled. The prominent families among the Francos included Ergas, Altaretz, Almida, Ancona, Belilius, Lubergon, Lopez, Lucena, Marini, Sithon, Selviera, Siniore, Faro, Piccotto, Caravaglli, Rodrigez, and Rivero. There were also Jewish translators employed by the European consuls. The Ottoman authorities attempted to extort money from the Jewish translators by putting pressure on the Jewish community. The Jewish community, however, refused to release these translators from paying their share of the communal taxes.

From the 1520s until the mid-17th century, Jews as well as Christians filled the post of *emini gümürük*, that is, the chief officer of the local customs house charged with the collection of receipts. Many Jews died in the plagues which occurred during the Ottoman period. Many scholars in the community created halakhic literature, especially responsa, codes, homiletics, exegesis of the Bible, and liturgy. There were also rabbis who created kabbalistic literature. Many of these scholars settled in Erez Israel.

Between 1841 and 1860 three *blood libels occurred in Aleppo. In June 1853 the Greek-Catholic patriarch accused the Jews of Aleppo of kidnapping a Christian boy for ritual purposes. Despite the tension between Jews and Christians in the city, the Picciotto family helped the latter. Only a few Jewish students studied in the Christian schools. In 1854 the rabbis of Aleppo declared a *herem* (boycott) on any relations with the Protestant missionaries who tried to proselytize Jews. From 1798 until the end of the 19th century several European states appointed European Jews who had settled in Aleppo as their consular representatives. The first was Raphael Picciotto, who was appointed in 1798 consul of Austria and Toscana, and other members of his family were later appointed consuls of other states. Another Raphael Picciotto was consul of Russia and Prussia between 1840 and 1880; the consul of Austria-Toscana was Elijah Picciotto and after his death in 1848 his son Moses inherited this office. The consul of Holland was Daniel Picciotto and of Belgium Hillel Picciotto. The consul of Persia was Joseph Picciotto and of Denmark Moses Picciotto,

of Sweden and Norway Joseph Picciotto, and of the U.S. Hillel Picciotto. In the 18th century many local Jews acquired French or British citizenship. Until 1878 the French consul's attitude to Jews was negative, following the policy set by the consul Bertrand during his years in Aleppo (1862–78), but from 1878 the policy was changed by the consul Destree. British consuls protected the Jews of Aleppo throughout the century.

The *ḥakham bashi* in Aleppo was the supreme spiritual authority and from the 1870s there were two chief rabbis. The chief rabbi in 1858–69 was Hayyim Lebton, and after his death Saul Duwek (d. 1874), Mennaseh Sithon (1874–76), and Aaron Sheweika in the year 1880. The later rabbis were Moses Hachohen and Moses Sewid. The Francos established in the 18th century two schools for orphans and poor children. A great yeshivah was active. In 1862 the *vali* imprisoned R. Raphael Kazin, and freed him only under the order not to establish a Reform community in Aleppo. In 1865 a book by R. Elijah b. Amozeg of Leghorn, *Am le-Mikra*, was burned in Aleppo. In 1868 the first Jew was appointed to the *meclis* (city council) of Aleppo. From 1858 on Jews officiated in the mercantile court of law in Aleppo. In 1847, 3,500 Jews lived in the city, and in 1881, 10,200. During most of the Ottoman period Aleppo had the largest Jewish community in Syria. The majority of its Jews belonged to the middle class and were known as diligent merchants and agents. The local government, the European consuls who lived in the city, and the European agents of the trading companies recognized the economic power of Aleppo's Jews. A few Jews also had roles in the administration of the *Vilayet* of Aleppo, for the most part as tax collectors, custom officers, and **sarrafs*, some earning vast amounts from these positions in addition to their own businesses.

In the first half of the 19th century, the status of the community declined both economically and culturally. At the same time hostilities erupted between the various religious communities in Syria. The opening of the Suez Canal in 1869 greatly affected the international trade of the Jewish merchants of Aleppo. In 1875, a blood libel was spread about the Jews of Aleppo; however, the missing Armenian boy, whose absence had provided the charge, was found in a nearby village. In 1869 the *Alliance Israélite Universelle established a school for boys with 68 students from the wealthy families and 15 children from needy families, but most of the latter left the school. In 1873 the school was closed and in 1874 it was reopened. In 1872 the Alliance established a school for girls, with 20–30 students, utilizing European teaching methods. It was closed and reopened a few times and only in the 1890s did it operate at full capacity. In 1865 Abraham Sasson and his sons set up a printing house in Aleppo, one of the sons having learned the craft in Leghorn. In 1887 Isaiah Dayyan established another printing press with the help of H.P. Kohen from Jerusalem. Two years later they had to cease operation, not being able to obtain a government license. The license was obtained in 1896 and printing resumed and continued until World War I. Having learned the craft with Eliezer *Ben-Yehuda in Jerusalem,

Ezra Ḥayyim Jouegati of Damascus set up and operated a press from 1910 to 1933. Another printing press was founded by Ezra Bijo in 1924 and continued until 1925. Altogether, approximately 70 books were printed in Aleppo, mostly works by local scholars, ancient manuscripts found locally, and prayer books of the local rite. From the 1850s immigrants from Aleppo settled in Western cities like Manchester and opened firms there. The immigration of Jews from Aleppo to other countries and to Erez Israel was limited until the 1870s and the majority of the immigrants settled in Egypt, but in the 1880s and 1890s it grew and became a flood as thousands traveled to North and South America. The immigrants wished to improve their socio-economic circumstances. Many Jews from Aleppo emigrated to Beirut as well from the middle of the 19th century until the 1940s. After World War I there were over 6,000 Jews in Aleppo. The wealthy moved from the Jewish quarter, which was surrounded by a wall, to new quarters. However, the link with Jewish culture was not severed; traditional learning was not neglected and a few hundred immigrated to Palestine. In 1931 there were 7,500 Jews in Aleppo, of whom 3,000–3,500 were poor laborers. In particular among the others were merchants and brokers, and some 20 Jews were wealthy and had big firms while five or six were bankers.

There are descriptions from the years 1931 and 1934 of the impoverishment of Aleppo Jewry. Most of the immigrants to Erez Israel were needy. In the 1940s many Jews immigrated through “illegal” immigration (*Aliyah Bet*). In the year 1944, in the wake of the deteriorating political and economic situation of the community, 510 emigrated from Aleppo to Erez Israel. In 1945 many children and young men immigrated to Erez Israel. The police accused the leader of the community of Aleppo, Rachmo Nechmad, of aiding the secret immigration to Erez Israel. Among the scholars of the first half of the 20th century were R. Ezra Abadi, R. Abraham Salem, R. David Moses Sithon, R. Elijah Lopez, R. Judah Ataya, R. Abraham Isaac Dewik, and R. Isaac Shehivar.

[Eliyahu Ashtor / Leah Bornstein-Makovetsky (2nd ed.)]

In 1947, Aleppo had a Jewish community of about 10,000. In an outbreak of violence against the Jews in December 1947, all the synagogues were destroyed and about 6,000 Jews fled the city. Many of them secretly crossed the frontier into Turkey or Lebanon, where they settled, or continued to Israel, Europe, or America. On December 1, 1947, anti-Jewish riots broke out in the Jewish quarter of Aleppo. About 150 buildings, 50 shops and offices, ten synagogues and five schools were damaged; 160 old Torah scrolls from the Baḥsita synagogue were burned. The leaders of the community preserved the famous *Keter Aram Zova*. Thanks to their efforts most of the scroll arrived in Israel. In November 1947 the Jewish Telegraph Agency reported that 22 Jews from Aleppo had been arrested when they tried to pass the frontier between Lebanon and Israel. There are other reports about many Jews from Aleppo who tried to escape to Israel. The Jews also suffered under the reign of Colonel Adib Shishakli (1949–54). The

principal leaders of the community in 1953/1954 were Chief Rabbi Moses Mizrachi, who was 90 years old, R. Za‘afрани, and Selim Duek. The latter was a wealthy merchant who had relations with the local authorities. According to a report by the president of the Beirut community in 1959, around 2,000 Jews lived in Aleppo then. The 1,000 Jews living in Aleppo in 1968 resided in two quarters: Baḥsita, the old quarter; and Jamiliyya, founded after World War I. Muslims, who had moved into these quarters after the departure of the Jewish residents, occasionally assaulted their Jewish neighbors and several cases of murder were recorded. The four schools of the Alliance Israélite Universelle were closed by the government in 1950, and thereafter most of the children studied at a religious elementary school (*talmud torah*). As the community dwindled, this school was also closed, and some Jewish children studied at Christian schools. A special prayer-custom, the Aram-Zobah rite, existed in Aleppo (its prayer book was printed in Venice, 1523–27). In July 1967 Jewish teachers were dismissed and degrading regulations against the Jews were issued by the government. In that year only 1,500 Jews were living in Aleppo. The Jews of Aleppo in the last generation tried to maintain their Jewish identity. They published lectures by Edmond M. Cohen, which were distributed at great risk in the 1970s and 1980s. This was the last book produced by the remnants of the community.

Aleppo immigrants in Buenos Aires in the 1920s, under the leadership of R. Saul Sithon Dabbah, lived traditionally, as in Aleppo. During the 1930s, integration into the life of Argentina increased and with it came a decline in religious and ethnic identity. This trend reversed itself after one more generation, under the guidance of R. Isaac Shehebar.

Musical Tradition

Syrian Jewry and, particularly, the community of Aleppo long enjoyed a reputation as lovers of music and singing. In the course of eight centuries, they developed a characteristic style in their liturgical and related activities. As early as the 13th century, the Spanish Hebrew poet Judah *Al-Ḥarizi, referring to Syrian personalities, mentioned the cantor R. Daniel and said his performance conquered “the hearts of the holy people by his delightful song” (*Tahkemoni*, 46). From about the same time we have evidence concerning the adoption and singing in Aleppo of the Arabic poetical strophic genre called *muwashshah* (Hebrew *shir ezor*) invented in Andalusia by the beginning of the 10th century. This new genre, soon after its creation, gained great favor and knew wide circulation. One can infer from the question concerning its singing addressed by the Jews of Aleppo to Maimonides that it was already then popular among them and that it probably provoked the dissatisfaction of the rabbinical authorities. Their question was whether the singing of Arabic *muwashshahāt* (plur. of *muwashshah*) with instrumental accompaniment was permitted. The question probably implied secular and/or paraliturgical singing.

Almost all the chants and hymns sung outside the formal religious service were the work of distinguished Aleppo rabbis such as Moses Laniado, Raphael Antebi, Jacob and Mordecai Abbadi, and Mordecai Levaton, who were poets as well as composers. Some of them may have modeled themselves on the poet Israel *Najara of Damascus who was highly esteemed by composers of the period. This encouragement of the art of singing by the rabbis found strong support in R. Mordecai Abbadi's introduction to a book of *bakkashot* (Sephardi hymns), *Mikra Kodesh*, published in 1873. The melodic style of Aleppo belongs to the Arabian-Turco-Persian musical family, but also shows other influences, mainly those of Sephardi Jews. Both in prayers and other songs, the **maqām* style (melodic pattern) and elaboration prevail. For each Sabbath or festival prayer there is an appropriate *maqām*, and the various *zemirot* (hymns) also conform to the *maqām* pattern.

The Aleppan musical tradition was instrumental in the evolution of the Sephardi-Jerusalemite style, which currently dominates the entire realm of the liturgical and paraliturgical in many Oriental communities in Israel. It probably started with the singing of *bakkashot* and its fascinating dissemination and wide adoption by many immigrant groups. The establishment of formal cantorial training seminaries in the last decades certainly was determinant in consolidating the style toward which most of the generation of the Israeli-born Oriental cantors inclined.

ALÈS (or **Alez**; until 1926, **Alais**; אֶלֶס in Hebrew sources), town in Provence, S.E. France. There was a Jewish community there in the Middle Ages. Solomon b. Abraham *Adret refers in a responsum to a custom followed in the communities “between Narbonne and Alais.” The text of the oath used by Alès Jewry is mentioned in the *Coutumes d’Alais*, the costumal of Alès, for 1216–92. In the mid-13th century Jacob b. Judah in the *migdal Aloz*, apparently the citadel of Alès, copied the Hebrew translation of Maimonides’ Arabic epistle on astrology addressed to the sages of Montpellier. The physician Jacob ha-Levi, who wrote a medical treatise *Makkel Shaked* in 1300 (Bod. Ms. 2142), also lived in Alès. After their expulsion from the kingdom of France in 1306, the Jews of Alès took refuge in Provence and the Comtat Venaissin.

ALESSANDRIA, town in northern Italy. The first known Jewish settler in Alessandria was Abraham, son of Joseph Vitale de Sacerdoti (Cohen), who opened a loan bank in or about 1490. The subsequent history of the community, to modern times, continued to center around, and to a great degree consisted of, the record of his descendants, later known by the name Vitale. In 1550, it was proposed to expel the Jews from the Duchy of Milan, which since 1535 had been under Spanish rule. Simone (Samuel) Vitale thereupon went to Madrid and secured authorization for two families to reside in the city.

When the Jews were finally expelled from the Duchy of Milan in 1590, he again traveled to Spain and received permission to remain in Alessandria in consideration of the large sum owed him by the government. Thereafter, the community was concentrated around the Vitale family, whose approval had to be obtained by all newcomers before they could settle there. Of the 230 Jews living in Alessandria in 1684, 170 were members of the Vitale family; in 1761, out of 60 households, 36 bore this name. The wealthier members of the community were engaged in the manufacture of textiles and silks; their mills gave employment to many Christians. General conditions remained unchanged when Alessandria passed to the House of Savoy in 1708. The administration of the community remained distinct from that of Piedmont Jewry. The ghetto was established in 1724. In 1761, the Jewish population amounted to 420 persons, the Vitale family having lost the right to approve the newcomers. From the 18th century, the rabbinate became an almost hereditary office held by the family of Levi (de) Veali. The Jews of Alessandria, with the rest of Italian Jewry, enjoyed temporary civic emancipation during the period of French influence in Italy in 1796–1814. Subsequently, there was a sharp reaction. In 1837, Alessandria Jewry was again restricted to the ghetto, although its gates were not renewed. At a wedding celebration in 1835, an overcrowded house in the area collapsed, killing 42 persons, including 17 Christian guests and R. Matassia b. Moses Zacut Levi de Veali. Although from 1848 the Jews of Alessandria enjoyed complete emancipation, many of them were attracted to the larger cities. Between 1900 and 1938, the total of Jewish residents decreased from 868 to 101 according to Mussolini's census.

[Cecil Roth]

Holocaust Period

Starting in 1938, the Jews suffered under the regime's anti-Jewish laws, but the final phase of persecution began only at the end of November 1943, after Minister of the Interior Buffarini Guidi ordered all provincial chiefs to send all Jews to the "appropriate concentration camps." During the night of December 13, supporters of the German-imposed Italian Social Republic attacked the synagogue in the via Milano, destroying or stealing the silver objects. Books and precious manuscripts were burned in a great bonfire in Piazza Rattazzi that same evening. Also in December, 11 Jews from Alessandria were arrested and sent to Fossoli, from where they left for Auschwitz in February 1944; another six were seized by the Germans in the spring of 1944. The roundups continued in two other important old Jewish communities in the province of Alessandria. Twelve people were deported from Acqui, including the entire impoverished family of Arturo Bachi. Eighteen people were deported from Casale. In all, 48 Jews were deported from the entire province of Alessandria.

[Alberto Cavaglioni (2nd ed.)]

After the war 168 Jews lived within the community, but their number decreased to 90 by 1969. At the turn of the 20th cen-

tury Alessandria no longer operated a Jewish community and was under the jurisdiction of the community of Turin, as were all other nonfunctioning communities of Piedmont (Asti, Carmagnola, Cherasco, Cuneo, Mondovì, Saluzzo, and Ivrea).

ALEXANDER (c. 36–7 B.C.E.), son of *Herod and *Mariamne. As Herod's heir presumptive, Alexander was educated in Rome with his younger brother Aristobulus from c. 23–17 B.C.E. On his return to Judea he married Glaphyra, the daughter of Archelaus, king of Cappadocia. His arrival aroused the fears of those members of Herod's retinue who had been responsible for the death of Mariamne, for they assumed Alexander would avenge his mother's death. *Salome – who had been chiefly to blame – incited the king against Alexander, insinuating that he and his brother intended to take revenge on him for their mother's death. Influenced by these slanders, Herod recalled *Antipater, his son by his first marriage, to support him. In 12 B.C.E. the king took both princes with him to Italy to arraign them before Augustus on charges of conspiracy. At their meeting in Aquileia, the emperor managed to effect a reconciliation between the father and the sons. However, the intrigues against the princes continued, and relations with their father deteriorated irrevocably. Alexander was put in irons and his life threatened. As a result of the intervention of Archelaus, Herod was pacified and Alexander released. The machinations against him continued, however. This time it was the Spartan Eurycles, a guest at Herod's court, who incited the king against him after accepting a bribe from Antipater. Herod then suspected two men of plotting with Alexander to kill him. Alexander was again imprisoned, to-

gether with his brother. After Alexander confessed that they wanted to escape to Italy to take refuge from their accusers, Herod again lodged a complaint about his sons' conduct to Augustus. The emperor granted Herod permission to judge them as he saw fit, but advised him to try them in a court composed of Roman well-wishers and officials. The trial took place in Berytus (Beirut). Alexander and his brother were sentenced to death and sent to Caesarea. There a commander of the garrison, Tiro, a veteran in Herod's service, attempted to gain them a reprieve. His plea that if the executions took place riots would erupt only served to incense Herod further. Tiro was put to death together with other friends of Alexander. The two brothers were brought to Sebaste (Samaria) where they were executed by strangling.

[Abraham Schalit]

°ALEXANDER, name of seven popes. The following are the most significant for Jewish history:

ALEXANDER II, reigned 1061–73, consistently followed the policy set by Pope *Gregory the Great at the end of the sixth century of applying suasion rather than force to convert Jews. When the Christian reconquest of the Iberian peninsula began in earnest, he urged the bishops of Spain to continue defending the Jews against attack by native and foreign soldiers, especially the unruly bands of French knights who had joined the Christian armies against the Muslims. He wrote in the same vein to Berengar, viscount of Narbonne, and to Wifred, its bishop, in 1063. In 1065 Alexander issued a strong warning to the prince of Benevento, in southern Italy, who was using force to convert the Jews.

ALEXANDER III, reigned 1159–81, reissued the *bull *Sicut Judaeis* protecting Jews against physical injury and interference with their religious rites. He objected when the Jews in Bourges, France, erected a synagogue which was not only new, but also higher than a neighboring church. The Third Lateran Council, which met in 1179, prohibited Christians from serving in Jewish homes; urged the secular authorities not to confiscate the property of converts from Judaism lest, being impoverished, they reverted to their former faith; and requested the civil courts to admit the testimony of Christians in lawsuits involving Jews. The pope also objected to Jews having the right to cite a cleric before a secular court. Because of prevailing conditions in Europe, most of these restrictive measures were not enforced for a long time, but they eventually found their way into the *Corpus Iuris Canonici* of 1580, the official collection of church law. The possibility that the pope would urge the council to force the Jews to wear a distinguishing *badge was averted, perhaps through the influence of Jehiel, grandson of *Nathan b. Jehiel, the compiler of the *Arukh*, who held a high post in the papal household.

ALEXANDER IV, reigned 1254–61, reissued the bull *Sicut Judaeis* in 1255. During the bitter struggle of the papacy against the imperial Hohenstaufen family, he granted letters of protection to a number of Roman Jewish army suppliers, exempting them from having to pay extra tolls on the roads. That this did not represent a generally favorable attitude is evident from his other pronouncements. Alexander IV insistently enforced the wearing of the distinguishing Jewish badge and the confiscation of the Talmud. The pope commended Louis IX of France and Count Thibaut of Champagne (who was also king of Navarre) for having taken away from the Jews sums which had presumably been gained through usury. He granted them the right to use such money for "pious purposes" (1258). In a letter addressed to several churchmen, the pope expressed horror that certain clerics had left church articles with the Jews as pledges for their debts.

ALEXANDER V, reigned 1409–10, was elected by the Council of Pisa in a vain effort to end the schism within the church. He shared the superstitions of his day, blaming the division within the church on bad Christians and on Jewish magicians. The Jews, he asserted, corrupted the world by consulting the Talmud and practicing usury.

ALEXANDER VI (BORGIA), reigned 1492–1503, displayed an ambivalent attitude toward the Jews. Where personal gain or the exigencies of diplomacy made it desirable, he was harsh; but where he was free to use his good sense, he showed understanding and humanity. After the expulsion of the Jews from Spain and Portugal, he permitted *Marranos to continue residing in the environs of Rome. When, however, King Ferdinand of *Spain protested, alleging that the pope's leniency encouraged their flight from Spain, Alexander compelled the refugees publicly to reaffirm their Christian loyalty. Even so, he appears to have profited financially from his refusal to take more extreme measures. While the pope reduced the size, and therefore the prominence, of the distinguishing Jewish badge, he lengthened the distance of the disgraceful annual races in Rome in which Jewish participants had to run naked, so as to be able to watch them from his residence at Castle St. Angelo. He imposed on the Jews an additional tribute of 5% for three years, to help defray the expenses of the Turkish War. Alexander treated favorably the Jews he employed as his personal physicians; one of these Bonet *Lattes, dedicated to him his book on astronomy.

ALEXANDER VII, reigned 1651–67. His policy toward the Jews was primarily motivated by zeal for making converts. Though he did not apply force, he frequently applied indirect compulsion. Residence in the ghetto was strictly regulated, and the entire Jewish community was held responsible for the rental of an apartment vacated by a convert or through the death of its occupant in the recent plague, for Jews were not permitted to own property even within the ghetto (1658). Christian contact with Jews was assiduously discouraged. In 1659 Jews were prohibited from teaching or learning under Christians. To be the servant of a Jew was a punishable offense.

The one improvement in the Jewish situation under Alexander VII was the abolition, in the last year of his papacy, of the shameful annual races (cf. Alexander VI).

[Solomon Grayzel]

***ALEXANDER**, name of three Russian czars.

ALEXANDER I, czar of Russia 1801–25. Alexander I's character and actions were to a large extent shaped by the vicissitudes he experienced in his struggle against *Napoleon. His ties with Metternich and the Holy Alliance were a result of his reaction against the spirit of the French Revolution; Alexander activated and joined the Alliance as "the gendarme of Europe" after Napoleon's downfall. When Alexander ascended the throne, Russian policy toward the large Jewish population living in former Polish territory, constituting the so-called Jewish question, had already been under active consideration for some time in government circles. In November 1802 Alexander appointed a committee to consider all aspects of the Jewish question in Russia. Some of its members were his personal friends and, like Alexander at that stage, harbored liberal ideas. The committee's report was approved by Alexander and promulgated in 1804 as the Jewish Statute. It was the first comprehensive piece of Russian legislation to deal with Jewish affairs. The statute, as well as subsequent legislative and administrative measures concerning the Jews taken during Alexander's reign, was based upon the assumption that the Jews were a parasitic element, an undesired legacy bequeathed by the defunct Polish state. The policy underlying the statute, therefore, was that the Jews must be directed toward employment in productive occupations, such as agriculture and industry. On the other hand the native population, especially the peasants in areas that had formerly belonged to Poland, had to be protected from alleged Jewish exploitation and influence. At the same time measures should be taken to raise the Jews from what was considered their debased cultural condition by encouraging secular education and *assimilation into the Russian Christian social and cultural environment. A program of repression and restrictions was therefore embodied in the statute, which imposed limitations on Jewish residence, occupations, and land tenure. The full brunt of the legislation was partially averted during the Napoleonic Wars, when the Russian government was concerned that the Jewish population might be driven to help the French, but the measures were resumed with even greater force after the war. The efforts of the English missionary Lewis *Way to induce Alexander to grant the Jews emancipation had no practical results. Alexander, at this time inclining to pietism and mysticism, initiated a policy intended to promote the conversion of the Jews to Christianity. In 1817 a "Society of Israelitic Christians" was founded and placed under the czar's personal patronage.

ALEXANDER II, czar of Russia 1855–81. Developments in Russia under Alexander II and the measures he adopted were a result of the harsh legacy of the reign of his father *Nicholas I, the aftermath of the Crimean War, and his attitude toward the rising revolutionary movement in Russia. Alexander's accession raised great expectations among the Jewish as well as the Russian population. The Jews hoped for a change in the oppressive policies pursued by Nicholas I. The abolition in 1856 of the special system of recruiting Jews for the army (see *Cantonists) appeared as a good omen. Alexander, however, was firmly opposed to the abolition of the Pale of *Settlement restricting Jewish residence. The basic Russian policy toward the Jews, which aimed to "reeducate" them and make them "useful members" of the state (see Alexander I), underwent no change during his reign. Alexander II, however, attempted to promote their "improvement," and ultimate "fusion" with the Russian people, by extending the rights of certain groups within the Jewish population. These, by virtue of either their economic situation or education, were considered free of "Jewish fanaticism." His policy was also dictated by the demands of the Russian economy which could utilize Jewish capital and skill for its development. Alexander accordingly approved certain reforms to alleviate conditions for the Jews. In particular, the restrictions applying to rights of residence and entry into government service were eased for merchants of "the first guild" (i.e., wealthy merchants), university graduates, and artisans. All these partial and limited concessions were kept within the bounds personally prescribed by Alexander. In the last decade of his reign, when revolutionary tension mounted, the anti-Jewish oppressive policy again intensified. Nevertheless, Alexander was remembered by the Jews as a friendly and enlightened ruler. His assassination on March 13, 1881, brought this relatively liberal interlude to an end and initiated a period of violent reaction.

ALEXANDER III, czar of Russia 1881–94. The reign of Alexander III was dominated by the rising tide of the revolutionary movement in Russia, in which Jewish youth took an increasing part. Ascending the throne after his father Alexander II's assassination, Alexander III was determined to suppress all liberal tendencies and maintain an autocracy. The czar's teacher, Konstantin *Pobedonostsev, procurator-general of the Holy Synod (the supreme authority of the Russian Orthodox Church), a fanatic reactionary, became the most powerful figure in the state. The first organized *pogrom against Jews was perpetrated in Yelizavetgrad (today *Kirovograd), in southern Russia, in April 1881. It was followed by a series of similar outbreaks of anti-Jewish violence in the course of 1881–84. Alexander and his government accepted the theory that the pogroms stemmed from the inherent hatred of the indigenous population for the Jews because of their "economic domination." This led to the conclusion that the indigenous population must be shielded "against the harmful activity of the Jews."

The "Temporary Regulations" of May 3, 1882 (see *May Laws) followed. These prohibited Jews from resettling in the

villages or from holding real estate outside the urban areas, and authorized the village communities to oust the Jews already settled among them. These measures were succeeded by partial expulsions of “illegal” Jewish settlers from the interior of Russia, and in 1891 by the eviction of about one-half of the Jewish population from Moscow. Admission of the Jews to the bar was temporarily halted in 1889, and their participation in local government was curbed in 1892. A **numerus clausus*, restricting the proportion of Jews allowed to enter secondary schools and universities to between 3% and 10% of the admission total, was imposed in 1887. This policy was adopted by Alexander in the face of the majority report of the governmental commission under the chairmanship of Count Pahlen, sitting between 1883 and 1888, which was opposed to a regressive policy and counseled “a graduated system of emancipatory and equalizing laws.” Alexander was ready to support the planned Jewish emigration from Russia suggested to the Russian government by Baron Maurice de *Hirsch.

ALEXANDER, English family of printers.

ALEXANDER ALEXANDER (d. 1807?), pioneer of the Hebrew press in London with Benedict Meyers (Hebrew: Jost) of Halberstadt. In 1770 Alexander and Meyers produced an edition of the Ashkenazi prayer book with English translation; the list of subscribers included many non-Jews. This was followed by a *Haggadah* in two editions, Sephardi and Ashkenazi. Originally Alexander did not do the actual printing himself. He produced many liturgical works, including the complete liturgy according to the Sephardi and Ashkenazi rites with slovenly executed English translations (1773), as well as a Pentateuch with translation (1785). In 1772 he began to issue a series of annual pocket calendars. His son LEVY (JUDAH LEIB; 1754–1853) also printed Hebrew and English works for many years, reproducing several of his father's editions. Failing to secure for one of these the patronage of Chief Rabbi Solomon *Hirschel, he published a number of scurrilous attacks on him (“The Axe laid to the root, or, Ignorance and Superstition evident in the character of the Rev. S. Hirschel,” 1808; “A Critique of the Hebrew Thanksgiving prayers ... on Thursday the 7th of July ... With an anecdote of the humorous sermon delivered by the High Priest the Rev. Solomon Hirschel... for the occasion,” 1814). He continued the attack on the wrappings of his edition of the festival prayers issued in parts from 1808–15. His own writings include a reply to the proposals of J. *Van Oven on the problem of the Jewish poor (1802), and an English grammar in rhyme (1833). His *Memoirs of the Life and Commercial Connections of the Late Benjamin Goldsmid of Roehampton*

(1808) contains piquant details of contemporary Jewish life in London.

[Cecil Roth]

ALEXANDER, ABRAHAM (Senior; 1743–1816), Revolutionary War officer, U.S. Custom House auditor, and *hazzan* of Charleston's Beth Elohim Congregation (1764–84). Born and educated in London, Alexander, the son of Joseph Raphael Alexander, immigrated to Charleston, South Carolina, before the American Revolution. He served for many years as a volunteer lay minister (known then as *hazzan*). A Hebrew scholar and scribe, he wrote, in his own hand, a prayer book for the High Holy Days “according to the custom of the Sephardim” (1805). During the Revolution, when Charleston fell to the British in 1780, he surrendered at first, along with the rest of the population, but soon afterward left the city to join patriot forces in the backcountry. After he was commissioned a lieutenant of the dragoons, his regiment's guerilla fighting helped drive the British from the Carolinas. Alexander, a widower, in 1784 married Ann Sarah Huguenin Irby, a widow of French Huguenot affiliation. Intermarriage was unusual for the times, especially since he was a strict adherent to Orthodox Judaism. Yet before their marriage she became a devout Jewess, one of the earliest converts of American Jewish history; apparently, however, he resigned his position as *hazzan* of the congregation. Alexander entered the service of the new federal government at Charleston's U.S. Custom House, as clerk in 1802 and then as auditor until his retirement in 1813. An active Mason, he is notable in Masonic history as one of 11 founders and the first secretary-general of the Supreme Council, 33rd Degree, Scottish Rite Masonry (“mother council of the world”), which was founded in Charleston in 1801.

BIBLIOGRAPHY: H.A. Alexander, *Notes on the Alexander Family of South Carolina* (1954); C. Reznikoff and U.Z. Engelman, *Jews of Charleston* (1950), index; R.B. Harris, *History of the Supreme Council, 33rd Degree, Ancient and Accepted Scottish Rite of Freemasonry, Southern Jurisdiction, U.S.A. 1801–1861* (1964), 45–48.

[Thomas J. Tobias]

ALEXANDER, BEATRICE (1895–1990), founder of the Madame Alexander Doll Company and one of the best-known U.S. female entrepreneurs. Alexander was born in Brooklyn, N.Y., to Hannah Pepper, a widow. When Beatrice was a toddler, her mother married another Russian immigrant, Maurice Alexander; the couple went on to have three more daughters. Beatrice always considered Alexander, who established the first doll hospital in the United States, as her real father. She learned the craft of dollmaking in her father's shop where she observed both the fragility of the china dolls of that era and their importance to children. The contrast between the

wealth of many of Maurice's customers and the poverty of the neighborhood made a deep impression on her and she became determined to achieve a better future. Alexander's early surroundings also accustomed her to seeing women contributing to the family economy; her mother worked with her husband in his shop, as well as having full responsibility for the home. In 1915, a few weeks after serving as high school valedictorian, Alexander married Philip Behrman, who later joined her in managing the Madame Alexander Doll Company. The couple had one daughter, Mildred, who grew up in the business, as did her son, William Alexander Birnbaum, company president until 1994.

"Madame Alexander" began her career during World War I when the decrease in imported dolls from Europe created a shortage. Her first project was the "Red Cross Nurse" rag doll. In the 1920s she formally created one of the largest doll manufacturing companies in the United States. The Madame Alexander Doll Company has created more than 5,000 different dolls, often based on literary figures and Disney characters, as well as real people. Madame Alexander dolls, known for their high quality and artistry, are on permanent display at a number of museums worldwide and have received numerous awards. In 1986, Beatrice Alexander was honored with the Doll of the Year Lifetime Achievement Award.

Alexander, who began to withdraw from the business in the 1970s, was a well-known philanthropist, supporting American and Zionist causes. A trustee of the Women's League for Israel, Alexander gave particular support to projects benefiting children.

[Judith R. Baskin (2nd ed.)]

ALEXANDER, BERNARD (1872–1935), South African lawyer and communal worker. Born in the province of Poznan (Poland), Alexander went to South Africa as a child. In 1903 he helped to establish the Jewish Board of Deputies of the Transvaal and Natal; he was its president when, in 1912, the South African Jewish Board of Deputies was founded, with the Transvaal Board as one of its constituents. He became vice president and from 1916 to 1927 was president of the South African Board. Alexander took a leading part in congregational activities and Jewish institutions in Johannesburg. During his chairmanship of the Jewish War Victims' Fund (1915–25), it raised more than £500,000 for Jewish war relief. Alexander was a member of the Johannesburg City Council and served on civic and educational bodies. As solicitor to the Paramount Chief of Swaziland, he headed (1929) a mission to the British government on behalf of its people.

[Louis Hotz]

ALEXANDER, FRANZ (1891–1964), U.S. psychoanalyst, criminologist, and author. Alexander was born in Budapest and studied medicine there. During World War I, he served in the Austro-Hungarian Army at a bacteriological field laboratory. After the war he did postgraduate work at the psychiatric hospital of the University of Berlin. With the establishment of Berlin's Institute for Psychoanalysis in 1921, he became its first student and stayed on there for ten years as clinical associate and lecturer. During that period he formulated his ideas for his first book: *Die Psychoanalyse der Gesamtpersoenlichkeit* (1927). Early in his career as a psychiatrist Alexander became convinced that the vital approach of psychoanalysis should be the exploration of the human mind to lead men and women to more constructive and satisfying fulfillment in their lives. His research provided much understanding about "psychosomatic specificity" tracing such psychosomatic symptoms as peptic ulcer to their origin in childhood neurotic conflict, and "dream pairs" showing how dreams occur in complementary pairs to produce wish fulfillment. Alexander also made many attempts to shorten therapy through use of the patient's transference relationship with his or her therapist. His famous work *Der Verbrecher und seine Richter* (1929; *The Criminal, the Judge and the Public*, 1931), written with H. Staub, a lawyer, led to an invitation to teach at the University of Chicago. Here he established the world's first university chair in psychoanalysis. From 1931 to 1932, Alexander was research associate in criminology at the Judge Baker Foundation in Boston. He incorporated his findings in his book, *The Roots of Crime* (1935), written with William Healy. In 1932 he established and became director of the Chicago Institute for Psychoanalysis. From 1938 to 1956 he was also professor of psychiatry at the University of Illinois. In 1956 he was appointed head of the new psychiatric department of Mt. Sinai Hospital in Los Angeles and professor of psychiatry at the University of Southern California. Among the many high posts he occupied were president of the American Psychoanalytical Association, president of the American Society for Research in Psychosomatic Medicine, and president of the Academy of Psychoanalysis. He was one of the founding editors of the professional journal *Psychosomatic Medicine* (1939). His other books include *The Western Mind in Transition* (1960); *The Scope of Psychoanalysis* (1961); and *Psychosomatic Specificity* (1968).

[Zvi Hermon]

ALEXANDER, HAIM (Heinz; 1915–), composer and pianist. Alexander was born in Berlin. In 1936, following the ascent of the Nazis to power, he settled in Jerusalem and studied with Stefan Wolpe and Joseph *Tal at the Palestine Conservatory. He was one of the founders of the Academy of Music in Jerusalem (later the Rubin Academy), where he was professor until his retirement. He also lectured at the musicology department of the Hebrew University of Jerusalem, at the

University of Pennsylvania, at the Jacques Dalcroze Institute, Geneva, and at NYU. A versatile musician and superb improviser, he taught piano, harpsichord, improvisation, theory, and composition. Like all other Jewish composers who emigrated from Central Europe in the 1930s, Alexander established his own personal response to the dialectics of the ideological pressure of the Zionist vision of the East and the internal pressure to retain and absorb the great European heritage. He was always alert and open to new ideas and influences. In the 1950s Alexander attended avant-garde seminars in Darmstadt and added the serial technique to his rich vocabulary, such as in *Patterns* (1965) for piano, while still retaining his penchant for lyrical, tuneful writing in the *Nature Songs* (1988). In 1971 Alexander undertook a large-scale project of transcribing traditional songs kept at the Jerusalem Sound Archives, many of which he later arranged for various ensembles. He published a textbook *Improvisation Am Clavier*, with two cassettes (Schott, 1987). His large output includes many choral works, songs for voice and chamber ensembles such as the cycle *Ba-Olam* ("In the World," 1976), orchestral works such as the Piano Concerto, chamber works, and many compositions for piano.

[Jehoash Hirshberg (2nd ed.)]

ALEXANDER, JASON (1959–), U.S. actor and entertainer. Born in Newark, N.J., as Jay Scott Greenspan, Alexander starred in 180 episodes, over nine years, of the wildly popular situation comedy *Seinfeld*, starring Jerry *Seinfeld. Alexander portrayed the hapless George Costanza, a "schlepp" partly based on the show's co-creator, Larry *David. Costanza, neurotic, devious, and unscrupulous, was one of the more memorable characters in television series history.

Although he was short, chubby and began to grow bald at an early age, Alexander had such a commanding stage presence that he was invariably cast as the star in school plays, in roles ranging from romantic leads to elderly character parts. He won a scholarship to Boston University's drama department and at 20 was cast in the Stephen *Sondheim Broadway musical *Merrily We Roll Along*, but the show closed shortly after it opened. Alexander left college soon thereafter to pursue his acting career. He got his first film role in *The Burning*, produced by Harvey *Weinstein, in 1981 and three years later he played four roles in the Broadway musical *The Rink*. He created the role of Stanley Jerome in Neil *Simon's semi-autobiographical play *Broadway Bound* and then took on a starring role in *Jerome Robbins' Broadway*, for which he won the Tony, Drama Desk, and Outer Circle Critics awards as best actor in a musical.

Alexander's voice appeared in a number of animated features, including *Aladdin*, *The Return to Jafar*, and *The Hunchback of Notre Dame*. In 1997 he played an AIDS-afflicted drag queen who finds romance in the movie *Love! Valour! Compassion!* He also got a lead role in the Los Angeles stage version of *The Producers*.

After *Seinfeld*, for which he won six Emmy nominations, four Golden Globe nominations, and other honors, Alexander starred as a self-help guru in a television series, *Bob Patterson*, but it was quickly canceled. In 2004 he starred in another situation comedy, *Listen-Up*, based on the life of a sportswriter. He also made a quick, highly publicized trip to Israel to air his views about the Israeli-Palestinian conflict.

[Stewart Kampel (2nd ed.)]

ALEXANDER, KOBI (1952–), Israeli high-tech entrepreneur. Alexander was born in Tel Aviv. He served as an intelligence officer in the army. In 1977 he graduated in economics from the Hebrew University of Jerusalem and in 1980 he received an M.B.A. degree from New York University. In 1980–81 he worked as an economic consultant for several international corporations. In 1982 he and his two partners, Boaz Misholi and Yehiam Yemini, established Efrat Future Technology Inc. in 1984, after the development of the firm's first product, Tadiran joined the partnership and later on a group of American investors joined as well. In 1986 Comverse USA was established, the mother company of Efrat. In 1987 Efrat took big losses, its stock failed, and Yemini retired. In 1988 Alexander moved to New York and succeeded in stabilizing the firm and bringing it back to profitability. Efrat employed 1,500 workers with a turnover of \$300 million dollars a year and is a leading firm in the field of software and systems enabling network-based multimedia enhanced communication services. Alexander is the chairman, president, and CEO of Efrat. In 1997 Comverse and Boston Technologies were merged, and Alexander became the head of a firm with revenues of over \$1 billion a year. He also served as a director of the venture fund established by Comverse and George Soros.

[Dan Gerstenfeld (2nd ed.)]

ALEXANDER, MICHAEL SOLOMON (1799–1845), the first Anglican bishop in Jerusalem. After an Orthodox Jewish upbringing, in 1820 Alexander left his native Germany for England, where as Michael Solomon Pollack he served as *hazzan* and *shohet* to the small communities in Norwich (1820–21), Nottingham (1821–23), and Plymouth (1823–25). Coming into contact with Christian missionaries, he was converted to Christianity in 1825. Alexander then moved to Dublin, where he taught Hebrew, was ordained, and where, in 1827, he was appointed to a curacy. Later he was sent as a missionary to Danzig by the London Society for the Promotion of Christianity among the Jews. In 1830 he returned to London in the service of the society. From 1832 to 1841 he was professor of Hebrew and rabbinics at King's College, London. He collaborated with Alexander McCaul in Hebrew translations of the New Testament and the Anglican liturgy. In August 1840 he, with other converts, signed a protest against the *Damascus blood libel. When, on the withdrawal of *Muhammad Ali from Palestine, it was decided to establish an Anglican and Lutheran bishopric in Jerusalem under the auspices of Great

Britain and Prussia, with missionary as well as political objectives, Alexander was appointed the first incumbent (November 1841). Although the British consul, on the instructions of the Foreign Office, did not support his missionary activities, Alexander zealously carried out the duties of his office as he conceived them, visiting Egypt, Syria, Iraq, and Abyssinia, which were included in his diocese. He died while on one of his visits to Egypt; his body was brought back to Jerusalem where he was buried in the Christian cemetery on Mt. Zion. His tombstone bears a long inscription in Hebrew, English, Greek, and German. His published works include *The Hope of Israel*, a lecture (1831); *The Glory of Mount Zion*, a sermon (1839); and *The Flower Fadeth and Memoir of Sarah Jane Isabella Wolff... eldest daughter of... M.S. Alexander* (1841).

[Cecil Roth]

ALEXANDER, MORRIS (1877–1946), South African lawyer and politician. Alexander went to South Africa from East Prussia as a child. He practiced law in Cape Town and soon became involved in politics and in Jewish communal affairs. He played a leading part in the formation of the Cape Jewish Board of Deputies (1904) and was its president and most active figure until its merger with the South African Board of Deputies (1912), thereafter serving as vice president of the United South African Board and chairman of its Cape Committee until 1933. As a Jewish spokesman in matters of immigration and naturalization, Alexander was largely instrumental in having Yiddish recognized as a European language in the immigrant's literacy test (1906). He was elected to Parliament in 1908 and for 35 years was known as a champion of the Indian and Colored communities against discriminatory laws. He was an active Zionist and was a lay preacher to the Cape Town New Congregation. His first wife, Ruth, was the daughter of Solomon *Schechter. His second wife, Enid, wrote his biography *Morris Alexander* (1957). The large collection of Alexander's papers – documents covering his entire life – are housed in the University of Cape Town.

BIBLIOGRAPHY: G. Saron and L. Hotz, *Jews in South Africa* (1955), index; G. Saron, *Morris Alexander* (1966).

ALEXANDER, MOSES (1853–1932), first Jewish governor of an American state. Alexander, who was born in Obrigheim, Germany, immigrated to America in 1867. He became mayor of Chillicothe, Missouri (1887), and moved to Idaho around 1891. A successful businessman, he was elected mayor of Boise in 1897 and served two terms. As the Democratic governor of Idaho, serving for two terms (1915–19), Alexander achieved great popularity in his own state and elsewhere, earning a

reputation for wit, eloquence, and progressivism. He secured legislation on behalf of workmen's compensation, the state highway system, irrigation, reclamation and waterway systems, and prohibition. He also rallied Idaho around Woodrow Wilson's call to enter World War I, and he supported the women's suffrage movement.

He helped organize and lead the first synagogue in Idaho. The town of Alexander, Idaho, is named for him.

To commemorate his achievements, the Idaho State Historical Society in Boise installed the Moses Alexander Collection to highlight this American success story. The exhibition's 80 cubic feet of material, dating from 1876 to 1987, sheds light on the role Alexander played in shaping Idaho's business, political, and religious communities. The collection includes original and carbon copy correspondence, telegrams, newspaper clippings, speeches, videos, photographs, scrapbooks, fiscal records, and court proceedings, as well as assorted printed material such as blueprints, maps, and certificates that are supplementary to the correspondence.

[Robert E. Levinson / Ruth Beloff (2nd ed.)]

ALEXANDER, MURIEL (1884–1975), South African actress and producer. Born in Exeter, England, Muriel Alexander was a member in 1904 of the first class held at Tree's Academy, London, which later became the Royal Academy of Dramatic Art. She won a scholarship and acted in Sir Henry Tree's company at His Majesty's. Settling in South Africa after World War I, she founded the Johannesburg Repertory Players, which had a predominantly Jewish membership and directed them for many years. In 1960 they renamed their theater The Alexander.

ALEXANDER, SAMUEL (1859–1938), British philosopher. His family originated in Alsace and he was born in Australia. From 1882 to 1893 he taught at Oxford as a fellow of Lincoln College, being the first Jew appointed to a college fellowship in an English university. From 1894 to 1924 he was a professor of philosophy in Manchester. In 1930 he was made a member of the Order of Merit, the highest honor in British intellectual life. Alexander also participated in Anglo-Jewish communal life and was a member of the academic council of the Hebrew University. Alexander was the principal exponent of metaphysical realism in England. In his view, metaphysics is a descriptive science, which elucidates the most universal levels of reality. There are various levels in the unfolding of reality, each of which is rooted in the one preceding it and emerges from it. The most important of these emergent levels which have thus far manifested themselves are those of matter, the physical-chemical life, and mind. However, the creative potential of the cosmic order has not ceased – the next level to evolve will be that of “deity.” The relationship of “deity” to mind will

be of the same order as that of mind to matter and of matter to space-time. The impending advent of “deity” in the process of emergent evolution is evidenced by the existence of religious consciousness. Deity is the goal of the ever-advancing craving – perhaps asymptotic – for it. His doctrines have much in common with those held by Alexander’s friends and contemporaries, A.N. Whitehead and Lloyd Morgan. In his later life, Alexander turned to the study of aesthetics in which he found much substantiation for his views on the cosmic order. The most original and characteristic portion of his work in metaphysics is the recognition of the reality of time, change, process, and the concept of “point-instants” as ultimate units of reality. The “pragmatic deduction” of the categories (i.e., categories of reality, not of thought) is found in the second part of his book *Space, Time and Deity* (2 vols., 1920). His most lasting contribution to epistemology is his elaborate distinction between “contemplation” of an experience and the “enjoyment” of it: the objective awareness of an “-ed” and the subjective “non-accusative” enjoying self-awareness of an “-ing.” Many modern philosophers not otherwise in sympathy with Alexander’s realistic metaphysics owe to him this celebrated distinction. His other major writings are *Moral Order and Progress* (1889); *Locke* (1908); *The Foundation of Realism* (1914); *Spinoza and Time* (1921); *Beauty and Other Forms of Value* (1933); *Philosophical and Literary Pieces* (edited 1939).

[Leon Roth]

°ALEXANDER BALAS, king of Syria, 150–146 B.C.E. According to Diodorus and Strabo, Balas was his original name before he assumed the cognomen Alexander. Many of his contemporaries state that Alexander Balas was a native of Smyrna, of lowly parentage, but he pretended to be the son of Antiochus IV Epiphanes and claimed the throne of his alleged father in opposition to Demetrius I Soter. Alexander was supported by Attalus II of Pergamum and was recognized by Ptolemy VI Philometor of Egypt. The Romans, inclined to encourage the disturbances in Syria, also allowed Alexander’s adherents freedom of action. In 153 B.C.E., Alexander led an army of mercenaries against Demetrius. The pretender’s first act was to win Jonathan the Hasmonean to his side by appointing him high priest and leader of the Jews. Demetrius fell in battle, and Alexander assumed the throne in 150. To strengthen his position in Syria he married Ptolemy’s daughter. However, when he conspired against him, Ptolemy withdrew his support and allied himself with Demetrius II, son of the late king, who now

laid claim to his father’s throne. In the ensuing battle between Alexander and Ptolemy on the River Oenoparas near Antioch, Alexander was defeated and Ptolemy mortally wounded. Alexander took refuge with the Arab chieftain Zabeilus, who slew him and sent his head to Ptolemy who had not yet died from his wounds.

ALEXANDER THE FALSE, impostor who pretended to be the son of Herod and Mariamne. According to Josephus, after Herod’s death in 4 B.C.E., there appeared “a young man, Jewish by birth but brought up in the city of Sidon by a Roman freedman” who “on the strength of a certain physical resemblance passed himself off as the Prince Alexander, whom Herod had put to death.” He successfully deceived several Jewish communities on his way to Rome, but when he arrived there, he was unmasked by the emperor Augustus; Celadus, a freedman who had known the real Alexander, informed the emperor of the deception. The impostor’s life was spared, however, and he became an oarsman in the imperial galleys.

[Isaiah Gafni]

°ALEXANDER THE GREAT (356–323 B.C.E.), king of Macedonia who conquered most of the Near East and Asia. A legend preserved in Josephus (Ant., 11:329ff.) tells that when Alexander was besieging Tyre, Sanballat, the leader of the Samaritans, came to him at the head of 8,000 men. Alexander received him in a friendly manner and acceded to his request that he be allowed to build a temple on Mount Gerizim, where Sanballat’s son-in-law Manasseh would serve as high priest. According to this legend, Alexander demanded of the high priest, Jaddus (Jaddua), the surrender of Jerusalem and of the Jewish people, and when the latter refused on the grounds that he had sworn loyalty to Darius, Alexander marched on Jerusalem at the head of his army to punish the panic-stricken Jews. However, Jaddus succeeded in calming the Jews by making it known that he had a revelation in a dream that no harm would befall the city and the Temple. On the following day Jaddus set out with the chief priests, the elders, and the leading citizens, and awaited Alexander’s arrival at Zofim, to the north of Jerusalem. When Alexander saw the high priest he prostrated himself before him, telling his men that Jaddus had appeared to him in a dream and informed him that he would defeat the Persian king. Alexander then went up to the Temple, offered a sacrifice, and granted the Jews extensive privileges. When the Samaritans heard of the success of the Jews they invited Alexander to visit their temple on Mount Gerizim on his return from Egypt. Their efforts, however, proved unsuccessful.

A similar story, but with different names for the high priest and the meeting place, occurs in the Talmud: "The twenty-fifth [of Tevet] is the day of Mount Gerizim, on which no public mourning is permitted, it being the day on which the Cutheans [i.e., the Samaritans] requested the House of our God from Alexander of Macedonia in order to destroy it and he granted it to them. People came and informed Simeon the Just. What did he do? He put on his priestly garments, and he and some of the nobles of Israel who carried burning torches in their hands walked all night, some on one side, others on the other, until dawn. When dawn rose he [Alexander] said to them: 'Who are these?'

They answered: 'The Jews who rebelled against you.' When he reached Antipatris and the sun shone, they met. On seeing Simeon the Just, Alexander descended from his chariot and prostrated himself.

[They] said to him: 'Should a great king like you prostrate yourself before this Jew?'

He answered: 'The image of this man wins my battles for me.'

He said to the Jews: 'Why have you come?'

They replied: 'Is it possible that star-worshippers should mislead you into destroying the House in which prayers are said for you and your kingdom that it may never be destroyed?'

'To whom are you referring?'

'To the Cutheans who stand before you.'

'They are delivered into your hands.'

At once they pierced the heel of the Cutheans, tied them to the tails of their horses and dragged them over thorns and thistles, until they came to Mount Gerizim, which they plowed and sowed with vetch, even as the Cutheans had planned to do with the House of our God" (Yoma 69a).

The legend in Josephus ascribes to Alexander things which are highly improbable. After the battle at Issus, Alexander set out hurriedly for Egypt in order to dislodge the Persians from the Mediterranean coast. The siege of Tyre was protracted and Alexander had no time to turn aside from his main route in order to visit a city as unimportant as Jerusalem was then, or the Jews, who were a small nation. It is obvious that Alexander advanced with his army along the coast and did not then visit the interior of the country, although undoubtedly he did so in the spring of 331 B.C.E. The Roman writer Curtius Rufus relates that when Alexander was in Egypt the news reached him that the Samaritans had rebelled and had consigned Andromachus, the Macedonian governor of Samaria, to the flames. Alexander hurried to Samaria, reestablished order with an iron hand, and stationed Macedonians there. On this occasion Alexander probably visited the Samaritan temple on Mount Gerizim, a visit which would not have been friendly (as is evidenced by the discoveries of the remains of Samaritan fugitives in the caves of Wadi Daliyeh (see F.R. Cross in bibl.). The Jews in Jerusalem presumably rejoiced at the reversal of the Samaritans and tried to appear before Alexander as a people loyal to him and to his rule, in which purpose they

doubtlessly succeeded. An intimation of this success may be gleaned from the legendary account that Alexander granted to the Jews special privileges not only in Jerusalem but in the Diaspora as well. Nonetheless, there is no basis for assuming that he visited the Temple in Jerusalem, for had he done so, such an important event would assuredly have been referred to in the Talmud, which contains many stories about Alexander of Macedonia (Tam. 31b–32b). It may be reasonably assumed, however, that the Jews approached Alexander before his journey to Samaria to correct any false impression he may have had, fearing that he might confuse them with the Samaritans and include them in their punishment. This is clearly reflected in the above-mentioned *aggadah*, which gives the place of the meeting as Antipatris. Although this name does not fit in with the time of Alexander, the Talmud is most probably preserving an authentic popular tradition (Antipatris was on the main route along which an army had to pass when marching from north to south). The *aggadah*, however, is not precise in naming Simeon the Just as the officiating high priest at that time. As for the Jews' destroying Samaria on that occasion, the allusion is probably to its destruction by the Jews in the days of John Hyrcanus.

[Abraham Schalit]

In the *Aggadah*

The legends about Alexander of Macedonia do not so much portray his historical image, as describe the Greeks as a whole, as they were known to the peoples of the East, including the Jews. According to Plato (*Republic*, 435–6), the love of knowledge is characteristic of the Greeks and the love of money and possessions, mainly of the Phoenicians and the Egyptians. According to the *aggadah*, however, the heart of the Greek is torn by two conflicting desires: a craving for money and a hankering after knowledge; for while the Greek loves gold, he also longs to observe people and their customs, to become acquainted with new countries and new manners, thus increasing his knowledge. He delights in proclaiming the latter desire, and he attempts to conceal the former. He is deeply humiliated when he finds that he has failed to do so, as was the lot of Alexander upon his visit to King Kazya for the assumed purpose of observing his administration of justice (TJ BM 2:5, 8c). The disdain of the people of the East for the rapacious Greek conquerors is a conspicuous feature of the *aggadah*, which describes Alexander's visit to the country of the Amazons (Tam. 32a). The aggadic account of Alexander's wish to enter the Holy of Holies and of the sage who dissuaded him from doing so (Gen. R. 61:7) was intended to demonstrate to the Jews that the sword is not always the most effective weapon against enemies like Alexander; moderation and discretion, guarded compromise and the exploitation of an enemy's weakness, courage and strength of spirit, often accomplish what the sword cannot. One *aggadah* in which the personality of the Macedonian king bears a close resemblance to the historical Alexander, reports a discussion between him and the elders of the south country (Tam. 31b–32a). Here he is featured as a typical Greek philosopher, bent upon learning

from every man and from every nation, inquiring into every purpose, seeking precise definitions of concepts.

[Elimelech Epstein Halevy]

In Medieval Hebrew Literature

Stories about Alexander were included in Hebrew literature throughout the Middle Ages. They may be divided into two categories: (1) Stories describing his wisdom and high moral standards, reflecting the belief that as a pupil of Aristotle he had to be a philosopher. As early as the 11th century, Solomon ibn *Gabirol included such a story in his ethical work, *Tikkun Middot ha-Nefesh*. This practice was imitated by most medieval Hebrew moralists. Stories about him and epigrams attributed to him are found in Arabic works translated into Hebrew, e.g., *Musrei ha-Filosofim* by Ḥunain ibn Ishaq and the pseudo-Aristotelian *Sod ha-Sodot*. (2) The medieval romance, the *Gests of Alexander*, was known in Hebrew, and published in many versions. This work, which originated in Hellenistic literature, is known in Greek as the *Pseudo-Callisthenes*; it was written around 300 C.E. by an anonymous Alexandrian author. According to W. van Bekkum, one of the recensions of the Greek text was believed to have been done by a Jew who added new elements taken from Josephus and the rabbinic literature, but Trumpf has proven that it was written by a Christian author who used the Septuagint. Some of the Hebrew versions seem to draw upon the *Pseudo-Callisthenes*, but most of them are based on the Latin version, the *Historia de proeliis Alexandri Magni*, a recension of the Latin translation by Archpresbyter Leo of Naples (mid-10th century). It seems that at least one version was translated into Hebrew from the Arabic, itself a translation of the Latin version. There are five printed versions of the Hebrew text of the *Gests of Alexander* (and others in manuscript):

(a) In the 12th century a version of this work was included in the *Josippon (written 200 years earlier) and became in this way part of Hebrew historical literature.

(b) Israel Lévi printed a version from an Arabic translation attributed to Samuel ibn Tibbon, based on the Latin *Historia de proeliis*. It was a deficient edition of the Ms. Héb. 671.5 in the Bibliothèque Nationale, Paris, of the *Sefer Toledot Alexander (Kovez al Jad, 2 (1886), 1–82)*. A critical edition of the same manuscript was published, with English translation, by Wout Jac. van Bekkum: *A Hebrew Alexander Romance according to Ms. Héb. 671,5 Paris, Bibliothèque Nationale* (Groningen, Styx Publications, 1994). According to the editor, there is a tendency to cleanse the Hebrew text of mention of paganism and idolatry in the Latin text, although some of the pagan names still remain.

(c) Wout Jac. van Bekkum also published the first critical edition of the Alexander Romance according to another London Ms.: *A Hebrew Alexander Romance according to Ms. London Jews' College no. 145* (Leuven, Uitgeverij Peeters en Departement Oriëntalistiek, 1992). This manuscript is also based on the Latin translation by Leo of Naples, but it rep-

resents a different version of the Hebrew translation, with its own characteristics.

(d) I.J. Kazis printed a Hebrew version (1962) based on the Paris manuscript Ms. Héb. 750.3, translated by Immanuel b. Jacob *Bonfils (mid-14th century) from the same Latin text of the *Historia de proeliis*, which was compiled from other sources as well.

(e) Another version, printed also by I. Lévi (in: *Festschrift... Steinschneider* (1896), 142–63), based on the Ms. 53 of the Estense Library in Modena, seems to be unrelated to the Latin text; Lévi conjectured that this version may be derived directly from the Greek *Pseudo-Callisthenes*. Its story is more imaginative and fanciful than that of the other versions, and has sometimes parallels with texts in the Talmud and Midrash. Two more manuscripts have, according to W. van Bekkum, a similar nature: Ms. Héb. D.11 from the Bodleian Library, Oxford, and another one from Damascus.

Besides being popular as a novel, the *Gests of Alexander*, constructed from hundreds of stories which can exist independently, was also used in Hebrew literature as a source for short stories. The name of the hero, Alexander, is often omitted and only the plot proves its origin in this romance (e.g., *Sefer Ḥasidim*, 379).

ALEXANDER LYSIMACHUS (Gr. Ἀλέξανδρος Λυσίμαχος), a leader of the Jewish community in Alexandria, Egypt, in the first century C.E., and a member of one of the most illustrious and wealthy Alexandrian Jewish families. Alexander was the brother of *Philo of Alexandria and the father of *Tiberius Julius Alexander and Marcus Julius Alexander. He served as *alabarch during the reigns of Tiberius and Claudius. He was imprisoned by Caligula, but Claudius released him and restored him to office. Alexander also served the younger Antonia, Claudius' mother, as procurator of her large estates in Egypt. When Marcus Julius Agrippa was on his way to Rome, he visited Alexandria and asked Alexander for a loan; Alexander lent the sum to Agrippa's wife *Cypros. He made a gift to the Temple, plating its gates with gold and silver.

[Abraham Schalit]

°ALEXANDER OF APHRODISIAS (end of second century–beginning of third century C.E.), Greek philosopher, commentator on the writings of *Aristotle, and author of independent works. Alexander was important for his systematization of Aristotle's thought and for the formulation of a number of distinct doctrines, especially in psychology. A number of his commentaries and independent works were translated into Arabic, and the views contained in them became an important part of medieval Islamic and Jewish Aristotelianism. The first book of Alexander's *On the Soul* was translated into Hebrew by Samuel ben Judah of Marseilles from the Arabic translation made by Ḥunain ibn Ishāq. This translation, which contains brief annotations, was completed in 1323 in Murça and a revised version of it was finished in 1339–40 in Montùlimar.

Alexander, it was commonly thought, wrote a second book in psychology, called *Treatise on the Intellect*, and it circulated in Arabic translation. Averroes wrote a commentary to this work that was translated into Hebrew and is extant in manuscript only with the supercommentaries of *Moses b. Joshua of Narbonne (1344) and Joseph b. Shem Tov *Ibn Shem Tov (1454). H.A. Davidson edited the Averroean portions of the commentary themselves, without these supercommentaries, in 1988.

*Maimonides' estimation of Alexander may be gathered from a famous letter which he wrote to Samuel ibn *Tibbon. Evaluating the philosophical literature of the day, Maimonides advises his translator that for a correct understanding of Aristotle's teachings he should read, beside the commentaries of *Themistius and Averroes, also those of Alexander (A. Marx, in JQR, 25 (1934/35), 378). Maimonides used works by Alexander in the composition of his *Guide*, and Alexander's views formed part of Maimonides' own brand of Aristotelianism (for details see S. Pines, "Translator's Introduction," *Guide of the Perplexed* (1963), 1XIV–1XXV). Maimonides cites Alexander as his source for his discussion of the factors which prevent man from discovering the truth (*Guide* 1:31), for his account of the celestial motions and intelligences (2:3), for his knowledge of the views of certain Greek philosophers (2:13), and for his discussion of God's knowledge (3:16). Alexander may also have influenced Maimonides' views on religion and political history, particularly the view that God used "wily graciousness" in bringing man from inferior forms of worship to more adequate ones (3:32).

Of special importance for Jewish philosophers was Alexander's doctrine of the intellect, discussed in detail particularly by *Gersonides (*Wars of the Lord*, Book 1). Aristotle's views (especially *De Anima* 3:5) were rather enigmatic. Central to Aristotle's discussion was the distinction between the agent intellect (*nous poietikos*) and the passive intellect (*nous pathetikos*). Interpreting Aristotle's views, Alexander held that the agent intellect did not form part of the individual human soul, but was identical with the intellect of God; while the passive intellect belonged to the soul as a mere predisposition or ability for thought. The passive intellect was also called material

or hylic intellect (*nous hylikos*), and when actualized by the agent intellect became the acquired intellect (*nous epiktetos*) or intellect in habit (*nous kath'hexin*). The passive intellect, according to Alexander, being part of the individual human soul, is, like it, mortal; only the acquired intellect is immortal, insofar as the objects of its thought are the immaterial beings, in particular, God. While Alexander's doctrine of the intellect was more precise than that of Aristotle, it contained enough ambiguities to give rise to further refinements on the part of Islamic and Jewish philosophers.

Jewish, as Islamic, philosophers accepted Alexander's notion of the agent intellect, but instead of identifying it with God, they identified it with the lowest of the celestial intelligences, which, on the one hand, governs the sublunar world, and, on the other, is a causal agent in the production of human knowledge (see also *cosmology). The agent intellect is also important to Jewish Aristotelians for its roles in the production of prophecy. While there was general agreement about the nature of the agent intellect, there was disagreement about the nature of the passive one. Alexander's acquired intellect became a commonplace in Jewish philosophy, though the medievals refined this notion by distinguishing between the intellect in actuality, and the acquired intellect. Medieval philosophers disagreed about the exact nature of the acquired intellect, but it became important for their doctrine of the immortality of the *soul and the world to come (for details see *Intellect, Doctrines of).

[Julius Guttmann / Alfred L. Ivry (2nd ed.)]

°ALEXANDER OF HALES (d. 1245), English scholastic philosopher and theologian. Alexander joined the Franciscan order after 1230, while teaching at the Faculty of Divinity in Paris. Since he did not complete his comprehensive work, *Summa universae theologiae* (4 vols., 1481–82; 1924–48), which was first edited by his pupils, the extent of his responsibility for the attitudes and opinions expressed in it, and according to which his personal character has been traced, remains controversial. The section on Jews in Christian society confirms the ecclesiastical tradition of restricted toleration. The existence of the Jewish people serves as lasting witness to the origins of Christianity; their conversion at the end of days, according to the teaching of St. Paul, will

mean the conclusion of mankind's salvation. Therefore, a definite distinction is drawn between the believers in the Old Testament and the Saracens, who then occupied the Holy Land. Obviously, this remark had a topical relevance in the period when Louis IX was preparing another Crusade. Jewish blasphemies against Christ must be severely punished, if made in public, but not more severely than those committed by Christians. Books containing such utterances must be burned.

Alexander's *Summa* originated at a time when the Talmud and post-biblical Jewish literature were under attack. Thus, although the *Summa* uses *Maimonides' *Dux neutrorum* (*Guide of the Perplexed*) as a source of philosophical doctrine, especially in the discussion of cosmological questions, the author was reticent in identifying the source of his doctrines. Jacob Guttman found Maimonides mentioned only twice, although soon afterward his name became a household word among the masters of the schools. Most striking is the use of Maimonides' reflections on the meaning of biblical commandments, intended to affirm the Old Testament's character as divine revelation, in opposition to the dualistic theories of contemporary heretics. In this context "Rabbi Moyses Judaeus" is mentioned by name with his differentiation of *judicia* and *caerimonialia*. This interest in the teachings of the third book of the *Dux* (*Guide*) prepared the way for *Aquinas' interpretation of Deuteronomy as the model of his social theory. Alexander was also influenced by Ibn *Gabirol (Avicbron), although he does not mention this philosopher by name.

[Hans Liebeschutz]

***ALEXANDER POLYHISTOR** (first century B.C.E.), Greek scholar. Alexander was born in Miletus in Asia Minor. He was taken prisoner by the Romans, but was later freed, and continued to live in Italy as a Roman citizen until his death (c. 35 B.C.E.). He was called Polyhistor (very learned) because of the wide variety of subjects on which he wrote. His works included three volumes on Egypt, one on Rome, and a work entitled "Concerning the Jews." This last work reflects the growing Roman interest in the Jewish people at the time of Pompey's conquest of Judea. Lengthy fragments from this work have been preserved by *Eusebius (*Praeparatio evangelica*, 9), and by Clement of Alexandria. From these it seems apparent that he combined relevant excerpts from Jewish, Samaritan, and gentile writers and reproduced them in indirect speech. Thus, valuable fragments of the writings of Hellenistic-Jewish authors have been preserved of which nothing would otherwise be known. Alexander cites the historians *Aristeas, *Demetrius, *Eupolemus, and *Artapanus, the tragic poet *Ezekiel, the epic poets *Theodotus and *Philo the Elder, as well as non-Jewish writers such as the historian Timochares, author of "The History of Antiochus," and *Apollonius Molon.

It seems that Alexander made little original contribution to the subject. In his works he made indiscriminate use of traditions both favorable and hostile to the Jews. He also dealt with the Jews in other works. In his book on Rome he states that a Jewish woman named Moso wrote the Law of the Hebrews, i.e., the Torah (see Suidas, s.v. Ἀλέξανδρος ὁ Μιλήσιος). Although Alexander was fully aware of the Jewish tradition concerning Moses, he appears to have seen nothing wrong in quoting a conflicting tradition from a non-Jewish source. His explanation that Judea was named after one of Semirasis' sons must have been taken from a similar source (quoted in Stephanus Byzantinus' exposition on Judea).

[Menahem Stern]

ALEXANDER SON OF ARISTOBULUS II (d. 49 B.C.E.), one of the last of the *Hasmoneans. Alexander, eldest son of Aristobulus II, was the son-in-law of *Hyrcanus II. His wife, *Alexandra, was the mother of *Mariamne, wife of *Herod the Great. As a result of the struggle between Aristobulus II and Hyrcanus II for the throne of Judea, Alexander was sent by Pompey in 63 B.C.E. as a captive to Rome – with his father and the rest of his family. He escaped on the way and returned to Judea, where he succeeded in mustering an army of 10,000 infantry and 1,500 cavalry, and in occupying the strongholds of Alexandreion, Hyrcania, and Machaerus. *Gabinius, recently arrived in Syria as proconsul, collected a force to oppose him and sent his adjutant Mark Anthony ahead. Anthony equipped an additional Jewish contingent under the Jewish commanders Peitholaus and Malichus. Gabinius defeated Alexander's army in the vicinity of Jerusalem, and the remnant fled to Alexandreion. Besieging the fortress, Gabinius promised Alexander his freedom and an amnesty for his troops if he surrendered. His mother also pleaded with Alexander to accept this condition and he left Alexandreion which was then razed to the ground by Gabinius. Gabinius thereupon introduced a much more stringent administrative system than was in force earlier.

Alexander rebelled a second time in 55 B.C.E., when Gabinius was in Egypt. He again mustered a large force and began to drive the Romans from Judea. Gabinius returned and immediately advanced to meet Alexander. He employed *Antipater to persuade Alexander's army to desert to Hyrcanus. Alexander, however, still had thirty thousand men left and he met in battle the armies of Gabinius and Hyrcanus at

Mt. Tabor and was defeated. The defeat shattered Alexander's resources. Antipater, however, succeeded in effecting a reconciliation between Alexander and Hyrcanus, by arranging a marriage between Alexander and Hyrcanus' daughter Alexandra, which might eventually enable Alexander to become high priest. When civil war broke out in Rome between Julius Caesar and Pompey in 49 B.C.E., Pompey ordered his father-in-law Q. Caecilius Metellus Scipio, then proconsul in Syria, to put Alexander to death in Antiochia.

[Abraham Schalit]

ALEXANDER SUSLIN HA-KOHEN OF FRANKFURT

(d. 1349), German talmudic scholar. Alexander was born in Erfurt and taught there as well as in Worms, Cologne, and Frankfurt. Although he was apparently still in Frankfurt in 1345 he sometime toward the end of his life resettled in Erfurt where he died a martyr's death. He is the last of the early German halakhic authorities. Alexander's fame rests upon his *Aguddah* (Cracow, 1571; photostatic copy 1958; critical annotated edition, Jerusalem, 1966–), a collection of halakhic decisions derived from talmudic discussions and arranged in the order of the tractates of the Talmud. It includes novellae (his own as well as those of some of his predecessors), and a commentary and collection of *halakhot* to the minor tractates and to the Mishnayot of the orders *Zera'im* and *Tohorot*. The language is very concise and it can be seen that he wrote it in great haste, under the stress of the expulsions and persecutions of his time. Indeed the purpose of the book is to give halakhic rulings in a concise form, ignoring differences of opinion, for a generation which was harassed and persecuted. His sources are *Mordecai b. Hillel ha-Kohen and *Aher b. Jehiel, and they often have to be consulted in order to understand him. The *Aguddah* was published in 1571 from a defective and faulty manuscript by Joseph ha-Kohen, brother-in-law of Moses *Isserles, who attempted to correct the text, but with only partial success. A digest, called *Hiddushei Aguddah*, compiled by Jacob Weil, was published as an appendix to his responsa (Venice, 1523), and has been frequently reprinted. *Aguddah* on the order of *Nezikin*, with notes by J.H. Sonnenfeld, came out in Jerusalem, 1899. The later halakhic authorities attached great value to his works; Jacob ha-Levi Moellin and Moses Isserles (in his glosses to the Shulḥan Arukh) in particular regarded his decisions as authoritative, and quote from him, although they were aware of his sources. He was eulogized in a dirge *Ziyyon Arayyavekh Bekhi* (published in the addenda to Landshut's *Ammudei ha-Avodah* (p. III–IV)).

ALEXANDER SUSSKIND BEN MOSES OF GRODNO

(d. 1793), Lithuanian kabbalist. Alexander lived a secluded

life in Grodno, never engaging in light conversation so as not to be deterred from study and prayer. Many stories were told about him. According to a well-substantiated one, several days before Passover in 1790, a Jewish victim of a blood libel was sentenced to death unless he agreed to convert. Alexander, afraid the condemned man would be unable to withstand the ordeal, obtained permission to visit him in prison, and persuaded him to choose martyrdom. The execution was scheduled for the second day of Shavuot; on that day Alexander left the synagogue in the middle of the service for the place of execution, heard the condemned man recite the prayer of martyrdom, said "Amen," and returned to the synagogue, reciting the memorial prayer for the martyr's soul. The second incident relates that Alexander was imprisoned in a German town for soliciting money for the Jews of Erez Israel, as it was illegal to send money out of Germany. On being freed, he immediately resumed collecting, ignoring the danger involved.

Alexander's most important work, *Yesod ve-Shoresh ha-Avodah* (Novy Dvor, 1782; corrected edition, Jerusalem, 1959), a book of ethics, touches upon many aspects of Jewish life. It is divided into 12 sections, the final section *Sha'ar ha-Kolel*, concluding with an account of the coming of the Messiah. According to the author, the basis of divine worship is love of God and love of the Jewish people. Alexander emphasizes that a Jew must be grieved at the contempt in which the God of Israel and the people of Israel are held among the Gentiles, who persecute the chosen people and then ask mockingly, "Where is your God?" He speaks often and with great sorrow of the desolation of the holy city of Jerusalem and of Erez Israel and extols "the greatness of the virtue of living in the Land of Israel." In Alexander's view, the essence of observance is intent (*kavvanah*); the deed alone, without intention, is meaningless. For this reason, he insisted on clear and meticulous enunciation of each word in prayer, giving many examples of how words are distorted in the course of praying. He also laid down a specific order of study: Talmud, *musar*, literature, and then Kabbalah. He emphasizes the need for study of the geography of the Bible.

Alexander was rigid in the matter of religious observance, threatening violators with severe retribution in the hereafter. He asked every Jew to resign himself to "the four forms of capital punishment of the *bet din*" and in his will he ordered that upon his death his body be subjected to stoning. Yet the central theme of his work is "worship the Lord in joy." His ideas make Alexander's writings closely akin to the basic tenets of Ḥasidism and *Naḥman of Bratslav said of him, "he was a Ḥasid even before there was Ḥasidism." In annotated prayer books, especially in those of the Sephardi rite, his *Kavvanot ha-Pashtiyut*, the "intent" of the text of the prayers as set forth in the *Yesod ve-Shoresh ha-Avodah*, is appended to most of the prayers. He was deeply revered and as long as there was a Jewish community in Grodno, men and women went to pray at his grave. Descendants of his family who originally went by the name of Braz (initials for Benei Rabbi Alexander Zusskind) later assumed the name Braudes.

ALEXANDER THE ZEALOT, joint leader, with *Eleazar b. Dinai, of an armed band of Jews during the administration of the Roman procurator Ventidius *Cumanus (48–52 C.E.). They led a punitive expedition after a group of Galilean Jewish pilgrims had been murdered while passing through Samaria on their way to Jerusalem to celebrate one of the festivals. Cumanus, bribed by the Samaritans, took no steps to punish the guilty parties. The Jews thereupon abandoned the celebration of the festival and, under the leadership of Alexander and Eleazar, attacked several Samaritan villages, “massacred the inhabitants without distinction of age and burnt the villages.” After a show of force by Cumanus and entreaties by the Jewish leaders of Jerusalem the armed bands dispersed, the zealots returning to their former strongholds in Judea.

[Isaiah Gafni]

ALEXANDRA, Hasmonean princess, daughter of *Aristobulus II, king of Judea. Captured by Pompey, Alexandra was brought to Rome in 63 B.C.E. together with her father, her two sisters, and her brother *Antigonus II. The family was released in 56 B.C.E. and returned to Jerusalem. After the death of her father in 49 B.C.E., Alexandra was sent with Antigonus and her two sisters to Chalcis in Lebanon at the invitation of its ruler, Ptolemy, the son of Mennaeus. Alexandra married Ptolemy's son, Philippion. But Ptolemy, jealous of his son, executed him, and then married Alexandra himself. Nothing more is known of her.

[Abraham Schalit]

ALEXANDRA (d. 28 B.C.E.), daughter of *Hyrcanus II; wife of *Alexander, the son of Aristobulus II; and mother of Aristobulus III and of *Mariamne, Herod's wife. Alexandra regarded Herod's appointment of the Babylonian (or Egyptian) Ananel (Hananel) to the high priesthood as a violation of the

Hasmonean family's right of succession to the office and attempted to secure it for her son Aristobulus. Though Herod acceded to her request, he was unable to forgive her, and did not allow her to leave the palace. When Alexandra tried to escape with her son, Herod foiled the attempt. He then affected a reconciliation. When, however, her son was drowned in a swimming pool, Alexandra accused Herod before Cleopatra of engineering his death and asked her to have Mark Antony charge Herod with the murder. Herod was summoned to Laodicea, but cleared himself by bribery.

After the battle of Actium (31 B.C.E.), it seemed certain that Herod could not escape punishment, since he had sided with Antony against Octavian (Augustus). When Herod returned from a meeting with Octavian with added honors, Herod's sister Salome, Queen Mariamne's implacable enemy, slandered her and Alexandra to her brother, and Mariamne was condemned to death for treason. According to Josephus' biased account, Alexandra escaped the same fate by dishonorably accusing her condemned daughter of disloyalty to her husband. Her own fate was not long delayed. After Mariamne's death Herod fell ill and appeared likely to die. Alexandra, thinking that her opportunity had now come, attempted to obtain control of the two fortresses in Jerusalem. When this was reported to Herod, he ordered her immediate execution. With Alexandra's death, the last member of the Hasmonean dynasty to play an active role in history disappeared. Alexandra cannot be considered exceptionally sagacious or gifted with insight into Herod's character. In all, she seemed to resemble her grandfather Alexander Yannai; she was courageous, but lacked flexibility and guile, and hence was no match for Herod.

[Abraham Schalit]

ALEXANDRI (*Alexandrah*, *Alexandrai*, *Alexandros*; third century), Palestinian *amora*. He was a leading aggadist of his day. Many of the scholars who quote Alexandri belong to the *amoraim* who centered around the academy at Lydda. It is therefore probable that Alexandri came from Lydda. It is re-

lated that he used to go about the streets of the town urging people to perform good deeds. He once entered the marketplace and called out: "Who wants life?" When the people answered him affirmatively he responded by quoting the verse: "Who is the man that desireth life ... Keep thy tongue from evil, and thy lips from speaking guile. Depart from evil and do good; Seek peace and pursue it" (Ps. 34:13–15; Av. Zar. 19b). Many of Alexandri's homiletical dissertations are based on the book of Psalms. "Break Thou the arm of the wicked" (Ps. 10:15) is quoted by him as an indictment of profiteering. From Psalms 16:10 he derived that whoever hears himself reviled and does not resent it deserves to be called pious (*hasid*). He also said: "When man uses a broken vessel he is ashamed of it, but not so God. All the instruments of His service are broken vessels, as it is said: 'The Lord is nigh unto them that are of a broken heart' (Ps. 34:19); or 'Who healeth the broken in heart'" (Ps. 147:3, PR 25:158b).

He customarily concluded his daily prayers: "Sovereign of the Universe, it is known full well to Thee that it is our desire to perform Thy will, and what prevents us? The yeast in the dough (i.e., the evil inclination which acts as a fermenting and corrupting agent) and subjection to foreign rule. May it be Thy will to deliver us from their hand, so that we may be enabled to perform the statutes of Thy will with a perfect heart" (Ber. 17a).

No details of his life are known, except that his statement "The world is darkened for him whose wife has died in his days" (Sanh. 22a) may have had a personal application. Scholars by the name of Alexandri b. Haggai (b. Ḥagra, b. Ḥadrin), Alexandri "Kerovah" ("the hymnologist"), and Alexandri de-Zaddika ("the Just"), are mentioned in isolated talmudic passages and one of these may be identical with this Alexandri.

[Yitzhak Dov Gilat]

ALEXANDRIA, city in northern *Egypt.

Ancient Period

Jews settled in Alexandria at the beginning of the third century B.C.E. (according to Josephus, already in the time of Alexander the Great). At first they dwelt in the eastern sector of the city, near the sea; but during the Roman era, two of its five quarters (particularly the fourth (= "Delta") quarter) were inhabited by Jews, and synagogues existed in every part of the city. The Jews of Alexandria engaged in various crafts and in commerce. They included some who were extremely wealthy (moneylenders, merchants, *alabarchs), but the majority were artisans. From the legal aspect, the Jews formed an autonomous community at whose head stood at first its respected leaders, afterward – the ethnarchs, and from the days of Augustus, a council of 71 elders. According to Strabo, the ethnarch was responsible for the general conduct of Jewish affairs in the city, particularly in legal matters and the drawing up of documents. Among the communal institutions worthy of

mention were the *bet din* and the "archion" (i.e., the office for drawing up documents). The central synagogue, famous for its size and splendor, may have been the "double colonnade" (*diopelostion*) of Alexandria mentioned in the Talmud (Suk. 51b; Tosef. 4:6), though some think it was merely a large meeting place for artisans. During the Ptolemaic period relations between the Jews and the government were, in general, good. Only twice, in 145 and in 88 B.C.E., did insignificant clashes occur, seemingly with a political background. Many of the Jews even acquired citizenship in the city. The position of the Jews deteriorated at the beginning of the Roman era. Rome sought to distinguish between the Greeks, the citizens of the city to whom all rights were granted, and the Egyptians, upon whom a poll tax was imposed and who were considered a subject people. The Jews energetically began to seek citizenship rights, for only thus could they attain the status of the privileged Greeks. Meanwhile, however, *antisemitism had taken deep root. The Alexandrians vehemently opposed the entry of Jews into the ranks of the citizens. In 38 C.E., during the reign of *Caligula, serious riots broke out against the Jews. Although antisemitic propaganda had paved the way for them, the riots themselves became possible as a result of the attitude of the Roman governor, Flaccus. Many Jews were murdered, their notables were publicly scourged, synagogues were defiled and closed, and all the Jews were confined to one quarter of the city. On Caligula's death, the Jews armed themselves and after receiving support from their fellow Jews in Egypt and Erez Israel fell upon the Greeks. The revolt was suppressed by the Romans. The emperor Claudius restored to the Jews of Alexandria the religious and national rights of which they had been deprived at the time of the riots, but forbade them to claim any extension of their citizenship rights. In 66 C.E., influenced by the outbreak of the war in Erez Israel, the Jews of Alexandria rebelled against Rome. The revolt was crushed by *Tiberius Julius Alexander and 50,000 Jews were killed (Jos., Wars, 2:497). During the widespread rebellion of Jews in the Roman Empire in 115–117 C.E. the Jews of Alexandria again suffered, the great synagogue going up in flames. As a consequence of these revolts, the economic situation of the community was undermined and its population diminished. See also *Diaspora.

[Avigdor (Victor) Tcherikover]

Alexandrians in Jerusalem

During the period of the Second Temple the Jews of Alexandria were represented in Jerusalem by a sizable community. References to this community, while not numerous, can be divided into two distinct categories: (1) The Alexandrian community as a separate congregation. According to Acts 6:9, the apostles in Jerusalem were opposed by "certain of the synagogue, which is called the synagogue of the Libertines and Cyrenians and Alexandrians, and of them of Cilicia and of Asia." The Alexandrian synagogue and congregation are mentioned in talmudic sources as well: "Eleazar b. Zadok bought a synagogue of the Alexandrians in Jerusalem" (Tosef. Meg. 3:6;

Alexandria in early Christian times.

cf. TJ Meg. 3:1, 73d). (2) References to particular Alexandrians. During Herod's reign several prominent Alexandrian Jewish families lived in Jerusalem. One was that of the priest Boethus whose son Simeon was appointed high priest by Herod. Another family of high priests, the "House of Phabi," was likewise of Jewish-Egyptian origin, although it is not certain whether they came from Alexandria. According to *Parah* 3:5, Hanamel the high priest, who had been appointed by Herod in place of Aristobulus the Hasmonean, was an Egyptian, also probably from Alexandria. "Nicanor's Gate" in the Temple was named after another famous Alexandrian Jew. Rabbinic sources de-

scribe at length the miracles surrounding him and the gates he brought from Alexandria (Mid. 1:4; 2:3; Yoma 3:10; Yoma 38a). In 1902 the family tomb of Nicanor was discovered in a cave just north of Jerusalem. The inscription found there reads: "The bones of the sons of Nicanor the Alexandrian who built the gates. Nicanor Alexa."
[Isaiah Gafni]

Jewish Culture

The Greek-speaking Jews of Alexandria were familiar with the works of the ancient Greek poets and philosophers and acknowledged their universal appeal. They would not, however,

give up their own religion, nor could they accept the prevailing Hellenistic culture with its polytheistic foundations and pagan practice. Thus they came to create their own version of Hellenistic culture. They contended that Greek philosophy had derived its concepts from Jewish sources and that there was no contradiction between the two systems of thought. On the other hand, they also gave Judaism an interpretation of their own, turning the Jewish concept of God into an abstraction and His relationship to the world into a subject of metaphysical speculation. Alexandrine Jewish philosophers stressed the universal aspects of Jewish law and the prophets, de-emphasized the national Jewish aspects of Jewish religion, and sought to provide rational motives for Jewish religious practice. In this manner they sought not only to defend themselves against the onslaught of the prevailing pagan culture, but also to spread monotheism and respect for the high moral and ethical values of Judaism. The basis of Jewish-Hellenistic literature was the Septuagint, the Greek translation of the Bible, which was to become the cornerstone of a new world culture (see *Bible: Greek translations). The apologetic tendency of Jewish-Hellenistic culture is clearly discernible in the Septuagint. Alexandrine Jewish literature sought to express the concepts of the Jewish-Hellenistic culture and to propagate these concepts among Jews and Gentiles. Among these Jewish writers there were poets, playwrights, and historians; but it was the philosophers who made a lasting contribution. *Philo of Alexandria was the greatest among them, but also the last of any significance. After him, Alexandrine Jewish culture declined. See also *Hellenism.

Byzantine Period

By the beginning of the Byzantine era, the Jewish population had again increased, but suffered from the persecutions of the Christian Church. In 414, in the days of the patriarch Cyril, the Jews were expelled from the city but appear to have returned after some time since it contained an appreciable Jewish population when it was conquered by the Muslims.

Arab Period

According to Arabic sources, there were about 400,000 Jews in Alexandria at the time of its conquest by the Arabs (642), but 70,000 had left during the siege. These figures are greatly exaggerated, but they indicate that in the seventh century there was still a large Jewish community. Under the rule of the caliphs the community declined, both demographically and culturally. J. *Mann concluded from a *genizah* document of the 11th century that there were 300 Jewish families in Alexandria, but this seems improbable. The same is true for the statement of *Benjamin of Tudela, who visited the town in about 1170 and speaks of 3,000 Jews living there. In any case, throughout the Middle Ages there was a well-organized Jewish community there with rabbis and scholars. Various documents of the Cairo *Genizah* mention the name of Mauhub ha-Ḥazzan b. Aaron ha-Ḥazzan, a *dayyan* of the community in about 1070–80. In the middle of the 12th century Aaron

He-Ḥaver Ben Yeshu‘ah *Alamani, physician and composer of *piyyutim*, was the spiritual head of the Alexandrian Jews. Contemporary with *Maimonides (late 12th century) were the *dayyanim* Phinehas b. Meshullam, originally from Byzantium, and *Anatoli b. Joseph from southern France, and contemporary with Abraham the son of *Maimonides was the *dayyan* Joseph b. Gershom, also a French Jew. In this period the community of Alexandria maintained close relations with the Jews of Cairo and other cities of Egypt, to whom they applied frequently for help in ransoming Jews captured by pirates. A letter of 1028 mentions this situation; it also praises Nethanel b. Eleazar ha-Kohen, who had been helpful in the building of a synagogue, apparently the synagogue of the congregation of Palestinians that may have been destroyed during the persecution of the non-Muslims by the Fatimid caliph al-Ḥākim (c. 996–1021). In addition to this synagogue there was a smaller one, attested to in various medieval sources that mention two synagogues of Alexandria, one of them called “small.” The Jews of Alexandria were engaged in the international trade centered in their city, and some of them held government posts.

Mamluk and Ottoman Periods

Under the rule of the Mamluk sultans (1250–1517), the Jewish population of Alexandria declined further, as did the general population. *Meshullam of Volterra, who visited it in 1481, found 60 Jewish families, but reported that the old men remembered the time when the community numbered 4,000. Although this figure is doubtless an exaggeration, it nevertheless testifies to the numerical decrease of the community in the later Middle Ages. In 1488 Obadiah of Bertinoro found 25 Jewish families in Alexandria. Many Spanish exiles, including merchants, scholars, and rabbis settled there in the 14th–15th centuries. The historian *Sambari (17th century) mentions among the rabbis of Alexandria at the end of the 16th century Moses b. Sason, Joseph Sagish, and Baruch b. Ḥābib. With the spread of the plague in 1602 most of the Jews left and did not return. After the Cossack persecutions of 1648–49 (see *Chmielnicki) some refugees from the Ukraine settled in Alexandria. During the 1660s the rabbi of the city was Joshua of Mantua, who became an ardent follower of *Shabbetai Zevi. In 1700 Jewish fishermen from *Rosetta (Rashīd) moved to Alexandria and formed a Jewish quarter near the seashore, and in the second half of the 18th century more groups of fishermen from Rosetta, *Damietta, and Cairo joined them; this Jewish quarter was destroyed by an earthquake. At the end of the 18th century the community was very small and it suffered greatly during the French conquest. Napoleon imposed heavy fines on the Jews and ordered the ancient synagogue, associated with the prophet Elijah, to be destroyed. In the first half of the 19th century under the rule of Muhammad ‘Ali there was a new period of prosperity. The development of commerce brought great wealth to the Jews, as to the other merchants in the town; the community was reorganized and established schools, hospitals, and various associations. From 1871 to 1878

the Jewry of Alexandria was divided and existed as two separate communities. Among the rabbis of Alexandria in modern times were the descendants of the Israel family from Rhodes: Elijah, Moses, and Jedidiah Israel (served 1802–30), and Solomon Ḥazzan (1830–56), Moses Israel Ḥazzan (1856–63), and Bekhor Elijah Ḥazzan (1888–1908). As a result of immigration from Italy, particularly from Leghorn, the upper class of the community became to some extent Italianized. Rabbis from Italy included Raphael della Pergola (1910–23), formerly of Gorizia, and David *Prato (1926–37). Later rabbis were M. *Ventura and Aharon Angel. During World War I many Jews from Palestine who were not Ottoman citizens were exiled to Alexandria. In 1915 their leaders decided, under the influence of *Jabotinsky and *Trumpeldor, to form Jewish battalions to fight on the side of the Allies; the Zion Mule Corps was also organized in Alexandria.

[Eliyahu Ashtor]

Modern Times

In 1937, 24,690 Jews were living in Alexandria and in 1947, 21,128. The latter figure included 243 Karaites, who, unlike those of Cairo, were members of the Jewish community council. Ashkenazi Jews were also members of the council. According to the 1947 census, 59.1% of Alexandrian Jews were merchants, and 18.5% were artisans. Upon the outbreak of the Israeli War of Independence in 1948, several Jews were placed in detention camps, such as that at Abukir. Most of the detainees were released before 1950. There were several assaults on the Jewish community by the local population, including the throwing of a bomb into a synagogue in July 1951. With *Nasser's accession to power in February 1954, many Jews were arrested on charges of *Zionism, communism, and currency smuggling. After the *Sinai Campaign (1956), thousands of Jews were banished from the city, while others left voluntarily when the Alexandrian stock exchange ceased to function. The 1960 census showed that only 2,760 Jews remained. After the *Six-Day War of June 1967, about 350 Jews, including Chief Rabbi Nafusi, were interned in the Abu Za'bal detention camp, known for its severe conditions. Some of them were released before the end of 1967. The numbers dwindled rapidly; by 1970 very few remained and in 2005 just a few dozen, mostly elderly people.

[Haim J. Cohen]

Hebrew Press

The first Hebrew press of Alexandria was founded in 1862 by Solomon Ottolenghi from Leghorn. In its first year, it printed three books. A second attempt to found a Hebrew press in Alexandria was made in 1865. Nathan *Amram, chief rabbi of Alexandria, brought two printers from Jerusalem, Michael Cohen and Joel Moses Salomon, to print his own works. However, these printers only produced two books, returning to Jerusalem when the second was only half finished. A more successful Hebrew press was established in 1873 by Faraj Ḥayyim Mizraḥi, who came from Persia; his press con-

tinued to operate until his death in 1913, and his sons maintained it until 1916. Altogether, over 40 books were printed. In 1907 Jacob b. Attar from Meknés, Morocco, founded another press, which produced several dozen books. Apart from these main printing houses, from 1920 on the city had several small presses, each producing one or two books. A total of over 100 books for Jews were printed in Alexandria, most of them in Hebrew, the others in Judeo-Arabic and Ladino. Most of them were works by eminent Egyptian rabbis, prayer books, and textbooks.

ALEXANDRIAN MARTYRS, ACTS OF, genre of patriotic Alexandrian literature containing heavy overtones of antisemitism. This is known also as the “Acts of the Pagan Martyrs” (mistakenly, since the martyrdom has nothing to do with religion). Fragments of this literature were first published at the end of the 19th century. At that time the fragments were understood to be of a strictly official nature, in effect the protocols of numerous trials of Alexandrian representatives before the Roman Caesars. These missions would inevitably end in the execution of the delegates, thus arousing further the Alexandrians' hatred both of the emperor and his presumed allies, the Jews, although a number of specimens make no mention of their part in the proceedings. With the publication of additional fragments, this view was modified, and it is now accepted that “this genre has nothing to do with official documents, and the protocol form... is merely a literary disguise” (Tcherikover, *Corpus*, 2 (1960), 56).

The background for the various trials covers a period of 150 years. The earliest embassy is associated with *Caligula (37–41), the latest (*Acta Appiani*) probably refers to the emperor Commodus (180–192). However, the most widely discussed fragments are those belonging to the *Acta Isidori et Lamponis* (for literature see *ibid.*, 66–67). Isidoros, the head of the gymnasium of Alexandria, launched a vigorous attack against the Jewish king *Agrippa I, and summoned him be-

fore the court of Claudius. The dialogue between the emperor and Isidoros is heated. At one point Claudius refers to Isidoros as “the son of a girl-musician” (i.e., a woman of loose morals) whereupon the latter immediately rebuts: “I am neither a slave nor a girl-musician’s son, but gymnasiarch of the glorious city of Alexandria. But you are the cast-off son of the Jewess Salome!” (*ibid.*, 8of.). Isidoros and his colleague Lampon were immediately sentenced to death. The trial probably took place in 41 C.E. (although many scholars favor 53), for in that year a series of debates on Jewish civic rights came before Claudius. It would be mistaken, however, to conclude from this document that all the Acts were aimed solely at arousing anti-Jewish sentiment. Tcherikover has shown clearly that antisemitism in the Acts “plays a secondary part only, the major theme of the work being the clash between the Alexandrians and Rome.” The author’s main purpose was to ridicule the Roman emperors, and for this purpose it was often sufficient to allude to the alleged cordial understanding between the emperors and the Jews.

[Isaiah Gafni]

ALEXAS, friend of Herod the Great (37–4 B.C.E.) and husband of Herod’s sister, Salome. Herod forced Salome to marry Alexas, after threatening her with open enmity if she refused. Apparently Alexas was among the dignitaries who became powerful under the patronage of the new Judean dynasty. According to Josephus, Herod gave Alexas instructions about the procedure to be followed after his death. Alexas seems to have wielded sufficient authority to secure the release of the prisoners whom Herod had ordered to be executed on the news of his death to insure that the nation would mourn. But the whole story is probably a malevolent legend without foundation. Alexas had a son named after him, but with the surname Helcias. This son, known as Helcias the “Elder” or “Great” (ὁ μέγας), was apparently among the important members of the house of Herod. He is also referred to as “Helcias the Prefect” (*Ant.*, 19:353). By the third generation, the house of Alexas had already obtained Roman citizenship, for Helcias’ son was named *Julius Archelaus. Josephus states that he was “well versed in Greek learning,” and Archelaus was therefore among the first to receive the historian’s works (*Apion*, 1:51).

[Isaiah Gafni]

ALEXEYEV, ALEXANDER (1820–after 1886), apostate and Christian propagandist. He was born Wolf Nachlas into a ḥasidic family in Nezarinetz, Podolia, and became a Christian after his impressment into the Russian army. During his army service Alexeyev was made a noncommissioned officer for his zeal in persuading Jewish child conscripts to convert to

Christianity. Later he became paralyzed and was discharged. Alexeyev was subsequently appointed to attend the *Saratov blood libel case (1853) as an expert. He wrote a pamphlet entitled “Do Jews Use Christian Blood for Religious Purposes?” (1886), which boldly defends the Jews against this particular accusation. Other writings, however, aimed at winning Jewish converts, attacked the Talmud and the rabbis in crude terms which made an impact at the time.

ALFALAS, MOSES (late 16th century), preacher, lived in Tetuan, Spanish Morocco. Alfalas, in common with R. *Judah Loew of Prague, employed philosophical terms in his preaching, without retaining their accepted meaning. Many of his sermons were delivered in Salonika, and he probably lived there some time. His printed works are *Ho’il Moshe* (1597), 13 chapters of homiletic treatment of the midrashic sayings that refer to the meaning of the Torah and the relationship between Israel and the Torah; *Ba Gad* (printed together with the above), which contains seven chapters of homilies explaining the significance of the *milah* (“circumcision”); *Va-Yakhel Moshe* (1597), 25 homilies which he had preached in Venice, Salonika, Tetuan and other towns, including some homilies written by his students under his supervision. All three books include an index of contents and sources, compiled by Samuel ibn Dysoss.

ALFANDARI, family originating in Andalusia, Spain, and claiming descent from the family of Bezalel of the tribe of Judah. After the Expulsion (1492) the family spread throughout the Turkish Empire and France. For many generations they were among the major scholars and communal leaders of Constantinople, Brusa (Bursa), Smyrna, Egypt, and Erez Israel. The first member of the family of whom there is knowledge is ISAAC B. JUDAH, who died in Toledo (1241). JACOB B. SOLOMON of Valencia and Solomon Zarzah translated *Sefer ha-Azamim*, attributed to Abraham *Ibn Ezra, from Arabic into Hebrew. The name “Alfandery” was known in 1506 both in Paris and in Avignon, and, in 1558, in Lyons. Variants are “Alfandarc” and “Alfandrec.” Members of the family lived in Egypt immediately after the Expulsion from Spain at the end of the 15th century; they were primarily merchants. A 1515 document from Cairo mentions the merchant DAVID ALFANDARI. ISAAC, who traveled to Yemen on business, also lived there. Later, several members of this family immigrated to Egypt from Portugal, while some Marrano members of the family remained in Portugal. OBADIAH (mid-17th century), apparently a member of the Egyptian branch of the family, was the last marketer for the woolen industry in Safed, where he was known as “chief of the artisans.” His business failed as a result of the exorbitant demands made upon him by the authorities in Safed, he left for Egypt, and it was

on a journey from Egypt that he was robbed and murdered (c. 1661). JACOB (second half of 16th century), a noted scholar of the Turkish branch, was the father of two well-known rabbis, Ḥayyim and Shabbetai. ḤAYYIM (the Elder; 1588–1640) was a noted scholar, communal leader, and *dayyan* in Constantinople, his birthplace. He wrote a great number of responsa, four of which were in the possession of his grandson, Ḥayyim b. Isaac. Among his correspondents was Jacob di Trani. He also wrote commentaries to most of the talmudic tractates, as well as novellae on the Tur of Jacob b. Asher, but these have not survived. SHABBETAI, born c. 1590, achieved fame as a scholar in his youth, and corresponded with two of Safed's great scholars, *Ḥiyya Rofe and Yom Tov *Zahalon, with whom he developed close ties upon their visit to Constantinople. Ḥayyim the Elder's son JACOB *ALFANDARI was one of the leading scholars of Constantinople. Ḥayyim's other son, ISAAC RAPHAEL (c. 1622–c. 1687), studied under Joseph Trani and about 1665 was appointed rabbi of one of the congregations in Brusa, a position he held until his death. Isaac Raphael, whom A.M. Cardoso met in Brusa in 1681, is purported by the latter to have expressed his belief in Shabbetai Zevi to him, but this testimony is spurious. Isaac Raphael wrote many responsa and corresponded with Ḥayyim *Benveniste, who lauded him highly. His son Ḥayyim b. Issac *Alfandari was a noted scholar. ELIJAH B. JACOB ALFANDARI (1670?–1717), rabbi and halakhic authority, was *av bet din* in Constantinople, where he was born and died. He fought Shabbateanism. His works include *Seder Eliyahu Rabbah ve-Zuta* (1719) on the laws of *agunah* and *Mikhtav me-Eliyahu* (1723), on the laws of divorce. Approximately at the same time there were in Salonika two scholars, both among the most distinguished of Solomon b. Isaac ha-Levi's pupils: MOSES ALFANDARI, scholar and pietist, and his brother ISAAC.

ḤAYYIM ALFANDARI, known as "Rabbenu" to distinguish him from the Elder, was a rabbi in Jerusalem. In 1758 he was included among the members of Judah Navon's *bet midrash*, "Damesek Eliezer." He was also one of a delegation of the seven rabbis including H.J.D. *Azulai sent on a special mission to Constantinople (but getting no farther than Egypt) to oust the official representative of Jerusalem's "*Vaad Pekidei Erez Israel*." JOSEPH ALFANDARI (d. 1867), a *dayyan* and preacher in Constantinople, studied under Isaac *Attia, author of *Rov Dagan*. He wrote *Porat Yosef* (1868), responsa to which he appended his teacher's responsa, and talmudic novellae, and *Va-Yikra Yosef* (1877), homilies with some responsa.

SOLOMON B. ḤAYYIM ALFANDARI (d. 1773), rabbi and *dayyan* in Constantinople, signed documents and halakhic decisions along with the other rabbis of the community from 1746 to 1764. He later became chief rabbi. His two sons, who also served as rabbis in Constantinople, were RAPHAEL HEZEKIAH ḤAYYIM and ABRAHAM.

FERNAND ALFANDARI (1837–1910), a judge, was appointed to the Court de Cassation in Paris (1894).

BIBLIOGRAPHY: Ashtor, Toledot, 2 (1951), 486–7; S. Avizur, in: *Sefunot*, 6 (1962), 69; M. Benayahu, in: *Aresheth*, 2 (1960), 111–2; idem, *Rabbi Ḥ.Y.D. Azulai* (Heb., 1959), 380–1; Conforte, Kore, 46b; A. Galanté, *Histoire des Juifs d'Istanbul*, 1 (1941), 127.

ALFANDARI, AARON BEN MOSES (1690?–1774), rabbi and author. He taught at the yeshivah of Smyrna, where he served as *dayyan*. About 1757 he settled in Hebron where he was appointed chief rabbi. He wrote *Yad Aharon*, an attempt to bring Ḥayyim *Benveniste's *Keneset ha-Gedolah* up to date by including later decisions as well as sources not available to Benveniste. He also added his own decisions, as well as a work on the methodology of the Talmud. The volume on *Orah Ḥayyim* was published in Smyrna in 1735; on *Even ha-Ezer* in two volumes in 1756–66. The one to *Yoreh De'ah* and the uncompleted manuscript on *Hoshen Mishpat* were destroyed in the great Smyrna fire of 1743. He also wrote *Mirkevet ha-Mishneh*, a commentary on Maimonides' *Yad Hazakah*; most of it was destroyed in the same fire and only the first part was published (1755).

BIBLIOGRAPHY: Azulai, 1 (1852), 16 no. 119, s.v. *Aharon Alfandari*; M. Benayahu, *Rabbi Ḥ.Y.D. Azulai* (Heb., 1959), 355; Michael, Or, no. 302.

ALFANDARI, ḤAYYIM BEN ISAAC RAPHAEL (c. 1660–1733), kabbalist and rabbi. He lived at Brusa, Turkey, where in 1681 he met Abraham Miguel *Cardozo [Cardoso]. According to the latter's testimony, Alfandari later came to him in Constantinople for esoteric study and believed in Cardoso's concept of the Divinity. For this reason Alfandari quarreled with Samuel *Primo, the rabbi of the Adrianople community. He was summoned before the scholars of Constantinople (c. 1683) and warned to disassociate himself from Cardoso's circle. On this occasion he denied belonging to Cardoso's circle and accused the latter of belief in the Trinity. Later Alfandari became an extreme Shabbatean. He signed his name "Ḥayyim Zevi," called himself "Messiah," and gathered a group of followers in Constantinople. Cardoso accused them of desecrating the Sabbath and eating forbidden food. In 1696 Alfandari settled in Jerusalem as head of the community (*resh mata*). He was active in public affairs and presided over a yeshivah. At one time he resided in Egypt, where he studied Isaac *Luria's writings which were in the possession of Moses Vital, grandson of Ḥayyim *Vital. He also lived in Safed, where he wrote a booklet called *Kedusha de-Vei Shimshei* (printed in J. Kasabi's *Rav Yosef*). By 1710 he had returned to Constantinople where, in 1714, he was a signatory to the excommunication of Nehemiah *Ḥayon during the controversy on *Oz le-Elohim* (1713). In 1717, however, Alfandari was Ḥayon's envoy and delivered letters of the scholars of Hebron and Salonika to the rabbis of Constantinople, and in 1718 he tried to reconcile Ḥayon with Naphtali *Katz. In 1722 his name appeared first on the list of the Safed scholars confirming Daniel Kapsuto's credentials as emissary. He returned to Constantinople, and died there. He wrote *Esh Dat* (1718), homilies on the Torah, and at the end of

that work, *Muzzal me-Esh* by his uncle Jacob; and *Maggid me-Reshit*, a collection of responsa by his grandfather Ḥayyim the Elder, which closes with *Derekh ha-Kodesh* (1710). Alfandari's kabbalistic works have not survived.

BIBLIOGRAPHY: N.Ḥ. Ḥayon, *Ha-Kolot Yehdalun* (Amsterdam, 1725), 6a; *Lehishat Saraf* (letters against Ḥayon, 1726), 11b, 14b; Rosanes, *Togarmah*, 4 (1935), 195–7; I. Ben-Zvi, in: *Reshumot*, 5 (1953), 56; I. Molcho and A. Amarilio, in: *Sefunot*, 3–4 (1959–60), 222–5, 227; Y. Nadav, *ibid.*, 325; R. Shatz, *ibid.*, 429, 431.

ALFANDARI, JACOB (c. 1620–1695), halakhic writer and preacher, the oldest son of Ḥayyim Alfandari the Elder, one of the leading scholars of Constantinople. Alfandari, who studied under his father, taught at a yeshivah. His disciples included Jacob Sasson. According to Abraham Miguel Cardoso, he urged his devotees not to accept the teaching of Shabbetai Zevi. He wrote many responsa, but most of his writings were destroyed in a fire in Constantinople. Some were rescued and published by his nephew Ḥayyim b. Isaac Alfandari, under the title *Muzzal me-Esh* (“Saved from Fire”; appended to his *Esh Dat*, Constantinople, 1718). Another portion, also published under the same title, was incorporated in Joseph Kasabi's responsa *Rav Yosef* (Constantinople, 1736), which was edited by Kasabi's pupil Jacob b. Judah Alfandari, grandson of the author. The responsa that he sent in reply to his brother Isaac Raphael's inquiries were published in *Maggid me-Reshit* (1660–74). A book of his sermons was in the possession of his nephew, Ḥayyim b. Isaac Raphael, who, in his *Esh Dat*, frequently cites homiletical expositions in his uncle's name. His rhetorical style, which is replete with rabbinical sayings, caused Ḥayyim Joseph David Azulai to call him “the father of rhetoric.” His grandson Jacob was a prominent disciple of Ḥayyim b. Isaac Alfandari, and wrote an introduction to *Mikhtav me-Eliyahu* by Elijah Alfandari (1723).

BIBLIOGRAPHY: Ghironi-Neppi, 180 (but the mention of a book on the Torah in manuscript may refer to a work by another scholar of the same name).

ALFANDARI, SOLOMON ELIEZER BEN JACOB, known as **Mercado** or **Maharsha** (Moreinu **ha-Rav Shelomo** Eliezer; 1826 or 1829–1930), rabbinic authority. Alfandari was born in Constantinople. When he was about 25, he headed the yeshivah founded by a certain Foa, a wealthy resident of Constantinople, and among his pupils were many who subsequently became important rabbis. At the age of 30, he was elected a member of the general religious council (*Majlis*) of Constantinople. During the sultanate of Abdul Ḥamid, Alfandari opposed the conscription of Jews into the Turkish army, on the grounds that such conscription constituted interference with their religious practice, in violation of an agreement made by the Spanish exiles with the Turkish authorities as a condition for their settling in Turkey in the late 15th century. The order of conscription was finally rescinded. Alfandari was later appointed chief rabbi of Damascus, and

from 1904 to 1918 served as chief rabbi of Safed. In 1926 he settled in Jerusalem.

Regarded as one of the great scholars of his time, Alfandari was accepted by both Sephardim and Ashkenazim and despite his exceptional firmness, his responsa and rulings were honored without demur. During the last years of his life, he was visited by Ḥayyim Eleazar Shapira, rabbi of the Munkacs Ḥasidim, who was deeply impressed by his personality. After his death, the Ḥasidim of Munkacs dedicated to his memory *Masot Yerushalayim* (1931), a hymn in his praise. Some of Alfandari's responsa were published in the periodical *Torah mi-Ziyyon*, in the *Kanah Avraham* of Abraham Ḥai Amozag, and in the works of his contemporaries. A few of his responsa were published by Isaac *Nissim, under the title *She'elot u-Teshuvot Maharsha* (1932). His remaining works are still in manuscript.

[Abraham David]

ALFASI, family of Tunisian rabbis that originated in Fez, Morocco. MAS'UD RAPHAEL ALFASI (1700?–1774), halakhist and kabbalist. Born in Fez or Tunis, he studied in the latter under Zemaḥ Zarefati, Abraham Tayyib, and Isaac Lumbroso. He established a great yeshivah in Tunis that has continued to bear his name to this day, and served as chief rabbi there from 1741 until his death. His writings included a large work on Maimonides' *Yad* patterned on Judah *Rosanes' *Mishneh la-Melekh* (1731), and a commentary to the Talmud. *Mishḥa de-Ravevata* (2 vols., Leghorn, 1805) is a commentary on the Shulḥan Arukh and includes responsa. His homilies on the Pentateuch and for Sabbath and holy days are extant in manuscript (Ben-Zvi Institute, no. 713); his grandchildren came into possession of a work on the Zohar, the *Idrot*, and Isaac *Luria's kabbalistic works (see edition of *Zohar*, Leghorn, 1872). SOLOMON BEN MAS'UD RAPHAEL ALFASI (1721–1801), his son, succeeded his father as rabbi of Tunis. His work on the Shulḥan Arukh as well as his responsa are included in the second volume of his father's *Mishḥa de-Ravevata*. *Keruv Mimeshaḥ* (Leghorn, 1858) includes novellae on the Talmud and on Maimonides' *Yad* as well as a talmudic methodology. Alfasi was renowned as a pietist and a wonderworker; many miraculous tales were told about him. His brother ḤAYYIM BEN MAS'UD RAPHAEL (1756–1783) wrote novellae on the Shulḥan Arukh – entitled *Hiddushei Maharḥa* – which were included in his father's *Mishḥa de-Ravevata* (1805) and in his brother's *Keruv Mimeshaḥ*.

ALFASI, DAVID BEN ABRAHAM (Ar. **Abu Suleiman Da'ūd ibn Ibrahim Al-Fāsi**; tenth century), Karaite grammar-

ian and commentator. Alfasi, who came from Fez, Morocco, spent a number of years in Erez Israel where he composed a Hebrew-Arabic lexicon of the Bible (*Kitāb Jāmi' al-Alfāz*). The dictionary is extant in both a long and a short version, which was published in a critical edition by Skoss (see bibl.). The exact relationship between the two is not clear yet and needs further investigation. The dictionary consists of 22 chapters, one for each letter of the Hebrew alphabet. The entries are arranged according to the principle of bi-literal roots. He cites the translations of Onkelos and Jonathan b. Uzziel by name or refers to them as *al-Targum*, *al-Suryānī*, or *al-Mutarjim*. He also quotes the Mishnah and the Talmud, and the masorah and the Rabbanite *siddur*. Alfasi mentions *Saadiah twice as “*al-Fayyūmī*,” but he frequently uses and criticizes his commentaries without mentioning his name. He often designates the Bible *al-Qur'ān* or *al-Kitāb* (the Scriptures) and the Jewish scholars, *al-Rabbānīn* or *al-Rabbūnīn*, as was customary among Karaite authors. Alfasi's dictionary is one of the earliest and most important for the investigation of the history of Hebrew philology. The author reveals a fine sense for language and a profound, and, for his time, comprehensive, knowledge of ancient Hebrew linguistics. One of the important aspects of the dictionary is the comparative one: He quotes numerous parallels between biblical Hebrew and Aramaic, Arabic (both literary and spoken), and mishnaic Hebrew, many of which tally with those found in the *Risāla* of Judah b. Quraysh (whom the author does not mention), and many which have been accepted by present-day philologists. Alfasi explains many roots by metathesis or permutation of letters. He follows the Tiberian systems and the Palestinian grammarians as to the masoretic text, vocalization, and accents. The dictionary contains a wealth of information pertaining to early Karaite Bible exegesis as well as historical and material conditions in Erez Israel in Alfasi's time. Compendia of the short version were compiled successively by *Levi b. Japheth, Eli b. Israel, and *Ali b. Suleiman (and were incorporated by Skoss in the apparatus of his edition). Alfasi's commentaries on the Psalms and the Song of Songs have not been preserved.

[Solomon Leon Skoss]

ALFASI, ISAAC BEN JACOB (known as **Rif**; 1013–1103), author of the most important code prior to the *Mishneh Torah* of Maimonides. In a sense, Alfasi brought the geonic period to a close. The last of the Babylonian *geonim*, Hai Gaon, died when Alfasi was 25 years old. Alfasi himself was called “gaon” by several early halakhic authorities. *Judah b. Barzillai al-Bargeloni sometimes refers to him simply as “the Gaon.” Alfasi

was a native of Qal'at Ḥammad near Constantine, in Algeria, and is therefore sometimes called “ha-Kal'ī.” According to Abraham ibn David, Alfasi studied in Kairouan under both *Nissim ben Jacob and *Hananel b. Ḥushī'el, but nowhere does Alfasi mention them as his teachers.

After a period of study in Kairouan, Alfasi settled in Fez (hence his surname “Alfasi” or Rif, initials of R. Isaac Fasi). He remained there until 1088, when, in his 75th year, he was denounced to the government by enemies and was forced to flee to Spain. After a few months in Cordova he moved to Lucena, where he remained until his death. Shortly after his arrival in Lucena, he became head of the yeshivah (1089), following the death of Isaac b. Judah ibn Ghayyat. The most famous of his many students were Joseph *Ibn Migash, *Judah Halevi, Ephraim of Qal'at Ḥammad, and Baruch b. Isaac ibn *Albali. Before his death, Alfasi designated Ibn Migash as his successor, even though his own son, Jacob, was a distinguished scholar. His death was mourned in dirges by various poets, among them Moses Ibn Ezra. Another, hitherto regarded as by Judah Halevi, is now attributed by Abramson to Joseph ibn Sahl. In his *Shirat Yisrael*, Moses Ibn Ezra praised Alfasi, describing him as a man unsurpassed in keenness of intellect, whose wisdom was deep beyond compare, whose pen was swift, outdistancing that of any rival, and whose equal in intensity of religious feeling could scarcely be found. Alfasi dedicated his life to the study of the Talmud and its dissemination among the masses. Long before he came to Spain, his intellectual stand was decided and he was not influenced by the cultural life of Spain.

Hundreds of Alfasi's responsa have survived. Many of them were written while he was still in Fez, the majority in Arabic. In character and in style, Alfasi's responsa are still close to those of the Babylonian *geonim*. Alfasi's fame however rests on his great work *Sefer ha-Halakhot* (or *Halakhot Rabbati*). In the composition of this work Alfasi had a two fold purpose: (1) extracting all the halakhic material from the Talmud, ascertaining the decision, and providing a comprehensive compendium for ready reference; (2) preparing an essential summary of the Talmud, thereby facilitating its study. Concerning the first purpose Alfasi confined himself to those portions of the Talmud which were still operative and practiced, and excluded those of only academic importance. His code, therefore, covers the three orders, *Mo'ed*, *Nashim*, and *Nezikin* and the individual tractates *Berakhot* and *Hullin*. Even here Alfasi omitted entire chapters, such as the laws of the Paschal sacrifice (in the tractate *Pesaḥim*) and all that portion of the tractate *Yoma* which deals with the Temple Service on the Day of Atonement. Alfasi arranged laws scattered throughout the orders *Kodashim* and *Tohorot* which retain their relevance such as the laws of the Torah scroll, *mezuzah*, and *tefillin*, under the special title of *Halakhot Ketannot*. *Sefer ha-Halakhot* deals with 24 tractates of the Talmud.

Alfasi's quotations from the Talmud are often longer than necessary for the mere determination of a decision; often he explains the cited passage. For the most part, his explanations

are brief, and in several instances discernible only when compared with the talmudic text. He comments at some length on instances where the *geonim* differed in their interpretations, discussing the different views and giving his own interpretation. Such treatment at times mars the structure. Alfasi himself apologized for it in several places. On the other hand these extended comments greatly enhanced the value of the book.

To a certain extent Alfasi models himself on the *Halakhot Gedolot*, but Alfasi's book is much superior. The halakhic material is three or four times that in the *Halakhot Gedolot*; the aggadic material is even more. Alfasi exercises greater freedom in the handling of his material, and in the placement of certain discussions, often assembling into one place statements dealing with a specific subject but scattered throughout the Talmud. For example, he assembles all discussions on the scope and definition of censure and reproof at the end of chapter two of tractate *Shabbat*. Similarly he arranges the discussions of the *Gemara* relevant to many Mishnayot. He first quotes the discussions which bear directly on the Mishnah, then those which have a loose bearing on it, and finally those which have some association with it in terms of subject matter. Alfasi cites all the material from the Talmud necessary to establish the argument for each law and for every opinion, whereas the *Halakhot Gedolot*, for the most part, quotes only the law itself. Alfasi's sources are varied, but usually he does not identify them. In addition to the Babylonian Talmud and the geonic literature, he uses especially the *She'iltot* of *Aḥa of Shabḥa, *Halakhot Pesukot*, *Halakhot Gedolot*, Hai Gaon's responsa and commentary, and Hananel b. Ḥushi'el, upon whom most of his book is based and which he mostly copies. Other sources are an anonymous *Sefer Metivot*, Nissim Gaon's works, the *Hilkheta Gavrata* of Samuel ha-Nagid, and *Ḥefez b. Yazlī'ah. Nevertheless, Alfasi only dealt with those laws which originated in the Talmud. Alfasi also dealt with the *aggadah* in the Talmud which had been almost completely ignored by all the codifiers before him. He included those *aggadot* which taught good conduct and moral behavior, paving the way for all later codifiers. Alfasi's book is thus a source of considerable value for the *aggadah* also, and justly deserves the name "*Talmud Katan*" ("Little Talmud") given to it.

The *Sefer ha-Halakhot* was first published in Constantinople (1509), and this edition is now very rare (it was published in Jerusalem in 1969). The second edition (which was published in Venice, 1521) has many addenda from various glosses, thus altering the form of the book. All the later editions up to the Vilna Romm edition (1880–86) were based upon the Venice edition. The Vilna edition was compared with the first edition but is an eclectic version and so only enhanced the confusion. A complete and scientific edition – based on ancient prints, manuscripts, and **genizah* fragments – is still lacking. The Pressburg edition (1836) includes pseudo-Alfasi on *Nedarim*. An important aspect of the *Halakhot* is Alfasi's numerous revisions of what he had already written "and ordered to be corrected." These corrections were partly due to

criticism, especially from his pupil Ephraim. This is attested to by various *rishonim* (e.g., *Ba'āl ha-Ma'or* by Zerachiah ha-Levi to Sanh. 28b): "It seems that because of this Alfasi changed his opinion and ordered the erasure of what he had written on the subject... and the substitution of the corrected form... as you can find in some of the copies," and as Alfasi himself comments (A.A. Harkavy (ed.), *Kovez Teshuvot ha-Ge'onim* (1887), p. 327). His corrections have not always been included in the different manuscripts, and this accounts for the many variants in the versions of his book.

Jewish scholars of later generations were unstinting in their admiration of Alfasi and his book. Maimonides wrote "The *Halakhot* of the great rabbi, our teacher Isaac, of blessed memory, has superseded all these works (geonic codes)... for it contains all the decisions and laws which we need in our day... and, except for a few *halakhot*, not exceeding ten, his decisions are unassailable." Nevertheless, in one of his responsa Maimonides wrote that he differed from Alfasi in about 30 instances. In a letter to his disciple Joseph b. Judah, he advised him to make Alfasi's *Halakhot* his major study; and Maimonides himself taught it to his students. *Isaac b. Samuel ha-Zaken said of him: "A man will toil in vain to produce such a work, unless the spirit of God rest upon him" (introduction to *Menahem b. Aaron ibn Zerah's *Zeidah la-Derekh*, Ferrara, 1554). *Abraham b. David of Posquière, who tended to be severely critical of other authors, wrote of him: "I would rely on the words of Alfasi even if he should say that right is left." Even Alfasi's critics, and those who commented upon or supplemented his writings, never set out to find flaws in his work, but merely to correct whenever they deemed necessary; for they recognized the great usefulness of the book and wanted to see it used more widely. It was recounted that Jacob of Marvège, a tosafist, inquired in a dream whether the law concerning a certain case was according to the *geonim* or according to Alfasi; he received an answer from heaven: "And I shall establish my covenant with Isaac" (Gen. 17:21). Menahem ha-*Meiri always referred to Alfasi as "the greatest of codifiers." Joseph *Caro regarded Alfasi as the first among the three pillars of learning upon whom the house of Israel rests (Alfasi, Maimonides, and Asher b. Jehiel), and upon whose authority he determined the laws in his *Shulḥan Arukh*. Thus Alfasi's influence pervades Jewish code-literature up to modern times. At the close of the Middle Ages, when the Talmud was banned in Italy, Alfasi's work was expressly exempted, so that between the 16th and 19th centuries it was a principal subject of study among Italian Jews.

There is an extensive literature of commentary on Alfasi, some in amplification, others in condensation of his works. Among his critics and commentators were some of the greatest talmudic scholars, such as Ephraim his pupil, Zerachiah ha-Levi, *Abraham b. David, *Jonathan b. David ha-Kohen of Lunel, *Naḥmanides, *Meshullam b. Moses of Beziers, Aaron ha-Levi of Barcelona (see *Ha-Ḥinnukh), *Samuel b. Meir, Jacob *Tam, *Nissim b. Reuben Gerondi, and Joseph ibn Ḥaviva, author of *Nimmukei Yosef*. Almost all of them were

scholars of Spain and Southern France, for in these countries, especially the former, the *Halakhot* was studied even more than the Talmud itself. More often than not, these commentators amplified, updated, and extended the discussion of Alfasi's themes rather than actually commenting on his text. A commentary on Alfasi to *Hullin* by an anonymous Yemenite scholar of the 12th century (1960), attests to the wide popularity of this work. The vast literature that was produced about Alfasi further testifies to the high regard in which he was held by subsequent generations.

In addition to the critics and commentators to Alfasi there is a ramified literature including works not really dependent upon Alfasi, but which follow his method of arrangement rather than that of the Talmud. The most eminent are those of Asher b. Jehiel and Mordecai b. Hillel, though the latter does not mention Alfasi at all. There are other books which include the whole of Alfasi and which expand his work with parallels and references to his sources and responsa. The most important of these is *Sefer ha-Ittim* of Judah al-Bargeloni.

Over 300 of his responsa, translated into Hebrew, have been collected and published (first edition Leghorn, 1781). Over 150 were published in their original Arabic with a Hebrew translation by A.A. Harkavy in *Kovez Teshuvot ha-Ge'onim* (1887), most of them having previously been included in the Leghorn edition. Another edition (*Ginzei Kedem*, 4 vols. (1930), 38–49), based upon the Oxford manuscript, was published by B.M. Lewin. Most of these responsa too are included in the Leghorn edition with some changes (cf. also *Kohelet Moshe* of S.A. Wertheimer, 1899). Another collection of Alfasi's responsa was edited by Z. Byednowitz (1934). Most of these are included in the previous editions. All these responsa were republished by Z. Leiter (1954). Many of Alfasi's responsa are still extant in manuscript. Variae lectiones based upon manuscripts were published by A. Sofer in his *Teshuvot Hakhmei Provinzayah* (1967). Many of Alfasi's responsa are scattered throughout the works of the early halakhic scholars, such as Judah al-Bargeloni, in the books of those who used his works, including *Isaac b. Abba Mari, Baruch b. Isaac, and Judah *Almadari's commentary on Alfasi's *Sefer ha-Halakhot*. Several of Alfasi's responsa are to be found in the famous collection of Maimonides' responsa, *Pe'er ha-Dor*, Leipzig, 1859, nos. 182–208.

[Simha Assaf / Israel Moses Ta-Shma]

ALFEI MENASHEH (Heb. אֵלֶּי מְנַשֶּׁה), urban community in western Samaria, close to central Israel. The settlement is located on a hill, 1,082 ft. (330 m.) above sea level, and has an area of 1.8 sq. mi (4.6 sq. km.). In 1981 Ezer *Weizman, then secretary of defense, and Ariel *Sharon, secretary of agriculture, initiated the "seven star" plan to establish seven settlements at strategic points near the borders of Judea and Samaria. In 1983 the first settlers arrived at Alfei Menasheh. At the beginning, the community was part of the regional council of Samaria. In 1985 it received municipal council status. In the following years it came under terrorist attack. In 1987, in one such attack, the Moses family was decimated: the mother and one of the children were killed and the father and two other children severely injured. Between 1987 and 1989, three additional terror incidents rocked the community. The precarious security situation served to curtail the settlement's development, but in the 1990s it recovered and new neighborhoods were built. In 2002 its population was 5,250. The name of the settlement derives from Deuteronomy 33:17, which speaks of "the thousands of Manasseh."

[Shaked Gilboa (2nd ed.)]

ALFEROV, ZHOES I. (1930–), Russian Nobel laureate in physics. Alferov was born in Vitebsk, U.S.S.R. (now Vitsyebsk, Belarus), and graduated with a degree in physics (1952) from the Lenin Electrotechnical Institute in Leningrad (now St. Petersburg). From 1953 he was a staff member of the Ioffe Physico-Technical Institute in St. Petersburg, where he obtained his D.Sc. in physics and mathematics (1970) and which he directed from 1987. His academic appointments included dean of the Faculty of Physics and Technology at St. Petersburg Technical University. His main research interests concerned the theory and practical applications of semiconductors. He was awarded the Nobel Prize for physics (2000) jointly with Herbert Kroemer and Jack S. Kilby for his contributions to the double heterostructure concept. His research is of fundamental importance to the development of electronics, lasers, solar power usage, and communication technology. His honors include membership in the Russian (formerly U.S.S.R.) Academy of Sciences (1972), of which he was vice president from 1989, and the Lenin Prize of the U.S.S.R. (1972).

[Michael Denman (2nd ed.)]

ALFES (Alfas), BENZION (1850–1940), Yiddish and Hebrew writer. Born in Vilna, Alfes settled in Palestine in 1924; his earlier attempt to do so in 1871 had failed for family reasons. In Vilna he worked as a proofreader and for many years managed his wife's stocking factory. Alfes devoted his life to religious education, and was one of the few writers of his time who attempted to stem the secularizing drift of the Haskalah and its successor ideologies by writing religious literary works in Yiddish and Hebrew in a modern, popular style. He reacted to the late-19th-century proliferation of secular novels with his Yiddish *Ma'aseh Alfes* ("Alfes' Story"), published serially start-

ing in 1900. The work consists of ethical and moralistic love tales in which he cast traditional allegorical and didactic elements in epistolary form. The work went through 12 editions and became a household name. Alfes also translated many religious Hebrew works into Yiddish (e.g., Gerondi's *Sha'arei Teshuvah* and Maimonides' *Zavva'at ha-Rambam*), and edited several works of other authors. Many of Alfes' commentaries were included in liturgical texts. At the age of 90, he wrote his autobiography, *Toledot ve-Zikhronot* (published posthumously in 1941).

[Leonard Prager]

°**ALFONSO**, name of many Spanish sovereigns. Of special significance in Jewish history were the following:

Kings of Aragon

ALFONSO I (1104–34; “the Battler”). After capturing Tudela from the Moors in 1114, he permitted Jews who had fled during the fighting to return to the city. **ALFONSO II** (1162–96). He employed a number of Jews as stewards or physicians. **ALFONSO V** (1416–58). In 1414, as infante, he intervened on behalf of the *Saragossa community, which had been ordered to send a delegation of representatives to the papal court at the time of the disputation of *Tortosa. Alfonso asked the pope for a postponement until the Jewish leaders could complete their seasonal duties in the community. As king, in 1424, Alfonso confirmed a ban prohibiting the establishment of a Jewish community in Barcelona.

Kings of Castile and Leon

Alfonso VI (1072–1109). After the capture of *Toledo from the Muslims in 1085, Alfonso permitted the Jews to remain in their quarter (*judería*), and granted residence rights to Jews seeking refuge there. He also appointed Jews to important state posts. Thus, Joseph b. *Ferrizuel (Cidellus), became royal physician. **ALFONSO VII** (1126–57). Like his father, Alfonso VI, he also appointed Jews to high positions; Judah ibn Ezra was his *almoxarife* (“collector of revenues”) and in 1147 was in charge of *Calatrava, a stronghold on the Muslim border, where Jewish refugees from the *Almohad persecutions were welcomed. **ALFONSO VIII** (1158–1214), had a number of Jewish courtiers. He also settled Jews in frontier garrison towns, with complete autonomy within their fortified quarters. **ALFONSO X** (1252–84; “the Wise”). He was a patron of scholarship, and several Jewish translators and scientists, such as Isaac ibn Sid (Don Çaf) and Judah b. Moses ha-Kohen, worked under his auspices. Notable among their productions were the Alfonsine Tables *Libros del saber de astronomía*, one of the important scientific achievements of the reign. The code known as the *Siete Partidas* was produced under Alfonso's auspices, though not enforced until the following century. While this guaranteed the Jews physical security and rights of worship, it ordered the enforcement under the severest penalties of the conventional restrictions on the Jews, like the wearing of the Jewish *badge, and authorized

judicial prosecution of the Jews for ritual murder (see *Blood Libel). Toward the end of his reign, Alfonso's attitude to the Jews changed for the worse. In 1279 he had all the Jewish tax-farmers imprisoned. In January 1281, he ordered the wholesale arrest of the Jews while they were attending synagogue on the Sabbath and demanded a ransom of 4,380,000 gold *maravedis* for their release. **ALFONSO XI** (1312–50). Although Jewish officials, such as Don Yuçaf (Joseph) de *Ecija, attended his court, his policy toward the Jews was often influenced or directed by the church or by anti-Jewish courtiers, such as Gonzalo Martinez de Oviedo. In 1348 Alfonso prohibited moneylending by Jews, but the Cortes revoked the decree in 1351.

°**ALFONSO DE ESPINA** (or **de Spina, D'espina**; second half of 15th century), principal originator of the Spanish Inquisition and its ideological and methodological program. Few details are known about his life. A Franciscan friar, possibly of Jewish birth or descent, he became rector of the University of Salamanca, and was confessor of the powerful Alvaro de Luna. Espina's most important work is *Fortalitiium fidei contra Judeos, Saracenos et alios Christianae fidei inimicos*, written in 1458–59 and circulated in 1460. It was frequently printed (Nuremberg [1485–98], Lyons [1511]). The title, “Fortress of the Faith to give comfort to believers and defend the holy faith,” indicates his object. The *Fortalitiium fidei* consists of five sections, divided into chapters (*Considerationes*) and subdivided into *Haereses* (“heresies”); the second and third sections, *De bello hereticorum* and *De bello Judeorum*, contain his original views. The second section furnishes minute particulars of the sins committed by Jewish converts to Christianity (see *Conversos) and the means they adopted to continue observance of Mosaic Law. This seems for the most part to be based on accurate observation and is supported by various historical sources, including the Inquisitional records. Espina derived his knowledge of Jewish matters from his predecessors, such as Raymond *Martini and *Abner of Burgos, as well as from first-hand information. He recommends the establishment of an Inquisition in Spain and a detailed program. In the third section, tales about the *blood libel are revived. Here Espina explicitly suggests expelling the Jews from Spain, on the lines of the expulsion from England in 1290, implying that since England had managed to exist without the Jews, Spain could do likewise. The only way in which Spain can be converted into a truly Christian state, Espina states in this hate-obsessed work, is by extirpating the “Jewish heresy,” expelling the Jews, and conquering the Muslims remaining on its soil.

[Haim Beinart]

ALFONSO DE OROPESA (d. 1468), head of the Geronimite Order in Spain, said to have been of Jewish descent. In the early 1460s clashes took place in the cities of Castile between the ex-Jews who had adopted Catholicism (*Conversos) and their opponents among the Old Christian population. Alfonso now advised King Henry IV to take measures to supervise the Conversos and punish backsliders to Judaism. The king authorized him to execute his relatively moderate program, and Alfonso then conducted the investigation in Toledo and its environs for an entire year, imposing what he considered were adequate penalties. In 1465 Alfonso completed his *Lumen ad Revelationem Gentium* ("to prove the unity of all the faithful"), in which he explained his plan for the solution of the problem of both the Conversos and the Jews.

[Zvi Avneri]

ALFONSO OF ZAMORA (c. 1474–1544), Spanish scholar. He was the son of Juan de Zamora, apparently one of the exiles of 1492 who subsequently returned to Spain, father and son being baptized together in 1506. Alfonso, who had received an adequate Jewish education before baptism, became professor of Hebrew at Salamanca, one of the European universities where Hebrew studies had been established by a decree of the Council of Vienna in 1311–12. He published in Latin an introduction to Hebrew grammar, dictionaries, and contributions to Bible study as well as a conversionist letter to the Jews of Rome (Alcalá de Henares, 1526). Alfonso is mainly remembered for his participation in the pioneering Complutensian Polyglot edition of the Bible, in the preparation of which he worked for some 15 years.

[Cecil Roth]

°**ALFONSUS BONIHOMINIS (Buenhombre; d. 1353)**, Spanish Dominican, born in Cuenca or Toledo. From a stay in Morocco, where he had been imprisoned, Alfonsus claimed to have brought back the Arabic original of the *De adventu Messiae*, an anti-Jewish epistle allegedly written by one Samuel of Fez. He said that he had translated this text in Paris in 1339. Known as the "Epistola Samuelis Maroccani," it was later translated into several languages and widely circulated in Europe. In fact, it seems that he himself was the author, drawing largely from another tract in Arabic written by a Jewish convert to Islam, *Samau'al b. Judah ibn Abbas, probably with the intent of presenting it as a Christian rather than a Muslim polemic. Alfonsus also translated another Arabic treatise by Samuel (or possibly wrote it himself): *Disputatio Abutalib Saraceni et Samuelis Judaei quae fides praecellat: christiano-*

rum, an iudeorum, an saracenorum (Ms. Madrid Nac. 4402, fol. 103–10), a disputation between a Saracen and a Jew.

[Bernhard Blumenkranz]

ALGAZI, family which flourished between the 16th and 19th centuries in Turkey, Crete, Erez Israel, and Egypt, and produced a large number of rabbis, kabbalists, and authors. Its members include (1) **ABRAHAM BEN MOSES** (1560?–before 1640), born in Constantinople, son-in-law of Joseph Benveniste de *Segovia, a pupil of Isaac Luria. A renowned talmudic scholar, he corresponded with the greatest of his contemporaries. After 1600, he resided on the island of *Chios and in Brusa (now *Bursa), Turkey, where he headed the community until his death. (2) **ḤAYYIM BEN ABRAHAM** (?) (1614–before 1668), a Turkish scholar who studied under Joseph di *Trani and Abraham *Shalom in Constantinople, where he later headed his own yeshivah. He was the son-in-law of Judah ibn Ya'ish. His uncompleted commentary, *Netivot Mishpat*, to the *Meisharim* of Jehoram b. *Meshullam was published in Constantinople in 1669. His manuscript responsa and homilies were lost. (3) **MOSES BEN ABRAHAM** (d. before 1671) was one of the scholars of Bursa. Some of his novellae were published in his grandfather Joseph de Segovia's work, *Dovev Siftei Yeshenim* (Smyrna, 1671) to which was appended his booklet, *Sefat Emet*. (4) **YOM TOV BEN (NISSIM) SOLOMON** (d. 1727), a poet, lived in Constantinople. Letters and poems from his correspondence with the rabbi-poet Aaron de Toledo are extant. **ISRAEL JACOB B. YOM TOV *ALGAZI** was his son. (5) **ABRAHAM BEN (NISSIM) SOLOMON** (d. 1700), one of the scholars of Smyrna, edited his father's *Shema Shelomo* (Smyrna, 1659). (6) **ḤAYYIM BEN MENAHEM** (1640?–1710?), grandson of R. Ḥayyim Alfandari the Elder, was born in Smyrna. He studied under (Nissim) Solomon and Aaron *Lapapa. He served as rabbi of Rhodes and, after his son Abraham's death, returned to Smyrna. One of his students, Meir Danon, edited and published his *Ba'ei Ḥayyei* (Constantinople, 1712), novellae on Jacob b. Asher's *Turim*, on the Talmud, and on problems in Maimonides' *Mishneh Torah*. His manuscript homilies were lost. (7) **NISSIM JACOB BEN ḤAYYIM SOLOMON**, one of the scholars of Constantinople, settled in Safed. He visited Salonika in 1731 as emissary for Safed, returning by 1736. He is the author of responsa and novellae on Maimonides' *Mishneh Torah* (Ms. in Benayahu Collection). (8) **SOLOMON BEN ABRAHAM *ALGAZI** (1673–1762) was rabbi and codifier. (9) **ISAAC BEN ABRAHAM** (17th century), rabbi of Chios, studied under Ḥayyim *Benveniste, author of the *Keneset ha-Gedolah*, and (Nissim) Solomon Algazi. At the age of 17, he wrote *Doresh Tov*, a book of homilies. His manuscript responsa are in the Guenzburg collection in Moscow

(no. 400). Some of his responsa were published with those of Ḥayyim Benveniste, *Ba'ei Ḥayyei*. (10) YOM TOV B. JACOB *ALGAZI (1727–1802) was a kabbalist and master of *halakhah*. (11) ḤAYYIM ISAAC (d. 1814) was chief rabbi of Smyrna in the late 18th century. (12) JUDAH, a rabbi in Smyrna, visited Erez Israel. His commentary to Maimonides' *Mishneh Torah*, explanations of talmudic discussions, and homilies were published together as *Sha'ar Yehudah* (Salonika, 1805). Some of his manuscript works were lost. (13) MOSES BEN JOSEPH (1764–1840), a grandson of Solomon b. Abraham (8), was born and died in Cairo; in 1830, he was appointed chief rabbi of Egypt. That same year, with Adolphe *Crémieux's aid, he founded a modern school to which he also admitted Karaites. In 1840, he helped liberate the victims of the *Damascus blood libel. He was succeeded by his son Joseph.

ALGAZI, ISAAC BEN SOLOMON (1882–1964), Turkish Sephardi *hazzan* and composer. Algazi, who was born in Izmir, at an early age joined the “Maftirim Choir” led by his father, himself a noted *hazzan* and author of religious poetry. He served as a teacher at the *talmud torah* and later as *hazzan* in his native town. He also became proficient in Turkish art music and for many years arranged special courses for the members of his community; A. Hemsı and other musicians were among his pupils. Algazi was a noted performer of classical Turkish music and adapted some to Hebrew texts which he himself translated. In 1923 he was appointed *hazzan* and music instructor at the “Italian” synagogue at Galata (Istanbul), which had a long tradition of musical activity. In 1930 Algazi became associated with the Jewish newspaper *La voz de Oriente*. In 1933 he went to Paris, but settled finally in Montevideo (Uruguay) where he was prominent in Sephardi congregation activities. Algazi's abilities as a composer and adapter were combined with a pleasant, flexible voice and a highly distinguished performing style. He imparted a Turkish influence to Eastern synagogue song. The sole printed work (“adaptation”) of Algazi connects five *piyyutim* to form a Turkish “Fassil” (Suite), with each piece following a different rhythmic pattern (“uzul”). This work was published as *Extrait du Fassil Husseinı des chants juifs orientaux... adapté sous le contrôle de M. Isaac Algazi* (1924–25).

As is usual with Eastern music, most of Algazi's compositions and arrangements were transmitted orally, but several have been recorded (collection of Israel Broadcasting Authority, Jerusalem). Some of his outstanding works which survive in oral tradition are: *The Song of Deborah*; *Ha-Ben Yakkir Li Efrayim*; *Kiddush*; *Seliḥot*; two “*Peshrev*” for choir, to Hebrew texts; songs of the Ladino Folklore. A selection of Isaac Algazi's poetry has been published in: *Shirei Yisrael be-Erez ha-Kedem* (1921).

In addition to his main interest in Sephardi music, Algazi also devoted himself to the dissemination of Judaism

and wrote two works in Spanish, *El judaismo, religion de amor* (Buenos Aires, 1945) and *La Sabiduría Hebrea* (Montevideo, 1949).

ALGAZI, ISRAEL JACOB BEN YOM TOV (1680–1756), halakhic scholar and kabbalist, grandson of both (Nissim) Solomon *Algazi and Joseph *Ḥazzan. Probably born in Smyrna, Algazi lived in Safed, and for a few years, prior to 1730, in Smyrna. He was a member of a closed circle of kabbalists headed by Jacob Vilna. Algazi copied and published *Ḥemdut Yamim* (Smyrna, 1731–32), with many of his own glosses. By 1737 he was in Jerusalem and, a year later, dedicated “Neveh Shalom Berit Avraham,” a yeshivah founded there for him. Algazi became head of Bet El, a *bet midrash* for pietists, and was consequently known as “the pietist rabbi.” His was the first signature on the constitution of the kabbalistic group Ahavat Shalom. Algazi was appointed chief rabbi upon the death of his colleague, Isaac ha-Kohen (1755), but he died the following year. One of the most productive scholars of his time, he wrote many halakhic and homiletic works including *Emet le-Ya'akov* (Constantinople, 1764) on the laws of Torah scrolls; *Ara de-Rabbanan* (*ibid.*, 1745), reprinted with Judah Ayyash's commentary; *Afra de-Ara* (Leghorn, 1783), a methodology for Talmud and codes; *Ḥug ha-Areẓ* (Jerusalem, 1910; with addenda, 1927), on the laws of Purim; *Ne'ot Ya'akov* (Smyrna, 1767); *Kehillat Ya'akov* (Salonika, 1786), a methodology; *Shalmei Zibbur* and *Shalmei Ḥagigah* (Salonika, 1790), on the laws of prayer and blessings; sermons Part 1, *Shema Ya'akov* (Constantinople, 1745); and Part 2; *She'erit Ya'akov* (*ibid.*, 1751). Some of his works still survive in manuscript form. H.J.D. *Azulai, an acquaintance, condensed and completed Algazi's work, *Emet le-Ya'akov*, which he published under the title *Le-David Emet* (1786).

ALGAZI, LEON (Yehudah; 1890–1971), conductor, composer, and collector of Jewish music. Algazi, who was born in Romania, studied music in Vienna and Paris, and graduated from the Ecole Rabbinique de France. From his early studies with Abraham *Idelsohn, he acquired an interest in Jewish folklore and tradition. For many years, he taught at the Ecole de Liturgie et de Pédagogie in Paris. From 1929 he presented a weekly program of Jewish music on the French radio, and in 1937 became conductor at the Rue de la Victoire Synagogue. He helped to establish the “Mizmor” section of the Salabert publishing house, taught Jewish music at the Schola Cantorum (1936–40), and in 1961 was elected director of music for the temples of the Paris Consistoire. Among Algazi's many compositions of liturgical and folkloristic character are *Service sacré pour le samedi matin et pour le vendredi soir* (New

York, 1955), orchestral suites, psalms, harmonizations of traditional songs, and incidental music for the cinema and the theater. He published one extremely valuable collection, *Chants séphardis* (London, 1958). He also wrote essays on Jewish music in many scholarly publications.

ALGAZI, (Nissim) SOLOMON BEN ABRAHAM (1610?–c. 1683), rabbi. Algazi, the grandson of Joseph de Segovia *Benveniste, was born in Borsa. He studied under his father and the poet Joseph Ganso, as well as Joseph Sasson and Meir de *Boton at their yeshivah in Gallipoli. Algazi settled in Jerusalem in 1635, but was in Smyrna in 1646 – apparently in order to publish some of his works. Here he remained and was considered one of the city's outstanding scholars. He founded a *bet midrash* whose students included his son-in-law, Aaron *Lapapa, and Ḥayyim b. Menahem Algazi, later rabbi of Rhodes. Algazi opposed *Shabbetai Zevi and his followers; together with his son-in-law and other scholars, he excommunicated Shabbetai Zevi and stated that he deserved the death penalty. Compelled to flee and hide outside the city, when Shabbetai Zevi's apostasy became known (1666) he returned to Smyrna and resumed his position. Algazi assumed the additional name Nissim on recovering from a serious illness contracted during his travels. He returned to Jerusalem about 1670, and by 1673 was head of the local *bet din*. Algazi achieved a reputation for his saintliness and was reputed as a miracle worker.

Among his many works are *Yavin Shemu'ah* (Venice, 1639), a commentary to the *Halikhot Olam* of *Jeshua b. Joseph and to *Sefer Kelalei ha-Talmud* of Joseph *Caro with additions entitled *Halikhot Eli* (Smyrna, 1663); *Gufei Halakhot* (*ibid.*, 1675); *Ahavat Olam* (Constantinople, 1642), the first of four volumes of homiletics; *Razuf Ahavah* and *Appiryon Shelomo* (Verona, 1649), a commentary to the homiletical passages of the tosafists; *Ta'avah la-Einayim* (Salonika, 1655), an elucidation of difficult talmudic passages in the *Ein Ya'akov* of Jacob *Ibn Ḥabib, with the addition of passages omitted by him; and *Leḥem Setarim*, on the tractate *Avodah Zarah* (Venice, 1664); his *Ziknat Shelomo*, a commentary on the *Ittur* of *Isaac b. Abba Mari, was never published.

[Abraham David]

ALGAZI, SOLOMON BEN ABRAHAM (1673–1762), rabbi and halakhist. Algazi, who was apparently born in Jerusalem, was the half brother of Ḥayyim b. Moses *Abulafia, who restored the Jewish settlement in Tiberias.

Algazi was a pupil of Hezekiah da Silva. He served in the *bet din* of Abraham Yizḥaki, and taught in his yeshivah. One of his outstanding pupils was Judah Navon, author of *Kiryat Melekh Rav*. In 1728 Algazi immigrated to Cairo, where he

also served in the *bet din* and c. 1740 was elected chief rabbi of Egypt. Algazi rescinded the resolution of the Egyptian rabbis not to study the *Peri Hadash* of da Silva which was made on the ground that he differed in several instances from Maimonides and other leading halakhists; all Algazi's decisions were based on da Silva. He also wrote responsa and a book on Maimonides, now lost but which was seen by Ḥayyim Joseph David *Azulai in 1753.

BIBLIOGRAPHY: Azulai, 1 (1852), no. 23; M. Benayahu, *Rabbi Ḥ.Y.D. Azulai* (Heb., 1959), 571.

ALGAZI, YOM TOV BEN ISRAEL JACOB (1727–1802), kabbalist and halakhist. He studied with his father and was a close friend of Ḥ.J.D. *Azulai. Both studied under R. Jonah *Navon and R. Shalom *Sharabi. Algazi was a member of the Ahavat Shalom group of kabbalists and signed its articles of association in 1754, 1758, and 1759. He was a member of *bet ha-midrash* Neveh Shalom and of Bet El. R. Shalom Sharabi succeeded Algazi's father as head of the kabbalists' yeshivah, but Yom Tov Algazi administered it. Following R. Sharabi's death in 1782 he was elected rabbi and *dayyan* and in c. 1777 he became *rishon le-Zion*. The period of his office was a difficult one for the Jews of Jerusalem who were vexed by the authorities. Algazi's leadership, influence, and fame in the Diaspora were of help to the community. In 1764 he accompanied R. Abraham b. Asher and Ḥ.J.D. Azulai on a mission, on behalf of the Pekidei Erez Israel be-Kushta ("Agents for Erez Israel in Constantinople"). From 1770 to 1775 he was sent on other missions from Jerusalem to Constantinople, Adrianople, and Belgrade. He traveled in Italy, France, Holland, Germany, and Poland and returned to Jerusalem (1777) via Italy and Smyrna. He appointed his son Jacob a *parnas* of the Hebron community (1787). As the debts of the Hebron community increased, Algazi and his son endured a most difficult period (1793–95). Both father and son were in danger of imprisonment. Creditors became violent and Jacob Algazi was badly beaten up. In the month of Elul 1795, Algazi went to Constantinople and within three months collected a large sum of money for Hebron; he also conducted a large collection in Smyrna and Salonika. However, before he returned to Jerusalem, his son died (1796) from the blows which he had received. His works are distinguished by their sharpness and depth. They are *Hilkhot Yom Tov*, printed with the Vilna Talmud, on *Hilkhot Bekhorot ve-Hallah* by *Naḥmanides, which he found in a manuscript in Italy (1795); *Simḥat Yom Tov*, responsa (1794); *Kedushat Yom Tov*, responsa and sermons (1843); *Get Mekushar*, studies on the marriage contract, in *Ne'ot Ya'akov* (1767), 24–79.

ALGERIA (Central Maghreb; Ar. *al-Jazā'ir*), modern designation for the central part of North Africa, bordered by *Morocco on the west and *Tunisia on the east. Resistance

Places of Jewish settlement in Algeria.

against the Arab invasion in the seventh century was organized first near Biskra and later in the Aurès mountains, where the **kähina* (an epithet meaning priestess), the “queen” of the Judeo-Berber tribe Jarawa, won brilliant victories. With the death of the *kähina* in 693 came the collapse of **Berber* independence. Most of the Jarawa adopted Islam, others escaped to the west and south reinforcing the Jewish elements there. Oriental Jews, who followed in the wake of the Arab armies in large numbers, rebuilt the old destroyed communities of Algeria. The Jews in the urban centers, such as Mejana or Mesila, were Rabbanites; so also were the Jews in the capitals of the various Berber kingdoms – Ashir, Tahert (Tiaret), where the philologist R. **Judah ibn Quraysh* lived, **Tlemcen*, and **Qal’at Hammād*, where R. Isaac **Alfasi* was probably born. These communities were in contact with the communities of **Fez* in the west and **Kairouan* in the east, and even with the *geonim* of Babylonia and Palestine. It is partly through them that the teachings of the academies of **Sura* and **Pumbedita*, and later of Kairouan, spread to Morocco, and from there to Spain. Thus, the influence of these communities on the intellectual and religious development of the Jews of Spain can be seen. The teachings of the sages were spread to the area north of the Sahara Desert from Gabès, Tunisia, to Sijilmassa (in the Ziz Valley), Morocco, by traveling merchants. The Jewish tribes of the region of Wargha were **Karaites*. They were

nomad warriors. Their descendants were called “Bahusim” and remained in the eastern part of Algeria up to modern times. In the tenth century, a Jew named Abu al-Faraj instigated an important revolt against the Zirid sovereigns of the Berber tribes in the Setif region. Defeated, he was tortured to death in 989.

Apart from the fact that the community of **Tlemcen* was destroyed, almost nothing is known about Algerian Jews during the rule of the Almohads in the 12th and 13th centuries. In any case, after that period of disorder the Jewish population of Algeria was considerably diminished. In the 13th and 14th centuries some Jewish merchants residing in Algeria had regular contacts with other countries, particularly with Catalonia, and these ties served to keep open channels of communication with the more developed Jewish communities. Jews of Languedoc and even Marseilles lived in Bougie, the Algerian harbor town, from 1248. Tlemcen, gate to the Mediterranean and a final station on the Sudanese gold route, known as the “Jewish Road,” had a small but lively community, which was sustained by the rich Jewish merchants of Barcelona, Valencia, Tortosa, and Majorca. Most of these merchants were actually natives of the Maghreb and particularly favored by the kings of Aragon, who relied on them as essential to their prosperity. Their relatives had remained in the Maghreb, settling at **Algiers*, Cherchel, Tenes, Mostaganem, and Tlemcen. At that

time there was a continuous emigration of Muslims from the Christian kingdoms of Spain to Africa and they were assisted by the Jews in Spain. This was the very remunerative business of the great Jewish African-Spanish family Alatzar (also al-'Azār), in particular. The Jewish merchants of the central Maghreb had many trade activities, including the slave trade, so important at the time. However, they traded chiefly in Sudanese gold. Many traded with the Balearic Islands using their own ships.

The Christian kings of Spain appointed many Jews as their ambassadors to the Muslim courts. In that capacity Abraham and Samuel *Bengalil, Judas "Abenhatens," and the *alfaquim* ("physician") *Bondavin made their first visit to Tlemcen in 1286. In 1305 Solomon b. Zequi of Majorca was chosen to settle a dispute with the town of Breshk. These experts in North African diplomacy, as well as the wealthy merchants in the country, were exceptions among the mass of Algerian Jewry, whose level of culture was very low. Largely because of them and the possibility of communication with the important economic centers which they represented, many Spanish refugees of 1391 chose Algeria as their haven. They emigrated in continuous groups from Catalonia and the Balearic Islands. They were favorably received by the Muslim authorities, in particular by the Ziyamid princes. In contrast, their relations with the local Jews, who had at first received them fraternally, later became tense. Their numbers gave rise to fear of competition in their professions. Differences in ritual, language, customs, and above all social conceptions, caused conflicts between the two communities. The Sephardi Jews asserted themselves by their intellectual superiority, financial means, and skills. The older community resisted the attempt of the newcomers to dominate communal life. However, there were refugee leaders who were able to mitigate the conflicts between the two groups. The learning and dedication of the new immigrants renewed the moral and religious life of Algerian Jewry. Their talent in organizational activities strengthened the Jewish institutions of Algeria.

R. Ephraim Ankawa reestablished the community of Tlemcen; the eminent talmudic authorities R. *Isaac b. Sheshet Perfet (*Ribash*), R. Simeon b. Zemaḥ *Duran (*Rashbaz*), and the latter's descendants were mainly responsible for Algiers becoming a religious and intellectual center. The communities of *Honein, *Oran, Mostaganem, Miliana, Médéa, Tenès, Breshk, *Bougie, *Bône, and *Constantine, although dependent on Algiers, also became centers of Jewish learning under the leadership of the rabbis Amram Merovas Ephrati, Samuel Ḥalawa, the brothers Najjār, and others.

Very few of the Spanish exiles of 1492 came to Algeria. The only city that attracted them was Tlemcen, which they reached by way of Oran. It has been said, however, that the loss of Granada, Spain, in 1492 by the Muslims had grave repercussions for the Jews in Algeria. In cases such as that of the Muslim preacher al-Maghilli, resentment was expressed in violent tirades against the Jews. The prosperous and powerful communities of Tlemcen and, in particular, Tuat were de-

stroyed some years later as a result of such agitation. Just after these events, the Spanish occupation of Oran (1509–1708) and Bougie (1509–55), resulted in Jewish property being pillaged and the Jews themselves sold as slaves. Finally, however, some influential families such as Jacob *Cansino, Jacob b. Aaron, and *Sasportas convinced the Spaniards in Oran that their Arab policy would best be served by accepting a Jewish community in Oran. In the 17th and 18th centuries, descendants of Marranos and Jews from Leghorn, Italy, settled in Algeria, especially Algiers. Among the first who arrived were the Lousada, Alvarenga, Zacuto, Molco, and dela Rosa families; among the later ones were the Soliman, *Busnach, *Bouchara, *Bacri, Lealtad, and *Delmar families. They played an important role in ransoming Christian captives for European governments, and their commercial activities enriched the country.

The "refugees of 1391" had stimulated Algerian trade and brought prosperity to remote communities. They exported ostrich feathers from Mzab and African gold from Tuat, as well as burnooses, rugs, cereals, wool, and pelts to Europe, while European products were in turn sold in Africa by the same merchants. At that time the Jews owned estates, slaves, and flocks. In the regions subject to a central power, the Jews paid the **jizya*, the tax levied on all non-Muslims. Their rabbis were exempted from it, as were the merchants, mainly descendants of *megorashim*, because they paid customs on their imports. The native Jews were thus in an inferior position. Moreover, the *megorashim* had a separate quarter, synagogue, and even cemetery. Their dress was also different from that of the native Jews; they continued this distinction by wearing berets or hoods. Thus, they were called *ba'alei ha-kappus* or *kabbusiyyin*, in contrast to the *ba'alei ha-miznefet*, native Jews who wore turbans.

The organization of the communities that was established in the 14th century was in effect until 1830. At the head of each community was a *Sheikh al-Yahūd*, or *Zaken ha-Yehudim*, called also **muqaddam*, who was appointed by the Muslim authorities. His powers were discretionary, tempered only by protests of the rabbis. A prison and the police were at his disposal for punishing and carrying out the sentences of the *bet din*. He also named the officers (*gedolei ha-kahal*, *ziknei ha-kahal*) who were charged with the collection and administration of charity funds, and the management of the synagogue and charitable institutions. The Judeo-Spanish groups chose their officers (*ne'emanim*) themselves. The rabbinical courts were composed of three judges chosen and paid by the community. Only civil disputes were brought to them; they had no jurisdiction in criminal matters.

Although the rabbinical courts were available to Algerian Jews, they tended more and more to turn to Muslim civil courts. To discourage this practice the rabbis were able to threaten, and indeed put into effect, decrees of excommunication. On questions of *minhag*, however, the rabbis were often compelled to approve the local custom followed by African Jews. Some later practices originated in *takkanot*. The

haskamot, agreements over administrative regulations, also legalized local practices. The particular regulations of each community gave it a certain individuality that it jealously preserved for future generations. This resulted in collections of *minhagim*, prayers, and liturgy (*piyyutim*), the work of local rabbis, written either in Hebrew or Judeo-Arabic. The communities of Tlemcen, Oran, and Algiers each had its own *mahzor*. Sometimes the synagogues of the same town even had different liturgies. Thus, in the 18th century the community of Algiers was convulsed by disputes over liturgy.

Jewish-Muslim relations were, on the whole, good. It was only occasionally that outbursts of fanaticism gave rise to local persecutions. In certain towns it was accepted that at such times the mosques, although forbidden to infidels, should serve as a refuge to the Jews. The religious Muslim leaders sometimes helped them; for example, the *marabout* (Muslim holy man) of Blida, southwest of Algiers, stopped a pogrom and forced the plunderers to return their booty.

Generally, from the 16th century the situation of the southern Jews was better than that of their coreligionists in the centers under Turkish domination. The Turks were the ruling class who had come to exploit the country, and they treated the natives, both Muslims and Jews, roughly. Most Jews, living in separate quarters, were at their mercy. They increased the restrictions imposed on Jews in Islamic countries more through greed than fanaticism. On the other hand, the “sovereign” days, chosen by the Janissaries, and the beys, governors of provinces, humored the upper-class Jews, from among whom they chose their counselors, physicians, financiers, and diplomats. The Muslim rulers charged these diplomats with the difficult assignment of maintaining relations with European Powers, a task that was complicated by the pirate raids on European ships, condoned by the Algerian rulers. It was usually the wealthy and influential Jews originally from Leghorn, the *Gorenim* who received these assignments. Their high positions could not, however, protect them against the violence of the Janissaries who resented the favors the Jews received from the bey. The assassination in 1805 of the bey’s chief aide, the powerful Naphtali Busnach, was followed by the only massacre of Jews to take place in Algiers.

The French government had accumulated enormous debts to the Bacri and Busnach families, relatives and partners, who had been delivering grain to France for them since the end of the 18th century. These unpaid debts were the cause of diplomatic incidents that resulted in the French conquest of Algiers in 1830. The French conquest opened a new era for the 30,000 Jews of Algeria. In the beginning the communities were allowed to continue their self-government, and the rabbis continued to administer justice. But this autonomous structure was soon overturned. Rabbinical justice was deprecated and jurisdiction of the Jews passed to the French tribunals. The *muqaddam*, who had previously headed each Jewish community, was replaced by a deputy mayor. These reforms did not give rise to any protests on the part of the Jewish population, as they retained their previous legal sta-

tus. However, the changes caused some to leave: many European Jews returned to Leghorn, and the middle class, small tradesmen, and craftsmen emigrated to Morocco and Tunisia. On the other hand, Moroccan and Tunisian Jews, attracted by new conditions, immigrated into Algeria. There was also a movement of Jews from the south toward the centers and the port towns.

The Jews under French Rule

French colonialism lasted from 1830 to 1962. The duration of colonialism, the presence of French settlers, the involvement of French Jewry, and the impact of the changes in the country, its people, and its Jews shaped Jewish community history during this period. The cornerstones of the period were the establishment of the consistorial organization in 1845, the naturalization of the Jews in 1870, World War II and its impact (1939–45), and the decolonization processes from 1954 to 1962. The modernization process of Algerian Jewry was the most complete in the Muslim world; Jews became French citizens and dissociated themselves from Muslim society. It is not surprising that at the end of the colonial area most Algerian Jews continued their life in France, like all the French settlers.

Under the French each municipal council and chamber of commerce had one or two Jewish members. In 1858 a Jewish general counselor was elected for each province. In 1845, after a long mission of two French Jews, Jacques-Isaac Alters and Josef Cohen, consistories, on the model of those of France, were created in Algiers, Oran, and Constantine. Chief rabbis, brought from France, were appointed and paid by the government, and presided over all other religious functionaries. One of the tasks of these chief rabbis was to promote the emancipation of their followers, although they were not yet French citizens. Cultural assimilation was so rapid that it provoked a break with the old Jewish world. Some attempted to fight the trend toward total assimilation in such undertakings as the establishment of Hebrew printing houses in Algiers in 1853 and Oran in 1856 and 1880. French education, despite its advantages, led many Jews who were unprepared for it to leave Judaism. To counteract this trend *talmud torah* schools were opened in many cities. Several highly influential families formed a Jewish intelligentsia, capable of assimilating French civilization yet maintaining their own traditions. Members of these families were the first to enter the liberal professions, becoming magistrates, physicians, lawyers, engineers, high-ranking officers in the army, and, later, university professors. Both they and the French Jews favored the naturalization of Algerian Jews as did also French liberals.

Algerian Jews were granted the right of individual naturalization in 1865, and on October 24, 1870, by the *Crémieux Decree all Algerian Jews were forced to become French citizens, with the exception of those in the south, whose legal situation remained uncertain. This was the first instance in the Muslim world in which the Jew’s legal status changed so radically. The naturalization of some 35,000 Jews resulted in

a wave of antisemitism. Jews were attacked and in Tlemcen in 1881, in Algiers in 1882, 1897, and 1898, in Oran and Sétif in 1883, and in Mostaganem in 1897, where the violence reached its peak. Up to 1900 there were in all towns and villages cases of looting and killing, and numerous cases of synagogues being sacked and the Holy Scrolls desecrated and used as banners by the rioters. The *Dreyfus affair in France inflamed the anti-Jewish campaign even more. An antisemitic party came to power: Edouard *Drumont was elected the representative of Algiers and Max Regis became its mayor. Extraordinary measures were taken against the Jews. In Constantine, by decision of the deputy mayor Emile Morinaud, Jewish patients were not admitted to hospitals. The illegality of such steps, together with the fact that the Muslims failed to support the movement, brought about the defeat of the antisemitic party; in 1902 it ceased to exist altogether.

It should be emphasized that the wave of antisemitism came only from the French colonial settlers. It was a modern form of antisemitism deriving from the fear of a breakdown of the colonial hierarchy in which “inferior” elements might become part of the ruling class.

The heroic participation of Jews in World War I caused an improvement of relations, although in 1921 there was a renewed outburst of hatred in Oran. Hitler’s rise to power, greeted with rejoicing by the antisemites, caused a new wave of antisemitic campaigns, which resulted in a massacre in Constantine in 1934.

The crisis was renewed in 1936, when Léon *Blum, a Jew, became premier of France. The Jewish Algerian Committee for Social Studies, directed by Henri Abulker, André Lévi-Valensi, Elie *Gozlan, and others, undertook intensive activities aimed at curbing the racial unrest. Subsequently, the Union of Monotheistic Believers (Union des Croyants Monothéistes) was formed; during World War II it was responsible for the Muslims declining to identify themselves with the antisemitism of the Vichy government.

Holocaust Period

Despite the bravery shown by the Jews on the front during World War II, one of the first measures taken after the French defeat in 1940 was to abrogate the Crémieux Decree. The 117,646 Jews of Algeria became the object of daily suffering: they were cast outside the pale of society, impoverished, and humiliated. The Algerian administration applied the racial laws of Vichy with excessive severity. After Jewish children were banned from attending schools and restrictive clauses were applied in institutions of higher learning, Robert *Brunschwig organized private courses and schools. The expenses of these private schools were met by the communities jointly, although the financial burden was heavy. Some time later, the government totally forbade Jewish higher education and put the Jewish schools under strict, malevolent supervision without, however, contributing toward their upkeep. Only the rabbis were granted the right to represent the community before the authorities.

Algerian Jewry, in danger of total destruction, was saved only by its own determination. The Algerian resistance movement was the work of Jews, and consisted almost entirely of Jews. Among its leaders were Raphael and Stéphane Abulker, Roger and Pierre Carcassone, Jean Dreyfus, Jean Gozlan, and Roger Jais. Their activity led to the insurrection of Algiers led by Jose Abulker on November 8, 1942, which neutralized the capital while the Americans landed in the country as part of Operation Torch. Paradoxically, after this victory of the allies in Algeria, General Giraud, Admiral Darlan, and Governor Yves Câtel, with the complicity of the local diplomatic representative of the U.S.A., Robert Murphy, took new measures against the Jews, including the establishment of detention camps. The protests of Jewish international and Algerian organizations and the French Committee of National Liberation in London, the intervention of highly placed Jews, Muslims, and Christians against this injustice, and a world-wide campaign were all of no avail against the will of the antisemites. Finally after the personal intervention of President Roosevelt, the Crémieux Decree was again put into force on October 20, 1943. However, it was only in 1947 that equality for all was proclaimed.

[David Corcos / Haim Saadoun (2nd ed.)]

Contemporary Period

During the postwar period a number of Jewish organizations were formed in Algeria. The Fédération des Communautés Israélites d’Algérie was established in April 1947 for the purpose of defending Algerian Jewry and safeguarding its religious institutions. *ORT was founded in 1946 in Algiers and Constantine; the Ecole Rabbinique d’Algérie, established in 1947, began its activities in 1948; the Comité Juif Algérien d’Etudes Sociales, formed after World War I, resumed its activities in 1948 and published a monthly, *Information Juive*, from 1948 to April 1962 in Algiers and from September 1963 in Paris.

Although the formal structure of the Algerian community resembled the French pattern centering around legally sanctioned “religious associations,” in practice each *kehillah* functioned autonomously. Until 1961 the Fédération united 60 different communities. Thereafter the communal structure underwent a gradual disintegration and communal life became primarily a function of local customs and traditions.

The fate of the community was fundamentally determined by the Algerian nationalist struggle for independence. Tragically caught between two violently opposed forces the marginal position of the Jews in Algerian society exposed them to constant danger.

The conflict had already become clear in August 1956 when the FLN (Front de Libération Nationale – the Algerian National Liberation Front, an organization dedicated to achieving Algerian independence) appealed to the “Algerians of Jewish origin” who “have not yet overcome their troubled consciences, or have not decided which side they will choose” to opt for Algerian nationality. Jewish fears increased when, on February 18, 1958, two emissaries of the Jewish Agency were

kidnapped and assassinated by the FLN. In December 1960 the Great Synagogue of Algiers was desecrated and the Jewish cemetery in Oran was defiled. The son of William Levy, a Jewish socialist leader was killed by the FLN and subsequently Levy also was assassinated by the OAS (Organisation Armée Secrète – a counter-terror organization opposed to an independent Algeria). In May 1956 the Mossad, the Israeli secret service, which had begun to work in North Africa and created networks of Algerian Jews from Constantine, attacked the Muslims of Constantine in response to continuous attacks against Jews. About 20 Muslims were killed as a warning to Algerian Muslims not to involve the Jews in their struggle with the French.

Until 1961 the majority of Algerian Jews had hoped that partition or a system of dual nationality would obviate the conflict. As the struggle developed, however, they increasingly feared that popular reaction would be directed against them not only as Europeans but as Jews and Zionists. Consequently, although the community never adopted an official anti-independence position, in March 1961 a delegation from the Comité Juif Algérien d'Etudes Sociales urged that the negotiations then in prospect should obtain official recognition of the French nature of the Algerian Jewish community. (Later it was agreed in Evian to treat Jewish Algerians as "Europeans.")

By the 1960s the "Gallicization" of the large mass of Algerian Jews had developed to the point where both their emotional allegiances and cultural predispositions were largely French. The resulting diminution of Jewish observances did not, however, reflect a positive integration into the Algerian French community which was less a community than a settle-

ment of colons. Fundamentally, however, the separate identity of the community was maintained by the system of status inherent in Islamic society where religion and family and not formal nationality and cultural behavior were the determinative factors. The term "Frenchman" in Algeria did not apply to either Arab or Jew. The FLN and OAS reign of terror and counter-terror in 1961 and 1962 had catastrophic consequences for the Jewish community. As elsewhere in North Africa the Jewish quarters often straddled the European and Arab sections. These quarters often sustained the first and sometimes only Muslim reprisals after attacks by European terrorists on the Muslim quarters. These often degenerated into pitched battles between the two communities, especially their youth.

Throughout this period there was a steady flow of emigration of Jews from Algeria. The rate of emigration rose steeply in mid-1962 when, as a result of OAS violence, the community feared that the proclamation of independence would precipitate a Muslim outburst. By the end of July 1962, 70,000 Jews had left for France and another 5,000 for Israel. France treated the Algerian Jews on an equal footing with the non-Jewish repatriates. The United Jewish Social Fund made extraordinary efforts to help the refugees. In the course of a few months, no fewer than 32,000 refugees arrived in Paris and the nearby communities. Many Jewish refugees from southern Algeria found a haven in Strasbourg and its vicinity and were gradually integrated with the aid of the existing Jewish community. It is estimated that some 80% of Algerian Jews settled in France.

After Algeria had achieved its independence, all its Jews who held French citizenship retained it, except for a few iso-

Algerian towns and corresponding Jewish population figures, 1838–1968.

lated cases. The regime of Ben-Bella maintained a correct relationship with the Jews. During the years 1963–65, the minister of culture addressed the Jewish congregation at the synagogue of Algiers on the Day of Atonement.

In February 1964 a General Assembly was held at Oran by the Jewish communities of Algeria, which elected Charles Hababou as its president. After Houari Boumédiène rose to power in 1965 the situation rapidly deteriorated. Heavy taxes were imposed on the Jews, and discrimination of various kinds betrayed the anti-Jewish tendencies of the government. The rabbis no longer received their salaries from the state. This was explained by the fact that they had not become Algerian nationals. The Supreme Court of Justice declared that the Jews were no longer under the protection of the law, and an intensive economic boycott was instituted against Jewish merchants. The police engineered a libel suit against Hababou on the grounds that he had had connections with Zionism. In September 1966, as the result of a case brought before the Economic Court, Désiré Draï was condemned to death together with two non-Jews; but whereas he was executed on the day of Rosh Ha-Shanah, the two others were pardoned. On June 5, 1967, the Algerian press launched a violent attack against Israel and the Jews. The walls of the synagogues of Algiers and other Jewish communities were defaced. With one exception, all the synagogues in the country were taken over and converted into mosques, and the Jewish cemeteries of the country fell into decay. By 1969 fewer than one thousand Jews remained in Algeria. Most of the young men and women left, and thus there were hardly any marriages. The property of the Jewish communities was abandoned. (See Table: Algerian towns and corresponding Jewish population figures, 1838–1968.)

[Robert Attal]

The Jews who remained in the 1970s were mostly of advanced in age, unwilling to leave their assets behind and emigrate with the rest of the Jewish community to France. Only 50 Jews remained in Algeria in the 1990s, nearly all in Algiers, but there were individual Jews in Oran and Blida. A synagogue functioned in Algiers but had no rabbi. All the other synagogues were taken over for use as mosques.

Relations with Israel

On gaining independence, Algeria joined the Arab League and fully participated in its conferences against Israel. On June 5, 1967, Algeria along with other Arab states declared war on Israel, sending military assistance to Egypt. Even the Egyptian acceptance of ceasefire was denounced by Algerian mobs. Consequently, President Boumédiène pressed the U.S.S.R. to adopt a firmer anti-Israel policy, “a firm commitment to wipe out traces of the aggression” as well as to give military aid, some of which was subsequently channeled to Egypt. On July 23, 1968, the PFLP (“Popular Front for the Liberation of Palestine”) hijacked an El Al plane to Algeria. The plane, the crew, and its male Israel passengers were kept under detention for several weeks and only released in return for terrorists being

held by Israel. Algeria adopted an extreme attitude among the anti-Israel Arab factions, and gave full support to the Palestinian terrorists. It repeatedly expressed its official reservations regarding the Israeli-Palestinian peace process.

AL-GHARĪḌ AL-YAHŪDĪ (early seventh century), poet, singer, and composer from *Medina in Arabia. Al-Gharīḏ al-Yahūdi is not to be confused with al-Gharīḏ (nickname meaning the fresh voice), one of the four great singers in the early Islamic era (d. 716). The biographical account of al-Gharīḏ the Jew is reported by the 10th-century author al-İşfahānī in his monumental *Kitāb al-Aghānī* ("Book of Songs"), which contains a collection of poems from the pre-Islamic period to the ninth century, all of which had been set to music. Al-Gharīḏ the Jew is described in this book as a Kohen descended from Aaron ben Amram and a member of the Jewish group living in Yathrib (i.e., Medina, the city of the Prophet *Muhammad). Al-İşfahānī mentions in the same context other Jewish poets belonging to the same group, but the very fact that he dedicated a special entry to al-Gharīḏ points to his artistic ability and reputation. Al-İşfahānī even reports that Muhammad was pleased with one of al-Gharīḏ's songs.

[Amnon Shiloah (2nd ed.)]

ALGHERO, Sardinian port. The Jewish community developed there in the second half of the 14th century after Sardinia was acquired by the crown of Aragon. In 1354 Jews supplied the conquering army of Peter IV of Aragon and took part in the siege of Alghero. Among them were Jews from Castile, Sicily, Catalonia, and Majorca. Several are listed as soldiers. Following the conquest, many remained in Alghero. The first group of immigrants was joined in 1370 by families coming from Catalonia and southern France. Around 1400, new waves of immigrants came to Alghero, mainly from Provence. In 1360 King Peter IV conceded the Jews of Cagliari the privilege of erecting a tower in Alghero and permitted them to affix a commemorative stone to the wall to mark its foundation. The synagogue, built in 1381, was enlarged in 1438. The cemetery was established in 1383 and extended in 1435. As long as the attitude of the Aragonese authorities toward the Jews remained favorable, they were prominent in Alghero's economic life. A Jew, Vidal de Santa Pau, advanced money to the authorities

for restoring the city walls in 1423. In 1454 Samuel de Carcassona and Jacob Cohen, secretaries of the Jewish community of Alghero, obtained the right to emblazon the royal coat of arms on the wall of the synagogue. The wealthy Carcassona family loaned money to the Aragonese kings throughout the 15th century. In 1481 the brothers Samuel and Nino Carcassona were victualers for the royal galleys and military paymasters. Maimon Carcassona gave hospitality to the viceroy on his visits to Alghero. Moses, the richest property owner in the Jewish quarter, was the official collector of taxes and duties. Several celebrated physicians, including Bonjudes *Bondavin of Marseille, lived in Alghero. The friendly attitude of the Aragonese authorities toward the Jews found expression in the regulations of 1451 exempting them from wearing the Jewish *badge and from having to listen to missionary sermons. They were also granted judicial autonomy and exemption from taxation. Conditions for Alghero Jewry began to deteriorate in 1481 when they shared the treatment meted out to the Jews of Spain. They were expelled in 1492 after the general edict of expulsion from the Spanish dominions. The Carcassona family, who became Christians, remained. Antonio Angelo Carcassona (born in 1515) studied law at the universities of Bologna and Rome, graduating as a doctor of both civil and canon law. In 1533 and in 1586 members of the Carcassona family were tried by the Spanish Inquisition for inviting foreign Jews as guests in their house in Alghero.

[Attilio Milano / Nadia Zeldes (2nd ed.)]

ALGIERS (Al-Jazair), capital of *Algeria. The small Jewish community in the late Middle Ages was enlarged after 1248 by Jews from the Languedoc and about 1287 by Jews from Majorca. The population of Majorcan Jews increased between 1296 and 1313, when the town enjoyed a short-lived independence. The Majorcan Jews were arms suppliers. Before 1325 the port was visited regularly by Catalans and Genoese, as well as by Jewish shipowners and merchants.

The first Jewish refugees from Spain were warmly welcomed in 1391, but their increasing numbers caused anxiety among the Muslims and the native Jews, who feared their competition. One individual (whose identity cannot be ascertained), himself an immigrant, used his influence to prevent the landing of 45 newcomers and advised that all the fugitives be sent back, as they were accused of being Marranos. The *qadi* (Muslim religious judge) intervened in their favor.

The Spanish Jews prospered greatly and finally became the majority; they separated themselves from the native Jewish community by acquiring a cemetery and synagogue of their own and moving into a separate quarter. The leader of these Jews at first was R. Saul Ha-Kohen *Astruc, a scholar and philanthropist, who served as judge for the whole community. His successors were the famous R. Isaac *Bonastruc, R. *Isaac b. Sheshet (Ribash), and R. Simeon b. Zemaḥ *Duran; they instituted the so-called *takkanot* of Algiers which governed the religious life of Algerian and Tunisian Jews. Because of the school of Isaac b. Sheshet and the Durans, Algiers became a major religious and intellectual center in the 15th century. Many Marranos moved there in order to practice Judaism openly. The large-scale maritime trade of the Spanish Jews at the end of the 14th century gave economic impetus to the city and prepared it somewhat for its future role.

From early in the 16th century, the Turks ruled in Algiers. In order to develop trade, they encouraged the creation of a privileged class. They employed Jews as advisers and physicians; Jews were also responsible for the coining of money and the accounts of the treasury. The mass of the people, Moors and Jews, suffered periodically from the whims of the Janissaries and the cruelty of the militia. In 1706 an outbreak of the plague and a terrible famine reduced many Jewish families to indigence. Then, influenced by false accusations, the bey imposed an exorbitant fine on the community and ordered the destruction of the synagogues, which were saved only by the payment of a further sum. This ruined the majority of the Jews. They commemorated the failure of the Spanish who attacked Algiers in 1541 and 1775 by instituting two "Purims" of Algiers, which were celebrated every year by the whole community. From the 17th century onward, former Portuguese Marranos and many Dutch, Moroccan, and Leghorn Jewish families went to settle there. Proficient in business, many owning their own ships, they gained control of Algerian commerce and extended the system of letters of exchange, and that of concessions and agencies in Europe and the East. These new immigrants intermarried with the older families of the town and settled on the Street of the Livornese, completely separated from the *Hara* ("quarter"). These "Juifs Francs" ("Francos," i.e., free from the obligations of other Jews), or "Christian Jews" (because they wore European garments), were employed by all European countries to ransom Christian prisoners. Many were able diplomats who negotiated or signed various peace and trade treaties. Among these diplomats in the second half of the 17th century were Jacob de Paz, Isaac Sasportas, David Torres, Judah Cohen (d. early 18th century), and Soliman Jaquete (d. 1724). Their families became the aristocracy of the community and were active in promoting its welfare.

Internal strife in the Jewish community appeared only when the kabbalists R. Joshua Sidun, R. Joseph Abulker, R. Aaron Moatti, and above all R. Abraham Tubiana (d. 1792) introduced new rituals in their synagogues in accordance with the theories of R. Isaac *Luria. Members of other synagogues considered this sacrilegious and accused the innovators of

promoting a schism. Until the mid-20th century two different rituals were followed in the synagogues of Algiers, that of the *mekubbalim*, or kabbalists, and that of the *pashtanim*, or those who followed the original customs of the refugees from Barcelona and Majorca. The intense religious life of the community was stimulated later in the 16th century by eminent scholars such as R. Abraham Tawa, R. Moses Meshash, R. Abraham *Gavison, physician to the famous "beylerbey" (Ottoman governor) Euldj Ali (1568–87), R. Solomon Duran II and his disciple R. Judah Khallas II (d. 1620), R. Solomon Şeror (d. 1664) and his grandson Raphael-Jedidiah Şeror (d. 1737), the philosopher R. Mas'ud Guenoun (d. 1694), the poet R. Nehorai Azubib (d. 1785), and R. Judah *Ayash, one of the most venerated rabbis of Algiers. Their works, however, were neglected by the new generations, which turned toward other forms of culture.

In the late 18th–early 19th centuries the wealth of certain families added to the enormous influence of Naphtali *Busnach; this aroused the jealousy of the Janissaries, who assassinated Busnach. The day after Busnach's assassination (June 29, 1805), they sacked Algiers killing between 200 and 500 Jews. Despite this catastrophe, the great families would not forgo their internal disputes nor their fierce competition for power. David Bacri succeeded his partner and relative Naphtali Busnach as head of the community. He was beheaded in 1811 by the dey and replaced by David Duran who represented the opposing families. The latter was in his turn put to death by the dey during the same year, and Joseph Bacri assumed the title of **muqaddam* (head of the community). Involved against his will in disputes between the Jewish families, the rabbi of Algiers, R. Isaac Abulker, was dragged to the stake with seven other notables of the town (1815). After the landing of the French in 1830, Jacob Bacri was named "Chef de la Nation Israélite"; he was replaced by Aaron Moatti whose appointment was terminated in 1834.

In 1870 Algerian Jews became French citizens; subsequently antisemitism spread throughout the country manifesting itself in serious pogroms, particularly in Algiers (1884–87, 1897–98). After World War I a Zionist conference, the first in Algeria, was organized at Algiers. Although the Jewish élite was always active in the defense of Judaism, they were loyal French citizens.

The Algiers community was deeply affected by the nationalist struggle for independence. Much of the communal structure ceased to exist. The Great Synagogue in the ancient quarter, ravaged in the Christmas Eve riots of 1960 was only temporarily restored. The Maimonides rabbinical college was closed. During the French army's search of Bab-el-Oued in 1962, in reprisal for the machine-gunning of French soldiers by the local OAS, the synagogue of that quarter was ravaged.

Population Statistics

During the last four centuries the Jewish population of Algiers declined and increased according to the economic and political situation of the capital. In the 16th century it declined

from 2,000 to 750 persons, because of the Spanish assaults. In the 17th and 18th centuries the number of Jews rose to 15,000, but then decreased to 7,000 and later, to 5,000. About the same number was found there by the French in 1830. Eight years later there were over 6,000 Jews, but after the antisemitic persecutions of the last decades of the 19th century only 5,000 remained. After 1900, with the defeat of the anti-Jewish party, the Jewish population increased continuously: 10,822 in 1901, 17,053 in 1921, 23,550 in 1931, and 25,591 in 1941. During World War II Algiers received over 1,000 Jewish refugees from Europe; after the uprising against the French in 1954 a large number of Jews from the interior settled in Algiers. Over 95% of this population, numbering about 34,000, left the capital when the declaration of independence was proclaimed in 1962. The vast majority immigrated to France, some went to America, and others to Israel. By 1963 only 2,500 Jews remained in Algiers. In 1969 their number was reduced to a few hundred and at the turn of the century to a few dozen.

For bibliography see *Algeria.

[David Corcos]

ALGUADES (Alguadez), MEIR (d. 1410), personal physician to successive kings of Castile, chief rabbi, and chief justice of Castilian Jewry. After the massacres of 1391, Alguades devoted his energies to rehabilitating the stricken Spanish communities, despite his personal misfortunes (his son-in-law had accepted baptism during the persecutions). Alguades' activities extended beyond the frontiers of Castile into Aragon and Navarre. He was a friend and patron of Solomon ha-Levi of Burgos (later *Pablo de Santa Maria), Benveniste de la *Cavalleria, and Hasdai *Crescas, the learned apologist and satirist Profiat *Duran, and the poet Solomon da Piera, who composed an elegy on Alguades' death. Alguades translated into Hebrew Aristotle's *Ethics* (ed. by Satanow, Berlin, 1790) and in his foreword speaks of the obstacles which he encountered in his work, while leading the life of a courtier bound to accompany the monarch on his travels. A number of medical prescriptions written by Alguades in Spanish have been preserved in Hebrew translation. Beside his activities as court physician, Alguades was apparently a tax-farmer. The statutes of the Castilian communities issued at *Valladolid in 1432 confirm that Alguades' widow and daughter were to be exempted from taxes because of the services rendered by him to the Jewish communities. The local legend associating Alguades with the *host desecration charge which entailed disaster for the community of *Segovia in 1410 seems to have no basis other than the improbable account of *Alfonso de Espina in his *Fortalitium Fidei*.

BIBLIOGRAPHY: Baer, Spain, index, s.v. *Meir Alguadex*; S. Usque, *Consolation for the Tribulations of Israel*, ed. by G.I. Gelbart (1962), 325–33; I. Rodríguez y Fernández, *Segovia-Corpus* (1902); *Boletín de la Real Academia de la Historia, Madrid*, 7 (1885), 397 ff.

ALGUM, a tree which cannot be definitely identified. Mentioned among the trees of Lebanon which Hiram, king of Tyre, sent to Solomon for the building of the Temple and the palace (II Chron. 2:7), it is referred to elsewhere as having been imported from tropical Ophir (II Chron. 9:10–11; I Kings 10:11, where it is called *almog*). The Septuagint identifies the tree brought from Lebanon as a species of pine and that from Ophir as apparently a species of Tuja, while the Jerusalem Talmud and the Midrash identify it with *alvos*, i.e., *Aquilaria agallocha*, which is a tropical tree of high quality used in the making of furniture. It has also been identified with the biblical aloe (Num. 24:6; Ps. 45:9; Prov. 7:17; Song 4:14) used in incense and for perfume. In modern Hebrew *almog* is used for coral, which is also the meaning given to it in the Talmud (RH 23a).

[Jehuda Feliks]

ALḤADIB (al-Aḥḍab), ISAAC BEN SOLOMON BEN ZADDIK (mid-14th century–after 1429), Hebrew poet and astronomer. Of Spanish origin (very likely from Castile), after the events of 1391, Alḥadib went to Sicily in 1396. He lived first in Syracuse and then (1426) in Palermo. He applied his scientific interests to biblical interpretation, and also wrote secular and liturgical poetry. O. Ra'anán published in 1988 a critical edition of almost 90 of his poems, most of them secular, including monorhymed and strophic compositions and some rhymed prose. His poetry, with popular tendencies, is sometimes didactic, ethic, or sapiential, but sometimes also humorous or satiric, including some riddles, proverbs, and polemics, and introductions to prose works. Two interesting poems, alluding to the 13 principles of Maimonides, were written on the occasion of the wedding of his two sons. Like other late Hebrew poets, he wrote in a mannered style (for instance, a poem has one thousand words starting with the letter *nun*), imitating the octosyllabic structure of Romance poetry in many of his Hebrew verses. He wrote a hymn on Esther giving his name in acrostic, and an addition to the poem with which Moses Handali opened his commentary on the Hebrew translation of Al-Fergani's astronomy.

Only one of his works in prose has been published in full, *Leshon ha-Zahav*, on weights and measures mentioned in the Bible (Venice, undated). His writings (in manuscript) include *Orah Selulah*, on calculations; *Iggeret Kelei Hemdah*, describing an astronomical apparatus which he invented in Sicily; *Keli ha-Memuza* or *Keli ha-Emza'i*, also on astronomy; and *Maamar be-Gidrei ha-Devarim*, on theological terminology.

[Abraham Meir Habermann / Angel Saenz-Badillos (2nd ed.)]

AL HA-MISHMAR (Heb. על המשמר), Hebrew daily newspaper of the Israeli left-wing *Mapam Party, its affiliated Ha-Shomer ha-Za'ir youth movement, and the Kibbutz Arzi network of agricultural settlements. Established in Tel Aviv in 1943 under the editorship of Mordekhai *Bentov as *Ha-Shomer*, it became *Al ha-Mishmar* five years later after Ha-Shomer ha-Za'ir merged with Aḥdut ha-Avodah into Mapam. The newspaper was both a voice of the strident left-wing of the Zionist movement and the more inward-looking network of agricultural settlements. A quality newspaper, it covered national and international developments as well as local kibbutz news. In its earlier days its journalistic style was of a party organ. Yet its literary pages in particular were open to non-party voices. Its journalistic workforce consisted of members of kibbutzim on loan to work on the newspaper. After Bentov was elected a Mapam member of the Knesset, he was replaced as editor by Ya'akov Amit. Other editors of the paper were Marek Geffen, Ḥayyim Shaw, Sever Plotzkur, and Zvi Timor. In later years the paper's style was characterized by less ideological rigidity. Its staff included not only kibbutz members but also professional journalists. Its readership reached 15,000–18,000, but 10,000 of these were kibbutz subscriptions. Its circulation declined to 8,000 in the 1990s after kibbutz members were no longer required to read the paper. Their preference for the non-party commercial press, and for television over newspapers, together the financial problems which struck the kibbutz movement, caused the paper to close in March 2005.

[Yoel Cohen (2nd ed.)]

ALHANATI, DAVID (1908–1990), Greek attorney and community activist. Alhanati was born in Athens to a mixed Romaniote/Sephardi family from Ioannina and Larisa. He studied law at the University of Athens and from 1935 until 1942 he was legal advisor to the Jewish Communities of Greece and served on its board. During World War II, he fought in the Greek army on the Albanian front in 1940–41, was arrested by the Italians in 1942 as a prominent member of the Athenian Jewish community, and during the German occupation from September 24, 1943, went into hiding in the mountains and found refuge with a Greek friend in Pírgos until the liberation. Previously, he had assisted Rabbi Barzilai when he was pressed to hand over community lists to the Germans, and burned the Athenian community Jewish archives.

In 1945, he founded the Board of Jewish Communities of Greece (ΚΙΣ) and served as its first chairman. He also founded the ΟΡΑΙΕ Organization of Rehabilitation of Jews in Greece and was its vice president from 1945 until 1952. He represented the Jewish community of Greece in war trials held in the late 1940s and 1950s in Greece against Jewish and German Nazi collaborators. In 1945–46, together with the Mosad le-Aliyah Bet, he helped organize the voyage of four boats of illegal im-

migrants from Greece and Northern Europe departing from the Sounion coast, southeast of Athens, to Erez Israel. He established two *hakhsarah* (training) farms in 1945, which housed *ma'pilim* ("illegal" immigrants), as they waited for their departure to Erez Israel.

Alhanati was president of the Union of Greek Zionists (1965–84), was Greek delegate to the 26th and 27th World Zionist Congresses, and was president of the Jewish National Fund in Greece from 1965 until his later years. He also was secretary-general of the HELLAS-Israel organization and a lifetime member of B'nai B'rith.

In Athens, Alhanati also represented the legal interests of the Jewish National Fund and the Jewish Agency, and worked together with the Joint Distribution Committee to rebuild the lives of Greek Holocaust survivors and help Jewish refugees from Arab Middle Eastern countries and the former Eastern Bloc of the Soviet Union reach the West for relocation.

[Yitzchak Kerem (2nd ed.)]

AL HA-NISSIM (Heb. על הנסים; "for the miracles"), thanksgiving prayer added to the penultimate benediction of the *Amidah* and to the Grace after Meals on Ḥanukkah and Purim. The prayer starts with a general introduction: "For the miracles, the redemption, the mighty deeds, the saving acts, and the (victorious) wars, which Thou didst for our fathers in former times at this season." On Ḥanukkah a condensed account of the Hasmonean Revolt is added. The opening words of this section "In the days of Mattathias, the Hasmonean, son of Johanan the high priest..." present some difficulties owing to an apparent confusion between Jonathan, the high priest, and Johanan, father of Mattathias the Hasmonean. The additional recitation for Purim briefly retells the story of Purim. This prayer dates back to talmudic times (Shab. 24a). Several ancient sources also have the addition "as Thou hast done for them, thus perform for us, Lord our God, miracles and wonders, in our days" (Sof. 20:8, also *Siddur R. Amram Ga'on, Seder Ḥanukkah*, and *Siddur R. Sa'adyah Ga'on*, 256), but the prayer books omit this phrase on the halakhic principle that petitions and thanksgivings should be kept separate (Sh. Ar., OH 682:1). An imitative form of *Al ha-Nissim* was inserted into the *Amidah* and the Grace after Meals on the local Purims (see Special *Purims), and an attempt has been made to establish the recitation of such a prayer on Independence Day in Israel.

AL-ḤARIZI, JUDAH BEN SOLOMON (1165–1225), Hebrew poet and translator. He was born in Spain, very likely in Christian Toledo, a city that at this time preserved Arabic culture and that he describes with particular detail; however, there are no conclusive proofs of it, and other places have also been suggested. His education in this cultural atmosphere made him familiar with Arabic and Hebrew language and literature. Al-Ḥarizi was a member of a wealthy family

which became impoverished, and was therefore dependent on patrons.

He spent some years in Provence, where he translated several Arabic works into Hebrew for the non-Arabic speaking Jews and participated in the ideological disputes of the time, returning to Spain in 1190; in 1205 he was in Toledo and wrote a poem on the death of Joseph ben Shoshan. During discussions of the work of Maimonides he defended the Master against the anti-rationalist rabbis from Toledo. Some time later he left Spain to travel to the Orient. He first went to Marseille, and from there he sailed to Egypt; in 1215 he arrived in Alexandria and from there he visited Cairo, later continuing to Palestine, Syria, and Iraq. According to the information that he gives us in one of his works, in 1218 he was in Jerusalem. Damascus, Aleppo, Mosul, and Baghdad were among the cities visited. He mentions seeing the tombs of the prophet Ezekiel and of Ezra in Susa. The ten last years of his life, until his death in Aleppo in 1225, are now much better known thanks to important documents discovered and published in recent years. J. Sadan published in 1996 an Arabic biography written by Ibn al-Shā'ar al-Mawṣili in a work on the poets of his time (the first half of the 13th century). There are also many details about his travels in his *Tahkemoni* as well as in an Arabic description, *Al-rawdāh al-anīqah* ("The Pleasant Garden"), written by Al-Ḥarizi himself in his last years, which has been published and annotated by Y. Yahalom and Y. Blau (2002).

We do not know exactly the reasons for Al-Ḥarizi's travels. Scholars usually allude to his curiosity, to spiritual motifs, like the love for Zion, to the search for rich patrons in the Orient, etc. Al-Ḥarizi's visits to these countries helped to acquaint the Jewish communities there with Spanish-Hebrew culture. Most of his compositions were written during his travels and contain reflections on his experiences. He wrote many poems in honor of the prominent Jewish men of these communities, both satirizing their defects and praising their virtues, and used to revise what he had previously written, sometimes leaving different versions of his writings.

Al-Ḥarizi's most important literary translation is his Hebrew rendering of the *maqamat* of the Arabic poet Al-Ḥariri (Bosra, d. 1121), which he entitled *Maḥbarot Iti'el* ("Notebooks of Ithiel"), completed before 1218. His translation of the *maqama*, an Arabic literary form in rhyming prose, attains the quality of an original composition, and imparts a Hebrew flavor to Al-Ḥariri's typically Arabic art; it reproduces the elusive word play and ornate style of the original. Al-Ḥarizi's translation contained 50 *maqamat* of which only a portion of the first and 26 of the subsequent *maqamat* have been preserved. The *Maḥbarot Iti'el* were published by Th. Chenery (1872), and more recently by Y. Peretz (1951).

Al-Ḥarizi himself used this form for his major work *Sefer Tahkemoni* ("The Wise One"?), completed after 1220; he was among the first to use this genre in Hebrew literature. Its 50 *maqamat* show Al-Ḥariri's influence, being at the same time his way of showing the possibilities of the Hebrew language and of defending its usage. The language, rhymed prose with

some poems intermingled in the text, is taken from the Bible and is often a mosaic of biblical quotations. The different addressees of the work that appear in the manuscripts are not surprisingly Oriental Jews, as Al-Ḥarizi composed this book in his travels through the Orient, from one country to the other, or, as he says, from Egypt to Babylon.

The *maqamat* of the *Tahkemoni* begin with a narrative frame introduced by the narrator, Heman the Ezrahite, who represents in many cases the opinion of the writer. The main character, Heber the Kenite, resembles the heroes of the Arabic *maqama* in his nature, a roguish polymath and rhymester. He appears in many different forms and is only recognized at the end of the narratives, after having shown his abilities and wisdom. The book includes love ditties, fables, proverbs, riddles, disputes, and satirical sketches, such as the descriptions of a flea and a defense by a rooster about to be slaughtered.

Apart from its literary merit and brilliant, incisive style, the *Tahkemoni* also throws valuable light on the state of Hebrew culture of the period, and describes the scholars and leaders of the communities visited by the author. Al-Ḥarizi gives vivid descriptions of the worthies of Toledo, the poets of Thebes, a debate between a *Rabbanite and a *Karaites, and conditions in Jerusalem. The *Tahkemoni* also contains critical evaluations of earlier and contemporary poets, although Al-Ḥarizi's appraisal of his contemporaries is not always reliable and occasionally misses their most essential features.

In spite of the existence of many manuscripts, and of the edition of *Sefer Tahkemoni* by Obadia Sabak (Constantinople, 1578) and the more modern ones by de Lagarde (1883; 1925); by A. Kaminka (1899); by Y. Toporowsky (1952), etc., no critical edition of the *Tahkemoni* has been published. Several of the *maqamat* were translated into Latin, English, French, German, and Hungarian. There is an English translation by V.E. Reichert, *The Tahkemoni of Judah al-Harizi, an English translation*, 2 vols. (Jerusalem, R.H. Cohen's Press, 1965); and a new one by David S. Segal, *The Book of Tahkemoni: Jewish Tales from Medieval Spain* (Portland, Oregon, Littman Library of Jewish Civilization, 2001), with a long section dedicated to the analyses of each *maqama* and a detailed bibliography. A Spanish translation, with introduction and notes, appeared in 1988: *Las asambleas de los sabios (Tahkemoni)*, by C. del Valle (Murcia: Univ. de Murcia).

Al-Ḥarizi also wrote the *Sefer ha-Anak* ("The Necklace"), a collection of 257 short poems on moral and pious themes, mainly composed in two stanzas with rhyming puns (like the book of the same name by Moshe Ibn Ezra). It was published by H. Brody, *Sefer ha-Anak*, in *Festschrift Harkavy* (1908); and by A. Avronim (Tel Aviv, 1945).

In one of the last *maqamat* of the *Tahkemoni* Al-Ḥarizi includes more than 170 Hebrew poems according to the Andalusian tradition. In his stay in the Orient he wrote also poems in Arabic and sometimes, in Hebrew and Arabic. A number of his poems not included in the *Tahkemoni* and *Sefer ha-Anak* are extant in manuscript. Yahalom and Blau have published an autographic letter found in the *Genizah*.

Al-Ḥarizi was notably active as translator of philosophical, halakhic, and medical works from Arabic to Hebrew. Under the Hebrew title *Muserei ha-Filosofim* he translated for the sages of Lunel the *Adāb al-Falāsifa* ("Dicta of the Philosophers") of Ḥunain ibn Ishāq, a collection of proverbs synthesizing Greek and Arabic wisdom literature. This translation was published by Loewenthal in Frankfurt/Main in 1896.

The most important of his prose translations is that of *Maimonides' *Moreh Nevukhim* (*Guide of the Perplexed*, published by A.L. Schlossberg, London 1851–79; reprint Tel Aviv, 1952). Al-Ḥarizi, who translated the book after Samuel ibn *Tibbon for some Jews of Marseille, intended to render it simply and clearly, employing biblical Hebrew. In spite of two chapters added by him explaining difficult words and describing the contents of the chapters, the translation was considered of literary value but failing in accuracy. For this reason it was received with much criticism, and Ibn Tibbon's translation is generally preferred (Y. Shiffman, *Journal of Semitic Studies*, 44/1 (1999), 47–61). It was, however, through Al-Ḥarizi's translation that Maimonides' ideas were propagated in the Christian world. An anonymous Latin translation of the *Guide*, published in Paris by Agostino *Giustiniani in 1520, is based on Al-Ḥarizi's translation and was used by the English schoolmen. Al-Ḥarizi's version also served as the basis for Pedro de Toledo's Spanish translation (published by M. Lazar according to the Ms. 10289, B.N. Madrid, in 1989, Culver City, Calif: Labyrinthos).

Al-Ḥarizi translated in Lunel, for Jonathan ha-Kohen, Maimonides' introduction to the Mishnah and his commentary on the first five tractates of the Mishnah order *Zera'im*. He also translated other minor works, like the *Medicine of the Body* (Ferrara, 1552) and a few short works attributed to Aristotle or Galen.

Al-Ḥarizi's prominence in medieval letters is due both to his light, entertaining, and allusive style, and to the variety of his subject matter. In consonance with the tendencies of the time in Romance literature, his descriptions of nature are more realistic than those generally found in other Spanish Hebrew poets, with a feeling for the rural life and the animal world. He described storms at sea and, with the exception of *Samuel b. Joseph ha-Nagid, was the only medieval Hebrew poet to describe battle scenes.

[Aharon Mirsky and Avrum Stroll /
Angel Saenz-Badillos (2nd ed.)]

As a Musical Writer

Al-Ḥarizi's Hebrew translation of Ḥunain's *Adāb al-Falāsifa* contains, in its first part, three chapters (18–20) on music. As usual in *adāb*-literature, the text consists of sayings and aphorisms uttered by ancient Greek philosophers or other famous men. They deal with the miraculous power of music, its influence on soul, temperament and even animal life, its therapeutic value, and the like. Al-Ḥarizi was the first to introduce these ideas of late Hellenism, which had been transmitted by Ḥunain to Arab philosophy, into Jewish philosophical

and musical thought. Circulating in many manuscripts and a print of 1562, they were continually perused and quoted as a source of musical knowledge, and even as late as 1680 by Shabbetai *Bass.

As the original Arabic text has not yet been published from the manuscripts, Al-Ḥarizi's Hebrew version and its modern (though inadequate) translations serve as sole source to students of musical history up to now. The chapters on music in Arabic were edited by A. Shiloah (1958), who showed that Al-Ḥarizi's text is governed by a deep understanding of this intricate subject.

ALḤAYK, UZZIEL BEN MORDECAI (1740?–1820?), Tunisian rabbi. Alḥayk was born in Tunis where his father was a *dayyan* and communal leader. He studied in the yeshivah of Nathan b. Abraham *Bordjel, the greatest scholar of Tunis, and under David b. Moses Najar. He was appointed rabbi of the Portuguese community in Tunis. Most of his rulings deal with financial problems and testify to his great juristic ability. Alḥayk was very familiar with business and economic problems, and it is possible that he himself engaged in business. His responsa are an important source for the history of the Jews of Tunis of his time. He became friendly with Ḥayyim Joseph David *Azulai during the visit of the latter to Tunis in 1774. He collected the *takkanot* of Tunis which he published in his *Mishkenot ha-Ro'im* (102a ff.; Leghorn, 1860), his most important work, comprising alphabetically arranged articles on the Shulḥan Arukh. It deals primarily with civil law and, to a lesser extent, with laws of marriage. Many of the articles consist of his own responsa and rulings. He wrote *Ḥayyim va-Ḥesed* (Leghorn, 1865), sermons delivered between 1767 and 1810, including eulogies on Tunisian sages and other contemporaries.

AL HET (Heb. אָל הַעֵת; “for the sin”), first words of a formula of confession of sins (and of each line in the formula) recited on the *Day of Atonement. The confession of sins during the afternoon **Amidah* on the eve of the Day of Atonement and in every **Amidah* (and repetition of the **Amidah*) on the day itself, with the exception of that of the **Ne’ilah* service, is required according to a *baraita* (Yoma 87b). In talmudic times, apparently, any expression admitting sinfulness sufficed, but in time a set form of confession evolved. There are two such forms: **Ashamnu*, known as the “Shorter Confession,” and *Al Het*, the “Great Confession” (so called in the **Maḥzor Vitry*, 374; *Siddur Rashi*, 96; and *Ha-Manhig*, 60a).

Al Het contains a list of sins in alphabetical order, two sins being allotted to every letter. Each line begins: “For the sin we have sinned before Thee.” After the 44 sins in alphabetical order, another nine lines are added enumerating sins according to their prescribed punishments. The recitation is divided into four parts. After each, the formula, “And for all these, O God of forgiveness, forgive us, pardon us, grant us atonement, is chanted during the reader’s repetition. The list of sins embraces the specific (e.g., unchastity) and the general (e.g., those committed “unwittingly”), but sins of a ritual nature are not included. The whole confession is in the first person plural, perhaps as an expression of the doctrine of collective responsibility.

The authorship of the *Al Het* is unknown. It is first mentioned in the *She’iltot* of Aḥai Gaon (eighth century) and an abbreviated and probably more original form is found in the *Seder Rav Amram*. The Christian *Didache* (second century) also contains traces of an earlier Jewish alphabetical confession suggesting that this arrangement is very ancient. In the Sephardi rite the alphabetical arrangement is only one letter for each sin, but in some this is followed by a reverse-order alphabetical arrangement. The Yemenites use a shortened version. There are many textual variants of *Al Het* according to different rites; an interesting example of the confession apparently used in pre-expulsion England is contained in the *Ez Hayyim* (ed. I. Brodie, 1 (1962), 102ff.). It is customary to recite *Al Het* while standing with the head bowed, and to beat one’s breast at the mention of each sin. In Reform usage the *Al Het* has been considerably shortened.

ALI (Ben David; 12th–13th century), physician and poet. Ali, who lived in the Near East, probably in Syria, influenced poets in his time and exchanged verses with them. The ten poems which he wrote to his friend Aaron ha-Kohen (possibly Aaron ha-Kohen b. Marion of Acre), and Aaron’s ten poems for Ali, are preserved in the Cairo *Genizah*, the former apparently in Ali’s handwriting. These metrical poems express mutual praise and longing and reflect the influence of Spanish poetry. Several poems, written when the two friends were separated, express sorrow at the unfortunate fate of kindred

souls. Some of the poems found in the *Genizah* which are signed “Ali,” are presumably by him.

ALIAV (Kluger), RUTH (1914–1980), the only female member of Mosad Le-Aliyah Bet, the organization which saved Jews from the Holocaust by smuggling them into Erez Israel, in defiance of the restrictions on immigration imposed by the Mandatory Government (see “Illegal” *Immigration). The name Aliav, given to her by David Ben-Gurion, is an anagram of *Aliyah Bet*.

Aliav was born in Kiev; her family later settled in Czernowitz, Romania. She immigrated to Erez Israel in 1934 and settled with her husband on a kibbutz. She was one of the founding members of the Mosad and in 1939 returned to Romania to organize the escape of Jews and their illegal immigration to Erez Israel. In 1941, when further rescue work became impossible, she fled to Turkey from which she proceeded to Egypt to continue her rescue activities in bringing Jews from Arab countries.

From 1942 to 1945 she worked closely with the French and Dutch Resistance movements in Europe, became a colonel in the *Haganah, and was appointed by David Ben-Gurion as the only official Israeli representative in Europe. She was the first woman to enter the concentration camps upon their liberation. She continued her activities until 1947, serving directly under Ben-Gurion.

In 1947 she was awarded the Croix de la Lorraine by General de Gaulle, and the Legion d’Honneur of France. After the establishment of the State of Israel she headed the public relations and press department of Zim, the Israeli Navigation Company which evolved out of the “Illegal Immigration” ships of the Haganah; was the Israeli president of the International Federation of Business and Professional Women; and was honorary life president of the International Public Relations Associations. Her book, *The Last Escape*, is a dramatic account of her two years’ activity in Romania.

ALIBAG, Indian town on the Konkan Coast, south of Bombay; formerly the leading settlement of the *Bene Israel community. Its synagogue, “Magen Avot,” was founded in 1840 (rebuilt in 1910) on the initiative of the *hakham* Shalom Shurrabi, author and sponsor of liturgical works for the Bene Israel community. Alibag was the favorite resort of retired military personnel of the Bene Israel group and the center of Hebrew instruction for youth from neighboring Bene Israel settlements. The historian of the community, Ḥayyim Samuel *Kehimkar, was born in Alibag. The synagogue in Alibag was still functioning in the beginning of the 21st century.

[Walter Joseph Fischel]

ALI BEN AMRAM (second half of the 11th century), religious head of the Palestinian community in Fostat (Old Cairo), Egypt. Ali was the colleague and eventually successor of R. *Ephraim b. Shemariah, who bore the honorary title of *he-ḥaver ha-me'ulleh* ("most excellent scholar"). In a letter, written about 1060, that was found in the Cairo *Genizah*, Ali addressed the court physician Abraham b. Isaac ha-Kohen b. Furat, informing him that on Sabbaths and holidays he would receive public recognition in the synagogue for his virtuous acts. Two letters addressed to Ali from Palestine concerning the Jews in Tiberias and one introducing Moses b. Joseph, a Spanish scholar on diplomatic assignment, were also discovered in the *Genizah*. Ali was the author of a lengthy poem, extant in manuscript, dedicated to one Ali b. Mevasser. Two letters from the *gaon* Daniel b. Azariah to Ali have been preserved: in one, the *gaon* expresses his great confidence in Ali and gratitude for his kindnesses; in the other, the *gaon* asks Ali to hand over to the bearer contributions that had been collected in Fustat, probably for the yeshivah in Jerusalem. Ali was also in close touch with *Samuel ha-Nagid and his sons Jehoseph and Eliasaph in Granada.

[Moshe Nahum Zobel]

ALI (or Eli) BEN ZECHARIAH (13th century), *gaon* and head of the Pumbedita academy. Ali was born in the town of Erbil (now Iraq), and lived in Baghdad. From Arab sources it appears that while *Daniel b. Samuel ha-Kohen ibn Abi-Rabīa was the *gaon* of the academy, Ali made a claim for the post. The dispute came before the vizier, who in 1250 decided in favor of Ali and appointed him *gaon* (chief judge, as the office is designated in Arab sources). The poet *Eleazar b. Jacob ha-Bavli composed a poem in Ali's honor. Although Baghdad was captured by the Mongols in 1258, during Ali's *gaonate*, the office continued to exist. Of Ali's sons, two are known: Zechariah, who was deputy head of the academy, and Isaac, referred to as "prince."

ALIENS ACT, measure enacted by the British parliament in 1905 which restricted immigration into Britain from areas outside the British Empire; it is generally believed to have been chiefly a response to heavy East European Jewish immigration into Britain after 1880. (In British law, the age-old term "alien" is used to designate someone who is not a citizen of Britain or its Empire; it has no derogatory connotations.) Agitation to restrict Jewish immigration began in the 1880s

and became more outspoken through the actions of a number of right-wing groups and activists. In 1902, a Royal Commission was held into this question which recommended that there should be no general restriction on immigration but that "undesirable" migrants should be excluded. By the Act of 1905, would-be immigrants had to disembark only at a designated port, where officials could deny entry to "undesirable" immigrants, especially those without means of support. Historians have generally believed that the Aliens Act reduced East European Jewish immigration to Britain by about one-third in the years 1905–14. Recent research, however, has suggested that the Act had only limited effects, and that immigration declined because of perceptions of much greater economic opportunity in America. As Britain had *no* immigration restrictions prior to the 1905 Act, plainly something like it was inevitable. In 1919, following World War I, the 1905 Act was replaced by a much more stringent one which virtually ended Jewish immigration to Britain until the 1930s.

ALIGER, MARGARITA YOSIFOVNA (1915–1992), Russian poet. Aliger was born in Odessa and began to publish verse in 1933. Her prewar collections, *God rozhdeniya* ("Year of Birth," 1938) and *Kamni i travy* ("Stones and Herbs," 1940) although somewhat imitative and conventional, showed an unusual lyrical gift. She achieved fame in 1942 with her long poem *Zoya* (Stalin Prize, 1943) based on newspaper accounts of the life and death of a Moscow schoolgirl who fought behind the German lines during the defense of Moscow. In her long poem, "*Tvoya pobeda*" ("Your Victory"), Aliger, for the first time, turned to a Jewish theme and, while declaring unreserved love for her Russian homeland, bitterly complained about the historical injustice of German and Russian antisemitism. Expunged from subsequent editions of the poem, the passage in question widely circulated in manuscript during the 1940s and the 1950s. The poem reflected the ideological and emotional crisis of the Communist Jewish intelligentsia, brought about by the Holocaust and the upsurge of overt antisemitism in the U.S.S.R. during World War II. A number of her poems were translated into English by Elaine Feinstein (*Collected Poems and Translations*, 2002).

[Omri Ronen]

ALI IBN SAHL IBN RABBĀN AL-ṬABARĪ (ninth century), physician and medical writer in Iraq. He was born in Tabaristan, south of the Caspian Sea, son of a well-known Jewish astronomer and mathematician, Sahl ibn Rabbān, whose

greatest astronomical feat was his translation into Arabic of the *Almagest* of Ptolemy around 800. Because of civil disturbances Ali moved to Raiy, in the vicinity of Teheran, and became the teacher of Muhammad al-Rāzī, the Muslim medieval scholar and mystic. He then took the post of secretary to Māzyār ibn Qārin, prince of his native Tabaristan, and became a Muslim and a leading figure at the courts of the caliphs al-Mu'taṣim and al-Mutawakkil. His medical writings, especially the *Firdaws al-Ḥikma* ("Garden of Wisdom"), a medical compendium in seven parts (edited by Max Meyerhof), introduced Indian medical lore to Arab readers and to contemporary Western medicine. His other works include treatises on diet, on the proper care of health, on amulets and magic, on cupping and similar subjects. He also wrote a book in praise of Islam called *Kitāb al-Dīn wa al-Dawla* ("The Book of Religion and Empire").

ALI IBN SULEIMAN (c. 1200), Karaite exegete and philosopher. It is conjectured that he was a member of the Karaite academy in Jerusalem. Ali's literary activity was mainly confined to publishing older Karaite works in abridged form. These include (1) an Arabic commentary on the Torah (parts on Num. and Deut., preserved in manuscript in the British Museum and in Leningrad); (2) a compilation in Arabic of the compendium of *Abu al-Faraj Harun on he Torah (Ms. Sulzberger, in the Jewish Theological Seminary in New York; another part in the second Firkowitsch Collection in Leningrad); (3) the *Agron*, a dictionary of Hebrew rootwords in Arabic, based on the work of David *Alfasi, but incorporating several Hebrew roots and derivatives omitted by Alfasi, and explaining biblical terms by reference to the Mishnah, Talmud, and Targums (Ms. Leningrad); and (4) a philosophical treatise (manuscript in British Museum).

ALISTÁL (Slov. **Dolný Stal**, today **Hrobonovo**; Heb. אֵלִישְׁטֶאבָּא, הַעֲלִישְׁטֶאבָּא), village in Slovakia, near Bratislava. A community was established at Alistál in the 14th century by Jews from Bohemia and Moravia, who exported horses from the nearby royal stables. A synagogue was built in 1579. A community is mentioned again in records of 1780. Jews without residential rights in Pressburg (Bratislava) were enabled to live in Alistál under royal protection. In 1929 the Jewish population in Alistál and environs numbered 259; approximately half were occupied in agriculture. The community came to an end during World War II.

ALITURUS or **ALITYROS** (first century), Roman actor; *Josephus, in his autobiography, describes him as a special favorite of the emperor Nero and of Jewish origin. He relates how, going to intercede for three priests who had been sent to Rome in bonds by Felix, procurator of Judea, on a "trifling charge," he won the friendship of the actor, who introduced him to the empress Poppaea. With her aid he secured a pardon for the priests. The Polish novelist Sienkiewicz introduced "the actor Aliturus" in his *Quo Vadis* as Nero's instructor in the use of gesture in oratory.

ALIYAH (Heb. אֲלִיָּה; "ascent"), (1) the coming of Jews to the Land of Israel as *olim* (fem.: *olot*; sing.: *oleh, olah*) for permanent residence; (2) Jews coming from a particular country or region, or during a particular period, for this purpose, e.g., the Polish *aliyah*, the First Aliyah. *Aliyah* means more than immigration: it is a major ideal of *Zionism and the primary means for its realization. It implies personal participation in the rebuilding of the Jewish homeland and the elevation of the individual to a higher plane of self-fulfillment as a member of the nascent nation.

In earlier years the majority of *olim* were inspired by idealistic motives and even during the period of mass *aliyah*, when the main driving force was persecution and distress, many were motivated by messianic yearnings and there was always an infusion of idealists. *Aliyah* has been an almost uninterrupted process ever since the crushing of Jewish resistance by the Romans, but the term has been used particularly in connection with the modern Jewish return to the Land of Israel. Five major waves have been distinguished during the period of Zionist resettlement, each of which played its part in molding the *yishuv*, the Jewish community which constituted the Jewish state in embryo.

The First Aliyah, 1882–1903, consisted of individuals and small groups, mainly under the inspiration of *Ḥibbat Zion and the *Bilu movement, who established the early moshavot (see *moshavah). Some 25,000 – mostly from Eastern Europe – arrived during this period. There were two main influxes: in 1882–84 and 1890–91.

The Second Aliyah, 1904–14, which laid the foundation for the labor movement, consisted mainly of pioneers from Eastern Europe, who generally worked as hired laborers in the moshavot or the cities. They established the first Jewish labor parties and self-help institutions, the *Ha-Shomer watchmen's association, and the first *kevuẓot* (see *kibbutz), and laid the foundations for a new Hebrew press and literature. The influx, which totaled about 40,000, was interrupted by the outbreak of World War I.

The Third Aliyah, 1919–23, which started immediately after World War I, contained many young pioneers (*ḥalutzim*)

belonging to the *He-Ḥalutz and *Ha-Shomer ha-Za'ir movements. Together with the veterans of the Second Aliyah, they established the *Histadrut and *Gedud ha-Avodah, worked on road-building, set up more *kevuẓot* and *kibbutzim*, and founded the first *moshavim. Over 35,000 arrived during this period.

The Fourth Aliyah, 1924–28, which totaled some 67,000, contained many middle-class *olim*, over half of them from Poland. Some four-fifths settled in the main cities, considerably increasing the urban population, building new quarters, and setting up workshops and small factories. Development was halted by an unemployment crisis in 1926–28.

The Fifth Aliyah, 1929–39, accounted for an influx of over 250,000 Jews and transformed the character of the *yishuv*. A prominent part was played by refugees from Nazi Germany, over a quarter of the total, who transferred large amounts of capital and contributed valuable skills and business experience.

Aliyah continued during and after World War II, totaling about 100,000 in 1940–48 (sometimes referred to as the Sixth and Seventh Aliyot). Under British rule (1918–48) *aliyah* was regulated by the Government of Palestine. The official criterion for the numbers admitted was, in normal periods, the country's "economic absorptive capacity," on which the British authorities and Jewish leaders did not agree, but in periods of crisis *aliyah* was often halted or severely restricted on political grounds. Between 1934 and 1948, some 115,000 *olim* were brought into the country in defiance of British restrictions, while another 51,500 were interned by the authorities in Cyprus and admitted only after the achievement of independence. This influx was described by the British as "illegal" *immigration and by the Jews as *Aliyah Bet* or *ha'palah*.

Independent Israel immediately removed all restrictions on *aliyah* and enacted the *Law of Return (1950), which guaranteed every Jew the right to immigrate to Israel as an *oleh*, unless he or she was a danger to public health or security, and to become a citizen immediately on arrival. The mass *aliyah* that followed the establishment of the State assumed the character of *kibbuẓ galuyyot* ("the *ingathering of the exiles"), almost entire Jewish communities, such as those of Bulgaria, Yemen, and Iraq, being transferred to Israel. The resources of the State, as well as massive contributions from world Jewry through the Jewish *Agency, were mobilized for the transportation, reception, and integration of the *olim*. Mass *aliyah* – mainly from Eastern and Central Europe, North Africa, and the Middle East – resulted in the immigration of over a million and a quarter Jews in Israel's first two decades, the influx rising to its greatest heights in 1948–51 (684,000), 1955–57 (161,000), and 1961–64 (220,000). After the Six-Day War of 1967 there was a considerable increase in "voluntary" *aliyah* from Western Europe and the Americas. In the 1970s, as a result of pressure from Israel and other Western countries, the U.S.S.R. opened its gates, enabling more than 150,000 Jews

to make *aliyah*. The majority arrived until 1973, and later on many of them left Israel and moved to other Western countries. The next massive *aliyah* from the U.S.S.R. began in 1989 when it reestablished relations with Israel. In 1990–91, 350,000 Russian immigrants arrived in Israel, and by 2003, over a million had emigrated from the former Soviet Union, making them the country's largest immigrant group. The majority were motivated by economic and social factors rather than Zionist ideology. Many were professionals – physicians, engineers, musicians, etc. – and by the end of the 1990s over 30% were non-Jews (as opposed to 10% in the 1990–95 period), benefiting from Israel's liberal Law of Return, which accords the right to immigrate to non-Jewish descendants of Jews. Though their absorption in the country was often difficult, they became a highly visible and influential population group in the course of the years.

During the same period Israel also faced *aliyah* from Ethiopia. The first *olim* arrived at the end of the 1970s, after R. Ovadiah *Yosef acknowledged their Jewishness. About 5,000 arrived independently at refugee camps in Sudan and were brought from there to Israel. As many of them lost their lives on the way, the Israeli government initiated Operation Moses at the end of 1984, in which 8,000 were airlifted to Israel in a 45-day period. In 1985, Sudan closed its borders and the Ethiopian *aliyah* ceased. In May 1991, it was renewed, with another 14,000 arriving in a dramatic 36-hour airlift (Operation Solomon). Since then, more have arrived in small groups, bringing the total of Ethiopian Jewry to 80,000 in 2002. Their integration into the country's life, socially and economically, has been extremely problematic, though the younger generation is being steadily "Israelified."

In the early years of the 21st century, *aliyah* consisted of small groups of *olim*, mainly from Argentina and France.

See also State of *Israel: *Aliyah, Absorption and Settlement*, where a bibliography is given.

For *Aliyah le-Torah*, see *Torah Reading.

[Misha Louvish/Fred Skolnik (2nd ed.)]

ALJAMA (derived from the Arabic *al-Jamā'a*, an assembly or congregation), self-governing Jewish or Moorish community in medieval Spain. In the Iberian Peninsula the term refers to the legal institutional framework in which the Jews lived in a locality. It was the *kehillah* as perceived in Jewish jurisdiction and recognized by the authorities. The appellation also denotes the quarter inhabited by Jews or Moors. Other forms of the word are *aliama* and *alcama*; in Aragonese documents it sometimes appears as *yema* while in Portuguese the word is *Alfama*. The term was also used regularly in Sicily, and sometimes in south Italy, to designate the Jewish community. It was declined as a Latin noun, and still appears in Spanish dictionaries.

ALKABEZ, SOLOMON BEN MOSES HA-LEVI (c. 1505–1584), kabbalist and mystical poet, composer of the Sabbath hymn “**Lekhhah Dodi*” (“Come, my Beloved”). In 1529 he decided to settle in Erez Israel. In the course of his trip he stayed briefly in Adrianople. Here, a group of kabbalist ascetics asked him to instruct them in the spiritual life and in his methods of worship of God. At Nikopolis, he was probably in contact with Joseph *Caro, who greatly appreciated Alkabez’ knowledge of Kabbalah. Alkabez states that while they were both studying the Torah on the night of Shavuot, the **maggid* appeared to Caro. They therefore established the custom of staying awake on the night of Shavuot to study the Torah. The custom, which became widespread, is known as “**Tikkun Leil Shavuot*.” Alkabez preached wherever he went, and Samuel b. Israel de Uceda, Eleazer *Azikri, Abraham *Galante, Elisha Galileo, and Isaac Gershon were among those who listened to his preaching and quoted from his sermons. Alkabez probably arrived in Safed in 1535. Very little is known of his life there. His signature on rulings and documents is rarer than that of any other important Safed scholar. Nothing is known about his attitude to Isaac *Luria. It seems that he was head of the Meron yeshivah and it is almost certain that he was an officiating rabbi in Safed. A prolific author, he wrote some works on the Bible, and others of a kabbalistic nature. Many of his manuscripts were stolen when he died. It is not clear whether this was done during persecutions, or by other authors. None of his purely kabbalistic works was printed or preserved in manuscript.

Alkabez, in order to understand the secrets of the Zohar, used to go out with his students to pray and meditate on the graves of *zaddikim*. This practice was called *gerushin* (“banishment”). During these *gerushin*-peregrinations, they concentrated on rousing their contemplative powers spontaneously and without any previous preparation. Alkabez had a powerful gift for stimulating spiritual revivals and mystical life. His best-known disciple was Moses *Cordovero (who married Alkabez’ sister). It seems, however, that the teacher became student. This is mainly apparent from Alkabez’ *Likkutei Hakdamot le-Hokhmat ha-Kabbalah* (“Collection of Introductions to the Doctrine of Kabbalah,” Oxford Ms. 40). The structure of this work is analogous to that of Cordovero’s first important book, *Pardes Rimmonim*, and the opinions expressed in both works are generally the same. In one matter of principle, however, Alkabez took a more extreme view. According to him, the *Sefirot* (“Divine Emanations”) are the essence of God, and he moved toward the conception of God as immanent in the world. His kabbalistic doctrine emphasized the theoretical element and attempted to endow these symbols reflecting an inner, hidden world, with a conceptual character.

As a kabbalistic commentator on the Bible, his system generally follows that of his teacher, Joseph *Taitazak. His manner of developing an argument by first raising a series of difficulties as a basis for the understanding of his text, is similar to that of the Sephardi commentators and homiletic authors of his time. In his opinion, the sayings of the talmu-

dic sages were the true Kabbalah, because they possessed authentic traditions which were handed down from generation to generation and their commentaries were not homiletical interpretations of the text. He believed that the *aggadot* of the sages were reliable, and that one should not be given preference over the other. His writings show that in addition to expressing purely kabbalistic opinions in unique style, he was one of the first to bring full-length quotations from the Zohar and to explain them. The work also includes esoteric aspects of the Torah which are interpreted in brief (*Shoresh Yishai* (1561), 77). More than any other scholar in Safed and in Turkey, he made extensive use of the kabbalistic writings of *Eleazar b. Judah of Worms, particularly *Sha'arei Binah* and *Ma'aseh Roke'ah*. His attitude toward the sciences was negative. He often quoted commentaries of latter-day authors, some of whom lived close to his own times, as well as his older contemporaries. Among these were the treatises on the Bible by Joseph Gakon and Joseph Jabez he-Hasid. He also quoted from his father Moses Alkabez, his uncle Joshua, Joseph Taitazak, and the great halakhist Jacob *Berab (c. 1474–1541).

A collection of Alkabez’s prayers has been preserved (Moscow, Ms. Guenzburg 694, and Paris Ms. 198). They contain supplications, confessions, admonitions, and songs of praise, both in the form of hymns and of meditations in the style of Gabirol’s “**Keter Malkhut*.” Alkabez probably initiated the custom practiced by the kabbalists of Safed of going out to the fields to welcome the Sabbath with a recital of his hymns. His “**Lekhhah Dodi*” achieved unparalleled popularity, and is sung in Jewish communities at “**Kabbalat Shabbat*.” “**Lekhhah Dodi*” was accepted soon after it was written and was introduced into the prayer book in 1584 (Sephardi version, Venice). The meaning of this hymn, which is permeated by a longing for redemption and the regeneration of the “**Shekhinah*” (“Divine Presence”), was changed by the Shabbateans who contended that the Messiah had already arrived, and they adapted it to conform to their views.

His works include *Ayyelet Ahavim* (1552, on the Song of Songs), *Shoresh Yishai* (1561 or 1566 on Ruth), *Manot ha-Levi*

(1585, two commentaries on the Scroll of Esther), *Divrei Shelomo* on the Minor Prophets, *Ne'im Zemirot* on Psalms, and *Pizei Ohev* on Job. The titles of his other works on the Bible are not known. His sermons are also found in the book *Or Zaddikim*. His other writings are all kabbalistic: *Ozar Nehmad*, *Amarot Tehorot*, on the *Sefirot* and some sayings of the Zohar; *Appiryon Shelomo*, *Beit Adohai*, *Beit Tefillah* constitute "a comprehensive interpretation of all the prayers of the year"; *Berit ha-Levi*, a commentary on the Passover *Haggadah* in both the literal and the kabbalistic manner; *Lehem Shelomo*, the devotional rules of the meals, in the kabbalistic manner; *Mittato shel Shelomo* on the mystical significance of sexual union; *Sukkat Shalom*, *Avotot Ahavah*, *Shomer Emunim*, prayers and litanies (Ms. 8° 1008, Jerusalem).

ALKAHI, MORDEKHAI (1925–1947), Jew executed by the British in Palestine. Alkahi was born in Petaḥ Tikvah and grew up under difficult circumstances. He joined I.Z.L. in 1943 and gained a reputation for his courage and initiative. He was captured together with Yehiel *Drezner and Eliezer *Kashani on Dec. 29, 1946, while attempting to kidnap some British officers, and with his companions was hanged in Acre.

ALKALAI, ABRAHAM BEN SAMUEL (1750?–1811), Bulgarian rabbi and codifier. Alkalai, who was apparently born in Salonika, studied under his uncle Reuben b. Jacob, whose novellae he sometimes quotes in his works. He served as rabbi of Dupnitsa, where he also headed a yeshiva (1781). He visited Salonika in 1798, and Adrianople on his way to Constantinople (1802), as emissary of his community, which was suffering great hardships. Later he settled in Safed. His best-known work is *Zekhor le-Avraham*, in which he arranged alphabetically the laws of the Shulḥan Arukh (2 vols., Salonika, 1798; vol. 3, addenda, 1815). A second edition of the first two volumes, published by his nephew Judah Ḥayyim Alkalai, included an abridgment of vol. 3 with his own additions (1818). He also wrote responsa, *Ḥesed le-Avraham* (2 vols., 1813–14). A manuscript volume of his sermons is in the Jewish Theological Seminary library in New York (no. 9425).

ALKALAI, DAVID (1862–1933), founder and leader of the Zionist movement in Serbia and Yugoslavia. Alkalai, who was born in Belgrade, was a grandnephew of Judah *Alkalai, whose granddaughter he married. He studied law in Vienna, where he joined the Zionist students' association *Kadimah, and was active in the group centered in the first Zionist periodical **Selbstemanzipation*. Alkalai continued his studies in Vienna

and Tübingen, then returned to Belgrade, where he practiced law. He represented Belgrade at the First Zionist Congress in Basle (1897), was elected to the Zionist General Council (the Actions Committee), and from then on was the moving spirit in the Zionist movement in Belgrade and in Serbia. In 1924 he became president of the Zionist Organization in Yugoslavia, and was, for many years, president of the Belgrade Jewish community. He was instrumental in winning Yugoslav statesmen over to Zionism. Alkalai was a pioneer in the publication of Zionist literature in Serbian. He appears as Aladin, a Sephardi, the Jew heading the Land Acquisition Department in Herzl's novel *Altneuland*.

[Getzel Kressel]

ALKALAI, JUDAH BEN SOLOMON HAI (1798–1878), Sephardi rabbi and precursor of modern Zionism. Alkalai was born in Sarajevo (then Bosnia) and brought up in Jerusalem, where he was strongly influenced by Sarajevo-born R. Eliezer Papo. From 1825 until he again moved to Jerusalem in 1874, Alkalai was rabbi of Semlin (Zemun), near Belgrade. He taught Hebrew to the young men of the congregation, whose mother tongue was Ladino. As a young man, Alkalai was introduced to the concept of the Jewish nation by the rabbi of Corfu, Judah b. Samuel *Bibas, one of the originators of the idea of Ḥibbat Zion and settlement in Erez Israel. The struggle of three nations – Turkey, Austria, and Serbia – for the domination of the town of Semlin also directed his thoughts to a modern political conception of the destiny and aspirations of the Jewish people.

His first two books were written in Ladino; the rest in Hebrew. In his first book, *Darkhei No'am* (1839), a Ladino-Hebrew textbook, the outstanding feature is his revolutionary attitude toward redemption as opposed to the traditional religious interpretations. *Teshuvah* ("repentance"), which, according to the Talmud (Sanh. 97b), is the precondition for redemption, is interpreted by Alkalai in its literal sense, i.e., *shivah*, return (to Erez Israel). This approach, which was first expressed by R. Bibas and was later developed in Alkalai's writings, is the foundation of his preaching for a Return to Zion within the framework of traditional religious thought. He interpreted the traditional meaning of *teshuvah* as *peratit* ("personal"), i.e., "that each man shall return from the path of evil according to the definitions of repentance given by the early sages," whereas the new meaning refers to *teshuvah kelalit* ("general return"), i.e., "that all of Israel should return to the land of our fathers."

Alkalai's second book was a rebuttal to the scornful criticism that was heaped upon these interpretations. Entitled *Shelom Yerushalayim* (1840), it contained the first reaction to the *Damascus Affair and hints of a Return to Zion. The united stand of world Jewry during the Damascus Affair, as well as the struggle of the Serbs for their independence, led him to publish his first Hebrew work *Minḥat Yehudah* (1843). In this

work he interprets the year of the Damascus Affair, 1840, as a fateful and symbolic year for the Jewish nation on its road to redemption. The libeling and suffering of Damascus Jewry occurred in order to arouse the Jewish people to their plight in exile and "to the remoteness of Jerusalem." "Complacent dwellers in foreign lands" should learn the lesson of the Damascus Affair.

In all his writings, Alkalai cites passages from the Talmud, the Midrash, and the Kabbalah, to which he adds his own mystical interpretations. His own views, however, which he repeated both verbally and in writing, are clear, namely that redemption is primarily in the hands of man himself, of the people, and redemption through a miracle can only come at a later stage. This introduction of a natural voluntaristic factor into the yearnings for redemption was a daring concept for his period.

Alkalai aroused strong opposition in Orthodox circles, which rejected the modern concept of redemption. However, he continued to publish pamphlet after pamphlet, stressing that the settlement of Erez Israel was the primary solution to the Jewish problem in Europe. In these pamphlets he quoted the early and later sages, also using **gematria*. From these pamphlets, a far-reaching plan for the realization of the return to Erez Israel emerged. Alkalai called for the introduction of the tithe for financing settlement, for the achievement of international recognition of Jewish Erez Israel, for the restoration of the assembly of elders as a Jewish parliament, for the revival of Hebrew (particularly spoken Hebrew), for Jewish agriculture, and for a Jewish army. He expressed the hope that Great Britain would supervise the execution of the program. He opposed a plan, discussed in the early 1860s, to erect houses for the Jews in Jerusalem (*battei mahaseh*) as being merely of temporary benefit, whereas agricultural settlement would prove of permanent value.

In 1852 Alkalai visited England in order to propagate his idea for a return to Erez Israel. He subsequently traveled to several other West European countries seeking support for his plan. In each locality that he visited he founded a Society for the Settlement of Erez Israel. He corresponded with prominent rabbis in Germany and Austria who gave their imprimatur to his pamphlets. Alkalai also called for the establishment of an international Jewish association, which was realized only in 1860 with the founding of the *Alliance Israélite Universelle. He requested of this organization to help him carry out his plans. However, when, in 1870 the Alliance established the *Mikveh Israel agricultural school in Erez Israel, he opposed the project, arguing that, despite the usefulness of the school in training future Jewish farmers, the only worthwhile activity was the large-scale acquisition of land for settlement purposes. Alkalai opposed the religious Reform Movement in Germany which omitted the references to Zion and Jerusalem from its prayers. He also had no faith in the Emancipation movement, which he regarded as an unwanted diversion from migration and settlement in Erez Israel. For this reason, he also opposed Jewish emigration to the U.S. and elsewhere.

His efforts brought few results. He encouraged the Society for the Settlement of Erez Israel, founded by Ḥayyim *Lorje, but it achieved nothing. Alkalai eventually lost faith in his own society and those founded by others. He went to Erez Israel in 1871 and founded the Kol Israel Ḥaverim society for the settlement of Erez Israel, giving it the same name as the Hebrew translation of Alliance Israélite Universelle, as if to establish an Alliance branch in Erez Israel. However, when Alkalai returned to Serbia, the organization failed as a result of the opposition of the Jerusalem zealots and the Amsterdam center for the distribution of **halukkah* funds. Alkalai violently attacked the Jerusalem zealots and all other opponents of the settlement of Erez Israel, from leading Orthodox rabbis to the heads of the Reform movement.

He published 18 pamphlets and many articles in Hebrew newspapers. One of his pamphlets, *Mevasser Tov*, also appeared in English translation entitled *Harbinger of Good Tidings: An Address to the Jewish Nation on the Propriety of Organizing an Association to Promote the Regaining of Their Fatherland* (1852). A selection of his writings, with a bibliography and an introduction by G. Kressel, was published in 1943. A complete edition of his works, with an introduction by Y. Werfel (Raphael), appeared in 1944. Alkalai is the hero of a novel by Yehudah Burla, entitled *Ba-Ofek* ("On the Horizon," 1943–47).

[Getzel Kressel]

ALKALAJ, ARON (1880–1973), author and communal leader. Alkalaj, the son of a cantor, was born in Belgrade, where he became a bank director and Jewish communal and cultural leader. Apart from works on finance and economics, he published a biography of Moses (1938); a work about Josephus and the fall of Judea, *Josif Flavije i pad Judeje* (1965; orig. in *Jevrejski almanah*, 1963–64); a study of Jewish life in Belgrade; a monograph on Moses and a book about Israel (1960).

ALKAN, ALPHONSE (1809–1889), French printer and author. Born in Paris, Alkan worked as a printer, but also wrote for printing and bibliographical magazines. He later became secretary to the comte de Clarac, keeper of the Museum of Antiquities in the Louvre. There he was also able to exercise his knowledge of printing by acting as a proofreader. Alkan wrote several books on printing and its history, including *Les Etiquettes et leurs Inscriptions des Boîtes – Volumes de Pierre Jannet, Fondateur de la Bibliothèque Elzévirienne* (1883), *Un Fondateur en Caractères, Membre de l'Institut* (1886), and *Les Quatre Doyens de la Typographie Parisienne* (1889). Other significant books by Alkan dealt with bibliography.

[John M. Shaftesley]

ALKAN (real name **Morhange**), **CHARLES HENRI-VALENTIN** (1813–1888), French pianist and composer. The son of a school director, Alkan, a child prodigy, became a concert pianist but retired in 1839. He spent the rest of his life almost in seclusion, teaching, composing, and studying literature, especially the Talmud. Alkan wrote almost exclusively for the piano. His music fell into neglect, perhaps because of its tremendous technical difficulties, but in recent years concert pianists have rediscovered him. Alkan liked the grotesque and the macabre, and his melody is somewhat dry and unexpressive. Searching for orchestral sound on the piano, he achieved interesting effects of color and harmony through surprisingly modern-sounding chords by adding foreign tones and by unusual pedal effects. His brother **NAPOLEON** (1826–1888) was also a pianist and composed some salon pieces.

[Claude Abravanel]

ALLEGORY, a narrative in which the agents and the action, and sometimes the setting as well, are contrived not only to make sense in themselves, but also to signify a second correlated order of things, concepts, or events (Abrams).

In the Bible

A pure parable differs from a pure allegory in two respects: (1) it is simple and credible in itself; it begins by saying that case A is like case B. The parables in the Midrash and Gospels are of this sort (e.g., prodigal son: Luke 15:11–32; fatherless steward: *ibid.* 16; the 11th hour: Matt. 20:1–16). There are, however, some parables which tell a tale simple and credible in itself but do not begin by saying case A is like case B, but rather leave the hearer wondering, or – at first – deliberately mislead him (e.g., Nathan's parable, 1 Sam. 12:1–7; the "story" told by the anonymous prophet in 1 Kings 20:39). The latter might be called quasi-allegories or crypto-allegories. These stories are not as contrived as Ezekiel 17:1ff., which only makes sense as a "riddle" (*hidah*; Ezek. 17:2). This is not an allegorically applied parable but an allegory pure and simple. A similar quasi-allegory is the "Song of the Vineyard" in Isaiah 5:1–6, which, however, has an allegorical element (cf. verse 6 b) in the story as well as being allegorically interpreted in verse 7. The fact is that biblical Hebrew was hardly aware of a distinction between simile, metaphor, parable, and allegory. Thus, in Ezekiel 24:3 the word *mashal* designates a metaphor, whereas in 17:2 it introduces, together with the word *hidah*, a typical allegory (Ezek. 17:3–24). In fact, both these words cover the gamut of figurative language, including not only parable and allegory, but fable, tale, enigma, maxim, and proverb.

Beside allegorical figures, such as kindness (grace; *hesed*), faithfulness (*emet*), righteousness (*zedek*), integrity (*shalem*) in Psalms 85:11–12, 14 and 89:15, wisdom (*hokhmah*, *hokhmot*) in Proverbs 1:20; 8:1, 12; 9:1; 14:1, and folly (*kesilut*, *ivvelet*) in Proverbs 9:13, 14:1, maiden Israel, fair (lit. daughter) Zion, fair Jerusalem, and similar expressions in various poetical books,

there are two principal kinds of allegory in the Bible. The first occurs when the narrative is based upon an image that suggests the intended subject. Allegories of this kind are often found in Ezekiel, perhaps the first Hebrew poet to make an extensive use of the metaphor. Thus, in Ezekiel, 16:3–63, Jerusalem appears as an adulteress, and in Ezekiel 23:2–45, the two adulterous sisters Oholah and Oholibah represent Samaria and Jerusalem. In Ezekiel 19:2–14, there is a twin allegory, in which the lioness and the vine stock symbolize the people of Israel. This allegory is perhaps partially inspired by an originally Sumerian lyric, *The Message of Lú-dingir-ra to His Mother* (see M. Civil, in: JNES, 23 (1964), 1–11; J. Nougayrol and E. Laroche, in *Ugaritica*, 5 (1968), 310–19, 444–5, 773–9). Another allegory of the vine stock is found in Psalms 80:9–17. In Ezekiel 31:3–18, the fate of the Cedar of Lebanon symbolizes the destiny of Pharaoh, while the allegory of the shepherds and the flock in Ezekiel 34:2–16, 17–22, alludes to the kings of Israel. Ezekiel's allegorical descriptions are sometimes followed by an interpretation of all the figurative elements, a method found later in apocalyptic literature; symbolic visions are explained by a heavenly being or a man of God. This occurs first in Ezekiel 17:3–24, one of the finest pieces of allegorical imagery, which represents the king of Babylon as an eagle and the house of David as a cedar. The same proceeding is found in Ezekiel's vision of the resurrection of the dry bones (37:1–14), an allegory of Israel's restoration. The description of the invaders' army in Joel 2:1–11 portrays in reality the invasion of locusts, which the poet considered a sign of the Lord's anger. The shepherd's allegory in Zechariah 11:4–14 is a kind of apology of the divine Providence toward Israel. Some visions of apocalyptic literature, such as Daniel 4:7–24 or 7:2–27, are akin to allegory inasmuch as the details have an assigned meaning. The allegory of old age in Ecclesiastes 12:1–7 is, in its individual figures, somewhat akin to a riddle.

The second kind of allegory occurs when the literary composition has a complete meaning contained within itself, independently of the moral or spiritual framework that lies beyond it. There is perhaps one sustained allegory of this type in the Bible, namely the Song of Songs, which is an artistically elaborate anthology of love lyrics. Some scholars have nevertheless attempted to see it as an allegorical narrative about the relations between God and His people. An allegorical interpretation may be imposed by others on a work whose author did not intend it to have any meaning on other than the literal level. The allegorical exegesis of the Song of Songs may reflect such a creative approach to a work, which originally had no allegorical meaning at all. In fact, allegorizing interpretations made their way into Judaism in the first centuries B.C.E. and C.E.

[Edward Lipinski]

In Talmudic and Medieval Literature

Allegory was used in the talmudic period, and especially in the medieval period, in three types of literature, each using allegory in its own, different way: (a) homiletical literature

used allegory in trying to translate facts and ideas known to the public, into ethical teaching, by discovering the hidden meaning behind the well-known phenomena; allegorical interpretation of Scripture was frequently used in this literary type; (b) fiction, both poetry and prose, used allegory in order to develop a multi-level story or poem; (c) theological literature, especially medieval philosophy and Kabbalah, used allegory as a means to express the idea that the phenomena which are revealed to the senses are but a superficial and sometimes false part of the divine truth, whereas allegory can penetrate to deeper and truer levels.

The preachers of the talmudic and midrashic literature seldom used complete and systematic allegorical constructions. An attempt has been made to prove that two schools of allegorists existed in talmudic times, the *doreshei reshumot* and *doreshei hamurot*, both of which were frowned upon by the leading talmudic scholars. This may well be, and the result was that allegory is found in a scattered, unorganized way in this vast literature. One of the clearest examples of the use of allegory is to be found in the homiletical discussions of Ecclesiastes 9:15, 16 (Eccles. R., ch. 9). Here the characters in the biblical verse are interpreted in several allegorical ways, but each is complete, and explains every detail in the source, whether it is historical allegory, finding in the verse the story of Israel in Egypt, or ethical allegory, describing the relationship between the good and the evil (inclinations) in man. The midrashic preachers in this case, as in a few others, had no doubt whatsoever that the biblical verse is allegorical in nature; they discussed various possibilities of unveiling this allegorical meaning. This is a completely different situation from that found in the interpretations of the Song of Songs as allegory, for in that case the meaning (e.g., the relationship between God and Israel) preceded the detailed allegorical interpretations.

Later homiletical literature, in the medieval and early modern periods, revealed allegorical meanings not only in biblical verses, but in talmudic and midrashic passages. Obscure sayings of talmudic scholars, strange stories told by them (e.g., the stories of *Rabbah b. Bar Hana, allegorically interpreted by R. *Nahman of Bratzlav in the first years of the 19th century), all served as material for allegorical interpretation, usually within an ethical, moralistic framework. However, here also systematic, allegorical structure is very rare.

The clearest examples of the use of allegory in fiction is to be found in the **maqama* of the 12th–14th centuries, especially in Spain. Characters in these works are sometimes allegorical entities, usually with some hidden philosophical meaning. Usually it is difficult to distinguish between a well-developed fable and allegorical elements in these works, but some allegorical tendencies are evident. Most of the writers of this school followed examples, or even definite works, by their Arab predecessors or contemporaries. In Hebrew poetry of the period, especially sacred poetry but sometimes also in the secular, allegorical elements may be found. However, it is

difficult to point out a separate allegorical school. Abraham *Ibn Ezra's *Hai ben Makiz* is one of the best examples of allegorical works of this period.

It is not surprising that theological allegory is to be found more in the homiletical and exegetical works of medieval Hebrew philosophers and mystics than in the "straight" theological works. Allegory was used mainly to reconcile ancient lore with contemporary theology, and homiletics and exegetical literature are usually the meeting place of the old and the new. However, some use of allegory is to be found in stories and fables incorporated in theological works, e.g., in *Bahya ibn Paquda's *Hovot ha-Levavot*, in the writings of R. Shem Tov ibn *Falaquera, or even in Maimonides' famous "parable of the Palace" (Guide, 3:51).

The philosophers used allegory not only to explain away the physical attributes of God in the Bible and the talmudic literature. They interpreted whole biblical stories as allegory. This tendency is less evident in the early development of Jewish medieval philosophy; it came into its own only in the 13th century, in the writings of Maimonists like R. Zerahiah Hen (see *Gracian), in his polemical letters and his exegesis of the book of Job, or R. Jacob *Anatoli, in his homiletical work, *Malmad ha-Talmidim*. In works like these, one plot is substituted for another: the story of Abraham and Sarah, for example, becomes a parable of the relationship between matter and form, and Noah's three sons represent the three Platonic social classes.

[Joseph Dan]

In Kabbalah

Allegory does not occupy a prominent place in kabbalistic thought and insofar as kabbalists used it, they were influenced by philosophical exegesis. The specific domain of kabbalistic thought is the aspect of *sod* ("mystery"), that is, viewing the processes of the world or interpreting the Scriptures in a manner which refers them to the mystery of the Godhead and its hidden life. However, opposed to *sod* is *remez* ("allusion"), which is allegory. Philosophical commentaries did not talk of processes within the divine world revealing themselves through symbols; but of parallelism between biblical data, e.g., the stories of the Bible, and philosophical views derived from Greek and Arab tradition. Such commentaries recur in certain parts of the Zohar, especially in the *Midrash ha-Ne'lam* concerning the stories of the patriarchs and Ruth, where these stories were interpreted as allegories of the fate of the soul in its descent from above into the human body, its vicissitudes inside the body, and the future allotted to it after death and in the world to come. Here and there such commentaries are also found in the main body of the Zohar. In kabbalistic literature this type of allegorical interpretation is prominent among those kabbalists who tended (especially in the 13th and 14th centuries) to seek a compromise between philosophy and Kabbalah, and to develop mystical views beyond the specific theosophical system of *Sefirot. The main representative of this conception is *Isaac b. Latif. In the wide-rang-

ing commentary on the Pentateuch of *Baḥya b. Asher the allegorical parts (“rational exegesis”) were separated from the kabbalistic parts (“exegesis in the manner of the Kabbalah”). Allegorical interpretations are also found in the writings of kabbalists like Joseph *Ibn Waqar and Samuel *Ibn Motot. Allegory of the type which interprets the words of the Scriptures as referring to the history of man and his fate is found in abundance in the ḥasidic literature which combines the manner of the allegoristic and aggadic interpreters with the style of the kabbalists.

[Gershom Scholem]

One of the major kabbalists who systematically used philosophical allegories, especially Maimonidean ones, was Abraham *Abulafia. He describes this exegetical method as the fourth in his sevenfold system and applies it widely to the biblical texts in his Commentary on the Torah entitled *Sefer ha-Maftehot*. Moreover, unlike most of the other kabbalists and philosophers who allegorized the sacred scriptures, Abulafia composed some of his prophetic writings as allegories, inventing dramas whose specific meaning he himself interpreted by resorting to Maimonidean psychology or metaphysics.

The impact of his allegoristic approach is evident in Johanan *Alemanno, and in some instances of Ḥayyim *Vital's exegesis.

[Moshe Idel (2nd ed.)]

Modern Literature

Influenced by kabbalistic symbolism modern Hebrew (and later also Yiddish) literature developed the allegorical drama, of which the most outstanding examples are the moralistic dramas of Moses Ḥayyim *Luzzatto (e.g., *La-Yesharim Tehillah*). As to prose writings, while it is probable that the stories of R. Naḥman of Bratslav are of an allegorical nature, as they were later interpreted, there is no distinct allegory until the appearance of *Di Kliatshe* (Heb., *Susati*) of Sholem Yankev *Abramovitsh (Mendele Mokher Seforim). Also some of the writings of I.L. *Peretz and S.Y. *Agnon (e.g., *Pat Shelemah*, *Shevu'at Emunim*) were interpreted as allegories. Note should also be made of many political allegories which flourished during the years of Jewish underground activities in Erez Israel in times when writers had to disguise their message for fear of the censors. Further examples may be found in the early stories of Abraham B. *Yehoshua (e.g., *Mot ha-Zaken*, 1962) and in some prose works of Yitzḥak *Orpaz, as both writers seek to explain the tensions within the personal and collective subconscious. The allegorical names given to some of the characters are interwoven with realistic features (e.g., in Orpaz's novel *Or be-ad Or*, 1962). In his novella *Nemalim* (“Ants,” 1968), Orpaz describes how a horde of mysterious, demonic ants invade an apartment, threatening to destroy the home of a couple on the verge of a divorce. The menace of the ants has been interpreted as an allegorical story about the horror of the modern family as well as the destructive forces among the Arabs. Benjamin Tammuz's novella *Ha-Pardes*

(“The Orange Grove,” 1971) is likewise an allegory about the relations between Jews and Arabs, set against the background of pre-State Israel.

ALLEN, ISAAC (1875–1973), U.S. Zionist pioneer and talmudic scholar. Born in Russia, Allen immigrated to the United States in 1891. He graduated from the Law School of New York University in 1901, and while still a student won the right for Jews not to be required to take examinations on the Sabbath. A devoted Zionist, as early as 1897 Allen helped establish the Federation of American Zionists and the New York Zionist Council, of which he became president in 1898, and was a founder of the Mizrahi Organization of America in 1912. He was also a founder of the American Jewish Committee and the American Jewish Congress. He was a delegate to the Ninth Zionist Congress in Hamburg in 1909 and to many subsequent ones. He wrote regularly in the Yiddish press on American law, history, civics, customs, and policies for the benefit of new immigrants and also lectured publicly on these subjects. For 20 years, until failing health and eyesight forced him to retire at the age of 93, Allen conducted classes in Talmud at no fewer than four synagogues in New York.

ALLEN, MEL (Melvin Israel; 1913–1996), U.S. sportscaster, member of the Baseball Hall of Fame. Allen was born in Birmingham, Alabama, to Julius, a traveling shirt salesman, and Anna, scion of a rabbinical family and related to Simon *Dubnow and Shmarya *Levin. Allen's Russian-born grandfather arranged for a *shohet* to come to Birmingham for the Bibb County Jewish community and built a synagogue next to his house. Julius and Anna kept a kosher home, celebrated all the Jewish holidays, and the family attended an Orthodox synagogue regularly. When Allen was working for the Yankees and would have the ballplayers out to his house for a cookout, Allen's mother brought out a separate set of dishes from the basement and would fry oysters and cook shrimps for the players.

The eldest of three children, Allen was bar mitzvah in 1926 in Greensboro, North Carolina, where his family had moved, giving his bar mitzvah speech in Hebrew. At age 15 he enrolled at the University of Alabama, where he received his undergraduate degree in 1932 and a law school degree in 1936.

He got his start in broadcasting while still a law student, when the Alabama football coach asked him to replace the team's announcer for \$5 a game.

During a Christmas vacation in New York with friends, in 1936, Allen stopped at CBS for an audition on a lark and was shortly hired as a \$45-a-week announcer, understudying Ted Husing, CBS's top sports announcer, and Robert Trout in news. Allen's father thought his son was wasting a good education, and was less pleased when Mel explained that CBS wanted him to change his name. "They said, 'Not that we have any objection to the name Israel, but we just think it's a little too all-inclusive.' So I dropped the last name and kept my father's middle name, which was Allen, so that I still felt at least I had part of my father's name." Thus Melvin Israel became Mel Allen.

His broadcasting for CBS included interrupting Kate Smith's afternoon program with a news bulletin reporting the crash of the German zeppelin *Hindenburg*. The first baseball game Allen ever broadcast was the 1938 World Series for CBS, and in June 1939 he was hired to call New York Yankees and New York Giants home games.

Allen's garrulous, infectious style made him one of the first prominent American sportscasters, and the icon voice of baseball as television replaced radio as the primary form of mass entertainment. This occurred at the same time that the Yankees were playing in 15 of 18 World Series beginning in 1947. The "Voice of the New York Yankees" broadcast from 1939 to 1964, and was present for many major Yankees' events during that time, including introducing Lou Gehrig at Yankee Stadium on July 4, 1939, when Gehrig made his famous "Today, I am the luckiest man" speech; introducing a dying Babe Ruth at his sad farewell in 1948; and Roger Maris' record-breaking 61 home runs in 1961. Allen saw Gehrig in the dugout one day in 1940, when the Yankee captain was dying of amyotrophic lateral sclerosis. "Lou patted me on the thigh and said, 'Kid, I never listened to the broadcasts when I was playing, but now they're what keep me going,'" said Allen, who was then 27. "I went down the steps and bawled like a baby."

It was Allen who gave the nicknames "Joltin' Joe" to DiMaggio, "Old Reliable" to Tommy Henrich, and "The Scooter" to Phil Rizzuto. His endearing signature phrases on the air were his sign-on, "Hello, everybody, this is Mel Allen," his exclamation at high points in a game, "How about that!" and his home run call, "That ball is going, going ... gone!" His home run pronouncements were punctuated with reference to the team's sponsors, calling them "Ballantine Blasts" after the beer sponsor and "White Owl Wallops" for the cigar sponsor. Allen was abruptly fired after the 1964 season for reasons that have remained a mystery.

Allen broadcast Cleveland Indians games in 1968, and returned to call Yankees games on cable from 1978 to 1986. From 1977 he was the host of the long-running weekly television show, "This Week in Baseball," which continued to introduce the show with his voice even after his death. Allen also broadcast New York Giants baseball games from 1939 to

1943, 20 World Series, 24 All-Star baseball games, as well as 14 Rose Bowl games, five Orange Bowls, and two Sugar Bowls. He was the sports voice of Movietone newsreels and hosted boxing matches.

In 1978 he and sportscaster Red Barber were the first broadcasters awarded the National Baseball Hall of Fame's Ford C. Frick Award for "major contributions to baseball." Allen was the fourth person elected to the National (USA) Sportswriters and Broadcasters Hall of Fame in March 1972, was inducted into the American Sportscasters Hall of Fame in 1985, and was inducted into the Radio Hall of Fame in 1988. In 1959 he wrote *It Takes Heart* with Frank Graham Jr.

[Elli Wohlgernter (2nd ed.)]

ALLEN, PAUL G. (1953–), U.S. entrepreneur. As the co-founder of the Microsoft Corporation, Allen became one of the wealthiest (third-richest) men in the world. He also became one of the world's most active philanthropists, supporting the Survivors of the Shoah Visual History Foundation, among other projects. In 2004 he gave away more than \$500 million.

As a child, Allen attended Lakeside, a private school in Seattle known as a breeding ground for the city's future leaders. There he met Bill Gates and the two became fast friends. In 1975 someone brought to Lakeside a clunky Teletype-like computer and Allen convinced Gates that they should not miss out on the technology revolution. They set about developing an operating system for the computer, the Altair 8800, and succeeded.

Allen dropped out of Washington State University to work for Honeywell in Boston. There he again linked up with Gates, who was attending Harvard. They founded Microsoft in 1975. Allen had the programming expertise, Gates the financial acumen. In 1977 Allen said he expected the personal computer to become as much a part of everyday life as a telephone, and he envisioned innovations like E-mail and suggested the name Microsoft. He talked about a "wired world," a phrase he claims to have originated.

In 1982 Allen contracted Hodgkin's disease and endured months of radiation therapy. The following year, against Gates' wishes, Allen left Microsoft. The company did not go public for three years, but when it did, Allen's shares were worth \$134 million. He invested \$170 million in Ticketmaster, the computer-ticket service, and collected \$568 million when he sold the stock in 2002. He then started Starwave, one of the first Internet content sites and in 1992 the first home to ESPN's sports coverage on the Web. Five years later he sold it to Walt Disney for \$200 million. An early investor in Priceline.com, the online travel business, he invested \$30 million in 1998 and collected \$125 million when he sold his shares two years later. He was also a major investor in Dreamworks SKG, the film and entertainment studio headed by Steven *Spielberg, Jeffrey *Katzenberg, and David *Geffen. For an investment of \$675 million, Allen was given 18 percent of the company

and a seat on the board. Not all of his investments were successful. In 2003 and 2004 Allen pared his portfolio from 100 to 40 companies. In 1999, according to *Forbes* magazine, Allen was worth \$40 billion. By 2003 his fortune was “down” to \$21 billion, *Forbes* estimated. Allen’s grants to outside organizations and individuals have varied. Asked whether he had philanthropic role models, he pointed to the Stroum family, a prominent Jewish family in Seattle which supported the University of Washington, the Seattle Symphony, and local Jewish institutions. Allen had “a broad and diverse range of interests,” according to Laura Rich, author of *The Accidental Zillionaire: Demystifying Paul Allen*. One of Allen’s strongest interests was music. He played the guitar and collected memorabilia about Jimi Hendrix, the rock and blues guitarist and, like Allen, a Seattle native. Allen played with the Butcher Shop Boys (known for butchering songs, he said). He owned a recording studio and taught himself to play “Purple Haze,” a Hendrix signature number.

Passionate about the arts, Allen hired Frank Gehry to create an interactive rock ‘n’ roll museum, the Experience Music Project, in 2000 at a cost of \$240 million. He was also involved in a documentary on blues music for public television and organized benefit concerts to raise money for music education and blues artists. He also supported efforts to increase public understanding of science. In 2001 his documentary company produced a seven-part television series on evolution and helped fund another documentary on global public health. In 2004 Allen provided the British entrepreneur Richard Branson with the funds to build an aircraft for manned commercial space flight.

Allen was keenly devoted to sports. He owned the Portland Trail Blazers, a professional basketball team, and paid \$46 million of the \$262 million cost of the Rose Garden, a 21,500-seat arena in which the team plays. He also bought the Seattle Seahawks, a professional football team. Allen lived alone – and well – on Mercer Island, an enclave of old Seattle wealth and new millionaires. In 2004 Allen’s wealth was estimated at \$18 billion, including \$3.8 billion of Microsoft stock, enough to afford a 413-foot Octopus yacht, the world’s largest and, at \$200 million, the most expensive.

[Stewart Kampel (2nd ed.)]

ALLEN, WOODY (originally **Allen Stewart Konigsberg**; 1935–), U.S. comedian, filmmaker. Born in Brooklyn, New York, Allen started selling one-liners to gossip columns at the age of 15. He began his career writing jokes for television comedians, such as Garry Moore and Steve Allen. He then appeared as a stand-up comedian and in comedy sequences based on the theme of failure. Short, slight of build, and wearing heavy glasses, he developed what he called “formless farce,” exemplified by his film scripts for *What’s New, Pussycat?* and *What’s Up, Tiger Lily?* His play *Don’t Drink the Water* opened on Broadway in 1966. He played the lead in the film *Take the Money and Run* in 1969. Allen soon emerged as one of the

most notable figures in the film industry. From 1969, he directed and scripted an average of one film per year. His most successful was *Annie Hall* (1977), which won an Oscar for the best picture of the year; in addition, he took two other prizes for best director and best screenwriter. In 1978 he produced his first serious drama, *Interiors*. It has been compared in style and tone to the films of Swedish director Ingmar Bergman, whose work has influenced Allen greatly. In 1987 Allen won the best screenplay Oscar for *Hannah and Her Sisters*, as well as the American Comedy Award for Funniest Lead Actor. That year the American Comedy Awards also presented him with a Lifetime Achievement Award in Comedy.

Allen’s other films include *Bananas* (1971), *Play It Again, Sam* (1972), *Everything You Always Wanted to Know about Sex but Were Afraid to Ask* (1972), *Sleeper* (1973), *Love and Death* (1975), *Manhattan* (1979), *Stardust Memories* (1980), *Midsummer Night’s Sex Comedy* (1982), *Zelig* (1983), *Broadway Danny Rose* (1984), *The Purple Rose of Cairo* (1985), *Radio Days* (1987), *September* (1987), *Another Woman* (1988), *New York Stories* (1989), *Crimes and Misdemeanors* (1989), *Alice* (1990), *Shadows and Fog* (1992), *Husbands and Wives* (1992), *Manhattan Murder Mystery* (1993), *Bullets over Broadway* (1994), *Mighty Aphrodite* (1995), *Everyone Says I Love You* (1996), *Deconstructing Harry* (1997), *Celebrity* (1998), *Sweet and Lowdown* (1999), *Small Time Crooks* (2000), *Curse of the Jade Scorpion* (2001), *Hollywood Ending* (2002), *Anything Else* (2002), and *Melinda and Melinda* (2004).

In 1990, along with such fellow filmmakers as Stanley Kubrick and Martin Scorsese, Allen helped establish the Film Foundation, a group dedicated to preserving the heritage of American films.

In 1992 Allen caused a stir when it was discovered that he had been having a relationship with Soon-Yi Previn, the adopted daughter of his long-time girlfriend, actress Mia Farrow. In 1997 Allen, who was 62, and Soon-Yi, 27, were married in Venice.

Allen caused another stir in 1998, this time among the Jewish community, when he wrote an op-ed article in the *New York Times* (January 28) saying that he was appalled by Israel’s treatment of the rioting Palestinians (during the first Intifada). He expressed incredulity at what he understood from the media to be “state-sanctioned brutality and even torture.” Stressed Allen, “I can’t believe it, and I don’t know exactly what is to be done, but I’m sure pulling out my movies is again not the answer ... to bring this wrongheaded approach to a halt.”

As the perennial onscreen personification of angst and neurosis, Allen projects a love-hate relationship with himself and with his fellow Jews. Taking more of an amiable swipe than a nasty jibe, he peoples his films and peppers his dialogues with more Jewish wisecracks and wisecracks than most American directors or screenwriters ever have. A New Yorker to the core, Allen bases most of his films in his beloved hometown.

His dour, deadpan humor is just as funny off-screen as it is in his films. He is quoted as saying, “Most of the time I

don't have much fun. The rest of the time I don't have any fun at all." And "If my film makes one more person miserable, I'll feel I've done my job."

Capturing that humor in print, Allen has written a number of books and plays as well. They include his short story collections *Getting Even* (1971) and *Without Feathers* (1975); his essays *Side Effects* (1980); and in addition to his theatrical fare *Don't Drink the Water*, such plays as *Death Knocks* (1971), *Death: A Comedy in One Act* (1975), *God: A Comedy in One Act* (1975), *The Floating Light Bulb* (1982), and *Three One-Act Plays: Riverside Drive, Old Saybrook, and Central Park West*. He also published *Woody Allen on Woody Allen: In Conversation with Stig Björkman* (1995).

Another of Allen's creative talents, his clarinet playing, is highlighted in the 1997 documentary film *Wild Man Blues*, directed by Barbara Koppel. The film follows Allen and his New Orleans jazz band on their European tour. A serious jazz musician, Allen has been performing for more than 25 years at a downtown club in New York.

[Jonathan Licht and Ruth Beloff (2nd ed.)]

°ALLENBY, EDMUND HENRY HYNMAN, VISCOUNT (1861–1936), British soldier. Allenby commanded the Egyptian Expeditionary Forces which, in 1917–18, defeated the Turks in Palestine. In June 1917 he was sent to Cairo to succeed Sir Archibald Murray as commander of the British forces in Egypt and Palestine. British troops were then held up at Gaza after two unsuccessful battles. Deceiving the enemy into thinking he would launch a third frontal attack, he took Beersheba instead (October 31), thus forcing the Turks to withdraw from Gaza, and leading to the capture of Jaffa and of Jerusalem (December 9, 1917). By the autumn of 1918, troops transferred from Mesopotamia and India to Palestine were ready for forays across the Jordan, in which the *Jewish Legion (38th and 39th Battalions of the Royal Fusiliers) took part. Allenby again deceived the Turks into thinking that he would attack once more with his right wing, but, having secretly transferred the bulk of his forces (some 35,000 men) to the orange groves north of Jaffa, he broke through on the night of September 18–19 and reached Nazareth via the Megiddo Pass before the Turks realized what was happening. Their escape routes blocked, tens of thousands of Turkish troops were taken prisoner in a decisive victory. Pressing on to Damascus and Aleppo, Allenby forced Turkey out of the war on October 31. For his achievements he was named Viscount Allenby of Megiddo and Felixstowe, and received a parliamentary grant of £50,000. Of massive build and forceful personality (known to his troops as "The Bull"), Allenby later became British high commissioner in Egypt (1919–1925). In 1918 he was present at

the laying of the foundation stone of the Hebrew University on Mount Scopus. Though as a commander of the British Expeditionary Forces he was noncommittal toward Zionist aspirations, doubting the wisdom of British policy concerning a Jewish National Home, he later expressed an understanding of Zionism in a speech delivered at the inaugural banquet of the Hebrew University in 1925. One of the main streets in Tel Aviv is named in his honor.

[Edwin Samuel, Second Viscount Samuel]

ALLGEMEINE ZEITUNG DES JUDENTUMS (AZJ, "General Journal of Judaism"), one of the first modern and certainly the most important of German Jewish periodicals of the 19th century. The AZJ was published in Leipzig and later in Berlin between 1837 and 1922. In 1860, the journal had a circulation of about 1,500 copies. It was read not only in Germany, Austria, and Holland, but also in Eastern Europe. Its success enabled it to be independent of subsidies from public bodies as well as to publish monographs by scholars such as I.M. Jost, S.D. Luzzatto, L. Zunz, A. Geiger, A. Jellinek, and Franz Delitzsch. The founder, Ludwig *Philippson, edited the paper from 1837 to 1889. During the first two years the AZJ was published thrice weekly, in 1839 twice weekly, then weekly, and finally only once every two weeks.

The AZJ advocated moderate religious reform and closer relations with non-Jews. It prompted the convention of the Rabbinical Conferences of 1844–46, the Reform Synod at Leipzig in 1869, and the establishment of the *Lehranstalt fuer die Wissenschaft des Judentums* in Berlin. However, its columns were open to varying views. After the adherents of other ideological trends in Central European Jewry established their own periodicals from the middle of the 19th century, the AZJ ceased to reflect the moderate view. A most important contribution to Jewish life in Central Europe was made through the journal's efforts to foster and spread "Jewish" belle-lettres. While ignoring the more realistic genre of "village and ghetto tales" (e.g., by Berthold *Auerbach), Philippson focused on historic and heroic texts to stress the "ideal" aspects of Jewish life. The journal was instrumental in the establishment and support of the *Institut zur Foerderung der Israelitischen Literatur* in the late 1850s. In 1866, Philippson's *Juedisches Familienblatt* with its literary content was integrated into the feuilleton of the AZJ.

Following Gabriel Riesser's paper *Der Jude* (1832–35), the AZJ understood itself as the main organ of the Jewish eman-

icipation movement in the 19th century. Despite the political reaction after the 1848 revolution, it continued the battle. After the foundation of the German Reich, when full legal rights were achieved, the fight against antisemitism became the main focus of the AZJ. With the rise of Zionism, the journal declined in importance. Under the editorship of Gustav *Karpeles (1890–1909), its interests shifted towards the Jews of Eastern Europe and their situation. When Ludwig *Geiger took over (1910–1919), the journal assumed an anti-Zionist and anti-Orthodox position. Albert Katz (1858–1923), initially in charge of the supplement for communal affairs, became editor in 1919. In 1922, the AZJ finally merged with the *C.V.-Zeitung.

The AZJ is available at <http://www.compactmemory.de>. **ADD. BIBLIOGRAPHY:** *C.V.-Zeitung* 16, No. 18 (May 6, 1937); J. [Ezriel Carlebach and Robert Weltsch / Marcus Pyka and Johannes Valentin Schwarz (2nd ed.)]

ALLIANCE ISRAELITE UNIVERSELLE (Heb. אִלְיָאן אִשְׂרָאֵל כָּל הַיְּהוּדִים כִּי־הֵם “All Israel are comrades”), first modern international Jewish organization, founded in 1860, centered in Paris. The foundation of the Alliance expressed the renewal of Jewish cohesiveness after a short period of weakening in the second half of the 18th and up to the forties of the 19th century. Its inception was stimulated by ideological trends and political events in the national and international spheres in the second half of the 19th century.

Origins and Structure

From the outset the Alliance labored under a built-in tension; it was conceived to be a world organization of “fortunate” Jews, who had achieved emancipation and assimilation in their own countries, to help their fellow-Jews, wherever they were suffering for or discriminated against because of their religion.

The *Damascus Affair in 1840 renewed the urge toward Jewish solidarity and cooperation. Opinions were subsequently voiced, especially in Germany and France, that a regular body should be established to defend Jews everywhere, whenever discriminated against on religious grounds. The idea was discussed by various authors (Z. *Frankel; J. *Carvallo). The 1848 European revolutionary climate, however, worked against Jewish cohesion. On the other hand, the political constellation in Europe of the 1850–60s, and the hegemony of France under Napoleon III, was propitious for the establishment of a Jewish organization under French leadership for international Jewish work.

The *Mortara case in 1858 accentuated the urge for world-Jewish self-help, while the French hegemony in Europe pointed

to French Jews as the natural leaders. Inter-European tensions in the Catholic Church also emphasized the international character of religious problems, and the need for international solutions. The same year, Isidor *Cahen declared in his *Archives Israélites* that the Jews should mainly rely on themselves for their own defense, and suggested the establishment of an intercommunal organization to be named “Alliance Israélite Universelle” to defend the interests of Jews throughout the world. In February 1860 Simon Bloch, the French writer and later secretary of the Alliance, repeated this proposal. The Alliance was launched in May 1860, the founder-members – J. Carvallo; I. Cahen; N. *Leven, the secretary of Adolphe *Crémieux; A. *Astruc, and the poet, E. Manuel – meeting in the house of Charles *Netter. In June 1860 they published their manifesto which stressed the need for solidarity on Jewish matters, and stated that the Alliance would “serve as a most important stimulus to Jewish regeneration.”

The aims of the Alliance, as formulated by Carvallo and Netter were three: “to work everywhere for the emancipation and moral progress of the Jews; to offer effective assistance to Jews suffering from antisemitism; and to encourage all publications calculated to promote this aim.”

The statutes of the Alliance stipulated a typically French centralism. It was to be administered by a central committee of 30 members, located in Paris, elected by the general assembly of all members of the organization. Two-thirds of the central committee had to be Paris residents. Seven formed a quorum. The central committee had to report annually to the general assembly. Regional and local committees everywhere had to transfer their funds to the central committee, or to use part of them locally, with permission of the central committee. All Alliance presidents have been French Jews with the exception of the German S.H. Goldschmidt (president 1881–98). Adolphe Crémieux (president 1863–80) did much for the development of the Alliance. Other presidents have included Solomon *Munk, Narcisse Leven, Sylvain *Lévi, and René *Cassin.

Aims and Activity

Its aims, as expressed in its statutes, have been implemented under changing historical conditions. These, ever since its establishment, have influenced the scale and direction of its activities, conducted mainly in the diplomatic, social, and educational spheres.

Diplomatic Activity

The Alliance soon became the address to which persecuted Jewish communities turned to for help throughout the world. From the 1880s its main diplomatic activities were conducted on behalf of Near-Eastern Jewish communities. Political intervention was secured by various means and the Alliance may be considered the pioneer of Jewish diplomatic methods in modern times. During and after the 1860s the Alliance made repeated appeals to obtain improvement of the legal status of the Jews of Serbia and Romania basing its case on paragraph 46 of the 1858 Paris Convention, which declared the principle

of equal rights for the Jews. The Alliance interceded on behalf of the Jews of Belgium and of Russia, and for civil rights of the Jews of Switzerland. After Adolphe Crémieux became president, the French Foreign Office and French authorities in the colonies and protectorates frequently cooperated with the Alliance.

The peak period of Alliance diplomatic activity was during the Congress of Berlin (1878; see *Berlin, Congress of), when, in conjunction with the Joint Foreign Committee of the Anglo-Jewish Association, and the Board of Deputies it took steps to protect the interests of the Jews in the Balkan countries, obtaining the inclusion of a paragraph in the treaties with these states stipulating civil rights for all Jews. The Alliance interceded with the sultan of Morocco during the Madrid Congress of 1880, and obtained promises for the improvement of the status of Moroccan Jews. At the peace conference of Versailles, after World War I, the Alliance was active on behalf of the Jews of Poland, Hungary, Romania, and other countries affected by the peace treaties. It acted independently of the *Comité des Délégations Juives, since the Alliance opposed both the concepts of national *minority rights and of *Zionism; the Alliance then cooperated with those Anglo-Jewish organizations holding similar views.

ASSISTANCE TO EMIGRANTS. The Alliance began to provide assistance to Jews who wished to leave countries where they suffered from disabilities in 1869, mainly on behalf of Jews from Russia and Romania. It contacted both institutions and individuals in the U.S. to ascertain whether Jewish emigration there was desirable, the numbers that could be absorbed, and the most suitable qualifications. The Jewish migration was regulated by the committee for Jewish refugees in Koenigsberg, established and operated in collaboration with other Jewish organizations. The Koenigsberg committee also cared for the placement of starving Jewish orphans with German Jewish families for possible adoption. With the commencement of mass emigration from Russia after the pogroms of 1881, the Alliance again shared relief activities with other Jewish organizations.

When the first wave of 4,000 refugees arrived in Brody, Galicia, that year, Charles Netter went there on behalf of the Alliance. He failed, however, to cope with the unprecedented stream of emigrants. Subsequently the Alliance participated in several conferences of Jewish organizations and at that held in 1882, was charged to find opportunities for Jewish immigration outside the United States. It participated in two such conferences after 1891, although by then it had decided that it would not support the refugees in order to discourage further emigration. In matters of migration, the Alliance also cooperated with the *Jewish Colonization Association (ICA).

EDUCATION. In the 1890s the Alliance began to concentrate its efforts (in conjunction with ICA) on aiding Jewish education, especially in the Balkans (until after World War I) and the Middle Eastern countries. The educational activity of the Alliance was concerted with its diplomatic efforts, since it

aimed at the betterment of the social and legal status of the Jews through their "cultural and moral elevation." It was also an expression of the French patriotism of the Alliance and its pride in French language and culture which it intended to disseminate among the Jews. The work encountered difficulties since certain communities viewed the propagation of French culture in the schools established by the Alliance as a danger to the traditional framework of Jewish life. The French character of Alliance education was also to prove its undoing as it became inconsistent with the new nationalist spirit in these countries following World War I.

The important network of schools established by the Alliance made rapid progress with the help of large donations by Baron Maurice de Hirsch "to improve the position of the Jews in the Turkish Empire by instruction and education." These amounted to one million gold francs in 1874 and ten million gold francs in 1889. In Greece ten schools were opened at intervals, but progress there was arrested in the period between the two world wars; only four remained open by 1939 and there were none by the 1960s. In Bulgaria, the Alliance established ten schools between 1870 and 1885; these gradually disappeared soon after World War I. A similar process took place in Turkey where in 1912, the Alliance possessed 71 boys' schools and 44 girls' schools, of which 52 were in European Turkey (including the Balkans) and 63 in Asian Turkey (including Iraq, etc.). From 1932 the Alliance gradually handed over its schools to the local communities. The few schools of the Alliance in Serbia and Romania similarly closed. The Alliance increasingly concentrated its educational activities in North Africa and the Near East, including Iran. In Morocco, the schools in Tetuan (founded 1862) and Tangiers (1869) were followed by schools in five major cities (1873-1902). In 1912 almost 5,500 pupils attended 14 schools. At that time, the French administration began to take an interest in these activities and an agreement was concluded between the local government and the Alliance in 1928, whereby Alliance schools were placed under the strict control of the Public Education Department, and were also assured of effective material support. The network of the Alliance henceforth became an integral part of the social and educational activities conducted in the protectorate. The Alliance social relief activities combined with the educational movement to improve the living conditions of the pupils from the mellah. In 1939, 45 schools in Morocco had 15,761 pupils. The support of the local authorities enabled the Alliance to continue its work even during World War II. It received a new impetus in 1945. From 14,000 pupils in 1945, the total rose to 28,000 in 1952, the increase in attendance being mainly in the large urban centers of Marrakesh, Fez, Rabat, and Casablanca.

The Ecole Normale Hébraïque of Casablanca fulfilled the local need for Jewish teachers. The Alliance also increased its activities in the small communities, and a school was established for every Jewish community numbering 300 to 400 persons. In Casablanca, the Alliance also established a school for sufferers from trachoma, as well as an institute for the deaf

and dumb, in collaboration with *ORT and the *American Jewish Joint Distribution Committee. In Tunisia, the Alliance opened its first school in 1878; by 1960, there were 2,150 pupils in elementary schools, 700 in secondary schools, and 76 in commercial classes run by the Alliance. An attempt to open a school in Beirut in 1869 was unsuccessful, but later several schools were established.

Alliance schools in Beirut were destroyed by explosives in 1950, but were immediately rebuilt. In 1960 the schools of Saida and Beirut had 1,295 pupils. Several Alliance schools functioned in Syria, mainly in Damascus and Aleppo. In Iraq, where the Alliance opened a school in Baghdad in 1865, there were 6,000 pupils in its ten schools in 1947. In Iran, the Alliance inaugurated its first school in Teheran in 1898, not without encountering difficulties from the local Jewish community. In 1960, the school network of the Alliance in Iran had 15 schools with a total of 6,200 pupils, the greatest concentration being in Teheran; in the provinces all Jewish children attended Alliance schools. In Erez Israel, the Alliance agricultural school at *Mikveh Israel was opened by Charles Netter in 1870; in 1882, an elementary school was opened in Jerusalem. Other schools followed in the important towns. In Egypt the local communities carried out the educational work on behalf of the Alliance by gradually taking upon themselves the responsibility for the local schools.

World War II marks a watershed in Alliance activities. All branches of its activities were cut off from the head office which in turn had to take refuge from Paris in the non-occupied zone. From November 1942 the isolation was complete (see *France). The Free French government interested itself in the fate of the Alliance, and General de Gaulle entrusted responsibility for it to René Cassin. After the liberation, the Alliance – with assistance from American Jewry – resumed its normal activities again in Paris, and immediately had to deal with the upheavals following the war. Its central problem involved the struggle for a Jewish state, in Israel and the upsurge of nationalism in the Arab countries, their fight against colonialism and their refusal to recognize the national existence of the Jews in Israel. The Alliance found itself in a delicate position in regard to the many schools which it maintained in the Middle East, particularly in Syria and Iraq. Redefining its policy and its *raison d'être*, the Alliance published a programmatic declaration in 1945, in which it reaffirmed its universal character, its attachment to educational work, and its determination to “demand for the Jews who so desired the right of entry into Palestine, under the auspices of the United Nations and on the responsibility of the Jewish Agency in Palestine.”

The consequences of the Israel-Arab war of 1947–48 made themselves felt immediately by persecution of the Jews living in Arab countries and the mass exodus of Jews from these lands. After the departure of thousands of Jews from Iraq, all the schools of the Alliance there closed down. The same happened almost without exception in Syria and Egypt. In Morocco and Tunisia also, the success of the nationalist revolt, and the gradual achievement of independence from

France, resulted in an exodus from North Africa to France as well as to Israel in the 1960s and upset the foundations of the educational project of the Alliance. In Israel, the Alliance had to relinquish the French orientation of its schools; its elementary schools were closed down or taken over by the Israel education system. These, however, combined to give preference to the teaching of French as the first foreign language. The Alliance concentrated on development of secondary education, opening schools in Jerusalem, Tel Aviv, and Haifa.

In Morocco, the number of pupils in the schools of the Alliance fell from 30,123 in 1959 to 13,527 in 1963. In 1960, the Moroccan government decided to integrate part of the Alliance schools into its own school system. The Alliance retained its remaining schools under the name of Ittihad-Maroc, but they steadily lost their character. The same debilitation process, due to the same causes, could be observed in Tunisia and in Iran.

Educational network of the Alliance Israélite Universelle in 1968.

Country	Number of Schools	Numbers of Pupils
Morocco (Ittihad)	31	8,054
Iran (Ettehad)	13	5,158
Israel	13	4,828
Lebanon	3	1,109
Tunisia	3	1,366
Syria	1	431
Total	64	20,946

In addition to schools, the Alliance had established in Paris, in 1867, the Ecole Normale Israélite Orientale to supply the necessary directors and teachers for its schools and to give their teaching staff a certain homogeneity. The Ecole numbered 120 pupils in 1968. The Alliance had also opened (1897) a rabbinical school in Istanbul for the Oriental communities, which functioned for about ten years. A valuable library on Jewish subjects was founded at the Alliance offices in Paris, at the instance of its secretary-general, the historian Isidore *Loeb; it also issued many publications (see Bibliography). The Alliance organized expeditions for the purpose of helping *Beta Israel in 1868, and the Jews in *Yemen in 1908.

In the 1960s, the Alliance intensified its educational activities in France, where many former pupils from North Africa now lived. The Ecole Normale Israélite Orientale ceased to be exclusively a professional school, and admitted students who did not necessarily intend to become teachers. Secondary schools were opened in Nice and in Pavillons-sous-Bois near Paris. The diplomatic activity of the Alliance were mainly carried on through the Consultative Council of Jewish Organizations (New York) founded in 1946.

In the course of its long career, the Alliance has not always been immune from controversy. In the eyes of antisemites, it became the embodiment of the Jewish international “octopus” strangling civilization. The nefarious myth of the *Elders of Zion crystallized around a falsified image of the Alliance. It was criticized for being too French and not suf-

ficiently universal. Much criticism was directed after World War I against Sylvain Lévi who took a sharp anti-Zionist stand on behalf of the Alliance at the Versailles peace conference. In 1945, however, the Alliance took up a pro-Zionist stand.

In September 1989 the AIU inaugurated a new library which became the largest Jewish library in Europe, possessing over 120,000 items. Available at the library are the Alliance archives which have now been catalogued and offer a wealth of information on Jewish communities in the Mediterranean Basin as well as on French Jewry from the end of the 19th century through the first half of the 20th. The library also now houses specialized archives on Jewish medicine and Jewish education. It regularly organizes special exhibitions such as that on the Dreyfus Affair in 1995.

Publications of the Alliance Israelite Universelle have included: *Paix et Droit*, 1–20 (1921–40); *Cahiers* (1945–); *Mahberet* (1952–); *The Alliance Israélite Universelle 1860–1895* (1895); *La question juive devant la conférence de la paix...* (1919); N. Leven, *Cinquante ans d'histoire... 1860–1910*, 2 vols. (1919–22). For other titles see Hebrew Union College Library, *Dictionary Catalog of the Kalu Library*, 1 (1964), 408–11.

Les Nouveaux Cahiers (1965–) is a quarterly publication offering a forum for topics in Jewish Studies as well as for current issues of note among French Jewry. The journal regularly devotes space to interfaith relations, a subject of great concern to AIU. Day-long seminars are held once or twice a year under the auspices of the journal and are devoted to a historical, political, philosophical, or literary topic. A special annual appears with the papers of these seminars.

The AIU also has a College of Jewish Studies focusing its activities, under the direction of Shmuel Trigano, on in-depth study of Jewish thought in its various expressions. In addition to its regular courses, it organizes an annual symposium on a theme concerning the basic issues of Jewish existence and attracts French scholars as well as others from elsewhere.

In addition to its own widespread network of schools, the AIU has a growing number of affiliated institutions in France, Belgium, Spain, Canada, and Israel.

The Didactic Creativity department at the Paris headquarters places its services at the disposal of teachers interested in producing school materials. One project supported by AIU was a Hebrew–French dictionary for young children and another was a large colorful fresco on the principal stages of Jewish history.

To make the most important texts in Jewish tradition available to the largest possible reading audience, AIU sponsors the works in the “Les Dix Paroles” collection of the Verdier publishing house.

In Israel, the AIU took an active role in receiving new immigrants and helping in their absorption, particularly those from the areas of the former U.S.S.R. and from Ethiopia, and also expended great effort in facilitating contacts between young Jews and Arabs towards promoting mutual understanding and tolerance.

Prof. Adolphe *Steg became president of AIU in 1985, succeeding Jules Braunschvig, honorary president who died in 1994.

[Simon R. Schwarzfuchs]

Women Teachers and Students

By 1872, women were also included in the Alliance teaching force. Since few French Jews were willing to serve as teachers in the villages and towns of North Africa and the Middle East, the Alliance sent the brightest students from its schools to be trained in Paris. While the Ecole Normale Israélite prepared all male Alliance teachers, young girls arriving in Paris were assigned either to the École Bischoffsheim, a vocational and normal school, or to the middle-class boarding schools of Madame Weill-Kahn and Madame Isaac. The Alliance opened its own normal school for girls in 1922.

The female teachers of the Alliance were a diverse group. Students in one class at Mme Isaac's, for example, came from Constantinople, Adrianople, the Dardanelles, Tangier, Monastir, Alsace, Aleppo, Damascus, Aden, Beirut, and Salonika. They also differed in background, language, and piety as well as in temperament and intellect. Their teaching experiences were equally diverse, for the positions they were assigned and the cities to which they were sent (almost never to their town of origin) rarely had much in common. Women Alliance teachers were permitted to marry; most chose to do so, generally marrying their male counterparts, and large families were the norm.

In addition to founding, teaching in, and directing Alliance schools, women teachers also established workshops, organized cottage industries, and oversaw the employment of their graduates. They negotiated, not always easily or successfully, for the support of local community leaders, and provided the Alliance with ethnographic information which became the basis of its decisions and policy making. They had the benefit of a network of support (sisters, cousins, friends, and husbands) which, in contrast to their female counterparts in France (*institutrices*), often freed them to act independently.

The Alliance's goals of westernization and modernization were demonstrated in its women teachers, who were models of autonomy and literacy. Their examples spoke not only to the Alliance's vision of forming female students into good mothers and intelligent companions for their future husbands, but also to the empowerment of young girls, intellectually, physically, professionally, and spiritually. Reframing the ideology of French Jewry to reflect more accurately the needs of Jewish girls, the women teachers of the Alliance, and their many thousands of students, played a central role in their own emancipation.

ALLIANZ, ISRAELITISCHE, ZU WIEN, Jewish society in Vienna, originally intended to operate as a branch of the *Alliance Israélite Universelle in Paris, with similar aims. Since the Austrian authorities opposed affiliation with the Alliance, the Vienna Allianz was established as an independent society in 1873. Its first president was Joseph von *Wertheimer. Initially, it concentrated on assisting Jews in *Romania and *Siberia. It aided Jewish victims of the Russo-Turkish War in 1877 and supported the Alliance in its efforts to obtain equal civil rights for the Jews in the Balkans. At the Congress of *Berlin in 1878 the Allianz took up the Balkan issue in cooperation with the special Jewish committee for liaison with the congress. With the outbreak of the pogroms in 1881–82, the Allianz participated in relief and migration activities. It organized and maintained a number of educational institutions in Galicia and Bukovina, later supported by the *Baron de Hirsch Fund. The Allianz combatted antisemitism, notably at the *Tisza-Eszlar (1883) and *Polna (1899) blood-libel trials. Relief and emigration projects were established in conjunction with the “Esra” Association of Berlin and the *Jewish Colonization Association (ICA) to benefit Romanian and Russian Jewry between 1897 and 1905. During World War I, the society chiefly aided Jewish war victims; after the war it helped Jewish refugees and emigrants in transit through Vienna. The Allianz was liquidated in 1938 after the *Anschluss*.

ALLON, GEDALYA (formerly **Rogoznizki**; 1901–1950), historian. Allon was born in Kobrin, Russia, and studied at the Slobodka yeshivah. In 1917 he returned to Kobrin, where he became active in the Zionist movement and established a religious Hebrew school, Hevrona. After a year’s study in Berlin in 1924 he immigrated to Palestine. He was in 1931 one of the first graduates of the Hebrew University and then taught Talmud and Jewish history there. Allon clarified many problems in the development of *halakhah* and the evolution of the social history of the Jews. He argued that the period following the destruction of the Second Temple should not be viewed as the beginning of the Diaspora, but as a continuation of the period of autonomous existence in Palestine, retaining the basic elements of national independence (the lack of which is characteristic of the Diaspora). Allon’s work, combining an

exhaustive acquaintance with source material and an acute critical sense, placed the history of Palestinian Jewry in the first centuries of the Common Era upon a new basis. His *Toledot ha-Yehudim be-Erez Yisrael bi-Tekufat ha-Mishnah ve-ha-Talmud* (“History of the Jews in Palestine in the Period of the Mishnah and the Talmud,” 2 vols., 1953–56) was published posthumously, as were *Mehkarim be-Toledot Yisrael bi-Yemei Bayit Sheni u-vi-Tekufat ha-Mishnah ve-ha-Talmud* (2 vols., 1957–58) and collected essays that had appeared in various scholarly journals.

[Shmuel Safrai]

ALLON (Paicovitch), YIGAL (1918–1980), Israeli statesman and military commander; member of the Third to Ninth Knessets. Allon was born in Mesha, which later changed its name to *Kefar Tavor, in the Lower Galilee. His father, Reuven Yosef Paicovitch, a member of Hovevei Zion in Grodno, Russia, had settled in Eretz Israel in 1882. Allon received his elementary schooling in his native village and graduated in 1937 from the Kadoorie Agricultural High School. In that year he became one of the founders of Kibbutz *Ginnosar, where he was to reside for the rest of his life.

As a boy Allon joined the *Haganah, and in 1936, at the age of 18, became a member of the newly created special units (*peluggot sadeh*) under Yizhak *Sadeh, rapidly rising to officer rank. In 1941 Allon was among the founders of the *Palmaḥ, and in this capacity he fought with the British forces in Syria and Lebanon in the years 1941–42. In 1943 he became the deputy commander of the Palmaḥ, and after Sadeh became acting chief of staff of the Haganah in 1945, he replaced him as its commander. In this capacity he was responsible for planning the Palmaḥ’s multifaceted training program, operations against Arab bands, and attacks on civilian and military installations of the British Administration during the last years of its presence in Palestine. He also played a major role in smuggling immigrants illegally into the country (*Aliyah Bet*), and establishing settlements in prohibited zones. During the *War of Independence Allon commanded in decisive battles for the liberation of the Upper Galilee and Safed in the north; Lydda, Ramleh, and the Jerusalem Corridor in the center of the country; and the Southern Coastal Plain and the Negev, including Beersheba and Eilat, in the south. He also commanded the forces that entered deep into Sinai, as far as El-Arish, but was ordered by David *Ben-Gurion, who was under American pressure, to withdraw. Ben-Gurion also blocked his plans to capture the West Bank from King Abdullah’s Arab Legion, even though Allon believed he could accomplish the mission within three weeks.

In 1950, following the dissolution of the Palmaḥ on Ben-Gurion’s orders, Allon left active military service, but in the eyes of many remained a war hero whose military career had

wrongfully been cut short. Allon then entered active politics, joining the leadership of the Kibbutz Hame'uhad kibbutz movement, and *Mapam within the framework of his own movement. However, he objected to Mapam's pro-Soviet leanings and supported the decision of his movement's four MKs in Mapam to break away from the combined parliamentary group in the summer of 1954. Allon then joined the leadership of the reinstated *Ahdut ha-Avodah-Po'alei Zion. In 1955 he was elected to the Third Knesset, and was to serve in all the Knessets until his death in February 1980. He resigned from the Fourth Knesset in October 1960 in order to pursue his studies at Oxford but was forced to cut short his stay in Great Britain because of early elections for the Fifth Knesset. Nevertheless, during his stay in Oxford, Allon met many of the leaders of the British Labour Party, several of whom became his personal friends.

From 1961 to 1968 Allon served as minister of labor, in which capacity he promoted the improvement of the state-run employment service and manpower training, initiated extensive road works, and introduced new legislation on labor relations, including laws regulating strikes and lockouts and the establishment of labor courts. During his term of office, social insurance was extended. During the crisis leading up to the 1967 *Six-Day War, when Prime Minister Levi *Eshkol was advised to appoint a minister of defense in order to soothe the public, Eshkol preferred Allon, but due to Allon's absence abroad in the critical days, and pressure from other quarters, it was Moshe *Dayan, Allon's long-time rival from the days of the Palmah, who was appointed. Eshkol compensated him by appointing him deputy prime minister and minister for immigrant absorption.

Allon had strongly supported the establishment of the Alignment between *Mapai and Ahdut ha-Avodah in 1965, and in 1968 supported the union of Mapai, Ahdut ha-Avodah, and *Rafi to form the *Israel Labor Party. Following the Six-Day War he developed a plan for a permanent settlement of the Palestinian problem, which came to be known as the "Allon Plan." The plan, which sought to maximize Israel's security while minimizing the number of Palestinians who would remain under Israeli rule, proposed that most of the West Bank and Gaza Strip be handed over to Jordan, which would turn into a Jordanian-Palestinian state. Israel would remain in united Jerusalem, the Jordan Valley (except for a corridor connecting the Kingdom of Jordan with the West Bank around Jericho), the first mountain ridge west of the Jordan River, *Gush Etzyon, and the Latrun area. The Allon Plan was never adopted by the Government, but until 1977 most of the Jewish settlements in the territories were established within its parameters. Following the elections to the Seventh Knesset, held in 1969 under Golda *Meir's leadership, Allon was appointed deputy prime minister and minister of education and culture, and he was given the same positions in the government that Meir formed after the election of the Eighth Knesset on December 31, 1973. After Meir's resignation, following the publication of the Interim Report of the Agranat Commission on

the outbreak of the *Yom Kippur War, Yitzhak *Rabin, who was elected by the Labor Party as its new chairman and its candidate for prime minister, appointed Allon deputy prime minister and minister of foreign affairs, in which post he replaced Abba *Eban, who was not included in the new government. As foreign minister Allon was a member of the negotiating team that held talks with U.S. Secretary of State Henry *Kissinger on the Disengagement Agreements with Egypt and Syria in 1974, and the Interim Agreement with Egypt in 1975. In 1974 he also tried to promote his "Jericho Plan," under which Israel would hand over Jericho and an area around it to King Hussein of Jordan, as a first step towards implementing the Allon Plan, but the results of the Rabat Arab Summit Conference foiled his plans.

Serving under Yitzhak Rabin, who had been his subordinate in the Palmah and five years his junior, was not easy for Allon, but the relations between the two remained friendly. Following the 1977 election upset that brought *Menaḥem Begin to power, he remained a member of the Knesset, and was appointed chairman of the World Labor Zionist Organization. Among the issues that Allon promoted in the Knesset was the Mediterranean-Dead Sea canal for the generation of electricity. In the vote on the Camp David Accords with Egypt of September 1978, Allon abstained for ideological reasons. Allon also supported the creation of a united kibbutz movement, in order to better confront the economic difficulties that the kibbutzim faced following the 1977 elections.

In the books he wrote between 1948 and 1967 Allon developed a defense doctrine, which included the concept of "anticipatory initiative." He wrote "The Making of the Israeli Army," in M. Howard, *Theory and Practice of War* (1965), 335–7, and his books include *Ma'arekhot Palmah* ("Palmah Campaigns," 1966), *Masakh shel Hol* ("Curtain of Sand," 1968), *Shield of David* (1970), and *My Father's House* (1976).

Even after his premature death, differences of opinion remained as to whether Yigal Allon had been deliberately denied his rightful place as leader of the Israel Labor Party, or whether he had lost something of his charisma and qualities of leadership after ending his military career. In the late 1970s British Labour Party leader Harold Wilson said of Allon that he would never assume the leadership of his party, since he was "incapable of going for the kill." Friends and foes alike, however, never denied his humanity and charm.

ALLONEI ABBA (Heb. אֲלוֹנֵי אֲבָבָה), moshav shittufi in northern Israel, in western Lower Galilee. Affiliated with Ha-Oved ha-Ziyyoni movement, Allonei Abba was founded on May 23, 1948, during the War of Independence. Many of the set-

tlers were survivors of the Holocaust from Czechoslovakia, Romania, Germany, and other countries. The economy was based mainly on farming: poultry, dairy cattle, field crops, and vineyards. In the mid-1990s the population was approximately 200, increasing to 283 in 2002. The name refers to the natural Tabor oaks in the vicinity (*allon*, “oak”) and also commemorates the *Haganah hero Abba Berdiczew who died during World War II after having been parachuted into Slovakia.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

ALLONEI YIZHAK (Heb. אֶלְוֵי יִזְחָק), youth village in central Israel. It was founded in 1948 within the confines of neighboring *Kefar Glickson, with which it continued to be closely linked. In 1949 it received its own land in the vicinity. Its establishment was aided by the *General Zionist and Progressive parties and by the *Hadassah Organization of America. Within the framework of *Youth Aliyah, Allonei Yizhak trained immigrant children, principally in agriculture, and held courses for American high school students under the auspices of its American-Israel Secondary School Program. Subsequently it became a boarding school housing 75% of the village's students and still absorbing immigrant youth with special ulpan courses to learn Hebrew. The village included various farm branches, where students worked one day a week. In the mid-1990s the population was approximately 300, dropping to 223 from 20 different countries in 2002. The name (“oaks of Yizhak”) refers to the oak forest formerly in the vicinity and to the Zionist leader Yizhak *Gruenbaum.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

ALLONIM (Heb. אֶלְוֵי נִים; “oaks”), kibbutz in northern Israel, on the Tivon hills of western Lower Galilee. Allonim was founded in 1938 as a “tower and stockade” settlement during the Arab riots. The original settlers were graduates of the first *Youth Aliyah group from Germany. In 1968 it had over 500 inhabitants, including immigrants from various countries and Israeli-born. In 2002 the population was 547. The kibbutz economy was based on intensive mixed farming (field crops, dairy cattle, sheep, poultry). It was also home to the Algat Company, specializing in aluminum finishing processes for the aircraft, military, and other high-technology industries.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

ALLOUCHE, FELIX NISSIM S'AIDOU (1901–?), Tunisian editor. Born in Sfax, Allouche was editor of the local newspaper *Dépêche Sfaxienne*, formed a Zionist club in 1919, and in 1929 became associated with Vladimir *Jabotinsky. In 1924 he founded the Jewish weekly, *Le Réveil Juif*, and in 1934 became editor of *Tunis Soir*, which took a militant Zionist line; he also helped to found the Zionist weekly, *La Vie Juive*. During World War II, he joined the Resistance and later served as

Tunis correspondent for newspapers in Europe and America. Attacked bitterly by the Tunisian national press, he emigrated to Israel in 1956.

ALLUF (Heb. אֶלְוִי), honorary title conferred on scholars of the Babylonian academies who had the privilege of sitting in the first row. The word is of biblical origin: the tribal chiefs of Edom were called *allufim* (Gen. 35:15 ff.). (1) In the Bible, this word has two principal meanings: (a) “friend, companion, intimate” (cf. Jer. 3:4; 13:21; Micah 7:5; Ps. 55:14; Prov. 2:17; 16:28; 17:9); (b) according to the current interpretation, “chieftain,” but more probably (and this also applies to the Ugaritic *alp*) “clan” (which is also a meaning of *alluf* in Gen. 36:15–43; Ex. 15:15; 1 Chron. 1:51–54). (2) In the geonic period *alluf* was synonymous with the title of the *resh *kallah* which was already current in the Babylonian academies in the talmudic period. Originally the title was conferred on the seven heads of the *Kallah who served in Sura and Pumbedita, but from the ninth century onward it was also bestowed upon prominent scholars and personalities residing in other countries. (3) Based upon Psalms 55:14 the term *allufi u-meyudda'i* was used in classical-style Hebrew as an address in letters to a friend or teacher. Similarly, prominent members of the Jewish community councils were often referred to among Ashkenazim as *allufim*. (4) Rank in the Defense Forces of the State of Israel, equivalent to major general (see *Israel, Defense Forces).

AL-MADARI (Al-Mudari, Al-Mundari, El-Modari), JUDAH HA-KOHEN BEN ELEAZAR (Eliezer?) HE-ḤASID (13th–14th century), talmudic scholar of Aleppo. Al-Madari compiled a commentary to the code of Isaac *Alfasi, part of which is no longer extant. Though he was commenting on Alfasi, he based his book on Rashi's commentary and also cited Maimonides and other later scholars. It is probable that the novellae to the Talmud quoted in his name by various authorities are in reality quotations from his commentary on Alfasi and are not from separate compilations. His commentaries on tractates *Yevamot*, *Ketubbot*, *Gittin*, *Kiddushin*, *Sanhedrin*, and *Avodah Zarah* were printed in the 1962 edition of the Talmud published in Jerusalem (Pardess, El Hamekoroeth). His commentaries to *Pesahim* and *Megillah* were seen by H.J.D. Azulai.

[Abraham Hirsch Rabinowitz]

ALMAGIÀ, ROBERTO (1884–1962), Italian geographer and historian of cartography. He was born in Florence and in 1911 became professor at the University of Padua, which he left in 1915 to become professor in Rome. His early interests lay in

geology and oceanography, but he moved to the history of geographical science and finally to the history of cartography. His first published work was *Studi geografici sopra le frane in Italia* (2 vols., 1907 and 1910). His *Cristoforo Colombo* appeared in 1918, and in 1937, *Gli italiani primi esploratori dell'America*, in which he dealt in detail with the Italian contribution to the discovery of America. From 1920 he was co-editor of the *Rivista Geografica Italiana*, published by the Società di Studi Geografici, of which he became president in 1955. In 1922 he published *L' "Italia" di G.A. Magini e la cartografia dell'Italia nei sec. XVI e XVII*. He edited in 1929 *Monumenta Italiae Cartographica*, a volume of reproductions of early maps of Italy. During World War II he was granted refuge in the Vatican, where he prepared *Monumenta cartografica Vaticana* (4 vols., 1944–55). *Il mondo attuale* (3 vols., 1953–56) and *L'Italia* (2 vols., 1959) are his outstanding works on general and Italian geography. Almagià achieved an international reputation and was the recipient of many honors. His interest in a Jewish homeland is shown in his *La Questione della Palestina* (1918), *Una Escursione in Palestina* (1925), and *Palestina* (1930).

BIBLIOGRAPHY: *Geographical Journal*, 128 (1962), 367–8.

ALMAGOR (Heb. אֶלְמָגוֹר; "No Fear"), moshav on the Corazim Plateau N. of Lake Kinneret. Almagor was founded in 1961 as a *Nahal outpost on the Israeli-Syrian border (until 1967). A number of its soldier-settlers fell in Syrian ambushes in the vicinity and a monument was erected here in their memory. Its economy was based on out-of-season crops, vineyards, sheep, and poultry as well as mango and olive orchards. The moshav also operated a rest house, pub, and sailing facilities on the lake. In the mid-1990s the population was approximately 250, dropping to 207 in 2002.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

ALMAGOR, GILA (1939–), first lady of Israeli stage and screen; also the author of several children's books. Born in Petah Tikvah, Almagor wrote about her troubled childhood as the daughter of a widowed, mentally ill Holocaust survivor in her book, *The Summer of Aviya*, which was filmed in 1988. It starred Almagor herself in a role based on her mother. The prize-winning film was followed by another book, *Under the Domim Tree*, and another film adaptation starring Almagor. These two films are highlights in a career that began when she was 17 and appeared in the Habimah National Theater's production of *The Skin of Our Teeth*. Her stage credits include *Medea*, *The Crucible*, and *Three Sisters*. She has appeared in over 35 films, including *Sallah Shabbati* (1964), *The House on Chelouche Street* (1973), *Operation Thunderbolt* (1977), *Life According to Agfa* (1992), and *The Gospel According to God* (2004). She was awarded the Israel Prize in 2004. Almagor is married to Ya'akov Agmon, the former director of Habimah.

[Hannah Brown (2nd ed.)]

ALMAGRO, town in Castile, Spain, administrative center of the Order of *Calatrava. Jews probably settled there soon after the Christian reconquest (14th century). It was one of only four communities in the area of Ciudad Real that existed in the 14th and 15th centuries. The community developed during the 15th century, when cities in the crown domains offered little security to their Jewish population, but from the amount of tax paid it was a small one. During the 1460s it was able to construct a synagogue. There was also a sizeable *Converso group, and many Conversos from Ciudad Real took refuge there when they were attacked in 1449, 1469, and 1474. A number of the New Christians in Almagro were sentenced by the Inquisition in Ciudad Real and Toledo. The Jewish community was assessed to pay 800 *maravedis* in 1474 and 4,365 *maravedis* in 1485 to finance the war against Granada, and survived until the expulsion of the Jews from Spain in 1492. There is no information on the location of the Jewish quarter.

[Haim Beinart]

ALMAH (Heb. אֶלְמָה), Israeli moshav on a basaltic plateau N. of Safed. Alma is affiliated with Ha-Po'el ha-Mizrachi. It was founded in 1949. In 1953 the original settlers, who came from Libya, were joined by the proselytes of *San Nicandro, Italy, who later moved to other places in Israel. In 1968 Alma's inhabitants were from Libya and Tunisia. The economy was based on hill culture (vineyards, deciduous fruit, vegetables) and beef cattle. In 2002 the population was 732. The name Alma is historical, mentioned by *Benjamin of Tudela in the 12th century.

[Efraim Orni]

ALMAN, SAMUEL (1877–1947), composer of synagogue and secular music. Alman was born in Sobolevka, Podolia. From 1895 until 1903 he studied at the Odessa and Kishinev conservatories. While at Kishinev, he was strongly influenced by the cantor *Razumni. After the *Kishinev pogrom (1903) Alman went to London where he attended the Royal College of Music, and wrote a biblical opera *King Ahaz* (performed in 1912). He served as choirmaster of various London synagogues (notably at Humpstead) and Jewish choral groups. Alman's style was deeply rooted in the Southern Russian cantorial tradition, and he owed much to the choral technique of the *meshorerim* ("choristers"), as heard in the compositions of N. Spivak. He solved the problem of modern harmonization by following (especially in his instrumental works) the impressionistic style of Debussy. Alman succeeded in preserving the melodic features and deep sentiments of the Eastern European Ashkenazi chant, often creating a mystical atmosphere. Among his published works are *Shirei Beit ha-Knesset*, 2 vols. (1925, 1938), for cantor and choir; *Psalm 15* (1915) for chorus and organ, and *Psalm 133* (1934) for chorus and piano; "Mi addir" and "Sheva berakhot" (1930) for cantor and organ; *Ethics of the Fathers*

(1928); many arrangements of Yiddish folk songs; and compositions for strings including the quartet suite *Ebraica* (1932). In addition, he edited *Shirei Rozummi* (1930) and the supplement to F.L. Cohen's *Voice of Prayer and Praise* (1933).

[Hanoach Avenary]

ALMANZI (Almanzi), Italian family, originally deriving from Almansa, near Murcia, Spain. About 1665 Abraham Almansi established himself in Scandiano in the duchy of Modena. The family continued to be associated with this little place until the 20th century. The synagogue there, long maintained in the house of Isaac Almansi, was rebuilt by his sons in 1740. Later the family became scattered throughout Italy. BARUCH ḤAYYIM of Padua (d. 1837) was a noted bibliophile who purchased in 1812 a great part of the important library of Ḥayyim Joseph David *Azulai. His eldest son was Joseph *Almanzi (1801–1860) the poet and book collector. EMILIO (1869–1948) of Florence was a distinguished physicist and mathematician, noted for his contribution in the field of mechanics of the theory of elasticity. DANTE (d. 1948), a magistrate who was a Fascist party member and deputy chief of police (*prefetto*) was forced into retirement when the Italian racial laws came into operation in 1938. He was designated president of the Union of Italian Jewish Communities and made responsible for securing government authority in 1939 to found, together with Lelio Vittori Valobra, the vice president of the Italian Jewish Communities, *Delasem* (Delegazione Assistenza Ebrei). He presided over the Union of Italian Jewish Communities with exceptional dignity during the period of racial persecution.

[Cecil Roth / Manuela Consonni (2nd ed.)]

AL-MANŞÜR AL-YAHŪDĪ (early ninth century), court musician of the Umayyad caliph al-Ḥakam I, in Córdoba, Spain. A written record of this author's contribution to music is reported in the book *Nafḥ al-ṭīb* of the historian and biographer al-Maqqarī (1591–1632), who relied on other source material of the Andalusian historian ibn Ḥayyan (987–1076). Al-Maqqarī refers to al-Manşūr in the colorful story describing the arrival in Córdoba in 822 of a leading musician, Ziriyāb. The story re-

lates that al-Manşūr was sent by caliph al-Ḥakam to meet him in Kairouan and escort him to Córdoba. When the two musicians met, the news reached them of the sudden death of the caliph (822). Al-Manşūr then succeeded in persuading Ziriyāb to offer his services to the new caliph, 'Abd al-Rahmān II. Thus, al-Manşūr helped bring about the splendid era of Arab music in Spain inaugurated by Ziriyāb. It is assumed that al-Manşūr continued his musical activity together with Ziriyāb.

[Amnon Shiloah (2nd ed.)]

ALMANZI, JOSEPH (1801–1860), Italian Hebrew author and poet. He was born in Padua and received his instruction in Jewish studies mainly from R. Israel *Conegliano, who remained his teacher for 20 years. He also acquired a knowledge of Samaritan, Syriac, Arabic, Latin, Italian, French, and German. Almanzi never married and devoted his time (when not engaged in trade) to Hebrew literary works and the expansion of his library. This contained thousands of Hebrew books, among them rare and valuable prints and manuscripts, several coming from the collection of Ḥayyim Joseph David *Azulai. Almanzi's collection became widely known among Jewish scholars and many of them turned to him for their literary research; he responded willingly and thereby became friendly with the greatest scholars of his generation, such as S.D. Luzzatto, Zunz, Fuerst, and Steinschneider. Toward the end of his life he moved from Padua to Trieste. Most of his poems, which bear the signature "Yoel," are sonnets of moral-didactic content. He also wrote: *Me'il Kinah* (a lament on the death of his teacher, R. Israel Conegliano (Reggio, 1824)); *Toledot R. Moshe Ḥayyim Luzzatto* (first published in *Kerem Ḥemed* and several times thereafter as a preface to the books of R. Moses Ḥayyim *Luzzatto), a detailed and accurate biography of M. Ḥ. Luzzatto; *Higgayon be-Khinnor*, original and translated poems (Vienna, 1839); *Kinnim va-Hegeh va-Hi* on the death of Jacob Ḥay Vita Pardo, published in S.D. Luzzatto's work *Avnei Zikkaron* (Prague, 1841); and *Nezem Zahav* (97 sonnets, Padua, 1858; new edition, Tel Aviv, 1950). In addition Almanzi published poems in various periodicals; these included a translated fragment from Horace's "On the Art of Poetry" (in *Bikkurei ha-Ittim ha-Ḥadashim*, Vienna, 1845). After his death, his heirs published a catalogue of books of Jewish interest found in his library; the catalogue was edited by S.D. *Luzzatto and entitled *Yad Yosef* (Padua, 1864). It lists also Almanzi's published works. Almanzi's manuscripts were described by S.D. Luzzatto in Steinschneider's *Hebraeische Bibliographie*, 4–6 (1861–68). In 1865 the British Museum bought Almanzi's manuscript collection for a thousand pounds; the collection served as the foundation for the large Hebrew manuscript department of that institution.

[Gedalyah Elkoshi]

ALMERÍA, Spanish Mediterranean seaport. A Jewish community was formed in Almería at the end of the tenth century by refugees from the neighboring settlement of Pechina. The community became one of the most prosperous and important in Andalusia. The Jewish quarter was near the harbor. With the fall of the Caliphate many Jews of Córdoba moved to Almería. The Jews were engaged in maritime trade. Approximately 2000 Jews lived in Almería at the time. In the 11th century, the vizier of Almería, Ibn Abbas, published libelous tracts against *Samuel ha-Nagid, vizier to the king of Granada, and the Jews. His attitude led to war, in the course of which the king of Almería was killed and Ibn Abbas executed on Samuel's instructions. According to Abraham *Ibn Ezra's historical elegy (*Ahah Yarad*, line 4), no Jews in Almería survived the Almohade persecution of the mid-12th century, but the community revived subsequently. Later, the *Black Death resulted in much suffering. The treaty of surrender on the Christian Reconquest of Almería in 1489 afforded the Jews the same protection as the Moors. The conquerors found there some Conversos who had fled from Castile. After the edict of expulsion of the Jews from Spain in 1492 a number of exiles sailed from Almería for North Africa.

[Haim Beinart / Eliyahu Ashtor]

ALMOG, RUTH (1936–), Israeli writer. Almog was born in Petah Tikvah to an Orthodox family of German descent. "My parents emigrated from Germany in 1933. My mother insisted on it, she was a pessimist while my father was an idealist. As he could not find work as a physician, which was his profession, he decided to become a farmer, partly out of idealism. And so they bought beehives." Childhood memories, the atmosphere of the first Hebrew *moshavah, and the figure of the father are indeed recurring elements in Almog's prose. Almog studied literature and philosophy at the Hebrew University and taught in schools as well as at Tel Aviv University, making her home in Tel Aviv and from 1967 serving on the editorial staff of the literary supplement of the newspaper *Haaretz*.

Almog is considered one of the seminal women-writers in contemporary Hebrew literature. Relationships within the family, love, passion and betrayal, romantic dreams, and disillusionment are some of the major concerns in her prose. Following a collection of stories entitled *Hasdei ha-Laylah shel Margarita* (1969), she published *Be-Erez Gezerah* ("The Exile," 1971), the story of a young woman's journey to Germany in search of her family roots and her own identity. In her novel *Mavet ba-Geshem* (1982; "Death in the Rain," 1993), set against the Mediterranean landscapes of Israel and Greece, she depicts an intricate relationship between three men and two women. *Shorshei Avir* ("Roots of Light," 1987) is the story of Mira Gutman, who desparately tries to disentangle her roots in an attempt to free herself from the coils of her family's fate. Unlike

some of the other women-figures in Almog's stories, Mira, a modern Antigone, refuses to be passive and submissive. The death of her lover Jan during the Russian invasion of Czechoslovakia prompts her to fight for the ideal of freedom. The collection of stories *Nashim* ("Women," 1986) depicts women coping with loneliness, physical handicaps, and haunting memories: In "Rachel Stern meets Fellini in Rome," Almog juxtaposes the longing for life and the painful awareness of immanent death; In "Hanya Is No Longer Blue," she describes Hanya's physical deterioration and her last moments of grace. The collection entitled *Kol ha-Osher ha-Mufraz ha-Zeh* (2003) depicts, amongst other things, Holocaust survivors and immigrants who are trying to build a new life in Israel. This is also the theme of *Me'il Katon* (1993), the story of the boy Shaul-Paul who grows up amidst old and sickly immigrants from Europe and Oriental Jews. Almog's other works include the epistolary novel *Be-Ahavah, Natalia* (2005), various collections of stories, books for children, and two novels which she wrote together with Esther Ettinger (*Me'ahev Mushlam*, 1995, and *Estelina Ahuvati*, 2002). Almog was awarded the Brenner Prize (1989), the Agnon Prize (2001), and the Yad Vashem Prize for children's literature for "My Journey with Alex" (1999).

Almog's story "Shrinking" is included in *Six Israeli Novellas* (edited by G. Shaked, 1999); "Dora's Secret" appeared in *The Oxford Book of Hebrew Short Stories* (edited by G. Abramson, 1996); and "A Good Spot" is included in *New Women's Writing from Israel* (edited by R. Domb, 1996).

[Anat Feinberg (2nd ed.)]

ALMOG (Kopeliovitz), YEHUDA (1896–1972), leading figure of the Third *Aliyah. Almog, who was born near Vilna, joined Joseph *Trumpeldor in organizing *He-Ḥalutz. In 1919 he settled in Palestine, where he was a founder of *Gedud ha-Avodah. In 1923 he went to Soviet Russia as an emissary of He-Ḥalutz and later to Persia and other countries. He was a founder of the kibbutz Ramat Raḥel, near Jerusalem. From 1934 onward Almog devoted himself to the needs of the potash factory workers living in the difficult conditions of Sodom as well as to the settlement of the Dead Sea area and the development of *Masada as a national monument. His writings include *Hevel Sedom* ("Sodom Region," 1945), and *Hevel Yam ha-Melaḥ* ("Dead Sea Region," 1956).

BIBLIOGRAPHY: Tidhar, 4 (1950), 2005; Y. Erez (ed.), *Sefer ha-Aliyah ha-Shelishit* (1964), index; H.M. Sachar, *Aliyah: the Peoples of Israel* (1961), 155–91.

[Benjamin Jaffe]

ALMOGI (Krelenboim), YOSEF AHARON (1910–1991), Israeli politician and labor leader, member of the Third to Eighth Knessets. Almogi was born in Hrubieszow, Poland. In 1924 he joined the Dror youth movement and in 1928 started to prepare for his immigration to Erez Israel. For a number of years after arriving in Erez Israel in 1930, he worked as a laborer in orange groves and in construction. He was a member of the Kefar Sava Labor Council and joined the *Haganah. In 1936 he was sent to organize the *Hapoel defense units within the *Histadrut in the Tel Aviv area, and in 1937 he organized the Hapoel defense units within the Histadrut in Haifa. In 1940 he enlisted in the British Army; he was taken prisoner by the Germans in Greece, remaining in a prison camp until the end of the war and organizing the Jewish prisoners of war from Erez Israel. In the years 1947–51 Almogi was acting secretary of the Haifa Labor Council, and in 1948 organized a special labor brigade which took over the essential services of the city when the British evacuated it. In 1951–59 he served as secretary of the Council.

Almogi was elected to the Third Knesset in 1955 as a member of *Mapai. He served as secretary-general of Mapai in 1959–61 and as minister of housing and development in 1963–65. He was one of the members who broke away from Mapai in May 1965 together with David *Ben-Gurion to form *Rafi, and subsequently resigned from the government. Half a year after Rafi participated in the formation of the *Israel Labor Party in January 1968, he was appointed minister of labor. Almogi was reelected to the Eighth Knesset in 1973, but was not given a seat in the government, since he was elected mayor of Haifa, a position he held in 1974–75. In 1975–78 he served as president of the World Zionist Organization. His autobiography, *Be-Ovi ha-Korah* (“In the Thick of Things”), was published in 1980.

[Susan Hattis Rolef (2nd ed.)]

ALMOHADS (Arab. *Al-Muwaḥḥidūn*; “Those who Advocate the Unity of Allah”), Moroccan Berbers from Tinmel in the Atlas Mountains. Like their predecessors, the *Almoravids (*al-Murabitūn*), who ruled major areas of the Maghreb and Muslim Spain, the Almohads comprised a confederation of local Berber tribes. The Almohads were influenced by puritanical notions of Islam to even a greater degree than the Almoravids. They had been essentially inspired by the religious teachings of Ibn Tūmart (d. 1130), whose doctrine was a mélange of a strict conception of the unity of Allah, with a program of moral reform based on the Koran and the Sunnah: the traditional social and legal practice of the early Muslim community.

In 1121, Ibn Tūmart proclaimed himself the *mahdī*, or spiritual-messianic leader, openly questioned the legitimacy

of Almoravid rule, and waged a protracted war against them in the Maghreb. Ibn Tūmart’s actions came in the aftermath of a series of military challenges posed to the Almoravids also by the Christians in Spain, who had previously carried out the early phases of their plan of “re-conquest” and de-Islamization.

Under Ibn Tūmart’s successor, ‘Abd al-Mu’min, the Almohads brought down the Almoravid state in 1147; they captured *Marrakesh and transformed it into their Maghrebi capital. On the other hand, Almoravid domains in Muslim Spain were left virtually intact until the caliph Abu Ya’qūb Yūsuf forced the surrender of Seville in 1172. The spread of Almohad rule over the rest of Islamic Spain soon followed. During the reign of Abū Yūsuf Ya’qūb al-Manṣūr (1184–99) serious Arab rebellions devastated the eastern provinces of the empire, whereas in Spain the Christian threat remained constant. At the battle of Las Navas de Tolosa (1212), the Almohads were dealt a devastating defeat by a Christian coalition from Leon, Castile, Navarre, and Aragon. They retreated to their Maghrebi provinces, where soon afterwards the Muslim Hafsids seized power in Tunis, the Abd al-Wadids took Tlismān (*Tlemcen), and Marrakesh, the Almohad capital, fell to the Marinids in 1269.

The decline and eventual fall of the Almohad state was attributed to three main reasons. First, it shared power with no group outside its own hierarchy placing the center of power solely in the hands of the founders and descendants. Secondly, the puritanical orientation of Ibn Tūmart waned gradually among his many followers after his death. Under his successors, precedents had been set for the construction of costly and lavish “non-puritan” monuments. The famous Kutubiya mosque in Marrakesh and the older parts of the mosque of Taza attest to this policy. Neither did the movement for a return to traditional orthodox Islam survive; both the mystical movement of the Sufis and the philosophical school represented by Ibn Tufayl and Averroes (Ibn Rushd) flourished under the Almohad kings. Finally, the Almohads proved to be intolerant toward their Muslim opponents and the Maghrebi Jewish minority, thus alienating diverse segments of the population. In fact, in the pre-Almohad Maghreb the position of the Jews was apparently free of significant abuses. No factual complaints were registered prior to 1147 of excesses, coercion, or malice on the part of the authorities. After the ascendance of the Almohad ruler Abū Yūsuf Ya’qūb al-Manṣūr, however, the Jews began to encounter humiliations; many were forced to convert to Islam and had to wear the *qalansuwa*, a cap of strange and ugly shape, reaching down to their ears. The Jews, who officially had been converted to Islam but were suspected of secretly practicing their own religion, were compelled to wear special, and rather ridiculous, clothes so that the Muslims easily identified them. At the same time, Jews were not the only victims of Almohad cruelty; the Muslim *maliki* school of Sunni Islam was banned in Almohad North Africa and its leading works were burned in the public squares.

ALMOLI (Almuli), SOLOMON BEN JACOB (before 1485–after 1542), grammarian, physician, philosopher, and kabbalist.

Biography and Basic Works

Probably born in Spain, Almoli passed his early years in Salonika, but before 1515 settled in Constantinople, where he spent the rest of his life, serving as a *dayyan* and rabbi of one of the congregations there. Almoli devoted himself to the study of science and medicine, earning his livelihood from the latter, and serving, as it seems, as physician to the sultan. Few biographical details are known of his life except that it was marked by want and poverty. Having conceived the idea of compiling a general encyclopedia, he launched his undertaking enthusiastically, though fully aware that the work would take many years to complete and that large sums of money would be required for an adequate reference library. He was encouraged by the hope that others would take up his work in the event of his failing to complete it, but the scholars of Constantinople reacted disparagingly and rejected the plan. Almoli was also unsuccessful in his attempt to recruit a group of trainees for his work. He did, however, publish a small pamphlet of 24 pages under the title *Me'assef le-Khol ha-Maḥanot* (Constantinople, c. 1531), a prospectus of the proposed encyclopedia which was to be in three parts: (1) *Maḥaneh Yisrael*, on what every Jew needs to know; (2) *Maḥaneh Leviyyah*, on general knowledge; and (3) *Maḥaneh Shekhinah*, on Hebrew, Aramaic, biblical exegesis, theology, Kabbalah, and the commandments of the Torah.

The fate of the project is unknown. Also included is his *Sha'ar ha-Shem he-Ḥadash* (Constantinople, 1533), which he describes as being “the first section of the large book which deals with all matters of faiths.” In it he treats the existence of God, His attributes and essence, according to the Kabbalah and philosophy. He states that “wonderful secrets and explanations, hitherto unrevealed” (p. 13a) have been disclosed to him. With one exception, all Almoli's other works are mere prolegomena to larger works which he contemplated. The exception is the *Mefasher Helmin* (Salonika, c. 1515) often republished under its Hebrew title *Pitron Ḥalomot* (“Interpretation of Dreams”) and translated into Yiddish (Amsterdam, 1694). In it he classifies dreams by categories and gives rules for their interpretation.

Other Publications

(1) *Halikhot Sheva* (Constantinople, c. 1520), according to Almoli, the introduction to a larger projected work on the sci-

ence of Hebrew grammar. This is an original study, including rules for the pointing of the vowel *e*, under differing circumstances. The first part begins with general comments on the relationship between the *sheva* and the other vowels, which are significant guidelines for the history of the science of the Hebrew language. In the second part, the *sheva* is classified by categories. The third part deals with the different forms of the noun. Almoli cites various opinions as to the alternate pronunciations of the *sheva na'* (“mobile”) and gives his own analysis of it as a third type of vowel, having its place midway between the short vowels and the *sheva nah* (“quiescent”). A critical edition was published by H. Yallon. (2) *Iggeret ha-Purim* is mentioned in *Halikhot Sheva* and is probably a treatise on the Scroll of Esther. (3) *Sha'ar ha-Yesod* (Constantinople, 1536) deals with the roots of Hebrew words. This book is not extant, except for the title page. (4) Almoli was also instrumental in the publication of books on language and vocalization by other authors. These are the *Magen David* (Constantinople, 1517) of *Elisha b. Abraham, in the writing of which Almoli participated, replying to Profiat *Duran's and David *Ibn Yaḥya's criticism of David *Kimḥi; the *Yesod Mora* (Constantinople, 1530) and the *Safah Berurah* (Constantinople, 1530) of Abraham *Ibn Ezra; the *Leshon Limmudim* (Constantinople, 1526) of David ibn Yaḥya, together with the *Shekel ha-Kodesh* on prosody. For many years this last book was also thought to be the work of David Ibn Yaḥya, but H. Yallon has shown that it was written by Almoli, who included in it criticism of the *Leshon Limmudim* (critical edition by H. Yallon, 1965). Almoli also composed poems which were published in his own books and in those he edited.

Reif (eds.), *Interpreting the Hebrew Bible, Essays in Honor of E.I.J. Rosenthal* (1982), 157–69.

ALMON or **ALEMETH** (Heb. עֲלֵמֶת, עֲלֵמֹן), levitical city in the territory of Benjamin (Josh. 21:18; 1 Chron. 6:45). Alemeth appears in the genealogical lists of Benjamin beside *Anathoth and Azmaveth (1 Chron. 7:8; 8:36; 9:42) but it is missing in the list of Benjaminite cities in Joshua 18:21–28. Alemeth is identified with Khirbet Almit, 1 mi. (c. 2 km.) northeast of Anathoth. It was erroneously identified with Ailamon (Aijalon) on the Madaba Map which was based on a reference of Eusebius (Onom. 18:14). In the Crusader period Amieth (Alemeth) is mentioned with Aneth (Anathoth) and Farafonte (Ayn Fara).

[Michael Avi-Yonah]

ALMOND (Heb. אֶמְוֹן), one of the “choice fruits of the land” sent by Jacob to the ruler of Egypt (Gen 43:11). The tree blooms in Israel in January or February, while other fruit trees are still bare. Moreover, the almond blossoms before it is covered with leaves. Thus it symbolizes (Jer. 1:11–12) the speedy fulfillment of the prophecy of doom. It may also signify old age and the imminence of death. It is used, allegorically, in this sense in Ecclesiastes (12:5) to describe the short cycle of human life. Although the tree blossoms early, the fruit only ripens late in the summer. *Ahikar accordingly advised his son: “Be not like the almond tree, for it blossoms before all the trees, and produces its fruit after them.” The almond can be regarded as having two periods of ripening. It is edible together with its rind a few weeks after the tree blooms, while the fruit is still green. Its second ripening is three months later, when the outer rind has shriveled and the inside cover has become a hard shell. In its exposition of Jeremiah’s vision, the Talmud has the first ripening in mind: “Just as 21 days elapse from the time the almond sends forth its blossom until the fruit ripens, so 21 days passed from the time the city was breached until the Temple was destroyed” (TJ Ta’an. 4:8, 68c), the 21 days being the period between the Seventeenth of Tammuz and the Ninth of Av. Beth-El was originally called *Luz (Gen. 28:19) which is the less common word for almond or almond tree in Hebrew, but *loz* is the regular Arabic word for almond. Several localities in modern Israel bear the Arabic name Al-Luz. Two strains of almond grow in Israel: one, the *amygdalus communis* var. *dulcis*, usually producing pink blossoms and sweet fruit; the second, the *amygdalus communis* var. *amara* producing white blossoms and bitter fruit. The latter strain grows wild in mountain groves. It is edible only with the rind when it is young (Tosef. Ma’as. 1:3). Roasting, however, destroys the poisonous alkaloid, and makes this almond edible even in its later stages (cf. Hul. 25b). The almond played a part in the modern history of Erez Israel. Grown extensively in the earlier part of the 20th century, it was attacked by the borer beetle and almost all the orchards were destroyed. In the 1960s, almond cultivation was revived especially in the Northern Negev and again became an important branch of agriculture.

[Jehuda Feliks]

ALMOND, GABRIEL ABRAHAM (1911–2002), U.S. political scientist, credited with inventing modern comparative political science. Born in Rock Island, Illinois, Almond was the son of Russian and Ukrainian immigrants. His father was a rabbi. A student at the University of Chicago, he went on to earn his doctorate in 1938; but his thesis, *Plutocracy and Politics in New York City*, was not published until 1998. The work contained psychoanalyses of several wealthy New Yorkers, including unflattering references to John D. Rockefeller, a principal benefactor of the university. Charles Merriam, chair of the political science department, refused to recommend the thesis

for publication unless the offending material was removed. Almond refused. The thesis remained in the stacks of the University of Chicago library, where it became an underground classic among scholars. It was finally published by Westview Press.

Almond taught political science at Brooklyn College from 1939. During World War II he was head of the Enemy Information Section at the War Information Office (1942–44). After the war he was professor of political science at Princeton, Yale, and Stanford. He also taught at universities in England, Japan, Brazil, and the Ukraine. He was elected chairman of the Social Science Research Council’s Committee on Comparative Politics and, in 1966, president of the American Political Science Association. Almond’s *Appeals of Communism* (1954), an empirical study of the attractions and weaknesses of Communism, was significant for its treatment of the psycho-social background of political behavior. Almond’s major contribution in this field was the recognition of a cultural dimension in politics, and its application in the first nationwide study of political culture (G. Almond and S. Verba, *The Civic Culture* (1963)). The book examines the differences in the political cultures of five countries and looks at how these influence each nation’s stability and prospects for democracy.

Almond also developed the “functional approach” to comparative politics. Later he turned increasingly to problems concerned with the theory of political development as seen in “A Developmental Approach to Political Systems” (*World Politics*, 17 (1964–65), 183–214), and in G. Almond and G.B. Powell Jr., *Comparative Politics: A Developmental Approach* (1966).

Other books by Almond include *Political Development: Essays in Heuristic Theory* (1970); *The American People and Foreign Policy* (1977); *Comparative Politics: System, Process, and Policy* (1978); *Sects in Political Science* (1989); *The Civic Culture Revisited* (1992); *Comparative Politics Today: A World View* (1999); *European Politics Today* (1998, 2001); *Strong Religion: The Rise of Fundamentalisms around the World* (2002); *Discipline Divided: Schools & The Ventures in Political Science: Narratives & Reflections* (2002).

[Moshe M. Czudnowski / Ruth Beloff (2nd ed.)]

ALMON-DIBLATHAIM (Heb. עֶמְוֹן דִּבְלָתַיִם), city in the northern Moabite plain (the Mishor) between Dibon-Gad and the mountains of Abarim (Num. 33:46–47), along the route followed by the Israelites on their way to the plains of Moab (Arvot Mo’av). Khirbet Deleilat esh-Sherqiyeh, a site containing Iron Age I–II pottery, located about 10½ mi. (17 km.) north-northeast of Dibon (Dhiban), has been suggested for its identification. It is probably identical with Beth-Diblathaim, a Moabite city which is mentioned in the Mesha inscription between Madaba and Beth-Baal-Meon and in the prophecy of Jeremiah after Dibon and Nebo and before Kiriahtaim (Jer. 48:22).

[Yohanan Aharoni]

ALMORAVIDS (Arab. *Al-Murābiṭūn*; “Warrior-Monks”), confederation of Berber tribes of the Sanhajah group who lived in the Moroccan Sahara Desert. Their religious fervor and fighting capabilities enabled them to establish a formidable empire in the Maghreb and Muslim (Andalusian) Spain in the 11th and 12th centuries. Their theological Islamic zeal is attributed to Yahya ibn Ibrahim, their spiritual leader, as well as to the *‘alim* (religious scholar) ‘Abd Allah ibn Yasin. Imbued with Islamic zeal, the Almoravids conquered Morocco and major sections of western Algeria between 1054 and 1092. In 1062 they turned *Marrakesh into their base of operations and religious capital. Thenceforth, their main leaders embraced the title of *Amir al-Muslimin* (“commander of the Muslims”) but nevertheless continued to recognize the legitimacy of a still higher authority in Islam: the Abbasid caliph in Iraq upon whom the title *Amir al-Mu’minin* (“commander of the faithful”) had been bestowed. It was toward the end of the 11th century that the Castilian Christians who held on to parts of Spain began challenging the authority of the Almoravids and encroaching on their territories. The Almoravid leadership succeeded in temporarily repulsing the Christians and foiling their plans to conquer such key cities as Córdoba and Toledo.

With the exception of Valencia, Muslim Spain remained under Almoravid control. Notwithstanding, perhaps the weakest aspect of Almoravid rule in Spain and the Maghreb is the fact that they were a Muslim Berber minority in charge of a Spanish-Arab empire. With the passage of time, they found it increasingly difficult to protect all their territorial possessions from the Christian reconquest, especially in the aftermath of the fall of Saragossa in 1118. Moreover, in 1125 the *Almohads (those who advocated the “Unity of Allah”), a confederation of rival Berber tribes, began to rebel against them in the Atlas Mountains. Following a protracted struggle and relentless fighting, the Almohads defeated the Almoravids in 1147; they transformed Marrakesh into their own capital and extended their authority into Muslim Spain.

In addition to the powerful military force that they created at their zenith, the Almoravid period is also interesting for its art and architecture. What characterized Almoravid art was its puritanism. As Saharan military monks, the Almoravids rejected the lavish decoration that had dominated the late Umayyad architectural style, and they built on a practical rather than a monumental scale. Piety and asceticism prevented them from erecting elegant palaces and magnificent monuments. The most famous architectural site that remained from the time of the Almoravids is the Great Mosque at Tlemcen, Algeria, built in 1082 and reconstructed in 1136.

The position of the Jews under Almoravid domination was apparently free of major abuses. Unlike the problems encountered by the Jews during the rule of the *Almohads (the Almoravids’ successor dynasty), there are no factual complaints of excesses, coercion, or malice on the part of the authorities toward the Jewish communities.

[Michael M. Laskier (2nd ed.)]

ALMOSNINO, Sephardi family, originating in Spain and prominent later in Morocco, Salonika, Gibraltar, and England. The family was established from the 13th century at Jaca in Aragon, where BARZILLAI was *baile* in 1277 and JOSEPH and JACOB (possibly his sons) were “*adelantados*” of the Jewish community in 1285 (Régné, Cat, nos. 1277, 1370). ABRAHAM, an outstanding member of the Jewish community of Huesca, helped in the readmission of the converso Juan de Ciudad to Judaism in 1465. A generation later he was condemned by the Inquisition for his complicity in this and burned alive on December 10, 1489. His family thereafter settled in Salonika and were among the founders of the Catalan community there and legal proprietors of its synagogue. His children included the physician, JOSEPH, author of an elegy on the destruction of Jerusalem (published in *Sefunot*, 8 (1964), 264–5); a son HAYYIM, an active member of the Catalan community; and a daughter, who married R. Abraham Cocumbriel, son of Asach (Isaac: not Abraham, as the name was remembered in family tradition). Cocumbriel had perished together with Abraham Almosnino. The two families continued to intermarry, their descendants including BARUCH (d. 1563), head of the Catalan community in Salonika in the mid-16th century, father of *MOSES. Another ABRAHAM, a physician of Toledo (perhaps a cousin of the martyr), settled in Fez after the expulsion from Spain where he assisted in organizing the community of the *megorashim* (“exiles”). His son JOSEPH was a physician as well as a poet, and so was his grandson ABRAHAM. The

latter's nephew, ISAAC ḤASDAI (b. c. 1580), after many adventures, was arrested at Goa (India) on suspicion of being a New Christian physician from Oporto named Manuel Lopes and was sent to Lisbon for trial by the Inquisition. On successfully demonstrating that he was a Jew by birth, he was released and deported (Torre do Tombo Archives, Lisbon, *Inquisição de Lisboa*, reg. 5393). In a later generation, ḤASDAI (c.1640–1727) was among the most prominent rabbis of Tetuán. He was probably the father of ISAAC (d. 1785), rabbi of Gibraltar, who went from there with other Jews to London during the siege of 1781. His son Hasdai became a member of the *bet din* of the London Sephardi community. Of the latter's sons, ISAAC (d. 1843), *hazzan* of the community, modernized the service, at the same time carrying on a protracted quarrel with the rabbi, Raphael *Meldola, over the pronunciation of Hebrew, and SOLOMON (1792–1877), was secretary of the community and exercised influence over it for many years.

[Cecil Roth]

ALMOsnINO, JOSEPH BEN ISAAC (1642–1689), rabbi, halakhic authority, and kabbalist. Almosnino was apparently born in Salonika, and studied under Hananiah Taitazak. He went to Jerusalem to study in Jacob Ḥagiz's *bet ha-midrash*, Bet Ya'akov, where he probably made the acquaintance of *Nathan of Gaza. About 1666 Almosnino was appointed a rabbi in Belgrade where he married the daughter of the rabbi of that city, Simḥah ha-Kohen, whom he succeeded c. 1668. He was won over to Shabbateanism and transcribed the writings of Nathan of Gaza which were sent to his community (Oxford Ms. no. 1777). The community suffered two serious blows during Almosnino's tenure of office: a great fire in which his library and part of his writings were burnt and, in 1688, the fall of Belgrade to the Turks, as a result of which the community was destroyed. Most of the Jews escaped, but some were taken captive. Almosnino afterward traveled to the German communities where he succeeded in raising funds to ransom the captives and reconstruct the community. He died in Nikolsburg, while on this mission.

Many communities turned to Almosnino with their problems. Moses *Ibn Ḥabib corresponded with him on halakhic matters and wrote an approbation to his responsa. Almosnino also corresponded with Zevi Hirsch *Ashkenazi. Many emissaries from Erez Israel visited him, including Moses *Galante. Those of Almosnino's works which escaped the Belgrade conflagration were preserved by chance. They were sold to Arab dealers from whom they were acquired by a Jew. Two volumes of his responsa were published posthumously by his sons Simḥah and Isaac under the title *Edut bi-Yhosef* (Constantinople, 1711, 1713). Several of Almosnino's poems, though never published, are extant in the manuscripts of contemporary Turkish poets (Jewish Theological Seminary, Ms. no. 60,

353; Adler 358; Guenzburg 196). He wrote an autobiographical sketch that appears in the introduction to *Edut bi-Yhosef*.

BIBLIOGRAPHY: Rosanes, *Togarmah*, 4 (1935), 26 ff.; Scholem, *Shabbetai Zevi*, 1 (1957), 189; 2 (1957), 535, 790; Attias, in: *Minḥah le-Avraham... Elmaleḥ* (1959), 135 ff.

ALMOsnINO, MOSES BEN BARUCH (c. 1515–c. 1580), Salonika rabbi, scholar, and preacher. His numerous publications show his extensive knowledge of science, philosophy, history, and rhetoric. His rabbinic scholarship was widely respected. Although his responsa were never published in collected form, authorities such as Samuel de *Medina, Ḥayyim *Benveniste, Isaac *Adarbi, and Jacob di *Boton included some of them in their works. A gifted orator, he served in succession as preacher to the Salonika congregations Neveh Shalom and later the Livyat Ḥen, founded by Gracia *Nasi. A selection of his sermons, in Hebrew, is printed in his *Me'ammeḥz Ko'ah* (1582). In 1565 Almosnino was chosen as member of a delegation to Sultan Selim II to procure the confirmation of the privileges and exemptions granted by Suleiman the Magnificent to the Salonika community in 1537. The document had been destroyed in the great fire of 1545 and the local authorities again began to place crushing burdens on the community. The two other members of the delegation died en route. Almosnino, with the help of Joseph *Nasi, succeeded, after much heart-breaking effort, in obtaining a favorable decision (1568), and the Salonika community was given the status of a self-governing entity, which it enjoyed for many centuries. Almosnino's works in Hebrew include commentaries on the Five Scrolls (*Yedei Moshe*, 1582), a supercommentary on Abraham Ibn Ezra; a commentary on *Avot* (*Pirkei Moshe*, 1562); and comments on the Pentateuch and prayer book (*Tefillah le-Moshe*, 1563). While in Constantinople, Almosnino compiled in Ladino a description of Constantinople, published, with some rearrangement and omissions, in Spanish by Jacob *Cansino of Oran under the title *Extremos y Grandezas de Constantinopla*. It is one of the rarest works of Spanish Jewish literature and an important historical source. He published, also in Ladino, an ethical work, *Il Regimiento dela Vida* (Salonika, 1564; reprinted in Latin characters, Amsterdam, 1729), which enjoyed considerable popularity in its time. Appended to it is a lengthy treatise on dreams, "composed at the request of the most illustrious señor, Don Joseph Nasi" and giving a graphic description of the latter's luxurious way of life. He also published an exposition of Aristotle's *Ethics* and notes to Al-Ghazali.

[Abraham Hirsch Rabinowitz]

ALNAKAR, ABRAHAM BEN JOSEPH (1740?–after 1803), Sephardi liturgical scholar. Alnakar was born and brought up in Fez. From there he went to Algiers but returned to Fez by 1783, in which year he began to travel extensively. He was in

Tlemcen in 1783, in Tunis in 1785, in Melian, in Tripoli the following year, and again in Tunis in 1788. From there he proceeded to Leghorn where he remained until his death. For a number of years he engaged in publishing. In 1789, he went into partnership with Jacob Benaïm of Morocco and they published, at their own expense, *Tikkunei ha-Zohar*. They used the Constantinople edition of 1719 including the glosses of Jacob Vilna and Moses Zacuto. Alnakar added an introduction to the book, and songs of his own, which he printed in the book. The partnership was probably unsuccessful, since in 1791 his partner, together with Ḥayyim Abraham Israel Ze'evi, a Jerusalem emissary, published the Zohar with the glosses of H.J.D. *Azulai. Alnakar turned to the publication of prayer books. He became friendly with Azulai, receiving glosses to the festival prayers. In 1798 he published a prayer book for the New Year and the Day of Atonement, with his own commentary, *Zekhor le-Avraham*. This commentary appeared in almost every edition of the High Holy Day liturgy published in Leghorn, as well as in the Tripoli festival prayer book. In addition he published a small prayer book for the New Year and the Day of Atonement according to the rite of Argil (Leghorn, 1803). In the same year he published festival prayer books according to the rites of the Sephardim of Tunis and of Tlemcen. His *Afra de-Avraham* has remained in manuscript. He also drew a design of the Temple candelabrum with a kabbalistic commentary, of which he published a lithographic edition.

AL-NAKAWA, ISRAEL BEN JOSEPH (d. 1391), ethical writer and poet. The Al-Nakawa family had lived from the 12th century in Toledo where a synagogue (Midrash Ben Al-Nakawa) had been established by Israel's uncle, Abraham b. Samuel (murdered in 1341). Israel studied with *Asher b. Jehiel and his son Jacob. During the attack on the Jewish community of Toledo in 1391, which claimed many victims and even more converts, the aged Israel was savagely attacked and dragged through the streets. He finally killed himself, an example followed by his brother Solomon. The harrowing details are described in a dirge by an otherwise unknown poet, Jacob ibn Al-bene. According to one interpretation of this poem, Israel was the *ḥazzan* of a Toledo congregation. His son Ephraim escaped to North Africa and became spiritual leader of the Tlemcen Jewish community. Israel is best known through his *Menorat ha-Ma'or*, a compilation of aggadic and halakhic material in 20 chapters. The author attributes the inspiration and name of his work to a vision (as other authors had before and after him) of the seven-branched holy candelabrum (cf. Zech. 4) and a scroll (cf. Ezek. 2:9–3:3), in which he was instructed to write a book with this title. Whatever the inspiration, the troubled times through which Spanish Jewry passed in the second half of the 14th century called for a handbook of ethical and ritual instruction such as the *Menorat ha-Ma'or*. After an introductory poem and an introduction in rhymed prose, the author

describes the general need for a book such as his, in times of decline of religious knowledge and observance. The divisions of the book deal with the main themes of religious life: charity, prayer, repentance, humility, study of Torah, honor of parents, education of children, marriage, business morality, good manners, etc. Several supplements are appended to the work which, however, may not be by Al-Nakawa. The sources from which he drew his material include the whole range of rabbinic literature: the Talmud, the Midrashim, including some now lost, such as the *Midrash Hashkem*, the writings of the *geonim*, Maimonides, Naḥmanides, down to those of his teachers. Another work whose influence can be seen throughout the *Menorat ha-Ma'or* is that of *Mitzvot Zemanniyyot* by Israel b. Joseph. The Zohar is quoted under the otherwise unknown name of *Midrash Tehi Or* and in a Hebrew adaptation of the Aramaic original. It has been suggested that Israel was responsible for a Hebrew translation of the entire Zohar which was still current in the 16th century. The relationship between the *Menorat ha-Ma'or* and the *Midrash ha-Gadol* still needs investigation. In common with Isaac Aboab's *Menorat ha-Ma'or* (1514), Al-Nakawa's is of primary importance because of the texts, both extant and lost, quoted by the author. The originality of such a work lies in the arrangement of the material, in its emphases as well as in the "continuity" provided by the compiler. While Aboab's *Menorat ha-Ma'or* soon became one of the most studied and most often reprinted religious works, Al-Nakawa's remained relatively unknown. Though copies were current in Spain in the 14th and 15th centuries, only one complete manuscript has survived (Oxford, Bodleian Library, Ms. Opp. 146) which H.G. Enelow published in a monumental edition (4 vols., published 1929–32). The last chapter of the *Menorat ha-Ma'or* (on good manners) found its way into J.C. Wagenseil's *Belehrung der Juedisch-Teutschen Red- und Schreibeart* (Koenigsberg, 1699), from a Judeo-German translation by Isaac b. Eliakim of Posen (Prague, 1620). Jacob Emden included the same chapter in the third part of his prayer book, *Migdal Oz* (Altona, 1748). The relations between Al-Nakawa's and Isaac Aboab's *Menorat ha-Ma'or* have been much discussed and it is generally assumed that Aboab used, adapted, and condensed Al-Nakawa. However, there can be no absolute certainty in the matter. The main differences are that Aboab's work is purely aggadic and more speculative, and that its structure is more logical; that it has practically no Zohar quotations and that many talmudic passages are quoted in the Aramaic original, whereas Al-Nakawa mostly translates them into Hebrew. Israel Al-Nakawa was renowned as a poet and as such is mourned by the writer of the elegy mentioned above. Davidson's *Ozar ha-Shirah ve-ha-Piyyut* includes 16 of his compositions. Two *piyyutim*, with Al-Nakawa's acrostic, were published by Enelow (*Menorat ha-Ma'or*, 2:439–43) from a manuscript.

[Moshe Nahum Zobel]

ALONI, NISSIM (1926–1998), Israeli writer and playwright. Aloni, who was born in Tel Aviv, served in the War of Independence, and studied in Jerusalem and Paris. In 1963 he established Te'atron ha-Onot ("The Theater of the Seasons"), serving as director and artistic manager. His first play, *Akhzar mi-Kol ha-Melekh* ("The King Is Cruellest of All," staged 1953) published in *Ha-Masakh*, 3 (1954), focuses upon the personality of Rehoboam, the king who revolted against Jeroboam in the name of freedom and justice, but who adopted his rival's evil ways upon assuming the monarchy. In *Bigdei ha-Melekh ha-Hadashim* ("The King's New Clothes," staged 1961) and *Ha-Nesikhah ha-Amerikait* ("The American Princess," staged 1963; Engl., 1980), the influence of the Theater of the Absurd is evident. In his plays Aloni constructed a highly original world. Its basic components are drawn from the earliest elements of the European theater: myth, mask, costume, stock characters, etc. Aloni eschewed any blatant philosophical or emotional expression that might have been conceived in a situation existing outside the clear-cut boundaries of theatrical action. His play is to be judged by the author's ability to marshal these various theatrical components to express this imagined universe. He employed various means, such as the tape recorder or the cinema, to emphasize the clear and unique connection of his characters with imaginary reality. Other plays by Aloni include "Eddy King" (French, 1985), "The Bride and the Butterfly Hunter," "Napoleon, Dead or Alive," "Aunt Lisa," and "The Gypsies of Jaffa." Similar thematic elements also appeared in the few stories which Aloni published. Their main subject is a "reconstruction" of the world of childhood as a world of imagination, which may have been created either in the imagination of the child protagonist or of the adult narrator. Aloni's published works include the prose collection *Ha-Yanshuf* (1957, 1996). "*Liheyot Ofel*" appeared in English translation as "To Be a Baker," in S.Y. Penueli and A. Ukhmani (eds.), *Hebrew Short Stories*. Aloni was awarded the Israel Prize for theater in 1996.

ALONI (Adler), SHULAMIT (1928–), Israeli politician and civil rights activist. She served in the Sixth and Eighth to Thirteenth Knessets. Shulamit Aloni was born in Tel Aviv. She served in the *Palmaḥ during the *War of Independence and was taken prisoner by the Jordanians in the Jewish Quarter of Jerusalem. After her release she worked with immigrant children. She received a law degree from the Hebrew University of Jerusalem and joined *Mapai in 1959. In 1961–65 she produced a radio program dealing with issues of legislation and legal procedures, establishing a reputation as a fighter for citizens' rights, and as a critic of the bureaucracy in Israel. It was largely due to her advocacy that the Commission for Public

Complaints was established by Prime Minister Levi Eshkol in 1965. She was elected on the Mapai ticket to the Sixth Knesset in 1965. During this period she established the Consumers' Council and served as its chairperson until 1970. Her refusal to toe the party line, and personal animosity between herself and Prime Minister Golda *Meir, resulted in her exclusion from the Mapai list for the Seventh Knesset. As a result, in September 1973, before the elections to the Eighth Knesset, she established the Civil Rights Movement (Ratz), which managed to pick up some of the protest votes following the *Yom Kippur War, and received three Knesset seats. In the government formed by Yitzhak *Rabin, following Meir's resignation, Aloni was appointed minister without portfolio, but when the National Religious Party joined the government in October 1974, she resigned. In the Tenth Knesset, after receiving only one seat, Aloni joined the Labor-Mapam Alignment for the duration of the Knesset, for tactical reasons. In the course of the Twelfth Knesset Aloni was one of the advocates of the establishment of a new parliamentary group, made up of the ten members of the CRM, *Mapam, and Shinui. The new group called itself *Meretz and ran in the elections to the Thirteenth Knesset under Aloni's leadership. Meretz joined the government formed by Rabin in 1992, and Aloni was appointed minister of education, culture, and sport. However, she had frequent verbal clashes with the leaders of the *Shas religious party, which was also a member of the government, and in order to avoid a coalition crisis agreed, in May 1993, to hand the ministry of education over to Amnon *Rubinstein of Meretz, while she became minister of communications, science, and arts. Aloni decided not to run in the elections to the Fourteenth Knesset, but continued to fight for the issues she believed in from outside the Knesset.

Over the years Aloni helped numerous couples, unable to marry in Israel for halakhic reasons, to draw up marriage contracts, and participated in other activities designed to abolish or circumvent what she regarded as religious coercion. She was also active in helping establish shelters for battered women and stations to assist rape victims. In 1982 she was one of the founders of the International Center for Peace in the Middle East. In 2000 she was awarded the Israel Prize for her special contribution to Israeli society.

Among her books (all in Hebrew) are "Children's Rights in the Laws of the State of Israel" (1964); "Social Legislation" (1970); "The Arrangement: From a State of Law to a State of Halakhah" (1970); "Women as Human Beings" (1976); "Citizen and State: Basic Principles of the Doctrine of Citizenship" (1985); "Can't Do It Any Other Way" (1997).

[Susan Hattis Rolef (2nd ed.)]

ALOUF, YEHOSHUA (1900–1980), educator. Alouf was born in Slonim, Belorussia, but was sent to Erez Israel at the age of 12 to study at the Herzliah Gymnasium in Tel Aviv. Returning for the holidays in 1914, he was caught up in World War I and continued his studies in Warsaw where he became

a top gymnast with the local Maccabi. He returned to Tel Aviv in 1920 and was appointed teacher of physical education at the Gymnasium, later completing his studies at the Physical Education Institute in Copenhagen in 1925. From 1938 until his retirement in 1965 he served as national supervisor of physical education in Israeli schools. He was prominently associated with the Maccabi Sports Organization in a number of capacities, and was in charge of the first five *Maccabiahs. Alouf was responsible for the coining of modern Hebrew nomenclature in sport. He wrote many books on physical education. Alouf was awarded the Israel Prize for physical education in 1974.

ALPER, MICHAEL (1902–1955), U.S. rabbi and educator. Alper was born and educated in New York City, receiving his bachelor's, master's, and doctoral degrees from Columbia University as well as rabbinical ordination from the Jewish Institute of Religion. Early in his university career, Alper became the director of Jewish Education for the Hebrew Orphan Asylum. His tenure in this position coincided with a period of rapid growth and modernization in Jewish education in America. Advances in the field of general education were applied to Jewish schools and adult classes. Alper was a leading participant in this process of professionalization, writing textbooks and articles on educational topics, overseeing the publications of the American Association for Jewish Education and the Jewish Education Committee, and editing the journals *Jewish Education* and *Adult Jewish Leadership*. For the last nine years of his life, Alper taught at the Hebrew Union College–Jewish Institute of Religion, specializing in the training of teachers of religion. He was also involved in the nascent Reconstructionist movement, editing the *Reconstructionist* magazine for 15 years. Alper wrote *The Bible Retold* (1930), *Outline in Jewish Education* (1950), and *Reconstructionism and Jewish Education* (1954).

BIBLIOGRAPHY: *American Jewish Year Book*, 57 (1956); *New York Times* (Jan. 31, 1955); *Who's Who in American Jewry* (1938–39).

[Adam Mendelsohn (2nd ed.)]

ALPERSOHN, MARCOS (Mordecai; 1860–1947), Argentine farmer and Jewish writer. Alpersohn was born in Kamenets-Podolski, Russia. His father, Israel, was a *shoḥet* and *melamed*. In his youth Alpersohn was a *maskil*, writing Hebrew articles in the Jewish press. In 1891 he emigrated to Argentina and settled in Colonia Mauricio, the first agricultural colony founded by the *Jewish Colonization Association (ICA). From the very outset he wrote pamphlets in Yiddish under a pseudonym criticizing the ICA administration. After 43 years in Mauricio, he began to spend winters in Buenos Aires but remained on his farm during the summer.

Alpersohn was a prolific writer. In his three volumes of memoirs ("The ICA and Its 30 Years of Colonization in Argentina"), novels, plays, stories, and newspaper articles, he described with much color the life of the Jewish farmers in the

ICA colonies. He is considered one of the outstanding Yiddish writers of Argentina.

ALPERSTEIN, AVRAHAM ELIEZER BEN YESHAYA (1853–1917), rabbi. Born in Kobrin, Grodno Province, Alperstein studied under the direction of Rabbi Joseph Dov Halevi *Soloveitchik and Rabbi Jacob David *Willowski, who later became Alperstein's colleague in Chicago. He then studied at yeshivot in Kovno and Vilna and was granted rabbinical ordination from Rabbi Mordecai Meltzer, communal rabbi in Lida, and Rabbi Aryeh Leib Yellin of Bilsk, and then briefly served as rabbi of the Kaminetzer synagogue in Vilna before becoming the communal rabbi in nearby Novograd. A few years later, he accepted a position as rabbi of the Zevaḥ Zedek synagogue in the vibrant Jewish community of Slobodka near Kovno.

Alperstein came to New York in 1881 together with the first wave of immigrants. He served as rabbi of Congregation Adath Jeshurun in New York. Three years later he moved to Chicago, where he remained for 15 years, serving in several synagogues, Congregation Oheb Shalom Bnai Marienpol, Anshei Kovno, and the Suwalker shul. While in Chicago, Alperstein published his only book, a commentary on the Jerusalem Talmud, Tractate *Bikkurim*. After spending two years in St. Paul, Minnesota, Alperstein returned to New York in 1901 to become rabbi of the Yagustava shul on Rutgers Street, which enabled him to work together with Rabbis Moses *Matlin and Judah David Bernstein on the yeshiva named for Rabbi Isaac Elchanan Spektor of Kovno. Alperstein campaigned throughout the *shteiblach* of the Lower East Side, appealing for funds on behalf of RIETS, which began to grow and prosper. He arranged for the school to transfer its program to the Yagustava shul, where he served as rabbi and taught Talmud. By 1905, the year he became rabbi at Congregation Mishkan Israel, approximately 100 students were engaged in Torah study at RIETS. Alperstein was also active on behalf of the newly formed Agudat Harabbonim, the Orthodox rabbinical association.

Following his death, his wife founded in his memory the Beth Abraham Home for the Incurably Sick in the Bronx, which at present is the Beth Abraham Hospital, part of the Montefiore-Einstein complex.

ALPERT, HERB (1935–), U.S. trumpeter, bandleader, composer, and producer. Born in Los Angeles, Alpert studied jazz and classical trumpet and served two years in the army as a trumpeter and bugler. His first success in the music industry was the writing and recording of the instrumental hit "The

Lonely Bull" (1962) with his backup group the Tijuana Brass. Alpert's style influenced a number of other groups, such as Diana Ross and the Supremes and the Beatles. In 1962 he used his royalty monies to purchase the old Charlie Chaplin studio and form A&M Records in partnership with Jerry Moss. Under Alpert's guidance, A&M signed many famous pop performers such as the Police, Cat Stevens, Joan Baez, and the Carpenters. In addition, Alpert himself recorded the number one hit single "This Guy's in Love" (1972). In 1990 he and Moss sold A&M and in 1994 started a new record label – Almo. His albums showed an eclectic style with influences from Africa, funk and disco, Big Band sounds, and hip-hop. Among his recordings are *Herb Alpert and Hugh Masekela* (1978); *Rise* (1979); *My Abstract Heart* (1989); *North on South Street* (1991); the jazz album *Midnight Sun* (1992); *Second Wind* (1996); and *Passion Dance* (1997).

ALPHABET, HEBREW. The origin of alphabetic script has always been a subject of human curiosity. According to Greek mythology, script was brought to Greece from Phoenicia. This tradition was accepted by the Greek and Roman writers, some of whom developed it even further, and stated that the Phoenicians learned the art of writing from the Egyptians. In the 19th century there were scholars who subscribed to the theory of the Egyptian origin, while others believed that the Phoenician script developed from the Akkadian cuneiform, Cretan linear, Cypriote syllabic, and Hittite hieroglyphic scripts.

The Proto-Canaanite and Cuneiform Canaanite Scripts

Modern investigation into the origin of the alphabet began in 1905 with the discovery of the Proto-Sinaitic inscriptions by Sir Flinders Petrie at Sarābīṭ al-Khādīm in the Sinai Peninsula. These were short texts inscribed in an unknown pictographic script of approximately the middle of the second millennium B.C.E. The first steps toward decipherment of these texts were taken 12 years later by Sir Alan Gardiner, who noted a recurrent series – oxgoad (= Canaanite *lamd*); house (= *bayt*); eye (= *ʾayn*); oxgoad (= *lamd*); cross (= *taw*) – and realized that if the signs followed an acrophonic principle, their parallel Canaanite value (*lamd-bayt-ʾayn-lamd-taw*) would be *lbʾlt* – “for the lady” (goddess). Since then many attempts at

decipherment have been made. The most eminent study is that of W.F. Albright, who believes that it is possible to identify 23 of the probable 27 letters occurring in these texts. Accepting Gardiner's Canaanite acrophonic theory and assuming that these texts are votive inscriptions written by West Semites who were employed by the Egyptians in the turquoise mines of Sarābīṭ al-Khādīm, Albright bases his readings on the recent knowledge of the Canaanite dialects (mainly Ugaritic) in the second millennium B.C.E.

AN EARLY PALESTINIAN EPIGRAPHIC CORPUS. For several decades it was assumed that these West Semite workers (or slaves), while being in daily contact with the Egyptian hieroglyphs, invented the first alphabetic writing. However, at some sites in Palestine several similar pictographic inscriptions were found. Most of them are of a later date than the Proto-Sinaitic texts (mainly from Lachish, but also from Haṣī, el-Amarna, Beth Shemesh, Megiddo), but at least three are earlier than the Proto-Sinaitic inscriptions (from Shechem, Gezer, and Lachish). This early Palestinian epigraphic corpus consists mainly of inscribed shards and jar inscriptions (partly fragmentary), but there are also inscriptions on seals, a dagger, and javelin heads. The latest specimens (from the end of the Late Bronze period and from the very beginning of the Iron Age) display simplified linear letter forms which developed from the early pictographs. The script of these texts is called Proto-Canaanite (see figure 1).

The order of the early alphabetic texts is suggested by F.M. Cross, Jr. as follows:

- I. The Proto-Canaanite Texts
 - a. Old Palestinian (17th–12th century B.C.E.)
 - b. Proto-Sinaitic (15th century B.C.E.)
- II. Canaanite Cuneiform Texts
 - a. Ugaritic (14th–13th century B.C.E.)
 - b. Palestinian (13th–12th century B.C.E.)

PROTO-CANAANITE SCRIPT AS THE SOURCE OF LATER ALPHABETS. The Proto-Canaanite alphabet seems to copy some pictographic signs from the Egyptian hieroglyphs. Some Canaanite communities adapted the method of writing as in the Akkadian cuneiform syllabic script (i.e., clay tablet and stylus) to the new alphabetic system. Akkadian cuneiform was used in the latter half of the second millennium for international correspondence even between the Egyptian pharaoh and his vassals in Palestine (see *el-Amarna). The cuneiform alphabet was not limited to Ugarit in northern Canaan; specimens of this script were found at three sites in Palestine (Beth-Shemesh, Taanach, and Naḥal Tabor). However, whereas the cuneiform alphabet, as far as is known, ceased to exist with the beginning of the Iron Age (12th century B.C.E.), the Proto-Canaanite script was the source of all alphabetic scripts which later spread throughout the entire world. From this script the Proto-Arabic script branched off in the course of the 13th century B.C.E. (This is the parent script of the South Arabic monumental and the Ethiopic script, as well as the

Proto-Sinaitic, c. 1500 B.C.E.	Palestinian Proto-Canaanite inscriptions, 13–11 th cent. B.C.E.				Phoenician c. 1000 B.C.E. (Ahiram Sarcophagus)	Modern Hebrew

Thamudic, Safaitic, and Lihyanic scripts.) The main offshoot of the Proto-Canaanite script, however, is the Phoenician, from which the (Ancient) Hebrew and Aramaic as well as the Greek alphabets evolved (figure 2).

THE TERM “ALPHABETIC SCRIPT.” It has been alleged that the term “alphabetic” does not fit West Semitic writing. This script, using letters for consonantal phonemes (i.e., each sign represents a consonant plus any vowel (or “zero” vowel)) is, in I.J. Gelb’s opinion, a system of syllabic writing. While it is true that the West Semitic system of writing is a less developed stage than the Greek, the term alphabet itself does not mean that each letter must stand for either a consonant or a vowel, or for a consonant plus any vowel. Alphabet means a number of letters (20 or 30 approximately) listed in a fixed order, notwithstanding their individual values. The first abecedarly known until now, found in Ugarit, belongs to the 14th century B.C.E., and its order (after omitting some letters) generally fits that of the Hebrew alphabet (figure 3). The reduction of the symbols to represent consonantal phonemes was a revolutionary step toward spreading literacy, and the systematic insertion of the vowel signs into the script was only a further, though important, step in this process. Therefore there is no reason to restrict the term alphabet to Greek or Latin scripts.

Figure 2. Offshoots of the Proto-Canaanite script. J. Naveh, Jerusalem.

Figure 3. The Ugarit abecedarly, 14th century B.C.E. After Virolleaud, Syria, 28, Paris, 195,22.

The Phoenician Script

The Proto-Canaanite and the cuneiform alphabetic (as well as the South Arabic and the Classical, or North Arabic) scripts have 27–30 letters; the cuneiform also distinguishes between *ʾalef* – a, *ʾalef* – i, and *ʾalef* – u. The Proto-Canaanite inscriptions were written either in vertical columns, in horizontal lines or, quite frequently, in boustrophedon. In the 11th century B.C.E., with the development of the linear letter forms, the stabilization of the right-to-left direction, and the reduction of the number of letters to 22 consonants, the Proto-Canaanite developed into the Phoenician script. (The c. 1000 B.C.E. inscription on the Ahiiram sarcophagus found at Byblos displays this stage of evolution.) It seems likely that the Phoenician phonemic system consisted of 22 consonants; but the phonemic systems of the Hebrew and Aramaic languages were richer than that of the Phoenician language. When the Hebrews and Arameans adopted the Phoenician script they could not express in writing these phonemes which did not occur in Phoenician. In Hebrew, for example, there exists *š* (*shin*) and *ś* (*sin*), but both phonemes are designated by the same letter *š*; only in a relatively late period, with the invention of the diacritic signs, was it possible to distinguish between *š* (*shin*) and *ś* (*sin*).

The Phoenician people traded throughout the ancient world, and Phoenician inscriptions have been found as far apart as at Ur in the Persian Gulf and in Spain (figure 4). Most of these inscriptions, however, originated in Phoenicia, Cyprus, and Carthage. The Carthaginian inscriptions and those which were found in the western Phoenician colonies are called Punic inscriptions. While it is possible to distinguish between the dialects which were spoken in Phoenicia proper, in Cyprus, and in the Punic colonies, no special local characteristics in the scripts of the various centers developed. This one-trend evolution seems to be reflected in the scarce ink-written cursive material, but it is especially obvious in the many monumental (mainly votive) inscriptions. Whereas the Phoenician inscriptions of eastern origin after the third century B.C.E. are rare, the number of the Punic inscriptions (mainly from Carthage) increases in the late third and early second centuries until the destruction of Carthage in 146 B.C.E. It seems likely that in this period there developed in the west an independent cursive, which was later adapted to monumental writing by the neo-Punic communities existing in North Africa after 146 B.C.E. This is the neo-Punic script.

The Hebrew Script

The Hebrews adopted the alphabetic script together with other cultural values from the Canaanites in the 12th or 11th century B.C.E. They followed the current Phoenician script until the ninth century, when they began to develop their own national script.

EARLY INSCRIPTIONS. The *Gezer Calendar is considered to be the earliest Hebrew inscription known. Its script resembles the scripts of the tenth century Phoenician inscriptions from Byblos. The spelling of two words reflects the contraction of the diphthong *ay*, which is either a Phoenician or a North Hebrew (cf. Samaria ostraca) linguistic feature. On paleographical grounds, the Gezer Calendar should be dated in the late tenth century B.C.E. (i.e., in the time of Solomon) when Gezer was an Israelite city (1 Kings 9:16), and thereby determined as a Hebrew inscription (figure 5).

As strange as it may seem, the earliest clear Hebrew features can be discerned in the scripts of the ninth-century Moabite inscriptions, namely the stele of *Mesha (the Moabite Stone) and in a recently found fragmentary stele where *kmšyt*, the name of Mesha's father, is mentioned (for the Moabite script, see below).

As the eighth-century Hebrew inscriptions exhibit many specific and exclusive traits, it is obvious that in the ninth century the Hebrew script was written by wide scribal circles. The fact that up to the present almost no Hebrew inscriptions have been found from the ninth century is accidental, but the quantity of the epigraphic material from the eighth century onward shows a gradual increase of the spread of the knowledge of writing among the people of Israel and Judah.

DEVELOPMENT OF THE INDEPENDENT HEBREW SCRIPT. The evolution of the independent Hebrew script is one of a specific cursive character: the further it diverges from the (Phoenician) mother script, the more it drops the lapidary features. This one-trend development is obvious in the eighth-century engraved inscriptions, namely the Siloam Inscription, the Royal Steward (figure 6), and other tomb inscriptions (all from Jerusalem), as well as from the fragmentary Hebrew inscription on an ivory which was taken as booty (probably from Samaria) to Nimrud, and the hundreds of the eighth- to the sixth-century Hebrew seals from various sites. These inscriptions on hard material were written in a cursive style, copying even the shading, which is a natural feature of pen-and-ink writing. This lack of lapidary script may indicate that the custom of erecting stelae by the kings and offering votive inscriptions to the deity was not widespread in Israel. Such an assumption would explain how the specific lapidary element could disappear from the Hebrew script.

HEBREW EPIGRAPHIC MATERIALS. There is some indication of the common use of papyrus. In addition to the seventh-century palimpsest papyrus, preserved in the dry climate of Wadi Murabba'at near the Dead Sea about 20 clay sealings of papyrus rolls have been found (mostly in Lachish).

The majority of the Hebrew epigraphic material which has been found is pottery. About 100 jar inscriptions are known today. Sixty jar handles, inscribed after firing, were found in Gibeon, and other jars bear inscriptions on their bodies. Some were incised or written in ink after firing, but others were inscribed before firing the vessels. These inscriptions are mainly the names of the owners or the names of those responsible for their capacity, and others indicate the measure of capacity (*bt lmlk*, "a royal *bat*"). Toward the end of the seventh century B.C.E. it became more usual to impress a seal on the jar handle rather than to write on the soft clay. Recently 80 "private" seal impressions of some 30 specimens and about 800 royal (*lmlk*) seals were listed (M.L. Heltzer, in: *Epigrafika Vostoka*, 17 (1965), 18–37).

The most important Hebrew epigraphic material consists, of course, of ostraca, some of which were incised (e.g., two dockets from Tell Qasile, a name-list, and a message-like short letter from Samaria), but most were written in ink. The majority of ostraca were found in Samaria, Lachish, and Arad. This corpus, together with the Siloam Inscription and an ostrakon from Meẓad Ḥashavyahu, are the most important sources for the study of the Hebrew language in the period of the First Temple.

SOURCES FOR THE HEBREW LANGUAGE IN THE FIRST TEMPLE PERIOD. The Samaria ostraca consist of 63 dockets belonging to the eighth century B.C.E., probably to the time of Jeroboam II. They were found in the storage rooms of the royal palace and describe shipments of wine and oil brought in by farmers from various places, presumably as taxes. This material is the main source for the study of the Hebrew dialect spoken in the Northern Kingdom, while the other material reflects the Judahite, or Jerusalemite, dialect.

The Siloam Inscription describes the building of the tunnel through which the water of the Gihon was brought into the city of Jerusalem, presumably in the time of Hezekiah (11 Kings 20:20; 11 Chron. 32:30).

The ostrakon found at the seashore fortress called today Meẓad Ḥashavyahu, near Yavneh Yam (Minat Rūbin), is a letter written by a reaper who worked in the royal estate of Josiah, king of Judah. The reaper complained to the local governor of the confiscation of his garment (cf. Ex. 22:25–27; Deut. 24:10–13).

The Arad ostraca, which have only been partly published, were found in various levels of the eighth and seventh centuries. The published material from about 600 B.C.E. consists mainly of short messages dealing with supplies for the mercenaries employed in guarding the southern border of Judah (figure 7).

The 18 Lachish ostraca are letters sent by an officer to the governor of Lachish, who was probably in charge of the defense of the area, on the eve of the Babylonian conquest of Judah just before the destruction of the First Temple in 586 B.C.E. These ostraca reflect the most developed cursive hand (figure 8).

The Paleo-Hebrew Script

The Hebrew script did not cease to exist after the Babylonian capture of Judah, when most of the nobles were taken into exile. It was used by the people who remained to work the fields; the sixth-century inscribed jar handles from Gibeon, on which the names of winegrowers are listed, are an example. However, from the fifth century onward, when the Aramaic language and script became an official means of communication, the Paleo-Hebrew script (i.e., the ancient Hebrew characters as used in the time of the Second Temple) was used for writing Hebrew both in Judah and Samaria. It was preserved mainly as a biblical book hand by a coterie of erudite scribes (presumably of the Zadokite priesthood; cf. the Paleo-Hebrew Pentateuch fragments found among the *Dead Sea Scrolls). The vast majority of the *Hasmonean coinage as well as the coins of the First and Second Jewish Revolts bears Paleo-Hebrew legends. Although this script is a relatively static, formal hand, it seems likely that the Hasmoneans did not revive a forgotten national script; they struck coins with legends of a known writing which survived – though in a narrow circle – in the period of the Second Temple.

Together with the discovery (in Wadi Dali'ye) of Aramaic deeds written on papyrus in Samaria in the fourth century B.C.E., two clay sealings with Hebrew texts written in the Paleo-Hebrew script were found there without any Samaritan peculiarities. It seems likely that the divergence of the Samaritan script began sometime in the last two centuries of the first millennium B.C.E. The Samaritans continued to use this script for writing both Hebrew and Aramaic texts, but the Jews ceased using it after 135 C.E. A comparison of the earliest Samaritan inscriptions and the medieval and modern Samaritan manuscripts clearly indicates that the Samaritan script is a static script which was used mainly as a book hand (figure 9).

The Rise of the Aramaic Script

The Arameans adopted the Phoenician script in the 11th or 10th century B.C.E. The first *Aramaic monumental inscriptions originating in the Aramean kingdoms in the ninth and eighth centuries (Damascus, Hamat, and Sama'l) were written in the Phoenician script. The earliest clear Aramaic features are discernible in the cursive script of the mid-eighth century. In this period the Assyrians introduced the Aramaic language and script as a common means of communication among the various nations in the Assyrian Empire. Moreover, it became a *lingua franca* and was used from then on as a diplomatic and commercial language. For example, an Aramaic papyrus letter sent from Palestine about 600 B.C.E. was found at Saqqara in Egypt.

THE ARAMAIC SCRIPT COMPARED TO CONTEMPORARY PHOENICIAN AND HEBREW SCRIPTS. A comparison of the Aramaic script of the Saqqara letter and other Aramaic cursive material of the same time with the contemporary Phoenician and Hebrew cursives (e.g., the Arad and the Lachish ostraca) is most instructive. (It should be remembered that the independent development of the Aramaic script began 100 years

after that of the Hebrew.) The Aramaic script, omitting various bars, looks like shorthand in comparison with the Phoenician and particularly the Hebrew script. This phenomenon can be explained by the differing geopolitical and cultural factors prevailing among the respective peoples using the various scripts. The Phoenician script was relatively widely used among this trading people but remained a national script. The conservative Hebrew script was developed by a nation tending to preserve its traditional values; from the late eighth century B.C.E. (the fall of Samaria) this script was more or less restricted to Judah and was written by a people dwelling in a mountainous land away from international highways. On the other hand the Aramaic script, written by many peoples, became a strictly practical means, stripped of all sentiment (figure 10).

The Moabite, Edomite, and Ammonite Scripts

The inscriptions found in various sites in Transjordan provide a quite clear picture of the scripts used by the peoples living there and reflect their cultures.

The scripts of the ninth-century Moabite stelae – namely the Mesha stele and the fragmentary *kmšyt* stele – display definite Hebrew characteristics, though their language is not Hebrew but Moabite (another Canaanite dialect, different in some aspects from Hebrew). Later Moabite inscriptions (mainly seals from the seventh and sixth centuries) show clear Aramaic letters written side by side with letters of Hebrew form or of specific local character. The inscriptions bearing Edomite theophoric names (e.g., *Qws'nl*) found in Elath and in Umm al-Biyāra near Petra, exhibit a similar state of affairs. The writing of the Moabites and the Edomites in the ninth century did not differ from that of the Hebrews, while in the late seventh and sixth centuries clear signs are to be found of the intrusion of Aramaic elements into these two scripts. This intrusion probably began in the last third of the eighth century B.C.E. when the political influence of Israel and Judah came to an end and the Assyrians appeared on the King's Highway south of Damascus.

The recently published ninth-century B.C.E. Amman citadel inscription shows that the Ammonites spoke in a Canaanite dialect (similar to Hebrew and Moabite) but adopted the Aramaic script from the Arameans who lived in Damascus. About a score of Ammonite seventh-century seals written in contemporary lapidary Aramaic indicate that the Ammonites followed the Aramaic scribal tradition common in the Assyrian Empire.

The Official Aramaic Script and Its Descendants

Aramaic, being an official language of the Assyrian, neo-Babylonian, and Persian empires, was spoken and written in a vast area. Aramaic inscriptions have been found in Egypt, North Arabia, Palestine, Syria, Asia Minor, Mesopotamia, Persia, Afghanistan, and Pakistan. The examination of all this epigraphic material has shown that until the end of the third century B.C.E. (i.e., about 100 years after the fall of the Persian Empire) no local script developed and the Official Aramaic script remained a uniform script.

Many nations used Aramaic as a second language, and often it became the main spoken tongue. This was the situation in the fifth-century B.C.E. Jewish military colony in *El-ephantine, where over 100 Aramaic papyri and ostraca were found. This corpus – which is a main source for knowledge

of the Official Aramaic language and script – consists of legal documents and private and official letters, as well as two literary works. In the Persian period there existed an Aramaic lapidary script (cf. the fourth-century Judean jar-stamps), but the influence of the cursive hand was so strong that many in-

scriptions on hard material were written in the cursive style. The lapidary script died out in the late fourth century B.C.E., but the use of the standard Aramaic cursive went on for at least 100 years after the fall of the Persian Empire (330 B.C.E.). Aramaic was widely spoken and written and continued to flourish in various centers even in the Hellenistic period, when Greek became the official language.

THE DEVELOPMENT OF ARAMAIC LOCAL SCRIPTS. In the third and second centuries B.C.E. local scripts began to develop from the Aramaic. In the West two national scripts were born, the Jewish (square Hebrew) and the Nabatean, while the eastern offshoots are many: Palmyrene, Syriac, Mandaic, as well as the local scripts of Hatra (Mesopotamia), Nisa (Turkmenistan), Armazi (Georgia), and Elymais (Khuzistan). The Jewish book hand became stabilized in the Herodian period, and it did not undergo essential alterations until the present. From the Nabatean cursive hand the North Arabic script developed. The eastern branches and their relations to each other have not yet been studied thoroughly, but the developments of some trends are quite clear. The script of the ostraca of the first century B.C.E. found at Nisa (a Parthian capital) is a transitional stage between Official Aramaic on the one hand and Parthian (Pahlavik), Persian (Parsic), Book-Pahlavi, and other scripts which were invented for Middle Iranian languages on the other hand. This writing also employed a system of Aramaic ideograms. The script of the inscriptions and a coin-legend of the Elymeans is the ancestor of the Mandaic writing. The Mandeans are a religious sect living in Khuzistan near the Persian Gulf who preserved an eastern Aramaic dialect resembling that of the Babylonian Talmud.

The earliest Syriac inscriptions stem from the first and second centuries C.E. This script was employed by Christians in Syria-Mesopotamia. There are three main Syriac styles of writing: the Estrangelo, which resembles the script of the early inscriptions, is formal; the Serto, ordinarily used by the Jacobites, is a developed cursive; the Nestorian hand is another cursive variation. Syriac is an Eastern Aramaic dialect spoken by the Christian communities in Edessa (modern Urfa) and its vicinity. However, although the Palestinian Christians spoke in a Western Aramaic dialect, they adopted the Syriac script and wrote in a style similar to Estrangelo. The Manichaic script is an offshoot of Syriac; it was invented in the third century C.E. by Mani, the founder of the Manichean sect, as a book hand for writing religious manuscripts in a Middle Iranian dialect.

The Jewish Script

The talmudic tradition (Sanh. 21b) ascribes the adoption of the Aramaic ("Assyrian") script to Ezra, who brought it from the Babylonian captivity. However Aramaic arrived in Judea also through the Babylonian and mainly through the Persian administrations. At any rate it became the colloquial language, at first of the educated classes and then of wider circles. It seems likely that in the Persian period the Aramaic script was used for writing Aramaic texts only, but the earliest Hebrew manu-

scripts found in Qumran are fragments of Exodus and Samuel, probably written in the second half of the third century B.C.E. in the Proto-Jewish script, which displays the earliest Jewish national development of the Official Aramaic script. From this period on the Paleo-Hebrew script was restricted to Hebrew texts, but the Jewish script was used both for Hebrew and Aramaic. (The Samaritan script – a descendant of Paleo-Hebrew – was employed both for Hebrew and the Western Aramaic dialect spoken by the Samaritans.)

The most important material for the study of the early evolution of the Jewish script are the scrolls from the Qumran caves and the other documents found in the caves of Wadi Murabba'at and Naḥal Ḥever. The other material consists of tomb and ossuary inscriptions (mostly from Jerusalem) as well as some ostraca found mainly in *Masada (where a scroll of the apocryphal Book of Ben Sira was also discovered) and at *Herodium.

THE JEWISH CURSIVE HAND. As the development of the formal book hand will be dealt with below (see below, Square Script), the earliest Jewish cursive will be considered here. This cursive hand began to develop in the Late Hasmonean and Early Herodian periods (cf. the Jason Tomb inscription from Jerusalem), and flourished in the time of the Second Revolt (132–135 C.E.). As in other cursive scripts the letters are generally rounded, and there is a tendency to join the letters. However there was not sufficient time for the development of a fully ligatured writing (e.g., Syriac, Mandaic, and North Arabic; figure 11). Several minor cursive inscriptions are among the inscribed ossuaries and on the ostraca, but most of them are known from the papyri, messages of Bar Kokhba and his officers, found in Naḥal Ḥever and Wadi Muraba'at. The influence of this hand was strong enough to affect the formal hand. Therefore some biblical manuscripts and mainly legal documents were written in semiformal or semicursive styles. It seems likely that the cursive style ceased to exist with Bar Kokhba's defeat or soon after it, while from the surviving Jewish book hand other cursive offshoots have been born.

[Joseph Naveh]

CURSIVE SCRIPT

It is only natural that letters, notes, business matters, legal documents, etc., should be written with less care and accuracy than books. The writer does not intend to reproduce exactly the letters of the formal script. His intent is to give the basic structure of the letters, that is, an approximation of the "ideal" forms. This is clearly illustrated by figure 1 (second century C.E.). In the course of time there is less and less approximation, i.e., changes take place. Unwittingly, to save time and effort, the writers omit certain details by linking individual strokes, which were formerly not linked, and by uniting or fusing certain strokes. The pace of such structural development is much faster than the changes in the square script,

Figure 1. Fragment of Exodus 13 in Palestine cursive script, second century C.E. Jerusalem, Hebrew University Dept. of Archaeology.

which, by comparison with the cursive, hardly moves at all. The result is the rise of a full-fledged cursive style which can no longer, by any stretch of imagination, be called a simplified square. The changes that have taken place are so great that many letters have become utterly different from their counterparts in the square style. It should be mentioned that occasionally books are penned in cursive. Figure 2 (fifth–sixth centuries) is an early stage specimen. It contains a form that is decidedly cursive – the open *he*. This was not, at that time, a recent development; it had been in existence for centuries but it stayed outside formal writing until almost the end of the Middle Ages. The early cursive seems to have lasted until the eighth–tenth centuries, but further research and/or new material might change the present picture.

Figure 2. Mosaic inscription in the synagogue of Jericho, fifth–sixth century C.E. in situ.

PALESTINE-SYRIA TYPE. The 11th-century Palestine-Syria type is a fully developed cursive style, although the connection with the square script is quite clear. In figure 3 (12th century) the right strokes of the *alef* are high up, and the left one practically always joins the top of the middle stroke; *bet* and *kaf* differ greatly; *lamed* consists of two strokes only; final *nun* is regularly joined to the preceding letter; the middle stroke of *shin* is a small horizontal curve joined to the top of the left stroke. Whether the modern script of the Palestinian-Syrian

Figure 3. Palestine cursive script in a letter written in 1114 C.E. Cambridge University Library, T-S 13-J. 13/3.

region (figure 4) is a continuation of the style shown in figure 3 cannot presently be established.

One special group of cursive in ancient Palestine is characteristic of the Negev. This writing (figure 5; second century) appears, at first glance, to be undecipherable and its connection with the square script could only be established with difficulty. Documents of this type dating from the second half of the first century B.C.E. until the end of the Bar Kokhba War are extant. The fact that it disappeared without a trace shows that it was not the general Jewish cursive.

EGYPT TYPE. In Egypt the early stage of the cursive style seems to reach into the eighth century. The fully developed cursive style dates from the ninth to tenth centuries. Figure 6 belongs to the fifth century, figure 7 to the eighth, figure 8 to the 11th; in the latter, the *alef* appears in two forms at the same time – regular and cursive – and the final *nun* is written separately; generally the left downstroke of the *tav* is hardly severed from the top stroke. Four centuries later (figure 9) the *alef* is more cursive; final *he* is joined to the preceding letter and is a long inverted S-wave: the right and left downstrokes have been linked, in consequence of which the left one has been dragged down to a position below the line bottom; the same has happened, in most cases, to *tav* but there the linking stroke has not disappeared into the wavy line.

BABYLON TYPE. The early stage of the Babylonian cursive is represented by the fifth/sixth century incantation bowls (figure 10). The earliest available example of the fully developed cursive style (figure 11) belongs to the 11th century. *Alef* has the structure of K in the Roman alphabet. In the modern cursive

(figure 12) many letters are very far removed from their original forms, e.g., *alef*, *gimmel*, *he*, *tet*, etc.; the original top and right strokes of *tav* have been merged into the top of the left stroke, which runs very far down and finally bends leftward, sweeping still further in that direction.

PARSIC TYPE. The earliest specimens of the Parsic type (figure 13; 11th century) show a fully developed cursive style. *Alef* has both the K- and the N-form; in *he* and *tav* there is no tendency toward a linking up of the two downstrokes, such as completed in the Babylonian type. In figure 14 (modern) the upper right stroke of *alef* has become the main stroke's top part; *gimmel* resembles *nun* but the upper stroke of the letter tends to be vertical, and the corner of the *gimmel* is an acute angle; at the lower end, *zayin* bends with a little rightward slant. These features are not of recent origin: they gradually came into being after the period of figure 13.

TEMANIC TYPE. The earliest available specimen of the Temanic cursive dates from the 12th century (figure 15) and later material of this type is also very scarce. Figure 15 contains no very specific cursive forms: *zayin* developed into the question mark type only some time between then and the 16th century; its usage has continued to the present day.

MAARAVIC TYPE. The available cursive documents of the Maaravic type begin in the 11th century, and then, for a considerable time, continue to be scarce. In figure 16 (11th century) *alef* has the K-form; the right stroke of *mem* does not turn leftward at the bottom and the left stroke is as long as the right one, being practically on the same level. Figure 17 (15th century) presents the most unusual appearance among all the cursives, and its highly developed aesthetic character does not make for easy reading. This difficulty is increased by the fact that those letters which end in a leftward movement touch those which follow them, that when *bet* or *kaf* or, sometimes, *dalet* precede a *vav*, this is linked up with it and thereby dragged down from the line, the *he* in final position is linked with a preceding *resh* and placed below it, and the *yod* is placed inside a preceding *bet* or *kaf*. *Alef* has two forms, one that is initial and medial, the other final. In the latter the original main stroke is high and short, and the right stroke sits on its right end; the former is even more contracted: the two right strokes have been merged into one small vertical, while the left stroke slants down to the left. *He* is a kind of inverted S-wave; final *mem* is more or less an oval; *samekh* has a long tail; the right stroke of *zadi* and final *zadi* is generally above the line ceiling, and is joined to the tip of the main stroke; the top bar and right downstroke of *tav* have been fused into a curve, and the left stroke is joined to its bottom end. The modern hand of figure 18 is a very careful one. *Alef* has become a shallow S-wave starting above the line ceiling (the "full" form which is often used in this specimen seems to be an unusual attempt at special clearness); the top stroke of *dalet* is above the line ceiling; *he* is an inverted shallow S-wave of line height; *mem* tallies with the Ashkenazic form; *resh* is a tall letter – when

followed by *he* or *yod* it is linked with them, the *yod* being reduced to a dot; *tav* is a long, straight, oblique line.

SEPHARDIC TYPE. The available Sephardic material of fully developed cursive starts from the beginning of the 11th century. Figure 19 dates from the middle of the 11th century: *alef* has the K-form but in final – and, less often, in other positions – the two right strokes are high up, joined to the top of the left stroke; the *alef* part of the *alef-lamed* ligature is preserved in its angular form; the right part of *tet* is usually in the upper half of the line; the left stroke of *samekh* is generally not written with much care so that the letter is then identical with final *mem*, being of circular or oval outline. Figure 20 (15th century) illustrates a writing that forms a counterpart to the Maaravic hand of the same time (figure 17) but does not present the same extreme degree of parallelization. This kind of script is a book hand, but much plainer types are also used in books. Upon the introduction of the printing press it was not adopted as a type face and became very rare: it seems to have died out in the 18th century. The modern hand (figure 21) is not a continuation of it but of the plain sort, being clear and easily legible. *Alef* is a long letter, an S-wave beginning on top, at the right, with a narrow loop; *he* is a little inverted S-wave, mostly in horizontal position. The form of the *lamed* is identical with that of the present handwritten, but what appear to be the corresponding strokes are not really so. The main stroke of the Old Semitic form survives in the right stroke of the Hebrew cursive but the Western cursive in the left one. *Resh* is very often a tall letter; *yod* following *alef*, *dalet*, *samekh*, or *resh* is attached to them as a dot; a *he* which follows *resh* is linked to it.

YEVANIC TYPE. Figure 22, a dipinto from Magna Graecia (c. fourth century), shows the early cursive stage of the Yevanic type. Figure 23 (15th century), while resembling the Sephardic type in certain respects and Oriental types in others, is independent of either. The similarities are due to convergent developments, growing from the same original forms. The most characteristic letters are *alef*, *dalet*, *he*, *zayin*, *tav*; *he* and *tav* appear in double forms, one being more highly cursive than the other. A characteristic feature of this script is the rightward blob at the end of *dalet* and *zayin*.

ITALKIAN TYPE. The earliest available examples of the Italian type also come from Magna Graecia. Their script is the same as that of the early Yevanic, from which it developed. Figure 24 (11th century or somewhat earlier) is a more developed cursive, written with great care and used as a book hand. Little is left of these forms by the 13th century, and even less by the 16th; the writing of figure 25 is not particularly legible. The two downstrokes of *he* are linked but the left one remains in its position, thus the letter differs very much from those hitherto met with, where the left stroke had been dragged downward. The lower stroke of *lamed* has become a cross stroke – a feature unknown in the other cursives. *Samekh* as a plain circle is very rare in other types. The *pe* is another unique form: it

looks like horizontal figure 8 – the strokes increasingly curved until even the one on the left, originally a straight line, had become circular. In the centuries that followed there was some slight development. For instance, in *he* (figure 26) the left stroke and the link with the right stroke merged to form a dot; the result is that the letter is now virtually identical with modern Ashkenazic *pe*.

ZARPHATIC TYPE. The Zarphatic writing of figure 27 (12th century) might appear at first glance to be related to the Italian type. However, it is unmistakably of a different kind. Perhaps the similarity arises from their both having been written with the same sort of pen – a quill – while the other types from early centuries previously dealt with here, were produced by a reed pen. The forms in figure 27 are all in a properly developed cursive, although they do not differ greatly in their basic structure from the square letters. The most characteristic are the *alef*, *lamed*, *mem*, *final pe*, and *shin*. This document is written in a book hand. Figure 28 (14th century) is in a less careful hand of the same type.

ASHKENAZIC TYPE. The early Ashkenazic cursive is practically identical with that of the Zarphatic. Figure 29 (13th century) is not as carefully written as figure 26. It is not a book hand. During the next three centuries considerable changes took place (figures 30 and 31): the downstrokes of *dalet* and *zayin* end in a curve which is open to the left; *tet* has become a tick; the middle part of *lamed* has vanished, the letter being almost a straight line; in *mem* the left stroke is parallel with the right one and is generally of equal length – they are connected by a bridge, which is mostly horizontal.

KARAISTIC TYPE. There are two extant specimens of Karaitic cursive. Figure 32 (16th–17th centuries) represents Yevano-Karaitic. The right strokes of *alef* are high up; *gimmel* resembles *nun* but its bottom stroke is straight and horizontal; the upper part of *tet* is in the upper half of the line; *lamed* has lost the middle stroke; the right stroke of *mem* is extremely short, the left stroke is very long, starting high above the line; final *mem* is circular; the same is true of *samekh* but it has a tail on the left; the inner stroke of *shin* is joined to the top of the left one, slanting down from above. The forms of Crimean Yevano-Karaitic (figure 33; 18th century) are more or less the same in structure as in figure 32 and yet the writing looks very dissimilar. There is a structural difference in the *dalet* and *zayin*, where the downstroke finally turns rightward.

[Solomon Asher Birnbaum]

SQUARE SCRIPT

Sixth Century B.C.E. to Second Century C.E.

The square script belongs to the Aramaic branch of Semitic writing. In the Babylonian-Assyrian and Persian empires the Aramaic language and its alphabet became the official language and script of the administration. They were also adopted by the Jews in Babylonia and elsewhere, and later pen-

etrated Palestine. When the new script was officially adopted for the writing of Torah scrolls the change-over from the Paleo-Hebrew alphabet was complete although the old script was twice revived, centuries later, for legends on the coins under the Hasmoneans and under Bar Kokhba. The oldest dated document in the new script and language comes from Egypt (515 B.C.E.; figure 1). The script is highly stylized, with very thin downstrokes slanting to the left and very thick horizontals (or near-horizontals) dominating the picture. From this general Aramaic writing the Jews and the other peoples of the region – Palmyrene, Nabateans, etc. – in the course of the next few centuries developed types of their own. By the end of the fourth century B.C.E. the Jewish forms closely approached the full-fledged Jewish script (figure 2). Therefore it should properly be termed Jewish script rather than “Hebrew script,” since it was used by Jews, not by Hebrews (nobody would apply the term Hebrews to the Jews of that period). In speaking of this writing the designation Hebrew script should therefore be dropped; it could then be employed to describe the alphabet of the Hebrews. This would, in addition, have the advantage of conforming to the usage in the ancient sources, where *ketav ivri* denotes the pre-Exilic script. So long as the name Hebrew script continues to be used for the Jewish script, the script of the Hebrews ought to be designated Paleo-Hebrew, the term introduced in *The Hebrew Scripts* (see bibliography). In the second half of the third century B.C.E. Hebrew writing was already on the threshold of the square script (figure 3). By the middle of the second century B.C.E. further development had noticeably taken place (figure 4) and during the first centuries B.C.E. and C.E. the final form had almost been reached (figure 5).

The evolution from the sixth century B.C.E. was considerable. Figure 6 illustrates this step by step, through the six stages of the final *mem*. The top of the first form is a cursive development of the original W-form (which has been preserved in the Roman M).

Appearance of the Letters

For the second century C.E. it is already possible to speak of the square script proper (figure 7). By the seventh century (figure 8) almost every letter of the alphabet had either a top bar or a head, while many had a base as well. The invisible frame within which a letter was written was a rectangular oblong standing on one of its shorter sides. Only rarely was this frame a square. Hence the name square script is really a misnomer. At certain periods in certain regions the frame was not rectangular, the downstrokes being oblique while the top and bottom strokes remained horizontal (see, for instance, figures 24, 29, 34). After the first few centuries the evolution proceeded at a very slow pace. The changes did not involve the structure of the letters but the style of the writing. Perhaps by the seventh century (figure 8) there was a tendency for the horizontals to be thick, while the downstrokes were thinner, or thin. The first dated manuscript (from 896 C.E.) of the fully developed calligraphic kind (figure 9) was writ-

ten in a style which has remained virtually unchanged ever since (figure 10). While the horizontals had originally played a very minor role compared with the uprights, the opposite extreme had now been reached. The near-polarization of horizontal and upright strokes had not resulted in a dull geometrical pattern: some oblique strokes were left outside the system, some strokes extended above or below the line – the strokes themselves were not geometrically straight but slightly curved, wavy, or tapering. The great weight of the horizontals created a clear impression of continuity along the line. Half the letters rested on their bases, and the other half partly stood and were partly carried by their neighbors, in the manner of a suspension bridge. But, although strongly linked together, they did not lose their individuality. The evolution of the forms from the sixth century B.C.E. is here illustrated by the letters *he* and *samekh* (figure 11). It can be seen that the change in the first five centuries (see lines 1–5) was much greater than during the last eight (see lines 6–7).

One detail in the development of the forms – the rise of the *litterae dilatatae* – requires special mention, because it falls outside the category of structural evolution, and is of a purely aesthetic nature. Certain letters, when they stood at the left end of a line but did not reach as far as the actual edge of the column, had their top bars extended to that edge so that the line might be of the same length as all the others. The effect was to make the left edge of the column neat and straight, and ensure that the general appearance of the page should be pleasing to the eye. This device – dilatation is the term introduced in *The Hebrew Scripts* – no doubt arose spontaneously and spread among the scribes because it combined the virtues of simplicity and effectiveness. These forms do not appear to antedate the sixth to seventh centuries C.E.

Although an increasing number of Jews lived outside Palestine after the Babylonian Exile, there must have been close contact between them and Palestinian Jewry. This is evidenced by the fact that for a long time no divergent development took place. But such a state of affairs could not continue beyond a point, as forms do not remain static forever and writing, like language, is subject to change. As the dispersion of the Jews increased, separate developments set in, and each distinct cultural branch which grew up had its own type of writing. In some cases differentiation was restricted within narrow limits but in others divergence went very far, even though the conscious aim of the scribes was to reproduce faithfully the traditional forms of the letters, especially in the copying of synagogue scrolls. Other than in scrolls, *tefillin*, and *mezuzot*, the square script was used in biblical, liturgical, and talmudical codices but hardly ever in any other books. Certain letter forms were reserved for the scroll script.

Basic Types

The main groups or types of writing which came into being in the various Jewries are Ashkenazic in Germany and in Ashkenazi settlements elsewhere, Babylonian, Egyptian, Italkian, Maaravic in the Maghreb, Palestinian-Syrian, Parsic in Per-

sia and Parsi settlements, Sephardic in the Iberian Peninsula and Sephardi settlements, Temanic in the Yemen, Yevanic in the Balkans and Crimea, and Z̄arphatic in northern France. There were also some small groups, e.g., the scripts of the Jews in China or India. The Karaites developed three main types of their own (see below).

It is hardly ever possible to establish, with any measure of certainty, the genetic relation between the types, because the small amount of early material known was penned centuries after the group in question came into existence, and by then time had effaced any obvious clues. Sephardic appears to be an extension of Maaravic. Maaravic is presumably a continuation of the Palestinian-Babylonian-Egyptian complex. Parsic, though very individual, might be descended from Babylonian, and the same possibly holds good of the equally individual Temanic. There is, however, one exception where the relationship between two types is beyond doubt: the case of Ashkenazic and Z̄arphatic. Ashkenazic is definitely the continuation of Z̄arphatic.

Egypt Types

Outside Palestine only the Egyptian branch provides pre-square material (see above, figures 1 and 2). The oldest datable Bible manuscript, written in Egypt in a calligraphic hand, is of about the fifth century C.E. (figure 12). Although earlier than figure 8, it is in a more regular, formal style. A non-biblical manuscript dated three centuries later is written in an almost modern hand (figure 13).

The final stage of calligraphic development in Egypt was reached in the 10th and 11th centuries (figure 14), when horizontals were thick but not excessively so.

Babylon Type

The forms in figure 15, a non-biblical Babylonian manuscript of about the eighth century, are even less formal than those of the corresponding manuscript of the same time in Egypt but the forms in the biblical manuscript in figure 16 (written in 916 C.E.) are practically identical with those in the corresponding manuscript written in the Egyptian type; however, in figure 16 there is not much contrast between the thickness of the horizontals and verticals.

Parsic Type

The Parsic type, i.e., the script of the Persian Jews and their descendants outside Persia, is presumably derived from the Babylonian one, although there is too little early comparative material available to arrive at a paleographical decision. The earliest available documents already show a highly individual development. By the 16th century (figure 17, of 1571) the forms were so completely different from the Babylonian ones that the gulf must by then have been in existence for a very long time. The style was much less regular and formal, and there was an absence of monumentality. The horizontal strokes were very thick, the downstrokes thin. This contrast was already in evidence, though to a less marked degree, in the tenth century, when it is encountered in Palestine and Egypt – a strik-

ing example of how, in spite of geographical separation, new developments spread from group to group.

Temanic Type

Yemen was the southernmost early seat of Jewish writing. The available material begins approximately with the 12th century (figure 18). The contrast in thickness between horizontals and downstrokes was by then in full force. The term for this type as used in *The Hebrew Scripts* is Temanic. Like the Parsic type it is not regular and formal, and thus contrasts sharply with the Palestinian-Syrian, Egyptian, and Babylonian types. However, Temanic does not otherwise resemble Parsic, as a comparison of a manuscript of 1468 (figure 19) with the Parsic one of 1571 (figure 17) will show.

Maaravic Type

The northwestern shore of Africa – the Maghreb – was the home of the Maaravic type of the Jewish script, which had presumably followed the line of migration from Egypt westward, its forms being closely related to those of the Palestinian-Syrian/Egyptian/Babylonian complex. The general impression given by the script of the earliest available dated Maaravic Bible manuscript of 946 C.E. seems to point to a closer relationship with the Palestinian than with the Egyptian and Babylonian types. The contrast between thick and thin strokes is clear but not so great as in some of the above-mentioned types. In the non-biblical fragment of 978 C.E. (figure 21) the writing is slightly less formal. But Maaravic is connected not only with the east; there is also a close link with Europe, i.e., with the Sephardic type of the Iberian Peninsula.

Sephardic Type

This type is practically identical with Maaravic. It is to be assumed that Sephardic was introduced from Africa. However, available material of both types, which is of rather late origin, provides no definite proof. An epitaph which is of an unusually earlier date (sixth century, figure 22), and contains some rather archaic forms, also provides no proof in this respect. The possibly oldest pen-written Sephardic manuscript available comes from the ninth-tenth century (figure 23). Here the contrast between thick horizontals and thin down strokes is great. The writing is considerably less formalized than that of the Palestinian-Syrian-Egyptian-Babylonian complex. That stage was reached, and surpassed, by the 12th century.

The biblical manuscript of 1207, illustrated in figure 24, shows forms which are harmonious and regular without being rigid. The next three centuries saw hardly any change at all, and, upon the introduction of the printing press, the typeface was designed on the basis of contemporary manuscript forms. Through a historical accident only this typeface has survived to the present day, while the two other early typefaces (see below) disappeared. In the course of the centuries it deteriorated very much aesthetically, as a comparison between figure 24 and printed books from various ages will show.

The Sephardic type was not restricted to the Iberian Peninsula. It spread to the north of it; it was also employed in

Provence, Languedoc, and Comtat Venaissin. When contact with Spain ceased, upon the expulsion of the Jews in 1492, the script north of the Pyrenees and that of the exiled Sephardim started developing on divergent lines. In the new settlements, too, differentiation arose. The form used in the largest and most important of these – that in Turkey – is the main representative of the Sephardic type.

Yevanic Types

With Sephardic the Jewish alphabet entered Europe from the southwest. But its southeastern entry was perhaps of even greater consequence. Hardly any material has survived from Greek-speaking Jewry in Asia Minor and Greece during the Hellenistic period. However, slightly more material, the oldest available documents of the Yevanic type in Europe, has survived from Magna Graecia. These documents are also the earliest extant written in the Jewish script in Europe (see above, the section Cursive Script, figure 22). The oldest available example of the square style comes from Asia Minor (figure 25). It clearly belongs to the neighborhood of figure 5. No early biblical manuscript is available from this group but to judge by the conditions in other types the tenth-century fragment shown in figure 26 might indicate that there was a calligraphic biblical square style then in existence.

Italkian Types

The next stage was in Italy. Is the Jewry of this country descended mainly from the Jews who lived there in antiquity, or is the main source perhaps the settlement in Magna Graecia? If the latter, the Italkian type would have its roots not in the Palestinian but in the Yevanic type. The documents (inscriptions) start about 300 C.E. (figure 27). The earliest square manuscript, a biblical one, is of 979 C.E., the oldest from Europe that is dated (figure 28). The contrast between thick and thin strokes is strong. The style of the writing is quite unlike that of the contemporary western Oriental groups or that of Maaravic and Sephardic. Comparing the forms with those of figure 10, it would be most difficult, at first glance, to say exactly what makes them appear so different although the corresponding letters are constructed identically. In the 15th century the thick/thin feature was – perhaps under Ashkenazic influence – so pronounced that the script looked as if it consisted only of horizontals (figure 29, of 1466). When, not much later, the typeface was designed, this kind of writing was not chosen as a model (figure 30).

Zarphatic Types

In central and northern France the Sephardic type that was encountered in southern France was not found, a result of the southern provinces coming only very late to the French Crown. It is therefore misleading to use, in this context, the word French, with its wide connotation. The traditional Hebrew name for the northern and central region, *Zarefat*, is the source of the term *Zarphatic*, introduced in *The Hebrew Scripts*. In the earliest manuscripts certain similarities with the Italkian type can be noted. Was there perhaps a genetic

relation between the two, or do they represent separate, independent developments going back to Roman times? Current information is insufficient to answer the question, as no available Z̄arphatic manuscripts antedate the 12th century (figure 31). The difference between thick and thin strokes was strongly marked. Z̄arphatic did not long survive the expulsion of the Jews from France (1394) because the refugees were absorbed into the Jewries of their new homes. The Z̄arphatic type also included the script of medieval England, where the Z̄arphatim had settled in Norman times. It came to an end after only two centuries, when the Jews were expelled from England in 1290.

Ashkenazic Types

The earliest specimens of the Ashkenazic type (Ashkenaz is the traditional Hebrew name for Germany) show identity of script with Z̄arphatic. It therefore may be concluded that the Ashkenazic group is descended from Z̄arphati Jewry – which confirms the existing tradition to that effect, and corroborates the evidence provided by the Romance element in the Yiddish language. Available Ashkenazic material dates from the first half of the 11th century, consisting of epitaphs, the first dated one being of 1034, while the earliest manuscripts can be ascribed to the 12th century; of these, the first dated manuscript in square script is from 1236. Ashkenazic is one of the three richest sources of codices, the others being Sephardic and Italkian. The early epitaphs showed well-proportioned, pleasing lettering (figure 32, of 1082). Here there was no difference between the thickness of horizontals and verticals, while the Bible manuscripts of even earlier dates in the other types already had that feature fully developed. The earliest dated Ashkenazic Bible manuscript had the thick/thin contrast (figure 33, of 1236). By the 15th century the domination of the horizontal strokes had reached its climax (figure 34, of 1432): the horizontals were longer, i.e., the letters were wider. In addition, the letters had a characteristic stance. In all groups and during all periods the downstrokes slanted somewhat to the right, so that the letters leaned slightly to the left. But now the slant had become considerably more pronounced (compare figure 34 with, for instance, figure 29, which was otherwise written in the same kind of script). Curves and undulating elements decreased, the forms became slightly rigid, though less so than in the printers' typeface (figure 35): When the typecutters transferred the handwritten forms onto the metal, they regularized them geometrically. They also diminished the preponderance of the horizontal strokes. The thick horizontals began to be taken over for lapidary use in the 13th century; they became the rule toward its end. Detailed research might establish whether the development of the thick/thin feature was purely a matter of aesthetics, or whether there was a special reason, or a partial one, perhaps the transition from the reed pen to the quill.

Karaite Types

Finally, there was the script of the Karaites. They had cut themselves off from rabbinical Judaism in early times but continued to use the Jewish script, as they considered themselves to be

the real Jews. In their hands it underwent a distinctive development, which is not surprising as there is an intimate connection between religion and script throughout history and in all cultures. No single Karaite type existed; in various regions different Karaite types developed from the Rabbanite types. Material dated from the 11th century onward is available, but on the whole is sparse. There was a southern Karaite type in Egypt and Palestine, Yevano-Karaite in the Byzantine regions, Parso-Karaite in Persia.

From the above review of the square script it may be seen that there are many unsolved problems. An answer to some might be found by further research. For the fact is that the study of the Hebrew, i.e., the Jewish script, is, after all, still only at its beginnings. And the field is vast – stretching over more than two thousand years and many regions of the Old World.

[Solomon Asher Birnbaum]

MASHAIT SCRIPT

Cursive was sometimes used as a book hand when, of course, more care was taken with the writing. But this did not involve an approximation to the square; it led to elaboration and ornamentality of a different kind, and thus to the shaping of a new style, the mashait script (incorrectly designated "rabbinic").

The Palestine-Syria Type

This development took place independently in the various types and differed in degree from type to type. Evolution away from the cursive was greatest in the European types; in the Oriental ones there was little of it. A good example is in a specimen of the Palestine-Syria type (figure 1; 11th century). *Alef* has the pure K-structure; in *lamed* the horizontal stroke is omitted; *mem* has no base; final *nun* starts with a curve at the line bottom and is thus rather short; the inner stroke of *shin* tends to be slightly curved and joins the upper part of the left stroke. The forms in figure 2 (15th century) show very little change in detail but the general impression is one of a regular, pleasing hand. *Alef* has the square construction; *zayin* is a wavy line of the question mark type; the *alef* part of the *alef-lamed* ligature is a flattish parabola; final *nun* is a shallow S-wave, starting from the line ceiling; the inner stroke of *shin* is a little curve in horizontal position, joined to the top of the left stroke.

Egypt Type

This type, like Palestine-Syria, is the basic kind of mashait (figure 3; 13th century). The two right strokes of the K-form of *alef* are joined high up to the top of the left stroke; the left stroke of *tet* is of double height but does not extend below the line bottom; *lamed* has the two-stroke form; *mem* has no base; final *nun* starts slightly below the line ceiling; *samekh* is a circle; the middle stroke of *shin* is a horizontal curve joined to the top of the left stroke. Figure 4 (1326) shows a somewhat more formal hand. The two right strokes of *alef* are high up but, in contrast with that in figure 3, the letter is based on the square construction, except that the right stroke joins the outer end

of the middle stroke; generally the left stroke does not extend beyond the line ceiling; the *alef* part of the *alef-lamed* ligature is a shallow oblique S-wave, or even a straight line; the left stroke of *samekh* is short and only starts at the line bottom so that the letter is open on the left.

Babylonia Type

Figure 5, a Babylonian specimen (tenth century), also represents the basic kind. The *alef* part of the *alef-lamed* ligature is the unchanged right-hand part of *alef*; *mem* has a short base which is often curved; the inner stroke of *shin* is joined to the middle of the left stroke. The modern hand is shown in figure 6. The right stroke of *alef* is above the line ceiling, joining the top of the left one – it often looks as if it were its top part; the original middle stroke is strongly curved and situated in the upper half of the line height; *gimmel* has the form of what, in most types, is a *nun*; *he* has the question mark shape; *lamed* has the two-stroke form; the right stroke of *mem* has shrunk to a tiny stroke at the line ceiling – it is now nothing but the beginning of the inner stroke, changing it into a shallow S-wave; the left stroke has become long, filling the whole line height, without, however, extending above the line ceiling; final *mem* is a circle; *zadi* is a tall S-wave; the inner stroke of *shin* has become a dot at the top of the left one; the left downstroke of *tav* is severed from the top stroke, beginning at the line bottom and running rather far down.

Parsic Type

Although the individual letter forms of the Parsic type (figure 7; 14th century) present nothing unusual, the general picture is very distinctive. The main reason is the thickness of the horizontal strokes, which has the effect of reducing the distance between the top bar and base to a very narrow gap. *Alef* looks like a Roman N with the two right strokes half up the line height; *zayin* is a flattened Roman Z – it has thus almost returned to the Old Semitic form; the middle stroke of *lamed* has become the top part of the curve which is the lower half of the letter; *mem* has no base; the inner stroke of *shin* is a small curve in horizontal position. The top stroke of *gimmel* in figure 8 (18th century) slants down rightward, and is continued on the line bottom by a horizontal piece, which then slants down leftward below the line bottom. The *zayin* of figure 8 (18th century) has become unsymmetrical: the top stroke is much smaller than the bottom stroke, and sometimes disappears altogether; *mem* has no base; the inner stroke of *shin* has become a small curve, joined to the top of the left one. The modern forms (figure 9) do not differ from those of figure 8, or, for that matter, from modern cursive. The form of the *alef* here is an extremely rare one; what distinguishes *gimmel* from *nun* is that it is an acute angle, whereas *nun* has a rounded corner; the downstroke of *dalet* ends by turning right; *zayin* is of the question mark type; final *mem* is circular but the stroke often ends outside the letter with an upward movement; *samekh* is written in the same way, but when the top is reached a downstroke is added. In the somewhat cursive writing of figures 8 and 9, the thickness of the horizontals

is less pronounced. The tall forms of *dalet* and *resh* are very rare, and have obviously been adopted from outside – they were used in the neighboring Babylonian type at least from the late 15th century.

Temanic Type

This type shares with Parsic the thick horizontals and the consequent narrowing down of the space between the top bar and the base (figure 10; 13th century). The main stroke of *alef* has become horizontal, resting on the line ceiling; the *alef* part of the *alef-lamed* ligature is, on the whole, rather angular, as in *alef*; *zayin* is a small – sometimes very small – downstroke, crossed by a short horizontal; *tet* is like the Ashkenazic cursive form but preserves the inner stroke; the middle stroke of *lamed* is straight and horizontal; the right stroke of *mem* very occasionally ends in a short base; final *mem* differs from *samekh* in not having a downstroke on the left; *samekh* is generally less wide, and the downstroke has sometimes become a mere tail, resulting in an open letter. All downstrokes slant rightward. Three centuries later (figure 11; 15th century) the style is rather different, although very little change has taken place in the forms themselves. The horizontals are much less thick. The middle stroke of *alef* begins by being straight and horizontal, and then curves downward but does not reach the line bottom; the *alef* part of the *alef-lamed* ligature generally corresponds to the form in figure 10, but two other types are occasionally to be met with – one is identical with the right part of the square form, and the other is a shallow S-curve, running from the top right to the bottom left; the top of *zayin* is a tick, and the end of the downstroke turns rightward. The general style of figure 11 continues unchanged for two more centuries (figure 12; 17th century). The lower right stroke of *alef* now reaches the line bottom, unless prevented by the preceding letter; the *alef* part of the *alef-lamed* ligature corresponds to the square form; *zayin* is unchanged.

Maaravic Type

The forms of the Maaravic type (figure 13; 14th century) are cursive but written with care and regularity. The same applies to the specimen from the next century (figure 14). Here the parallelism of the downstrokes is developed to an extreme degree. Its impact is intensified by the high and narrow look of the letters, arising from the shortness of the horizontals. The right part of *alef* is high up and very small; *gimmel* is a right angle; final *mem* is an oval in the upper half of the line; *samekh* is triangular. The style of extreme parallelism seems to have been characteristic of one particular region and period, and is not met with again subsequently (see, for instance, figure 15; 18th century). An interesting detail in this specimen is that the *alef* of the big display script used for two initial words, is written in cursive, while the text itself is in mashait.

Sephardic Type

This type (figure 16; 11th century) corresponds to the cursive of the same period (figure 19, Cursive Script). It is clearly well advanced toward a fully developed mashait, although, in many

letters – e.g. in *he*, *mem*, *shin* – formality is achieved by features from the square. *Alef* is of the K-type; the middle stroke of *lamed* is fused with the downstroke to form a semi-circle in vertical position; final *mem* is more or less round; *samekh* is quadrangular; *shin* consists of a base and three parallel downstrokes, the inner one of which often does not reach the base. In the 15th century Sephardic mashait (figure 17) reached its climax, being a beautiful book of a high order. Legibility, however, is not good, the letters are narrow and very close to each other, and any downstrokes that end leftward touch the next letter. When the right downstroke of a letter does not turn leftward at the line bottom, it stops midway down the line height. Starting from the tip of the left stroke the lower right stroke of *alef* begins horizontally on the line ceiling and ends by curving down to the middle of the line height; the right top stroke is very thin and short, above the line ceiling; final *mem* consists of two more or less rounded halves, top right and left bottom; the bar of final *pe* has a little stroke at its left end, which represents the original top of the left stroke; the right stroke of *zadi* and final *zadi* is an extremely short horizontal which joins the top of the left stroke; the same applies to the inner stroke of *shin*. Transferred to the typeface of the printing press, this script, like the square, lost much of its beauty (figure 18; 18th century). Although only a shadow of its former self, it is still a pleasing hand. The usual, but incorrect, designation for it is “Rashi script,” obviously because *Rashi’s commentaries on the Bible and Talmud – the books which everybody was constantly handling from boyhood to old age – were printed in (Sephardic) mashait. Rashi himself, naturally, wrote in Zarpthic (see below).

Provençal Sephardic Type

For a long time this type did not differ from the Iberian type. Figure 19 (13th century) is a very plain hand. *Alef*, more often than not, has the cursive form. Figure 20 (15th century) is a beautiful hand. Figure 21 (18th century) is far inferior, but its mashait character is more pronounced than in the Sephardic type of figure 18.

Yevanic Type

The 13th century Yevanic mashait is a very plain hand (figure 22). *Alef* consists of a lower main part and an upper one, the lower combines the lower halves of the former left stroke with the former main stroke, resulting in a circumflex; the former right stroke and the upper part of the former left stroke remain separate; the downstroke, both of *dalet* and *he*, finally turns rightward. Figure 23 (15th century) is a more formal script but much less elaborate than contemporaneous Sephardic. In contrast with the latter, the horizontals play a very big role. *Dalet* and *zayin* have the same characteristics as in figure 22; the inner stroke of *shin* is short and joined to the middle of the left one.

Italkian Type

The first specimen of Italkian mashait (figure 24; c. 11th century) shows a very regular and pleasing hand, which, how-

ever, is not yet calligraphically developed. The left downstroke of *he* still issues from the top bar; *shin* is practically triangular, and the middle stroke is short and does not reach the line bottom; the frequent expression “he said” is always rendered by an abbreviation; the left stroke of *alef* and the left top stroke of the *mem* are omitted. In the 14th century a highly calligraphic style was reached. The horizontals dominate the picture in the way they do in the square, and a number of letters have the same structure, although their appearance is very different indeed – cf., for instance, the *mems* or *nuns* of the two styles occurring in the specimen (figure 25). There are practically no straight strokes; everything is curved. About a century later (figure 26) the difference between the thick horizontals and thin downstrokes is even greater. The latter have become thinner, longer, and straighter, and all the letters have a strong leftward slant. The downstrokes of the long letters are shallow S-curves, rather thick in the middle. Figure 27 shows the contemporaneous typeface. The designer evidently wished to avoid extremes.

Zarpthic Type

The Zarpthic forms of 12th-century mashait (figure 28) are clearly distinct from those of the contemporaneous cursive: not only are they very carefully written but they differ in many details. The right part of *alef* is at the line ceiling; the top part of *kof* is a horizontal line – only the merest trace of the downstroke is left. The fully developed calligraphic hand begins in the 13th century. Most downstrokes are shallow S-waves, thickened in the middle (figure 29; 14th century). Neither horizontals nor verticals dominate the picture. The distance between the letters is reduced to a minimum; very often they actually touch. *Shin* has a wide horizontal base. By the 15th century, only traces of this calligraphic style (figure 30) survived.

Ashkenazic Type

The differences between the 13th-century Ashkenazic mashait of figure 31 and the almost contemporaneous Zarpthic of figure 28 appear to be due only to the individualities of the scribes. Further research is needed to establish when the divergence between the two types became pronounced. It seems that the full development of the calligraphic style was reached in Ashkenazic very slightly later than in Zarpthic and that, like there, it was soon simplified (figure 32), surviving only as a display script (figure 32, top and bottom). The plain style is the basis of the typeface (figure 33).

Southern Karaitic Type

The 16th-century Southern Karaitic type of figure 34 is pleasant to the eye. There is not much difference between the thick and the thin strokes. The opposite may be said of the Yevano-Karaitic specimen (figure 35; 16th century).

LETTERS USED AS NUMBERS

Although in some early Hebrew inscriptions (such as the Samaritan ostraca) there appear certain symbols which may be taken as numerals, in general letters of the alphabet were used as numerical signs. This usage is not biblical. It may have been an imitation of the Greek custom; the first traces of it are found on Hasmonean coins (c. 135 B.C.E.) The letters from *alef* to *tet* stand for the units in succession; *yod* to *zadi* for the tens, and *kof* to *tav* for hundreds (that is, up to 400). In the Talmud the numbers above 400 are formed by compositions (500 = 400 + 100 (ת"ק); 900 = 400 + 400 + 100 (תת"ק), and so on; in later times the final forms of the letters *kaf* כ,

100	ק	19	ט"ט	10	'	1	א
200	ק	20	כ	11	א"	2	ב
300	ש	30	ל	12	ב"	3	ג
400	ת	40	מ	13	ג"	4	ד
500	ת"ק	50	נ	14	ד"	5	ה
600	ת"ק	60	ס	15	ה"ו	6	ו
700	ת"ש	70	ע	16	ו"ז	7	ז
800	ת"ת	80	פ	17	ז"ח	8	ח
900	תת"ק	90	צ	18	ח"ט	9	ט

mem ם, *nun* ן, *pe* ף, and *zadi* ץ were not infrequently used for 500, 600, 700, 800, 900). The thousands are represented by the same letters as the units, but are generally followed by a kind of apostrophe (or two dots are placed above them: 5727 = (ה' תשכ"ז). Numbers above ten are expressed by a combination of letters, those denoting the higher numbers being placed toward the right (e.g., 182 = כ"ב ט"ח). In an indication of the date of the year, the letter representing the thousands is generally omitted (5727 = תשכ"ז). The numbers 15 and 16 are not denoted by the letter ה"ה and ו"ו (since these combinations represent the abbreviated form of the Tetragrammaton): instead, the combinations ט"ו ("nine and six") and ט"ז ("nine and seven") are used.

[David Diringer]

BRILLE

This system enables the blind to read and write Hebrew with speed and relative facility. Until the 1930s, each school engaged in educating the blind and in printing Hebrew works in Braille developed its own system of Braille signs. There was no stan-

dard system of pointing Hebrew letters and a pupil graduating from a given Jewish school for the blind was unable to read the literature published by another. In 1936, an agreement was concluded among all the institutions engaged in the publication of the Bible, the translation and copying of books into Hebrew, and the writing and editing of material in Hebrew Braille. The agreement called for a uniform method of Hebrew Braille pointing to be adopted by all educational institutions concerned with the needs of blind children, as well as by the cultural centers providing Braille literature in Hebrew for the blind all over the world.

The problem and lack of uniformity in Braille writing existed in all languages and in schools for the blind all over the world. As a result of a UNESCO agreement in 1950, on the occasion of the international meeting on Braille uniformity, and upon the recommendation of the International Hebrew Braille Committee 1936–44, it was decided to adopt a uniform Hebrew alphabet in all countries and languages. According to this system, there are signs for the following characters: (1) all the Hebrew letters (with the exception of the end forms); (2) punctuation signs; (3) mathematical signs (numbers and notation); (4) all the Hebrew vocalization signs (the signs always follow the letter to which they belong); (5) signs for chemistry and physics; (6) signs for musical notes. Errors can be erased by straightening the embossed dots with the aid of a special implement or by passing six consecutive dots over the error. There are four institutions in the world engaged in the printing and publication of the Bible and books in Hebrew Braille: (1) the Jewish Braille Institute of America, New York; (2) the Israel Ministry of Education and Culture, Department of Special Education; (3) the Central Library for the Blind, Netanyah, Israel; and (4) the Jewish Institute for the Blind, Jerusalem.

MANUAL (DEAF)

In Europe and America finger spelling as a means of communication between the deaf has been accepted for decades. Latin finger spelling is not identical for all languages which use the Latin alphabet. In all systems of Latin finger spelling one principle determines the position of the fingers: the similarity of the position to the shape of the written letter. This principle aids in learning and memorizing finger spelling. This is also the reason that the finger spelling of many letters is identical in the systems used for the different languages written in the Latin alphabet. The need for finger spelling depends directly on the cultural needs of the deaf in his society. Hebrew finger spelling probably was not developed sooner because the intellectual level of the deaf in Israel, now average, was low 35 years ago. During the second decade of the existence of the State of Israel, educational and instructional activities for children and adults in the community of the deaf were greatly expanded. Even though only a small percentage of the members of the Association of the Deaf and Mute in Israel draws

its information from reading, this group continues to grow. They express a readiness to learn writing and finger spelling in the clubs for the deaf which exist in several centers in the country. This is especially true of Helen Keller House in Tel Aviv, the national center for the deaf.

Hebrew Finger Spelling

In 1968 a system of Hebrew finger spelling was published by Jonathan Shunary, a teacher of the deaf. The system was developed according to the following principles.

(1) Thirteen of the 22 letters in the Hebrew alphabet are expressed by accepted positions for the Latin alphabet as established by the World Federation of the Deaf (the International Manual Alphabet). However, almost all of the positions adapted for Hebrew finger spelling represent sounds different from those used in the International Manual Alphabet. This was done to keep to the principle of making the position of the hand as similar as possible to the intended letter. This was important to make it easier to learn the system and to spread its use quickly among the deaf in Israel. The letters *y*, *l*, *m*, and *n*, are expressed as in the International Alphabet, since it is possible to associate these to the Hebrew letters. The letter *a* was given the numerical value of one, and the letter *b* the numerical value of two. For several letters the position suggests a word beginning with that letter (Heb. דבקה, *devek*, “glue”; Heb. קרניים, *karnayim*, “horns”), or symbolizes the position of the mouth during the articulation of the letter: for *h* the mouth is opened wide so the sign is a scratching palm, *s* is pronounced with a strong burst of air and so the fist is closed.

(2) Three letters representing consonants not used in the Hebrew language are included in the Hebrew system. This is necessary for foreign names, place names, names of people active in international politics, science, sport, cinema, etc. The sign for *ǰ* (pronounced like the *g* in English “gin”) is a reversed *g* with the fingers pointing down; the sign for *ž* (pronounced like the *j* in the French word “*jour*,” or *s* in the English word “leisure”) is a reversed *z*; and that for *c* (pronounced like the *ch* in the word “church”) is a reversed *c*.

(3) The system makes it possible to represent vowels which are not written in Hebrew as letters. (a) Every consonant followed by an *a* vowel can be expressed by moving the palm being used to the right. (b) *e* vowels are expressed by moving the palm being used downward. (c) *i* vowels are expressed by a slight twist of the palm being used. The letter *vav* thus serves to indicate two vowels, *o* and *u*, just as it does in written Hebrew. (d) *o* vowels are expressed by pointing the thumb up.

(e) the *u* vowel is expressed by pointing the thumb to the left and moving it in that direction.

Just as many signs are expressed while simultaneously employing the mouth or without sound, so there are those who use a combination of finger spelling and this type of speech. In this case the lips are used to express the vowels and the finger spelling is made simpler.

[Jonathan Shunary]

SHORTHAND

The first attempts at evolving shorthand were made in the 19th century. In 1866, for example, Max Gondos adapted the Gebelsberger German method to Hebrew. Other attempts were made by Wilhelm Lerfler, Dr. Hedrich, and L. Kutz. In 1918 Lenis tried to evolve a system of Hebrew shorthand. The reason for the late appearance of Hebrew shorthand ties into the fact that Hebrew was not utilized as a living language until the 1880s. The need became pressing after World War I when Hebrew was recognized as one of the official languages of Palestine and began to be used in courts of law and for administrative purposes. Although it was widely believed that there was no need for Hebrew shorthand, since the Hebrew spelling omits a considerable number of vowels, this view proved unfounded and it was discovered that ordinary writing could not keep up with the speed of speech. Methods were invented after World War I by (1) Ben Yisrael Zulman (1919); (2) D. Tames (1921); (3) Mrs. P. Shargorodska (1926); and (4) J. Maimon (1929).

Of all these methods, Maimon's proved the most successful and popular among Hebrew shorthand writers. He began to evolve his method in 1924, basing it on the international shorthand system invented by General Felix von Konoisky. However, he also took into consideration the sounds and grammatical problems peculiar to the Hebrew language. He accordingly introduced amendments into the shortening of syllables and vowels and also invented special ideographs for Hebrew words. After working for several years on improvements, he published his first textbook of Hebrew shorthand in 1929; in 1932 he produced a guide called *Elef Kizzurei Millim* ("One Thousand Ideographs"). Maimon decided that Hebrew shorthand must be liberated from the traditions of the normal Hebrew lettering and be independent of it. He therefore established that Hebrew shorthand should be written from left to right, unlike the square Hebrew lettering, since this movement is easier for the right hand, as in Latin characters, and that Hebrew shorthand should also represent the vowels, as in Latin characters, and not omit them, as in previous methods. He explained that in Hebrew, vowels often serve as important aids to recognition of a word, and that if the vowel of the first syllable is represented it would be possible, in many cases, to shorten the word without reducing the possibility of deciphering it. Furthermore, according to his method (and in accordance with international practice) the vowel signs in shorthand can serve as links between the consonant signs. Other systems have also been propounded: e.g., by H. Bar-Kama and H. and R. Shtadlan, who trained a considerable number of students and won a certain amount of popularity among Hebrew shorthand writers.

ALPHABET, HEBREW, IN MIDRASH, TALMUD, AND KABBALAH.

The rabbis ascribed special sanctity to the letters of the Hebrew *alphabet. The Psalmist's declaration that "By the word of God were the heavens made" (Ps. 33:6) was taken to indicate the power of the letters, which form the "Word" of God. Bezalel succeeded in the construction of the tabernacle because he "knew how to combine the letters by which the heavens and earth were created" (Ber. 55a). These divine letters cannot be destroyed, and even when the material tablets were broken by Moses, the letters flew upward (Pes. 87b). Similarly when R. Hānaniah b. Teradyon was wrapped in the Scroll of the Law and burnt by the Romans, he exclaimed, "the parchment is burning but the letters are soaring on high" (Av. Zar. 18a). The alphabet played a role in the creation of the world. *Bet* was chosen as the proper letter with which to begin the creation since it is also the initial letter of the word *berakhah* ("blessing"). Furthermore, the letter *bet* had other desirable features. "Just as the *bet* is closed on all sides and open in front, so we have no right to inquire what is below, what is above, what is back, but only from the day that the world was created and thereafter" (Gen. R. 1:10). The claim of the letter *alef* was also acted upon favorably. It was finally placed at the beginning of the Ten Commandments. Another reason given for creation with a *bet* was to "teach that there are two worlds since *bet* has the numerical value of two" (*ibid.*). The Talmud related that this world was created with the letter *he* and the future world with the letter *yod*, both letters forming one of the names of God (Men. 29b). Every letter in the alphabet is granted symbolic meaning by the Talmud. Thus, for example, "*alef bet* means to learn wisdom (*alef binah*) while *gimmel dalet* means to show kindness to the poor (*gemal dallim*)" (Shab. 104a). Even the way the letters are written has significance. R. Ashi declares, "I have observed that scribes who are most particular add a vertical stroke to the roof of the letter *het*." This stroke signifies that "He lives in the height of the

world” since the *het* is the initial letter of the word *Hai*, “He lives.” The stroke above the letter indicates that the abode of the living God is on high. The addition of a letter from God’s name to a person’s name is indicative of Divine guidance and protection. Thus God placed a letter from his name, the *vav*, on Cain’s forehead (Gen. 4:15; PDR 21). Abram’s name was changed to Abraham by the addition of the letter *he* (Gen. 17:5; Gen. R. 39:11). The *yod* which the Lord took from Sarai when her name was changed to Sarah complained to the Almighty that, “Because I am the smallest of all letters, Thou hast withdrawn me from the name of the righteous woman.” God finally appeased the *yod* by utilizing it when Hoshea’s name was changed to Joshua by addition of this letter (Gen. 17:15; Num. 13:16; Gen. R. 47:1). The total number of letters in the alphabet, 22, is also given significance. The wicked King Ahab merited royalty for 22 years “because he honored the Torah which was given in 22 letters,” by refusing to surrender it to Ben-Hadad, king of Aram (Sanh. 102b). Great significance is given to those psalms which are alphabetically arranged (in 119 and 145), as are the first four chapters of Lamentations. Of the latter, R. Johanan declares that they were smitten by this alphabetical dirge, “because they violated the Torah, which was given by means of the alphabet” (Sanh. 103b). Halakhic exegesis also derives important laws from superfluous or missing letters in the bible and even from the flourishes and other graphic peculiarities.

[Aaron Rothkoff]

In Jewish Mysticism

The early mystical literature of the Jews, composed soon after the Talmud was concluded, dealt extensively with the symbolism and secret meaning of the alphabet. Apart from the special mystical alphabets such as the *Otiyyot de-Rabbi Akiva* (c. 700) and the alphabet of *Ben Sira (*Alphabetum Siracidis*, c. 700), attention was devoted to the secret meaning of the letters. The most noteworthy works are the *Sefer *Yezirah*, the *Heikhalot* writings, the *Pirkei de-Rabbi Eliezer*, the *Sefer Temunah*, **Shi’ur Komah*, *Ḥarba de-Moshe*, *Sefer ha-Yashar*, the *Book of *Razi’el* and the *Book of *Bahir*. The important role that mystical symbolism of letters plays in these writings is already partly evident from their alphabetical structure and shape. The belief that the alphabet has mystical significance is based on the idea that the 22 letters of the alphabet are spiritual essences which came into being as emanations from God. The Talmud had already stated that God created heaven and earth with the help of the alphabet (Ber. 55a), and the idea that the 22 letters as spiritual states were the basis of creation recurs throughout mystical literature (*Sefer Yezirah*, 2:2; 5:22; *Zohar*, 1:3; 2:152; *Zohar Ḥadash*, Ruth; Moses Cordovero, *Shi’ur Komah*, 8; *Yal. Reub.*, Gen., and elsewhere).

The Letters As Spiritual and Material Structures

The letters, as written in the Torah, are reflections of the heavenly letters. Their relation to each other is like that of the male and female which attain fulfillment only in union (*Zohar*, 2:228; cf. 3:220). This characteristic is also expressed

in the shape of the letters: *alef* is male, *bet* female, *gimmel* is again male, *dalet* female, and so forth (*Zohar Ḥadash*, Ruth). The form of the letters is not accidental; they are “spiritual essences whose external shape corresponds to their internal essence.” The spiritual counterpart of each letter derives from the individual **Sefirot*; thus, for instance, *alef* comes from *Keter* (“Crown”), *bet* from *Ḥokhmah* (“Wisdom”), *gimmel* from *Binah* (“understanding”) and so on (M. Cordovero, *Pardes Rimmonim*, 27:2; *Sefer ha-Temunah*, the end of *alef*). When a person pronounces or uses letters of the alphabet, it awakens the spiritual essence contained in them and “sacred forms” come into being which rise and unite with their origins, the heavenly letters, “which are the sources of emanation”; there they become subtle and incorporeal, similar to what they were before they took on a definite material shape in man’s mouth (Cordovero, op. cit., 27:2; 9:3; 15:3; idem, *Shi’ur Komah*, 53; idem, *Elimah* (Ms.), 132; *Sefer ha-*Kanaḥ*, 24; *Dov Baer of Mezhirech, *Or ha-Emet*, 12; idem, *Maggid Devarav le-Ya’akov*, 28). The whole doctrine of the spiritual, supernatural character of the letters seems to have originated under the influence of the Pythagorean theory of numbers.

The Letters of the Torah and Prayers

The letters “are the apparel of the Torah, woven from all the colors of the light, white, red, green, and black” (foreword to *Tikkunei Zohar*). An individual section of the Torah, composed of verses, is as “the soul for its physical members [the verses]” and in the same manner as the words draw their vitality from the verses so do the letters from the words: the one is the soul of the other and the apparel of the one is that of the other (*Pardes Rimmonim*, 21:5). This explains the particular sanctity of the scroll of the Torah and of the act of writing it (*ibid.*, 27:2; 20:1). The writing of a letter constitutes the material stage, its pronunciation, the spiritual stage, and its transition from oral pronunciation to thought is the third stage. Hence the special sanctity of prayer performed with purity and fervor, for it transforms the letters of the prayer into spiritual substances which rise, toward their heavenly origins (Cordovero, *Shi’ur Komah*, 19).

The Sequence of the Alphabet

Alef as the first letter encompasses all the others: “*Alef* is their primary source and they all draw from it.” The remaining letters are organized in three groups, each consisting of seven letters: *bet, gimmel, dalet, he, vav, zayin, het* “are the mystery of the rule of Grace,” *tet, yod, kaf, lamed, mem, nun, samekh* “that of the rule of Mercy,” and *ayin, pe, zaddik, kof, resh, shin, tav* “that of the rule of Strict Justice” (*Pardes Rimmonim*, 27:21).

Final Letters

The five final letters, which in the Talmud were stated to have been instituted by the Prophets (Shab. 104a), according to the *Zohar* were originally preserved by God, together with the “primordial light,” for a better future; only Adam knew them. After the Fall they were hidden from him too, until Abraham through inspiration came to know them. Abraham bestowed

the knowledge of the final letters on Isaac, he, on Jacob, and the latter, on Joseph. After Joseph's death, during the period of servitude in Egypt, they were eventually forgotten. The knowledge was regained when Israel received the Torah "and apprehended them in their essence," but after the worship of the golden calf they were lost to the people. Only Moses, Joshua, and the 70 elders still knew them. They brought the knowledge with them to Erez Israel and there they were again revealed in the Song of Songs to the whole people and added to the other 22 letters of the alphabet (*Zohar Ḥadash*, Ruth). When Moses ascended Mount Sinai he found God designing crowns for the individual letters (Shab. 89a). These are the crown-shaped flourishes which point to the ten *Sefirot* (*Sefer ha-Peli'ah*, 73) and represent the life-principle (*nefesh*) of the letters (Vital, *Ez Ḥayyim*, 1:5, 9). The vowels are the *neshamah* ("soul") and *ru'ah* ("spirit") of the letters, which emanated from the *Sefirah Hokhmah* ("Wisdom"; *Pardes Rimmonim*, 9:5; 28:6; *Tikkunei ha-Zohar*, 5). The cantillation accents evolved from the *Sefirah Keter* ("Crown") (otherwise *ibid.*, = *Tikkunei Zohar Pardes Rimmonim* 29:5). Each *zeruf* ("combination of letters") has its special purpose, and is based on a particular mystical idea. The doctrine of the combination of letters is already found in talmudic literature. In esoteric literature this doctrine is further elaborated, first in *Sefer Yezirah* and subsequently in numerous commentaries on it, in particular that of Shabbetai *Donnolo (tenth century). Through the linking together of letters it is possible "to call into existence new creatures" and the *amora* Rava tried to create a man in this manner (*Pardes Rimmonim*, 8:4; *David b. Solomon ibn Abi Zimra, *Magen David*, introduction; Rashi to Sanh. 65b). The doctrine of combination of letters regarding the Divine name was derived from the doctrine of *zeruf* (Abraham Abulafia in his letter to R. Solomon; cf. *Sefer ha-Bahir*). The entire kabbalistic literature abounds in speculations about the alphabet,

but the following writings deal particularly with this subject: *Sefer Barukh she-Amar* (1804); N. Bachrach, *Emek ha-Melekh* (1648), chapter *Sha'ashu'ei ha-Melekh*; Elijah ha-Kohen, *Midrash Talpiyyot* (1736), s.v. *Otiyyot*; *Isaac ha-Levi, Otiyyot de-Rabbi Yizhak* (1801).

°**ALPHONSE OF POITIERS** (1220–1271), brother of Louis IX (Saint Louis) of France. His jurisdiction extended over *Poitou, Saintonge, and Auvergne, and areas including Agenais, Quercy, and the *Comtat-Venaissin, i.e., almost one-third of present-day France. Alphonse treated the Jewish inhabitants in his domains with arbitrary harshness. In July 1249, he decreed the expulsion of the Jews of Poitou. The order was apparently not implemented, unless for a short period. In October 1268 he ordered the wholesale arrest of the Jews in his territories, and seizure of their movable property to finance his departure on a crusade. He subsequently fixed the tax liability of the Jews in his domain at 8,000 livres for the communities in Poitou, 6,000 for Saintonge, 2,000 for Auvergne, and 3,500 for Toulouse. In July 1269 Alphonse compelled the Jews to wear the Jewish *badge; those who failed to comply had to pay the heavy fine of ten livres. In July 1271, during Alphonse's absence, his "vice administrators" (*vices gerentes*), claiming his authorization, expelled the Jews of Moissac.
